

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

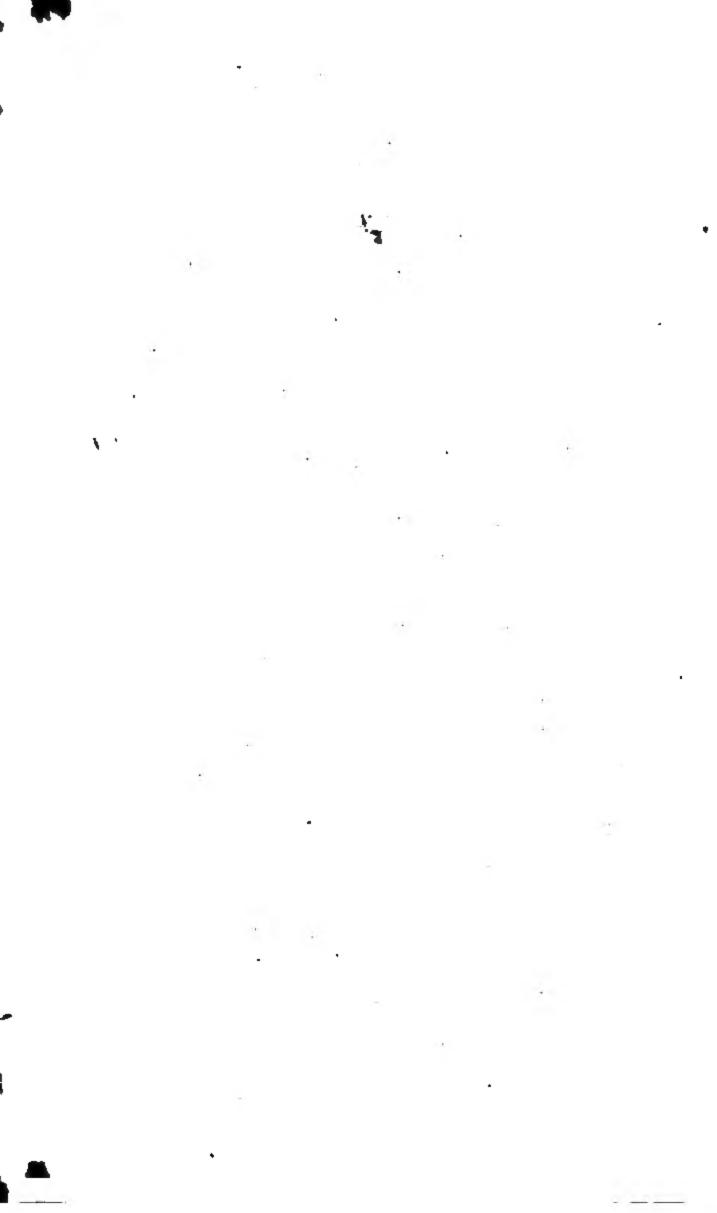

We also ask that you:

- + Make non-commercial use of the files We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + Maintain attribution The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

PREFACE.

THE Year of which we treat, presented the most aweful appearance of public affairs, which this country had perhaps beheld for many ages. All ancient systems of policy, relative to any scheme of equality or balance of power, seemed forgotten in Europe. Friends and allies were no more with respect to us. On the contrary, whether it proceeded from our fault, or whether it was merely our misfortune, mankind seemed to wait, with an aspect which at best bespoke indifference, for the event of that ruin which was expected to burst upon us.

It has happened fortunately, that the expected evil and danger, were less dreadful in the encounter, than in the distant appearance. The great

undoubtedly expected. If not great, and rather neganature, our losses, however ess than might have been apprehended.

-P R E F A C E.

apprehended. It affords no small room both for satisfaction and hope, that no diminution of national glory has taken place, through any failure of native valour in our Seamen and Soldiers. They have supported in all cases, and under whatever circumstances of disadvantage, their antient character.

With the importance and variety of the work, our labour has increased; and every year of this period, so full of trouble both abroad and at home, has produced so much matter, that the business of one has run in upon the other. The Reader will thus account for the delay which has annually increased. Perhaps we ought rather to apologize for bringing out the matter so crudely, as we are obliged to do, to keep tolerably within time, than for a delay rendered necessary by the magnitude of our task. Happy shall we deem the hour, when, recurring from the horrors of war to the pleasant ways of peace, we shall have the pleasure of announcing to the Public, the glad tidings of returning tranquillity.

Retrospedive view of American affuirs in the year 1778. Expedition to Bedford, Fair Haven; and to Martha's Vineyard. Admiral Montague dipossesses the French of the islands of St., Pierre, and Miquelon. Lord Cornwallis, and Gen. Knyphausen, advance into the enemy's country, on both fides of the North River. Surprize of Baylor's light horse. Success of the expedition to Egg Harbour. Surprize of Pulaski's legion. depredations by Butler, Brandt, and the Savages, on the buck frontiers. Destruction of the new settlement at Wyoming, attended with circumstances of fingular cruelty and barbarity. Col. Clarke's expedition from Virginia, for the reduction of the Canadian towns and settlements in the Illinois country. Consequences of Clarke's success. Expedition from Schobarie to the Upper Susquebanna. Destruction of the Unadilla and Anaquage settlements.

tual protection which the French squadron received from their new allies, at Boston, had Sept. 8th. entirely frustrated Lord 1778. Howe's design of at-1778. tacking D'Estaing in that road or harbour. Upon this You. XXII.

E have seen in our last failure of hope with respect to his volume, that the effec- primary object, the noble Admiral immediately feturned to the succour of Rhode Island, which, we have also seen, had been invested, and vigorously attacked, by General Sullivan. And finding that island already freed from danger, he proceeded to New York, where,

in consequence of what is understood by a previous leave of absence, he religned the command lony; which from their vicinity of the fleet into the hands of Admiral Gambier, and returned to

England.

Sir Henry Clinton, who had embarked with 4,000 men for the telief of Rhode Island, had two other material objects in view, in one or both of which he might probably have succeeded, if he had not been detained by contrary winds a few hours beyond his time, or that Sullivan had not been attentive to the danger to which he was exposed, when he found himfelf finally abandoned by the French fleet, and in consequence deserted by the New England volunteers, who composed the better part of his force. One of these was to cut off Sullivan's retreat to the continent; and the other, which might have been either adopted as principal, or pursued as a secondary object, was to attack the Americans in their head quarters and principal place of arms at Providence; the destruction, or effectual difmantling of which, would have removed an eye-fore, and constant source of apprehension, at least, from the immediate vicinity of Rhode Island.

frustrated these designs, Sir Henry This island being, however, the Clinton, on his return to New reverse of Nantucket in point of Grey, with the fleet of transports and most desirable contribution, rysfort frigate, upon an expedi- New York. tion to the eastward. The first In the mean time, Admiral Monobject of this expedition was to tague, who commanded on the exterminate some nests of small Newsoundland station, no somer privateers, which abounded in the received intelligence that D'Estaing rivers and creeks adjoining to Buz- had commenced hostilities on the

zards Bay, in that part of New England called the Plymouth Coto Rhode Island and the Sound, greatly infested the trade of New York, as well as the adjacent coasts of Long Island; whilst the nearness of their retreats, with the smallness of their vessels, and the shallowness of their creeks, secured them in a great measure from all pursuit.

This service was performed with great effect by the detachment under the command of the Major Ge-Between fix in Sept. 5th. the evening, when the troops were landed, and twelve, on the following day, the work was completely done; destroying in their course about seventy sail of shipping, besides a great number of imall craft. The detachment likewise burnt or destroyed in the same manner, the magazines, wharfs, flores, warehouses, ropewalks, and vessels on the stocks, both on the Bedford and Fair Haven sides of the Acushinet river.

The transports and troops proceeded from Fair Haven to the island called Martha's Vineyard; the inhabitants of which, like those of Nantucket, were once celebrated for their enterprize, skill, Sullivan's timely retreat having, and great success in the fisheries. York, dispatched Major General fertility, afforded a considerable and troops, under the convoy of confisting of 10,000 sheep, and Captain Fanshawe, of the Ca- 300 oxen, for the public service at

coalis

confequence of provisional orders with which he had been furnished for the purpose, he dispatched Commodore Evans, with the Romney and some frigates, together with a detachment of marines and artillery, to seize on the small islands of St. Pierre and Miquelon, which had been allotted to France by the last treaty of peace, for the purpose of caring and drying their sish, and serving as a store-house and their sishery.

As France had been particularly refiricted by the late treaty from fortifying those islands, and equally tied down from any increase of a fmall limited number of troops in them, which were only adapted to the support of the civil government, and not to any purpoles of defence, against whatever might deferve the name of enemy, this fervice was accordingly performed without difficulty. A capitulation was granted, in confequence of which the Governor, with the inhabitants, and the garrison, amounting in the whole to about 2,000, were transmitted to France; all the accommodations of habitation, trade, and filhery were defroyed; and the illands thrown back into their original flate.

Upon the return of the troops

in order also to procure forage and fresh provisions for the army, Lord Cornwallis advanced into Jersey with a strong body of troops, where he took a position between Newbridge, on the Hackinsack, to his left, and the North river, to his right. At the same time, Lieut. Gen. Knyphausen, advancing with another division of the army on the West Chester side, took a parallel position, his left reaching to the North River, near Wepperham, and his right extending to the Brunx.

It would not be easy to conceive any fituation more favourable for the carrying on of military operations with advantage. two divisions being only separated by the North River, could, by the means of their flat boats, unite their whole force on either fide of it within twenty-four bours 2 whilst, by the command of the Channel, which their marine afforded all the way up to the Highlands, Washington's forces, which were likewife feparated in the fame manner, but much more dispersed, could not have been afsembled in less than ten days. And even then, if he should quit his frong ground in the Highlands, in order to pass over to the relief of the Jerseys, he must have subjected himself to hazard the confequences of a general action. in a country, which from its nature, would have been very upfavourable to him in such an event. By this means, the provinces of New York, and the Jerseys were in a great measure laid open to the army; the necessary supplies of forage and provisions were plentifully obtained; and an opportunity was afforded to the well-affected of [4] 3 coming

coming in for protection or service. Such was one, among the numberless advantages, which our naval command of the seas and rivers afforded in the course of this war.

Baylor's regiment of light horse, which had been lately raised in Virginia, and was generally called Mrs. Washington's regiment, became a victim upon this occasion, to the design of Lord Cornwallis, with the immediate address, and prompt execution, of Major General Grey. This regiment having been detached with some militia to watch and interrupt the ioragers, their vicinity to the North River, in the villages of Old and New Taapan, where they lay, with other circumstances of lituation, and perhaps more than any, their unsoldierly security, and carelessness with respect to guards and posts, induced Lord Cornwallis to form a plan for their surprize in the night. In pursuit of this defign, whilst Gen. Grey, with the light infantry, and some other troops, advanced by Sept. 27th. night on the left, to furprize the enemy on that side, a detachment was made from Knyphausen's corps, on the right, confishing of the 71st regiment under Col. Campbell, and an American light corps, called the Queen's Rangers, who having passed the North River, intended to have enclosed them so effectually, that being placed between two fires, few' or none of them could escape.

Some deserters from the column on the right, prevented the completion of the scheme. These having at the most critical moment, rouzed the militia who lay in New Taapan, from their trance of tecurity, afforded a clear opportu-

nity for their escape, before the column could come up. But the Major General conducted his division, with so prosound a silence, and such excellency of order, that they not only cut off a serjeant's patrole of twelve men, without any noise, but completely surrounded the village of Old Taapan without any discovery, and surprized Baylor's horse, asseep and naked, in the barns where they lay. A severe execution took place, and the regiment was entirely ruined.

Capt. Ferguson of the 70th regiment, with about 300 land forces, were detached on the expedition to Little Egg Harbour, on the Jersey coast, under the convoy of Capt. Colins of the Zebra, with two other frigates, besides some light armed vessels and gallies, which, from their capacity of running into shallow water, were particularly adapted to the nature of the intend-

ed fervice.

The convoy arrived at the place of its destination about the beginning of October; but as the wind and other circumstances retarded the passage of the ships over a bar which lay in their way, and that every thing in such an enterprize depended upon expedition, the troops were crowded, as circumstances would admit, into the gallies and small crast, which were lightened, by taking out every thing that was not essentially necessary to the immediate service. It seems, that the enemy having received some intelligence of the design against them, had suddenly fent out to sea such of their privateers as were in any degree of readiness, in order thereby evade the impending danger. The larger of their remaining vessels,

consisting mostly of prizes, were, for their greater security, hauled up the river Mullicus as far as they could go, to a place called Chesnut Neck, which lay about 20 miles from the mouth of the river. Their fmaller privateers, and craft of different forts, were carried still far-

ther up into the country.

The detachment, with the lighter armed wessels, proceeded, through a most difficult passage, to Chesnut Neck; being obliged to work their way at random through numberless Moals, without the aid of a pilot, or any knowledge of the channels. Having successfully overcome these difficulties, they discovered on their arrival, an appearance of resistance which they could scarcely have expected; one battery shewing itself clole to the water-fide, and another, with a breaft-work manned, to cover it on an adjoining eminence. But upon a nearer approach it was discovered, that these works were totally destitute of artillery; and the troops being landed under a well-directed cannonade from the gallies and gun-boats, the neighbouring militia, who had undertaken their defence with small arms, foon found the talk beyond their ability, and wore, with little difficulty, and without any loss, obliged to abandon them and disperle.

The detachment found ten vesfels at this place; which were of a confiderable fize, and mostly British prizes. Although these were in general valuable, yet the difficulty of the navigation, and the danger of delay, rendered the carrying them off impracticable; they were accordingly fired and destroyed. And as the trade of New York had suffered greatly from their depredations, the commanders determined to root out this nest of privateers as effectually as possible. Under this determination, they destroyed the settlements, storehouses

and works of every fort.

The good will of the officers and troops would have led them to complete the business, by proceeding up the river, and destroying the remainder of the enemy's shipping, in their last retreat, at the Forks, if the difficulties had not appeared too discouraging, and the danger too imminent to be prudently encountered. The delays which they met with in their return, owing to the stranding of fome of the vessels, afforded an opportunity to the troops of making iome fuccessful excursions into the neighbouring country. In these they destroyed some considerable falt works, as well as the houses and fettlements of several persons, who had either been conspicuous by their activity in the rebellion; charged with oppression and cruelty to the well affected, or who had been concerned in the fitting out of privateers; a species of service, however, more calculated to gratify refentments on one fide, and to excite them on the other, than to produce any effential end with regard to the issue of the war.

When the troops had rejoined the squadron, a delay occasioned by contrary winds in Egg Harbour, afforded an opportunity to enterprizing officers for the performance of new service, and that of a more active and spirited nature, than what they had already executed. A French captain, with some private men, who had deferted from Pulaski's legion, gave fuch an account of the careless

[4] 3

manner

manner in which three troops of horse, and as many companies of infantry, all belonging to that corps, were cantoned, at only a few miles distance, that the commanding officers by sea and land, judged it a sufficient ground for undertaking an expedition to furprize and beat up their quarters. The advantage of conveying the troops by water to within a small distance of their destination, together with the information given by the deserters of an unguarded bridge, which lay a little on their side of the scene of action, the possession of which would serve in case of necessity, effectually to cover the retreat back to their vefsels, added much to the apparent

eligibility of the design.

The deferters spoke truth in this instance, and the success was accordingly answerable to the expeciation. 250 men were embarked, who after rowing ten miles, were landed long before day-light, within a mile of the bridge and defile we have mentioned; thele being leized without discovery, and a proper guard left to secure the possession, the rest of the detachment pushed forward, and so completely surprized Pulaski's light infantry in the houses where they lay, as nearly to cut them to pieces without relistance. The victors numbered above fifty Several officers, and dead bodies. among them, the Baron de Bose, a lieutenant-colonel, with a captain, and an adjutant, perished in this Saughter. Capt. Ferguson observes in his report, that it being a night attack, little quarter could be given, so that only five prisoners were taken. Though some attempt was made by Pulaski's horse,

and the remains of his infantry, to harass the detachment on their retreat, the good countenance which they kept, and the possession of the bridge, rendered it totally ineffectual.

Civil wars are unhappily diffinguished from all others, by a degree of rancour in their profecution, which does not exist in the hostilities of distinct nations, and absolute strangers. They are of course fruitful in circumstances grievous to humanity. In such cases, the most trifling occasions, the most vague and absurd rumours, will irritate the multitude in all armies, to acls of great rigour and cruelty. An account given by the deserters, that Pulaski had issued public orders, forbidding his corps to grant any quarter to the British troops, afforded a new edge to the fury of the foldiers, and thut up their bofoms against every feeling of pity or remorfe. This tale, totally unsupported, as it should seem, by any former, concurrent, or subsequent circumstance, might well be attributed to the malice of the deferters; and perhaps on all fuch occasions, it were better not to credit too hastily, shose reports which urge to acts of unusual severity, by charging a like intention to the enemy.

This and the former expedition afforded an opportunity for a renewal of those complaints, which the Americans had so loudly and repeatedly made, of the inhumanities and cruelties exercised by some corps of the British troops, as well as by their auxiliaries. A number of real or supposed sacts, were now particularly supplied by the surprize of Baylor's regiment,

which was represented as a coldblood massacre of naked men, surprized in their sleep; and who, from a reliance on the laws of war and customs of nations, being in full expectation of quarter when they made no relistance, would not lessen or hazard that security, by even an attempt to lay hold of their arms, or the smallest motion of defence. The depositions of several of the soldiers who had been left as dead, or who had wtherwise unaccountably escaped, were taken upon oath, authenticated in the usual forms, and published by authority. Some of the witnesses who appeared upon this occasion, afforded such extraordinary instances of the tenaciousness of human nature, in tome particular cases and circumstances, with respect to life, that a recital of the facts as they are stated, may possibly be considered by some as a matter of physical Of about a dozen curiofity. wounded soldiers who appeared to give their evidence, three had received, in a regular gradation, from nine to eleven stabs each, of bayonets, in the breast and trunk of the body, besides several wounds in other parts. Two others had received, the one five, and the other fix, stabs in the body. will undoubtedly excite the admiration of whoever confiders the nature of the weapon, and the force which it derives, as well from the weight of the musket to which it is fixed, as from the manner in which it is used, and the strength of the operator, that these men were not only able to give their testimony at a considerable distance of time, but that no

doubt seems then to have been entertained of their recovery.

Although some tribes of the Indians, particularly of those commonly called the Six Nations, had fent congratulations to General Gates on his success at Saratoga, and feemed to enjoy great fatisfaction in that event, and that others took different opportunities of expressing similar sentiments, yet the presents which they continually received from England, the industry of the British agents, and the influence of the great number of American refugees which had taken shelter amongst them, all operating in conjunction upon their own native and unconquerable passion for rapine, soon led them to contradict in act, their fentiments or professions upon that occasion. The success which attended the small expeditions undertaken by individuals of different tribes, under the guidance of the refugees, who knew where to lead them directly to spoil, and how to bring them off without danger, foon spread the contagion of havock through the adjoining nations, so that, in a little time, destruction raged very generally through the new settlements, on the back of the northern and mid: dle Colonies.

Colonel Butler, whose name we have seen, as an Indian agent and commander, in the wars on the side of Canada, and who hadgreat influence with some of the northern nations of that people, together with one Brandt, an half Indian by blood, a man of desperate courage, but, as it is said by the Americans, ferocious and cruel beyond example, were the principrincipal leaders in these expeditions. The vast extent of the frontiers, the scattered and mote situation of the settlements, the nature of the combined enemy, which seemed to coalesce in one point of action, all the properties of British, American, and lavage wartare, together with the exact knowledge which the refugees possessed of every object of their enterprize, and the immediate intelligence which they received from their friends on the spot, afforded them such advantages in these expeditions, that the wretched settlers found all personal resistance as inessectual, public protection was impracticable. To complete their calamity, fubmission could procure no mercy, nor was age, sex, or condition, in too many instances, capable of allaying the fury of their enemy.

In this course of havock, the destruction of the fine, new, and flourishing settlement of Wyoming, was particularly calamitous to the Americans. That district, fituated on the eastern branch of the Susquehanna, in a most beautiful country, and delightful climate, although claimed by, and in the natural order of things feeming properly to appertain to Pensylvania, was notwithstanding, since the last war, settled and cultivated with great ardour, by a numerous swarm from the populous hive of Connecticut. This measure was, however, so much opposed and resented by Pensylvania, and so obstinately supported by its antagonist, that after much aitercation, it became at length the foundation of an actual war between the two Colo-

nies, in which they engaged with fuch earnestness, that it was not even terminated by the contest with the mother-country, until the danger grew so near and so imminent to both sides, as of necessity to supersede for the present Their other confiderations. spective charters, and the grants of land under them, interfered strangely with each other. be presumed, that the crown in those days did not take much trouble in fettling the geography of boundless wastes, which afforded no immediate value, and whose future cultivation, or any disputes about their limits, appeared to be matters of so remote and uncertain a speculation, as to excite no great degree of present attention.

The Colony of Connecticut obtained by their grant, all the lands westward, within their proper degrees of latitude, to the South Seas, which were not already occupied by other powers. York, and New Jersey, were then within that exception, being both foreign, and they stretched directly across, in the way of that grant. Pensylvania was afterwards granted to its proprietors, lying on the farther side, and in a parallel line, with these two provinces. The Connecticut men acknowledged the validity of the exception with respect to New York and Jersey; but insisted, that their right emerged on the western boundary of those provinces, in the course of the supposed line, and could not in any degree be affected by a later grant made to Pensylvania. A claim which, if established, would narrow the limits of the last province to a degree, which would most materially affect its power and interests; and which lying open, as it still does, may possibly be productive of very material consequences with respect to the suture state of America.

The settlement of Wyoming confisted of eight townships, each containing a square of five miles, beautifully fituated on both fides of the Susquehanna. In such a country, fituation, and climate as we have described, and blest with a soil luxuriantly fertile; where every man possessed an abundance, which was, however, the fruit of moderate labour and industry; where no man was very rich, nor very great; the inhabitants exhibited, upon the whole, such a picture of primeval happiness, as has seldom been equalled; and such, indeed, as humanity in its present state seems scarcely capable of exceeding.

The settlement increased and throve accordingly. And notwithstanding its infant state, and the opposition they met from Philadelphia, population was already become so vigorous amongst them, that they had fent a thousand men to Terve in the Continental army. Yet, with this excessive drain from the cultivation of a new Colony, their farms were still so loaded with plentiful crops of every kind, and their pastures so abundantly covered with cattle, that their supplies to the army in those respects, were at least in full proportion to that which they afforded in men. Nor had they been deficient in providing against those dangers, to which, from their remote situation, they were particularly exposed; and had accordingly constructed for that purpose no less than four forts, which seemed, at least, fully sufficient to cover the settlement from the irruptions of the savages.

But neither the happiness of climate, the fertility of soil, nor the remoteness of situation, could prevent the evils of party and political discord from springing up amongst them. It might indeed appear from the supply of men which they had fent to the army, that only one political principle pervaded the settlement; a supply so iil suited to the state and strength of an infant colony, that it seems difficult whether to admire more, the excess of zeal from which it proceeded, or the total want of prudence, policy, and wildom, under which it was But notwithstanding this appearance, they had no inconsiderable mixture of loyalists among themselves, and the two parties were actuated by sentiments of the most violent animo-Nor were these animolities confined to particular families or places, or marked by any line of distinction; but creeping within the roofs, and to the hearths and boards where they were least expected, served, as it asterwards fatally appeared, equally to poison the sources of domestic security and happiness, and to cancel the laws of nature and humanity.

It would seem extraordinary, if such instances had not occurred upon other occasions, that this devoted people had frequent and timely warnings of the danger to which they were exposed by sending all their best men to so great a dislance, without their taking any timely measures for their re-

exill, or even for procuring a lubstitute of defence or protection. Their quiet had been interrupted by the savages, joined with marauding parties of their own countrymen, in the preceding year; and it was only by a vigorous opposition, in a course of successful skirmishes, that they had been ariven off or dispersed. Several of those whom they called Tories, and others who had not before been suspected, had at that time and fince abandoned the lettlement, and along with a perfect, and confequently dangerous knowledge of all the particulars of their fituation and circumstances, were geance. well known to have carried along with them such a stock of private resentment, from the abasement and infults they had suffered from the prevailing party, as could not fail to give a direction to the fury, and even a new edge to the cruelty, of their favage and inveterate enemies.

A fort of public act which had taken place in the fettlement since the last invasion, was preceded with, and productive of circumflances, which afforded cause for the greatest alarm, and for every possible desensive precaution. An anusual number of strangers had, ander various pretences, and the Anction of that universal hospitality which once to much distinguished America from the old world, come into the Colony, where their be-Haviour became so suspicious, that they were at length taken up and examined, when such evidence appeared against several of them, of their acting in direct contert with the enemy, on a scheme for the destruction of the settlements, that about twenty were fent off

under a strong guard to Comnecticut, in order to be there imprisoned and tried for their lives. The remainder of these strange Tories, against whom no sufficient evidence could be procured, were only expelled. It was foon well known, that this measure of sending their fellows to Connecticut, had excited the rage of those call= ed Tories, in general, whether in arms on the frontiers, or otherwise, in the most extreme degree; and that all the threats which had ever been denounced against this people, were now renewed with aggravated ven-

As the time approached for the finat catastrophe, the Indians practifed a more refined dissimufation, if not greater treachery, than had been customary with For several weeks previous to the intended attack, they repeatedly fent small parties to the settlement, charged with the strongest professions of friendship, declarations of the fullest desire and intention to preferve the peace. inviolate on their fide, and reduelts, that the same savourable and pacific disposition might be entertained and cultivated on the other. These parties, besides lulling the people in their present deceitful security, answered the purposes, of communicating with their friends, and of observing the immediate state of affairs in the Colony. Some alarm, or fense of their danger, began, however, to spread among the people, and letters were sent to General Washington, and to others in authorirepresenting their situation, ty, and demanding immediate affiftance. As the time more nearly

approached,

the enemy, more impatient than the rest, or more eager and covetous to come in for the first fruits of the spoil, made sudden irruptions into the settlement, and committed several robberies and murders; in the consie of which, whether through ignorance, or whether from a total contempt of all ties and obligations, they massacred the unhappy wife and sive children of one of those men, who had been sent for trial, in their own cause, to Connecticut.

At length, in the beginning of July, 1778, the enemy appeared suddenly, but in full force, on They were led the Suiquehanna. by Butler, that distinguished partizan, whose name we have already mentioned; who was affished by most of those leaders, who, like him, had rendered themselves terrible in the present frontier war. Their force was estimated at about 1,600 men, of whom, something less than one-fourth were Indims, led by their own chiefs; the others were disguised and painted in sech a manner, as not to be diffinguished from the lavages, excepting only their officers, who, being dreffed in regimentals, carried the appearance of regulars. One of the smaller forts, which was mostly garrifoned by those called Tories, was by them given sp, or as it was faid betrayed. taken by ttorm, Another was where, although they maffacred the men in the most inhuman manner, they spared the women and the place of parley. children.

It seems odd enough, if not singular, that another Colonel Butler, and said to be a near relation to the invader, should chance to

have the defence of Wyoming, either committed to his charge, or by some means fall to his lot. This man, with nearly the whole force of the settlement, was stationed in the principal fort, called Kingston; whither also, the women, children, and defenceless of all forts, as the only place of common refuge, crowded for shel- \ and protection. It ter feem, from his fituation and force in that place, that he might there have waited, and successfully refifted, all the attempts of But this man was fo enemy. wretchedly weak, that he suffered himself to be entited by his namefake and kinfman, to abandon the advantage and security afforded by his fortress, and to devote those under his charge to certain destruction, by exposing them naked' to so severe an enemy. Under the colour of holding a parley for the conclusion of a treaty, he was led into an agreement, that upon the enemy withdrawing their force, he should march out to hold a conference with them in the open field, and that at so great a distance from the fort, as shut out every possibility of the protection which it otherwise afforded. render this measure still more unaccountable, he, at the same time, snewed so great a distrust of the enemy, and feemed so thoroughly apprehensive of their designs, that he marched 400 men well armed, being nearly the whole strength of his garrison, to guard his person to

Upon his arrival there, he was greatly surprized at finding no-body to treat with; but not being willing to return without finishing his business, he advanced towards

the foot of the neighbouring mountains, still hoping that he might hear or see something of those he wanted. As the country began to grow dark and woody, a stag at length appeared, at a considerable distance among the bushes, the holders of which seemed so much asraid of treachery and danger from his side, that they retired as he advanced; whilst he, endeavouring to remove this ill impression, still pursued the stag.

This commander of a garrison did not once perceive his, danger, until his party was thoroughly enclosed, and he was suddenly awakened from his dream, finding it attacked at once on Every fide. His behaviour in this wretched lituation, could learcely have been expected from the conduct which led him into it. and his party, notwithstanding those circumstances of surprize and danger which might have disconcerted the most veteran troops, fought with resolution and bravery; and kept up so continual and heavy a fire for three quarters of an hour, that they seemed to gain a marked superiority over their numerous cnemy.

In this critical moment of danger, some sudden impulse of sear, or premeditated treachery in a foldier, which induced him to cry out aloud that the colonel had ordered a retreat, determined at once the fate of the party, and possibly that of the final author of their ruin. In the state of confusion that ensued, the enemy breaking in on all sides without obstruction, commenced an unresisted Confidering the great llaughter. superiority of numbers on the side of the victors, the fleetness of the savages, and the sierceness of the whole, together with the manner in which the vanquished had been originally surrounded, it affords no small room for assonishment, that the commander of the garrison, with about seventy of his party, should have been able to effect their escape, and to make their way good to a small fort on the other side of the river.

The conquerors immediately invested Fort Kingston, and to cheer the drooping spirits of the weak remaining garrison, sent in for their contemplation the bloody scalps of 200 of their late relations, friends, and comrades. Colonel Dennison, the present commander of the fort, feeing the impossibility of any effectual defence, not having force luthicient even to man the works for one effort, went with a flag to Butler, to know what terms he would grant on a surrender; to this application of weakness and misery, Butler, with all the phlegm of a real savage, answered in two short words, " the harchet." In thefe dreadful circumstances, the unfortunate governor having defended his fort, until most of the garrilon were killed or disabled, was at length compelled to surrender at discretion. Some of the unhappy persons in the fort were carried away alive; but the barbarous conquerors, to fave the trouble of murder in detail, shut up the greater part promiscuously in the houses and barracks, which having then fet on fire, they enjoyed the favage pleature of beholding the whole consumed in one general blaze.

They then proceeded to the only remaining fort, called Wilkefborough, which, in hopes of obtaining thining mercy, was furrendered without refistance, or without even demanding any conditions. the tragedy was renewed with ag-They found gravated horrors. here about seventy of that sort of militia, who are engaged by the different provinces, merely for the guard and defence of their respective frontiers, and who are not called to any other service. With these, as objects of particular enmity, the flaughter was begun; and they were butchered with every possible circumstance of the most deliberate, wanton, and savage cruelty. The remainder of the men, with the women and children, not demanding so much particular attention, were thut up as before in the houses, which being let on fire, they perished all together in the flames.

A general scene of devastation was now spread through all the towoships. Fire, sword, and the other different instruments of dealternately triumphed. The corn helds were let on fire, and the standing corn, now almost ready for the fickle, burnt as it The houses, furniture, valuables of every kind, together with all those improvements which owed their rife to the persevering toil, and patient industry of man, were as completely destroyed, as their nature, or the indultry ipoilers would admit. The lettlements of the Tories alone, generally escaped, appeared as illands in the midlt of the turrounding ruin. It has been often observed, that the practice and habit of cruelty with respect to any particular object, begets a socility in its execution, and a disposition to its commission, with regard to all others. Thus, these merciless ravagers, when the main objects of their cruelty were exhausted, seemed to direct their animosity to every part of living nature; and, as if it were a relaxation or amusement, cut out the tongues of the horses and cattle, leaving them still alive only to

prolong their agonies.

The following are a few of the more fingular or detached circumstances of barbarity, which are related as parts of this massacre. Captain Bedlock, who had been . taken prisoner, being stripped naked, had his body stuck full of sharp pine splinters, and then a heap of knots of the same wood being piled round him, the whole was fet on fire, and his two companions, the Captains Ranson and Durgee, thrown alive into the It is said, that the returned Tories, who had at different times abandoned the settlement in order to join in those savage expeditions, were the most distinguished for their cruelty. Among these, one, whose mother had married a second husband, butchered with his own hands, both her, his father-in-law, his own fifters, and their infant children. Another, who, during his absence, had sent home feveral threats against the life of his father, now not only realized them in person, but was himself, with his own hands, the exterminator of his whole family; mother, brothers, and fifters, mingled their blood in one common carnage, with that of the ancient husband and father.

However painful the task of reciting such horrible barbarities, (many of the worst circumstances of which are spared) it may not

be totally useless, if they serve to produce a dislike of that prompti- tude of entering into wars, which as but too natural to people, as well as to princes, when they fee the consequences, which their passion, often for trivial and contemptible objects, so frequently produce; and by which they are led gradually, not only to great crimes and great misfortunes, but even to a total change and degradation of their nature.

It is necessary to observe with respect to the destruction of Wyoming, that as no narrative of the exploits of the leaders in that transaction, whether by authority or otherwise, has as yet appeared in this country, we can only rely, for the anthenticity of the facts which we have stated, upon the accounts published by the Americans. these have already been long expoled to the view of all Europe, without their yet producing a fingle contradiction, any natural, but improper partiality, which might be a temptation to induce us, either to draw a veil over the whole, or to suppress any of the parts of that transaction, would therefore of course be as fruitless in the effect, as disgraceful in the delign. Happy should we deem it, for the bonour of humanity, that the whole account was demonurated to be a lable. The event has already thewn the impolitic nature of these proceedings, which have only served to fix a bitter and lasting resentment in the minds of the colonists.

confilling mostly of women and summer from Virginia, under the - shildren, (the broken parts, and the different frenes of this devalla- appear attenishing to these, who

tion) were little less deplorable, than those of their friends who had perished in the ruins of their houses. Dispersed and wandering in the foreks, as chance and fear directed their keps, without any mutual knowledge or communication, without provision or covering, they had a long tract of defarts to traverse, without guide or direction. accordingly suffered every degree of distress. Several women were delivered alone in the woods, at a great distance from every possibility of relief. If these, through vigour of mind, or strength of constitution, escaped, undoubtedly others, in similar, and in different circumitances, perithed.

Although the fate of Wyoming, and the .lamentations of the furvivors, had served alternately to freeze every break with horror, and to melt it with compassion; yet the various objects and exigencies of the war, rendered the Americans incapable for the prefent, of executing that vengeance on their lavage enemy, which was, however, fully intended at a proper Some imall expeditions were, indeed, undertaken, which, difficulties attending the them, and the spirit of enterprize under which they were conducted, were not destitute of merit, and consequently, are not unworthy of observation, in the narrative of a campaign not distinguished by any activity in the great and splendid operations of war.

Of this fort was an exp The sufferings of the respects, undertaken in the course of the conduct of a Col. Clarke, with a scattered relicks of families, who small party of between two and had escaped to the woods during three hundred men. It cannot but

have been generally used to contemplate military operations, only as they are circumscribed within the narrow confines of European countries, that the object of this enterprize was at to vast a distance. as that the party, in their way, obliged to traverie no less about 1200 miles, of a boundless, uncultivated, and uninhabited wafte, through which they were under a necessity of convering every necessary for sub-Attence, and every equipment for action. It is, however, to be observed, that their conveyance, for much the greater part of the way, was by water.

Their object was the reduction of those French settlements, which had been planted by the Canadians sa the opper Millilippi, in that fine and fertile region, as it is described, which taking its name from a noted nation of Indians, is called the 11liacis country. It appears, that much of the mischief which had fallen upon the fouthern and middle colonies from the incursions of the favages, had been attributed to the activity of the governor of those fettlements; who, fince the commencement of the troubles, acting as an agent for government, and paying large rewards for scalps, had belides been indefatigable in his continual endeavours of exciting the Ohio and Missisppi Indians, to undertake expeditions

of its mouth, where they hid their boats, and bent their course by land to the northward. In this stage of the expedition, after confuming all the provision which they had been able to carry on their backs, they endured a hard march of two days without any sustenance. We may therefore well credit their affertion, that when they arrived in this hungry state, about midnight, at the town of Kaskaskias, they were unanimously determined to take it or to perish in the attempt.

This town contained about 250 houses, and was sufficiently fortified to have withflood a much stronger enemy; but as the imagined fecurity which the people derived from their remotencie, forbad all ideas of dauger, it of course superseded all precaution against a surprise. This was accordingly as complete as possible. The town and fort were taken, without noile or oppolition, before the people were well awake ; and the inhabitants were fo effectually fecured, that not fo much as a fingle perion elcaped to alarm the neighbouring fettlements. The governor, Philip Rocheblave, who was confidered as so inimical to the Americans, was fent to Virginia, with all the written infructions he had received from which Quebec, Detroit, and Michillimackinack, for fetting on and paying the Indians. The inhabitants were compelled to take an oath of allegiance to the United States a and the fort became the principal citadel and head quarters of the victors.

A fmall detachment which was pushed forward from this place on horseback, surprised and took with as little difficulty, three other French towns, which lay from

fifteen to about seventy miles farther up the Missippi. In all, the inhabitants feem to have transferred their allegiance with great facility; nor were those dispersed in the country behind-hand with them; who, without waiting for any operation of force or necessity, flocked in by hundreds to take the new oath.

The situation of this small party, in the heart of the Indian country, at the back of some of their most cruel and hostile tribes, in the track of many others, and more or less in the way of all, was converted to peculiar advantage, by the extraordinary activity, and unwearied spirit of their commander. He directed and timed his attacks with such judgment, and executed them with such filence and dispatch, that the savages, at length, sound their own mode of war effectually turned Surprized in their upon them. inmost retreats, and most sequestered recesses, at those times and seaions, when they were icarcely less indisposed for action, than unprepared for defence, they experienced in their own huts and families, that unexpected flaughter and destruction, which they had so frequently carried home to others. Thus feeling, in the most sensible manner, those calamities which they were only wont to administer, they grew cautious and timid; and the continual danger to which their families were exposed, damped, for a while, the ardour of the warriors in undertaking expeditions. In the mean time, the Americans in the back fettlements, not only hearing of Clarke's successes, but immediately feeling their benefit, began to shake off their terror, and even seemed by degrees to partake of his spirit, and enterprize.

An expedition, in some degree of the same nature, was also undertaken, from the remote and upper parts of Pensylvania in the month of October, under the conduct of a Col. Butler; the present being, however, as much directed. against several considerable settlements belonging to those people whom they called Tories (and who, from the violence of their past hostilities, had become particularly obnoxious), as against the Indians, with whom they feem to have been intermixed as one people. This party, which consisted of a Pensylvania regiment, covered by riflemen and rangers, took its departure from Schoharie; and having gained the head of the Delaware, marched down that river for two days; from whence, turning off to the right, they struck across the to the Susquehanna, mountains which was the scene of action.

Without entering into a detail of particulars, it will be sufficient to observe, that they totally burnt and defiroyed, both the Indian castles or villages in that quarter, and the other settlements. that, notwithstanding the utmost address and precaution were practised for the purpose of a complete surprize, the inhabitants, both Tories and Indians, had the fortune to escape; a deliverance of no small moment in their fituation; as the vengeance for Wyoming, where they bore a distinguished part, would undoubtedly have fallen The destrucheavy upon them. tion was extended for several miles. on both sides of the Susquehanna; in the course of which, the fruits of a plentiful harvest, together with the only faw-mill and grift-mill in that whole country, shared an equal fate with the houses and every

other

The difficulties, distresses, and dangers, which the party encountered in this expedition, were peculiar to that part of the world; and required no small share of that patient fortitude, and hardiness of body and mind, which can scarcely be acquired without long habitude, under certain marked circumstances of fituation, by any confiderable number of men. Notwithstanding the occasional assistance which they derived from their pack - horses, they were under a necessity of carrying fix days provisions on their backs; and thus loaded, continually to wade through rivers and creeks of such a depth and magnitude, that they would scarcely appear passable, without any incumbrance, to men unused to such service. In these circumstances, after the toil of a hard march, and in some fituations not venturing to make fires for fear of discovery, they were obliged to endure, without cover, the chilling nights and heavy rains peculiar to that climate and feafon; whilst their arms were

other article useful or necessary to rendered useless, at those times when they were most liable to the fudden attack of an enraged and cruel enemy, whose principal effort lay in that fort of surprize. These were, however, only small matters, when compared with the danger which awaited their return, and which they hardly escaped. was the fudden rifing of the great rivers in their way, occasioned by the continual rains, whilst they were still in the enemies country, (who were very strong in that quarter) their provisions nearly expended, and every moment affording fresh room for apprehension, that their return would become totally impracticable. A strenuous and bold exertion, to which fortune was, at least, negatively favourable, prevented the fatal consequences of that event.

> In this manner, the savage part of the war was carried on in America with mutual boldness and perseverance; and waste and cruelty inflicted and retorted, with infinite variety of scenes of horror and disgust.

C H A P. II.

Review of conciliatory measures pursued by the commissioners for restoring peace to America. Attempt to open and smooth the way to a negociation by private communications and correspondence, fails in the effect, and is highly resented by the Congress. Resolutions by that body against bolding any communication or intercourse with one of the commissioners. Gentleman in question, declines acting any longer in the commission, and publishes a declaration in answer to the Congress. Declaration from the remaining commissioners in answer to that body. Final manisests and proclamation by the commissioners. Cautionary measures recommended by the Congress to the people; followed by a counter manifesto, threatening retaliation. Singular letter from the Marquis de la Fayette, to the Earl of Carlisle. American expedition for the reduction of the British settlements in the country of the Natches, on the borders of the Missippi. Expedition from New-York, under the conduct of Commodore Parker and Colonel Campbell, for the reduction of the province of Georgia. Landing made good, and the rebels defeated. Town of Savannab taken, and the province in general reduced. Major-General Prevost arrives from the southward; takes the town and fort of Sunbury, and assumes the principal command.

T affords no small degree of pleasing relaxation, to return from all the rage of war, and all the horrid ferocity of savages, and once more to tread in the pleasing paths of civil life. We have indeed beheld the first in its most Thocking and degraded form. Stripped of all that "pomp, pride, " and circumstance," which serve so strongly to fascinate the imagination, and divested of that glare of glory, which throws a shade over its deformities, the ghastly carcass has not only been exposed in all its nakedness, but polluted and distained by the bloody hands of barbarians. From so horrid a scene we naturally turn with pleasure, to trace the tranquil mazes of negociation, and to review the acts and conduct of men in the most refined state of society.

We briefly stated in our last volume, the insuperable difficulties

which the Congress had thrown in the way of that conciliatory system, with which the Commissioners had been charged from England to America; and that an acknowledgment of independency, or the total withdrawing of the military force, were the peremptory and only conditions held out by the former, upon which they would admit the opening of any negociation. of the gentlemen who was appointed in the commission, having served in the navy, on the American coast, and afterwards been governor of a province there, had formed considerable connexions, and an extensive acquaintance in that country; and he now hoped that these circumstances might be of essential service, by using them as means to facilitate the attainment of the great object in view. This seemed the more feasible, as his parliamentary conduct fince that time, had.

had been in fuch direct opposition to all those measures, which were deemed hostile or oppressive with regard to the Colonies, that it could scarcely fail of greatly increafing, instead of diminishing, any influence which he might then have acquired. Under these circumflances he deemed it reasonable to conclude, that the direct applications of friendship, under the, covert and freedom of a private correspondence, together with the fanction of personal esteem and opinion, might operate more happily in smoothing or removing those difficulties which stood in the way of an accommodation, than the stiff, tedious, and formal proceedings of public negociation. He was besides well aware, as indeed it was publicly avowed, that the Commissioners laboured under the capital impediment, of the Americans, with whom they were to treat, placing no manner of confidence in the faith or equity of the authority under which they acted; but that on the contrary, their diltrust of administration had grown so long, and was become so rivetted and confirmed, that they sufpected every proposal that was made, as held out only to circumvent; and as the mere offspring of duplicity and treachery. To remove this ill impression, would have been evidently an object of the utmost importance towards the opening of a negociation, and the hope of entering into a treaty. But if the accomplishment of this appeared to be an impracticability, it did not seem a very unreasonable expediation, that the character which this gentleman had acquired in his political capacity, of being an avowed friend to the rights and

constitutional liberties of Americas further strengthened and confirmed by the known principles of the opposition in general, with whom he had so long acted in parliament, might produce that necessary degree of considence in a private, which unhappily could not be obtained in a public negociation.

Under fome of these, and perhaps other ideas, he endeavoured to commence or renew a private correspondence with several members of the Congress, and other persons of confideration. Thus in fact, endeavouring to establish a double system of negociation; the one, ostensible, with the Congress at large; the other, unfeen and private, with individuals whose influence might not only facilitate, but even in some degree direct, the proceedings of the former. Some of these letters, which have been published, seem rather of an unusual cast, considering the peculiar circumstances and situation of the writer. While, as a common friend to both countries, he pathetically lamented their mutual calamities, he seemed no way sparing in his censure of the conduct and measures on the side of government which led to the present troubles; nor did he any more support the justice of the original claims fet up by the mother country, than he did the prudence or policy of endeavouring to enforce. them. Upon the whole, he used a freedom with the authority under which he acted, not cultomary with those entrusted with delegated power, and afforded such a degree of approbation to the conduct of the Americans in the past relistance which they had made to it, as is seldom granted by negociators to [B] 2 spetz

20] ANNUAL REGISTER, 1779.

haps not ill fitted to confirm that character of neutrality, which might have helped him to infinuate himfelf into the minds of the Americans.

However right the principles might be, upon which this infinuating scheme of conciliation was adopted, its effects were rather untoward; and the Congress affected to confider it in a very different point of view, from that in which it had been wished or intended to be placed. The first instance of this disposition that appeared, was in a resolution passed by the Congreis, about a week after their hrit communication with the Commissioners. In this, after stating fimply as a fact, and without any particular direction, that many letters addressed to individuals of the United States, had been lately received through the conveyance of the enemy, and that some of these were found to contain ideas, infidioully calculated to divide and delude the people; they, therefore, earnestly recommended to the governments of the respective states, and strictly directed the commander in chief, and other officers, to take the most effectual measures for putting a stop to so dangerous and criminal a correspondence.

This was followed by a resolution in the beginning of July, that all letters of a public nature, received by any members of Congress, from the agents, or other subjects of the King of Great-Britain, should be laid before that body. It need scarcely be doubted, that the contents of these objects of enquiry were already well known; but this measure afforded a sanction to the disclosure of pri-

vate and confidential correspondence, which was indeed necessary to lessen its odium, and at the same time held out authorized ground to the Congress, whereon to found their intended superstructure. veral letters being accordingly laid before them, a passage in one, from Governor Johnstone to General Joseph Reed, and in another, from that gentleman to Mr. Morris, together with an account given by General Reed, of a verbal message or proposal delivered to him by a lady, afforded an opportunity to Congress for entering into those violent measures, by which they interdicted all intercourse and cor-

respondence with Mr. Johnstone. The first of these exceptionable passages, went no farther than a fort of general proposition, that the man who could be instrumental in restoring harmony between both countries, would deserve more from all the parties concerned in or affected by the quarrel and reconciliation, "than ever yet was be-" stowed on human kind."—The fecond, in the letter to Mr. Morris, was more particular. After a complimentary declaration, of believing the men who conducted the affairs of America incapable of being influenced by improper motives, it, however, proceeds upon the subject of the negociation in the following terms:—" But in " all fuch transactions there is " risque; and I think that whoever ventures should be secured, at the same time that honour " and emolument should naturally " follow the fortune of those who " have steered the vessel in the storm, and brought her safely " to port. I think that Washington s and the President have a right to every favour that grateful namions can bellow, if they could conce more unite our interests,
and spare the miseries and devaluations of war."

But the transaction in which the lady was concerned, afforded the principal ground for that in-dignation and refentment expressed by the Congress. This matter, as stated by General Reed, went to a proposal of engaging the interest of that gentleman in promoting the object of the commission, viz. a re-union between the two countries, in which event, he should receive an acknowledgment from government of ten thousand pounds sterling; together with any office in his Majesty's gift in the colo-To which, Mr. Reed, finding (as he fays) that an answer was expected, replied, that, " he was " not worth purchating; but fuch er as he was, the King of Great-" Britain was not rich enough to **≪ do it.**"

The Congress if-Aug. 11th. fued a declaration, 1778. including three refolations, upon the subject, which they fent by a flag to the British Commissioners at New-York. The declaratory part contained a recital at length of those passages in the letters which we have taken notice of, together with the particulars of the convertation which had patied between Mrs. Fergulon, the lady in question, and General Reed. the refolutions they determine,

> laid paraculars in ot but be empts to ingress of America. icy ought

to demonstrate, the highest and most pointed indignation against such daring and atrocious attempts to corrupt their integrity.—And, "That it is incompatible with the honour of Congress to hold any manner of correspondence or intercourse with the said George Johnstone, Esq; especially to negociate with him open affairs, in which the cause of liberty and virtue is integrated."

These proceedings drew out an exceedingly angry and vehement declaration from the gentleman in question; in which, whatever sufficient cause he had for indignation and refentment, the immediate operations of pattion were, perhaps, rather too apparent. Those perfone, and that body, which were lately held up as examples of virtue and patriotifm to all mankind, and whole names feemed to be equalled with the most celebrated in antiquity; were now, not only found to be destitute of every virtue under heaven; but were directly charged with being the betrayers and destroyers of their country; with acting directly contrary to the sense and opinion of the people in general, and of facrificing their dearest interests to the most unworthy and base motives; and with deluding their unhappy conftituents, and leading them blindfold to irretrievable ruin. After charging the Congress with forgetting every principle of virtue and li-berty, it creates no furprize that he declares himfelf indifferent as to their good opinion; nor that their refolution was to far from being a matter of offence to him, that he rather confidered it so a mark of distinction,

[#] 3

With

22] ANNUAL REGISTER, 1779.

With respect to the facts or charges stated by the Congress, they are neither absolutely denied, nor acknowledged, by Mr. Johnstone in this piece; he consequently does not enter into any justification of his own conduct; but declares a refervation to himself of the liberty, if he should think proper, of publishing, before he lest America, such a justification, against the aspersions thrown on his character. He also seems indirectly to deny the charge, by attributing the resolutions to the malice and treachery of the Congress, who intended them only for the purposes of inflaming their wretched constituents to endure all the calamities of war, and as a means for continuing their delution, thereby to fruitrate all the good effects intended by the commission for the restoration of tranquillity. defeat their purpoles in this respect, he declared that he should for the future decline acting as a commissioner, or taking the smallest share in any business, whether of negociation or other, in which the Congress should be any way concerned. It may not be unnecessary here to observe, that this gentleman afterwards absolutely disowned the particular transaction with Mr. Reed.

The tone of this publication, accorded but badly with the high and flattering elogiums, which this gentleman had so lately bestowed on the Americans, in those very letters which were the subject of the present contest. In one of these, to Mr. Dana, is the following remarkable passage:—" If you follow the example of Britain in the hour of her pride, insolence, and madness, and resuse to hear

" us, I still expect, since I am " here, to have the privilege of " coming among you, and feeing " the country; as there are many " men, whole virtues I admire " above Greek and Roman names, " that I should be glad to tell my " children about." The same request, in equivalent terms, appears in a letter to Mr. Laurens, the president; and in that to General Reed, among other not dissimilar expressions are the following,— "Your pen and your sword have " both been used with glory and " advantage in vindicating the " rights of mankind, and of that " community of which you was a Such a conduct, as the " first and superior of all human " duties, must ever command my " warmest friendship and venera-" tion."

This piece from the Congress also drew out a declaration in anfwer from the other Commissioners, viz. Lord Carlisle, Sir Henry Clinton, and Mr. Eden; which went to a total and folemn difavowal, so far as related to the present subject, of their having had any knowledge, directly or indirectly, of those matters specified by the Congress. They, however, took care at the same time to guard effectually against any inference that might from thence be drawn, of their implying any assent to the construction put upon private correspondence by Congress; or of their intimating thereby a belief, that any person could have been authorized to hold the conversation stated by that body. With respect to the charges and resolutions, so far as they related merely to their late commissioner, they brother did

not think it necessary, they said, to enter into any explanation of the conduct of a gentleman, whose abilities and integrity did not require their vindication. They however gave a testimony from their own knowledge to the liberality of his general fentiments, and the fair and equitable principles upon which he had wished to restore the harmony, and to establish the union, between the Mother Country and the Colonies, on terms mutually beneficial.

But the great objects of this declaration, as well as of that iffued by Governor Johnstone, and of other former and sublequent publications, were to defeat the effect of the French treaties, to controvert the authority of the Congress, with respect to its acceptance or confirmation of them, and to render the conduct of that body suspicious or odious to the people. For these purposes, having first laid it down as an incontrovertible fact, that an alliance with France was totally contrary to the interests of America, and must in its effects prove utterly subversive, both of her civil and religious rights, they then proceeded to demonstrate, that she was not bound in honour, nor tied down by any principle of public faith, to adhere to those treaties. In support of this doctrine, they endeavoured to establish as proof, that the French concessions owed their origin en-

pofithat ming which rown. nedithe

British Empire, the court of Verfailles, merely with a view of prolonging the troubles, and of rendering the Colonies instru-Gallic ambition ments to and perfidy, fuddenly complied with those conditions, and signed those treaties, which the had before disdainfally constantly and jected.

They then proceeded to examine the validity of that fanction -which those treaties were supposed to derive, from the confirmation which they had fince received in America; and endeavoured much to establish as a general doctrine and opinion, that the Congress had far exceeded their powers, both in that respect, and in their laying down unreafonable and inadmissible preliminaries, as an insuperable bar to their own proposed negociation, and to defeat, without hearing of deliberation, all the amicable purpoles of their million. They infifted, that the Congress were not authorized or warranted, by their own immediate constitution, to take fuch decisive measures, and finally to pronounce upon questions of fuch infinite and lasting importance, without recurring to the general sense of the people, and receiving the opinion and instructions of their constituents, after a full and open discussion of the different fubjects in their respective assem-

Upon this ground, they pointed all their artillery directly against the Congress; whom they charged with betraying the truft repoted in them by their conftituents, with acting contrary to the general sense of the people, and with facrificing their interests and

[B] 4

and fafety, to their own ambitious views and interested designs. Indeed, however strange it may appear, there feems no doubt, that notwithstanding the repeated trials which the long continued, various, and extensive operations of the war had seemed to afford, of the disposition of the people in fo many Colonies, the Commisfioners themselves were fully persuaded, that a vast majority of them were firmly attached to the British government, and totally adverse to the rebellion. however, to be confidered, that all the information they could receive on the subject, was through the medium of men, whose minds were violently heated, by their sufferings, their losses, their hopes, their loyalty, and undoubtedly in many instances, by their private and party animolities.

The Congress, and those who wrote in their defence, and apparently with authority, controverted these positions, the inferences drawn from them, and the facts they were founded on. They first attacked the position which, would naturally operate with most force upon the minds and opinions of nien, viz. that the conclusion of the French treaties was entirely owing to the conciliatory propositions held out by the British parliament. This they asserted to be contradicted by facts and dates; and this point was strongly urged by the American popular writers, particularly Mr, Drayton, and the author of a celebrated publication, entitled, from the fignature, Common Sense, who with great industry pointed out to the public, the defectiveness, incoherence, or contradiction of the

But not satisfied with evidence. apparently gaining this point, they undertook to prove the direct reverse of the proposition, and pretended to shew, that the British concessions, instead of being the cause, were the immediate effect, of the French negociation and treaties. It was shrewdly observed in one of these publications, that the Commissioners, who now totally denied that the Congress had any power or authority to conclude the French treaties, had themselves proposed to enter into a treaty with that very body; and that the uncommon chagrin and disappointment which they openly avowed upon meeting with a refusal, was a sufficient testimony, how fully they were fatisfied of its competence to that purpole.

In refuting what they afferted as errors of fact on the part of the Commissioners, some of these writers did not scruple to avail themfelves of the same instrument, and asserted things which were not true, or which are at least highly improbable. Particularly, that to bribe the acquiescence of France in the ruin of America, that power was offered a cession of some considerable part of our East India pofsessions, and the same privileges and advantages on the Coast of Africa which were enjoyed by the subjects

of England.

Although the Commissioners did not expect that the facts or arguments flated in their declarations. would produce any serviceable effect in the conduct of the Congress, it was still hoped, that they would have operated powerfully upon the people at large. This fource of hope being also at length

exhausted, and the Commissioners convinced by experience, that the defign of detaching any particular province, or large collective body of the people, so far from the general union as to enter into a private or separate negociation, was as fruitless, as the attempt of opening a treaty with the Congress in the name of the whole, had already proved ineffectual, determined totally to change mode of conduct, and to nounce hostility and destruction, in their most terrific forms, to those who had rejected conciliation and friendship. The operations pof terror might possibly produce those effects, which the smooth language of peace was found incapable of attaining: or, if the loss of America was inevitable, it was determined to render it of as little value to its present and future possessions as possible.

The partizans of the predatory scheme in England, from whom this idea feems to be taken, afferted, that the nature of the country exposed it more to the ravage of such a war as was intended or threatened, than perhaps any other upon the face of the globe. Its valt line of sea coast was indetensible by any possible means, against the efforts of a superior marine, accompanied by fuch a moderate land force, as would be necessary for the purposes of a defultory and exterminating war; and those numberless navigable creeks and rivers, which had in happier days conveyed commerce to every door, and spread pienty, independence, and industry, thro' every cottage, now afforded equal means and facility, for the carrying of sudden and inevitable destruction, home to the most sequestered sire-side. The impracticability of evading the dangers arising from situation was farther increased, by that mode of living in small, open, scattered towns and villages, which the nature and original circumstances of the country had prescribed to the inhabitants.

The Commissioners Oct. 3d. accordingly issued and 1778. published that signal valedictory manifesto and proclamation, which has since been an object of so much discussion at home and abroad; and which has afforded a subject, that was no less agitated in both Houses of the British Parliament, than in the American Congress.

In that piece, they entered into a long recapitulation of facts and arguments which had been generally stated in former declarations, relative to the French treaties, the conduct and views of the Congress, their criminal obstinacy in rejecting all proposals of accommodation, and their total incompetency, whether with respect to the conclusion of treaties on the one hand, or to their rejection on With an enumeration the other. of their own repeated endeavours for the restoration of tranquillity and happiness to the people, and a review of the great advantages held out by the equitable and conciliatory propositions they had made, they announce their intention of speedily returning to England, as, under the circumstances of treatment and rejection which they had experienced, their longer flay in America would be as inconsistent with their own dignity, as with that of the authority which they represented. They, however, held out during the remainder of their stay, the same favourable conditions, and should still retain the same conciliatory disposition and sentiments, which they had hitherto

proposed or manifested.

The Commissioners then thought it necessary to inform and warn the people, of the total and material change which was to take place, in the whole nature and future conduct of the war, if they should still persevere in their obstinacy; more especially, as that was founded upon the pretended alliance with France. Upon this subject they expressed themselves as follows: "The policy, as well " as the benevolence of Great " Britain, had hitherto checked " the extremes of war, when " they tended to distress a people, fill confidered as fellow-subsi jects, and to desolate a coun-" try, shortly to become again a " fource of mutual advantage; " but when that country professes " the unnatural design, not only of estranging herself from us, " but of mortgaging herself and " her resources to our enemies, "the whole contest is changed; and the question is, how far "Great Britain may, by every " means in her power, destroy or render useles, connection a " contrived for her ruin, and for " the aggrandizement of France. "Under juch circumstances.

the laws of self-preservation must direct the conduct of Great Britain; and, if the British Colonies are to become an accession to France, will direct her to render that access sion of as little avail as possi-

" ble to her enemy,"

The first act of the Con-10th. gress in consequence of this manifelto, was a cautionary declaration or notice to the public, stating, that as there was every reason to expect, that their unnatural enemies, despairing of being able to enflave and subduc them by open force, would, as effort, ravage, burn, and destroy every city and town on that continent, which could come at; they therefore strongly recommended to all those people, who lived in places exposed to their ravages, immediately to build huts, at the distance of at least thirty miles from their present habitations, whither they were to convey their wives, children, cattle, and effects, with all who were incapable of bearing arms, on the first alarm of the enemy.

So far, the policy of the meafure was prudent and justifiable; but the following clause of this public instrument, however loured by a display of humanity, confined merely to terms, towards its conclusion, or even covered under the pretence of being intended only to operate in terrorem, can scarcely escape condemnation, as being exceedingly reprehensible and unjust in its prin-The resolution is couched following words, viz. "That immediately when the " enemy begin to burn or destroy " any town, it be recommended " to the people of these states, to " fet fire to, ravage, burn and " destroy, the houses and pro-" perties of all Tories, and ene-" mies to the freedom and inde-" pendence of America, and se-" cure the persons of such, so as " to prevent them from affiling

" the

the enemy, always taking care, not to treat them or their families with any wanton cruelties, as we do not wish, in this particular, to copy after our enemies, or their German, negro, and copper-coloured allies."

This was followed, in about three weeks, by a counter manifesto on the part of the Congress, filled with bitterness and acrimony. In this they boast, that fince they could not prevent, they strove, at least, to alleviate the calamities of war; had studied to spare those who were in arms against them, and to lighten the chains of captivity. In contrast to this portrait of their own conduct, they drew a hideous picture of those enormities which they attributed to the other They charge their enemy with having laid waste the open country, burned the defenceless villages, and having butchered the citizens of America. That their prisons had been the slaughterhouses of her soldiers, their ships of her seamen, and, that the severest injuries had been aggravated by the groffest insults, foiled in their vain attempt to indjugate the unconquerable ipirit of freedom, they had meanly affailed the representatives of America with bribes, with deceit, and with the fervility of adulation.

As a specimen of the spirit which inspired this piece, and the acrimony with which it abounds, we shall give the following passage in their own language—" They have made a mock of humanity, by the wanton destruction of men: they have made a mock of religion, by impious appeals to God, whilst in the violation of his sacred commands: they have made a mock even of

"reason itself, by endeavouring
to prove, that the liberty and
happiness of America could
fasely be entrusted to those who
have sold their own, unawed
by the sense of virtue, or of
hame."

They concluded the piece with the following threat of retaliation.

But fince their incorrigible difpositions cannot be touched by kindness and compassion, it becomes our duty by other means to vindicate the rights of humanity.

"We, therefore, the Congress : " of the United States of Ame-" rica, do solemnly declare and " proclaim, that if our enemies " prefume to execute their threats, " or persist in their present career " of barbarity, we will take such " exemplary vengeance as shall " deter others from a like con-" duct. We appeal to that God who fearcheth the hearts of men. " for the rectitude of our inten-And in his holy pre-" ience we declare, that as we are " not moved by any light and " hasty suggestions of anger or re-" venge; so through every pos-" fible change of fortune, we will " adhere to this our determina-" tion."

Thus, unhappily, did the second commission for the restoration of peace in America, prove as sutile in the event as the former. Although it would be too much to assirm, that any proposal made by the commissioners, or any circumstances attending their mission, could have been productive of the desired effect, after the conclusion of the French treaties; it would have been more untoward in point of time, and more subversive of

the purposes of their commission, than the sudden retreat from Philadelphia, which took place almost at the instant of its being opened. However necessary this measure might have been, considered in a military view, the difgrace of a retreat, and the loss of a province, were undoubtedly omens very inauspicious to the opening of a negociation. It has been publicly faid, (however strange it must appear) that one of the commissioners, at least, was totally unacquainted, even at the time of their arrival, that this measure was not only intended, but that the orders for its execution actually accompanied their mission.

As if Fortune had defigued, that this commission should have been distinguished in every part of its existence from all others, it was also attended with the singular circumstance, of a letter from the Marquis De la Fayette, (whose military conduct had placed him very high in the opinion of the Americans, as well as in their fervice) to the Earl of Carlisle, challenging that nobleman, as first commissioner, to the field, there to answer in his own person, and in fingle combat, for some harshness of reflection upon the conduct of nation, court and the French which had appeared in those public acts or instruments, that he and his brethen had issued in their political capacity. It is almost needless to observe, that such proposal, which could only be excused by na-. tional levity, or the heat and inexperience of youth, was rejected by the noble Lord to whom it was addreffed, with the flight that it deferved.

Whilst New York, the Jersies,

Pennsylvania, and the borders of Connecticut, had hitherto endured all the calamities of war, it fortuned, that the northern and louthern, as well as the more interior colonies, enjoyed no inconsiderable degree of general tranquillity. The early transactions in the neighbourhood of Boston, the attempt on Charlestown, Lord Dunmore's adventures in Virginia, with the subjugation of the Tories in North and South Carolina, being principal exceptions to this obser-The continual petty hostilities carried on between the inhabitants of the two neighbouring weak colonies, of Georgia and East Florida, served, however, to keep the rumour of war alive to the fouthward; and an expedition undertaken in the spring of this year by a party of Americans, conveyed its effects to the Missippi, and afforded no small cause of alarm, to the whole new colony of West Florida, which had hitherto been totally clear of the general tumult.

The expedition was, however, confined in its present effect to its immediate object, which only extended to the reduction of the British settlements in that country which had formerly belonged to a distinguished Indian nation called Natches; who many years before had fallen victims to European policy, the whole people having been prefidiously exterminated by the French. These settlements were under the government, and confidered as a part of West Flor rida; but being too remote for protection, if it could even have been afforded, the inhabitants preferved their property by furrendering without refistance to a Captain Willing, who commanded the American party, and who, alchough they were surprized and totally in his power, granted them every condition which they required, for their present and future security. It seems by the account, as if this party had fallen down the Missisppi by water; but from what place is not specified. It is probable, and seems in some degree confirmed by subsequent events, that the objects of this expedition were not confined merely to the reduction of the country in question, but were extended to the establishment of an intimate correspondence with the Spaniards at New Orleans, and to further views

upon Well Florida. The state and circumstances of the war, as well as of the forces under his command, together with the winter season, which restrained, if it did not entirely shut up enterprize, in the northern and central colonies, afforded an opportunity to General Sir Henry Clinton, towards the close of the year, to direct his views to the fouthward. The recovery of the province of Georgia, although in itself neither great nor powerful, was in various respects a matter of the utmost importance. Its products were indeed confiderable, and rendered more so, by their being greatly wanted. In particular, nothing could be more essential to the support of a fleet and army, at so great a distance from their principal sources of supply, than its Raple commodity, rice, which was now dedicated to the service of our enemies, whether in Europe or America. The possession of this province would also, by presenting a new barrier to the enemy, relieve East Florida from those constant alarms, incursions, and dangers, to which it had been so long exposed. And the two Florida's, with this, would all together form such an aggregate establishment of strength at the southern extremity of the continent, as could not fail greatly to influence the suture operations and fortune of the war.

Important as these objects were, this acquisition held out one Aill The fouthern colonies produced those commodities which were most wanted and most valuable in the European markets. France took off a prodigious quantity of their staple products; and the quiet and security which they had hitherto enjoyed, admitted fo. vigorous a cultivation, that their export trade seemed little otherwise affected by the war, than what it suffered from the British cruizers. Thus, in effect, the continental credit in Europe was principally upheld by the southern colonies: and they became the medium through which they received those supplies, that were not only indifpensibly necessary to the support of the war, but even to the conducting of the common butiness and affairs of life. The recovery of Georgia, would not only put an end to that quiet and security upon which so much depended, but would open so wide a door into South Carolina, as could never be effectually closed whilst it was held by a vigorous enemy; at the same time, that the vicinity of Charlestown would constantly expose it to his enterprize, and that the fate of the whole colony inevitably hung upon that of the capital.

All these important consequences, and perhaps others, were fally

30] ANNUAL REGISTER, 1779.

comprehended by the General; and the time and season serving, he entrusted the conduct of the expedition in the land department, so far as it was undertaken from New York, to Colonel Campbell, a brave and able officer, whole milfortune of being taken with a part of his regiment on their passage to America, as well as his subsequent sufferings under a long confinement near Boston, we have formerly seen. The force appointed to act under this gentleman's command, confisted of the 71st regiment of foot, two battalions of Hessians, four of provincials, and a detachment of the royal artillery.

The transports, with this force, failed from Sandy Hook, on the 27th of November 1778; being efcorted by a fmall fquadron of ships of war, under the command of Commodore Hyde Parker. the mean time, instructions had been communicated to Major General Prevolt, who commanded the troops in East Florida, to collect all the force that could possibly be ipared, from the mere necessary defence of the fort and garrison of St. Angustine, and to second the views of the expedition, by a vigorous invalion of the province of Georgia on that side, and by even endeavouring to penetrate fo far, as to be able to co-operate immediately with Colonel Campbell, in his intended attack on the capital town of Savannah.

It does not feem from any thing that appears, that the Americans were aware of the object of this enterprize; or, perhaps, the greatness of the distance, prevented their being able to take any measure for deseating its effect.

The fleet arrived at the Dec. 23d. island of Tybee, near the mouth of the river Savannah, in something under a month. the following day, the Commodore, with the greater part of the transports, got over the bar, and anchored in the river, within the Light House of Tybee; but, from fome unavoidable circumstances of delay, it was not until the 27th that they were there joined by the rest of the fleet. The commanders being totally ignorant of the force of the enemy, and of the state of defence which they were to encounter, seized this opportunity of delay, in endeavouring to procure intelligence. For this purpose, a company of light infantry, with a naval officer and failors, were difpatched, in two flat boats, up one of the creeks, and had the fortune of seizing and bringing off two men, who afforded the most satisfactory information. The commanders were now acquainted, that the batteries which had been constructed for the defence of the river, had been so much neglected, as to be grown out of repair and condition; and, that there were very few troops in the town, but that re-inforcements were daily They also gave such expected. exact information, of the lituation of two row gallies, which had been armed for the defence of the river, as afforded means after for cutting off their retreat, by any of those numerous creeks which intersect that country.

Upon this intelligence, the commanders determined to lose no time in the prosecution of their enterprize. Colonel Campbell had already seized the opportunity afforded by the delay, in making a

new

new and advantageous afrangement with respect to part of his force. He had formed two corps of light infantry, which were drawn from the provincial battalions, and attached one of these to Sir James Baird's light company, of the 71st (Highlanders), and the other to Captain Cameron's company, of the same regiment. A measure excellently calculated to transfuse the spirit, vigour, and confidence of veteran troops, equally inured to danger and to victory, to those who being yet raw, were distident of their own powers, from mere ignorance of their effect.

Every thing being in due preparation, the Vigilant led the way up the river, on the 28th, being attended by the Greenwich and Keppel armed vessels, and followed by the transports, who formed three divisions, in the order established by the commanders for At the same time the Comet bomb-galley was fent up the fouth channel, to prevent the enemy's row-gallies from escaping by the inland navigations. finding that the battery on a place called Salters Island, was totally deferted by the enemy, the armed veliels pushed forward towards the mtended landing place; but a number of the transports had grounded on the Flats by the way, which necessarily retarded for some time the landing. The activity and judgment of Captain Stanhope of the navy, who acted as a volunteer in this service, obviated this difficulty, as far as its nature would admit. Having undertaken the command of the flat boats, he embarked the whole first division of the troops with such celerity, that he joined the Vigilant with very

little loss of time, after she had taken that station which the shallowness of the water would admit, at about random cannon shot distance from the landing place. It was, however, then dark; and the enemy's fires shewing that they had taken post, and intended defence, the landing was deferred until morning.

The destined landing place was a post of great importance; exceedingly difficult of access; and which was accordingly capable of being easily put in such a state of defence, as might have effectually refisted a vast superiority of force. But it was the first practicable landing place on the Savannah river, the whole country between it and Tybee being a continued tract of deep marsh, intersected by the extensive creeks of St. Augustine and Tybee, besides a number of other cuts of deep water, which were impassable by troops at any time of the tide.

The first division of the troops, confisting of all the light infantry of the army, the New York volunteers, and the first battalion of the 71st regiment, under the conduct of Lieutenant Colonel Maitland, were landed at break of day. From the landing place, a narrow causeway of six hundred yards in length, with a ditch on each fide, led through a rice swamp to one Gerridoe's house, which stood upon a Rind of blunt and abrupt promontory, called in sea language a bluff, rifing confiderably above the level of the rice-swamp. The light infantry under Captain first landed. Cameron, being formed directly, and pulhed forward along the causeway. they approached the post they meand

34] ANNUAL REGISTER, 1779.

which, along with the stilness and immobility of the British troops, might have reasonably excited apprehension, distrust, and watchfulmess. At length, Colonel Campbell, convinced that the light infantry had got effectually round-upon their rear, suddenly brought forward the cannon, and commanded the line to move briskly on to the enemy. The well-directed fire of the artillery, the rapid advance of the 71st regiment, and the forward countenance of the Hessians, so overpowered the enemy, that they instantly fell into confusion, and disperied.

In the mean time, the light infantry having arrived at the new barracks, which were full in the way they were making to the rear of the enemy, fell in unexpectedly with a body of the militia of Georgia, who were there stationed with artillery, to guard the great road from Ogeeche; these were soon routed, with the loss of their cannon, and as Sir James Baird was in full pursuit of the fugitives, in his way to fall upon the main body, the terrified and scattered troops of the Carolina and Georgia brigades, came funning across the plain full in his front. Nothing could exceed the confusion and rout that now enfued, when the light in-Stantry, with the rapidity peculiar to that corps, threw themselves in headlong upon the flanks of a flying enemy, already fufficiently broken and confused.

No victory was ever more complete. 38 commissioned officers, 415 non-commissioned and privates, 48 pieces of cannon, 23 mortars, the fort with its ammunition and stores, the shipping in the river, a large quantity of provisions, with

the capital of Georgia, were all in the possession of the conquerors before dark. Neither the glory of the victory, nor the military renown arising from the judicious measures, and admirable mangeuvres which led to it, could reflect more honour upon the commander in chief, than every other part of his conduct. His triumph was neither distained by an unnecessary effufion of blood, nor degraded by present or subsequent cruelty. The moderation, clemency, and humamity of all his conduct, will be considered still the more praiseworthy, when it is recollected, that he was under the immediate impression of such peculiar circumstances of irritation and resentment, as had not been experienced by any other British officer, who had borne command during the American war.

The loss of the Americans in flain was very small, confidering the nature of the complete rout they had undergone. Only about fourscore men fell in the action and pursuit, and about thirty more perished in their attempts to escape through the swamp. The conduct of their commanders requires no observation. Every body will see they knew nothing of their buf-Although the fugitives fled, and consequently led the pursuit, through the town of Savannah, and that many of the inhabitants were then in the streets, yet, such was the excellent discipline observed, that in the heat of blood, not a fingle person suffered, who had not arms in his hands, and who was not besides in the act either of flight or resistance. The commander having received some information, that the fetting of the ca-

5

1.

pital on fire, in case of its loss, had been once a matter in contemplation with the enemy, took effectual measures to guard against that defign, if still intended. No place in fimilar circumstances, ever suffered so little by depredation, as the town of Savannah did upon this occasion; even taking into the account, that committed by their own negroes during the darkness of the approaching night. A strong circumstantial testimony, that those enormities, so frequently attributed to the licence of the soldiers, should with much more justice be charged to the indefensible conduct of their superiors; whether by a previous relaxation of discipline, an immediate participation in the guilt, or a no less culpable sufferance of the enormity.

Through the activity and prompt union of the commanders in chief by land and sea, and the spirit and diligence of their officers, General Howe, with the broken remains of his army, was not only compelled to retreat into South-Carolina, but notwithstanding many impediments in their way, and some wants not eatily remedied, particularly horses for their artillery, they, within less than a fortnight, had recovered the whole province of Georgia (excepting only the town of Sunbury) to the British government. In that time they had restored tranquillity every where, afforded protection to all who remained in or returned to their houses, established such posts as secured the whole line of frontier on the fide of South-Carolina, and formed the well-affected, who came in with their rifles and horses, into a corps of light dragoons.

In the mean time, Major-General Prevost found no small difficulty in bringing together, from their scattered and remote cantonments, the fmall parties with which he was to make an impression on the side of Florida. The getting forward his artillery, stores, and provisions, as the enemy were masters of the navigation in general, both along the coasts, and on the greater waters inland, was no less difficult. In these operations, the troops underwent unusual hardships and distresses, which they bore with the most exemplary fortitude and temper; both officers and foldiers having been reduced to live for several days solely upon oysters, and enduring at the same time the greatest heat and fatigue, without complaint, despondency, or murmur. major-general having at length brought forward a few pieces of artillery, suddenly surrounded the town and fort of Sunbury, on the frontiers of Georgia. The garrison, consisting of about 200 men, made some shew of desence, and gave the commander the trouble of opening trenches. But although they were supported by some armed vessels and gallies, yet all hope of relief being now totally cut off by the reduction of the rest of the province, they found it necessary to furrender at discretion. This happened just at the time, when Colonel Campbell, after the settlement of the interior country, had returned to Savannah, and was preparing to fet out on an expedition for the reduction of Sunbary. The command devolved of course to General. Prevost on his arrival at Savannah.

C H A P. III.

Island of Dominica taken by the Marquis de Bouille, governor of Martinico. State of the French fleet at Boston. Riot between the French and inhabitants. Desperate riot between the French and American sailors, in the city and port of Charlestown. M. D'Estaing sails from Busson for the West-Indies: baving first issued a declaration addressed to the French Canadians. Admiral Byron's fleet driven off from the coast of New-England by a violent burricane, which afforded an opportunity for the departure of the French squadron. British fleet detained at Rhode-Island, to repair the damages sustained in the tempest. Reinforcement sent from New-York to the West-Indies, under the conduct of Commodore Flotham, and Major-General Grant: narrowly miss falling in with the French sleet: join Admiral Barrington at Barbadoes, and proceed together to the reduction of the island of St. Lucia: troops land, take the French posts in the neighbourhood of the Grand Cul de Sac: proceed to Morne Fortune and the Viergie. M. D'Estaing appears in sight, with a wast superiority both of land and marine force: attacks the British squadron in the Grand Cul de Sac: and is bravely repulsed by Admiral Barrington, twice in the same day. French land their troops in Choc Bay: attack General Meadows three times in the Viergie; are repulsed every time, and at length acteated with great loss. Great glory obtained by the British forces, both by sea and land, in these seweral encounters. M. D'Estaing, after ten days longer stay, abandons the island of St. Lucia, without any farther attempt for its recovery. The Chevalier de Micoud, with the principal inhabitants, capitulate before the French fleet is out of sight.

TEORGIA was reduced in T the manner we have seen. In other respects little was done; nor did the season permit much to be done in other parts of America. Whilst the war stagnated there, the loss of the valuable island of Dominica in the West-Indies, opened a new scene of action in that quarter. Complaints and representations had been long and repeatedly made by the West-India merchants and planters to administration, of the weak and exposed state of those islands, which seemed to be left to the mercy of their powerful European neighbours, without a military force for their defence, or a competent naval squadron for their

protection. Jamaica had been particular in these applications. The immense British capital necessarily lodged in that island, rendered it no less an object of concern in this country, than its great domestic property did to the owners of the soil. The great increase of troops, and the unusual military preparations in the French and Spanish settlements, afforded sufficient room to justify these apprehensions and representations.

This business was also frequently introduced in both Houses of Parliament by the opposition, who repeatedly warned the ministers of the danger to which our West-India possessions were exposed.

They

They were generally answered in this instance, as in some others, by a repetition of the well founded confidence reposed in the pacific dispession and good intentions of our neighbours. But the simple matter of fact, undoubtedly was, that our military force and provifion by sea and land, were so complacely swallowed up in the vortex of the American war, and the demands were still to incessant and urgent, that the lources of lupply were constantly drained and exhausted, so that other objects, however important, were of necessity obliged to be committed, in a great measure, to the blind disposition of chance and fortune.

The island of Dominica was a part of those compensations, acquired by the treaty of Paris, for the expences of a war, very glorious indeed, but very burthensome. To these expences and glories, the whole of the cessions was not acequate. Considered independently of this comparative estimate, Dominica was an acquisition of no inconsiderable importance; and its lituation, lying between Martinico and Guadaloupe, and within view of each, would have rendered it of the utmost imporance in time of war. This circumstance seems to have been so well understood by government, that it went to a great and unusual expence in fortifying the island, and the works had been lately covered with a numerous artillery, fent for the purpose from England; but the garriton, if it could deserve to be called by that name, was totally incompetent to the detence of the one, or to the use of the other.

Neither the importance nor the

weakness of the island, escaped the attention of the Marquis de Bouille, Governor-general of Martinico. He accordingly landed with about 2000 men, under the cover of some

frigates and privateers, about daybreak at Dominica, and proceeded to attack the different batteries and forts by land, as his marine force did by sea. The handful of regular troops, amounting only to about a hundred men, together with the militia and inhabitants in general, did all that could be expected against such a superiority of force, and under fuch circumstances of surprize. But the French having taken those detached and halfmanned batteries which lay first in their way, and advanced by noon to attack the little capital of Roseau, by sea and land, which likewise comprehended the principal fortifications of the island, Lieutenant-Governor Stuart, with the military officers and council, seeing all defence fruitless, thought it necessary to save the inhabitants from plunder and ruin, by entering into a capitulation.

This was foon concluded. terms were the most moderate that could be conceived; the Marquis de Bouille having nearly agreed, without discussion or reserve, to every condition that was proposed in favour of the inhabitants. Besides the honours of war, and the liberty of retaining their arms, with the fullett security to their estates, property of every fort, rights, privileges, and immunities, they were allowed to retain their civil and religious governments in all their parts, with all their laws, customs, ordinances, courts, and ministers of justice, until the con-

[C] 3 clusion

clusion of a peace; and at that period, if the island should be ceded to France, they were to have it in choice, whether to adhere to their own political form of government, or to accept that established in the French islands. And in either event, such of the inhabitants as did not chuse to continue under a French government, were to be at liberty to sell all their estates real and personal, and to retire with their effects wherever they pleased. Other conditions of less importance, were equally favourable in their degree to the inhabitants; nor were they bound to any duty to the French king, more than what they had owed to their natural fovereign. In a word, a mere change of lovereignty was the only change in the condition of the inhabitants.

How much of the favour and lenity of these conditions may be attributed to the moderation and humanisy of the Marquis de Bouille, how much to the policy of inducing the less resistance in other English islands, or how much to the apprehension of Admiral Barrington's arrival with a superior naval force from Barbadoes, are questions not to be absolutely decided upon. It is, however, equitable, to attribute just and humane actions to the most laudable motives, where the contrary does not appear from any strong concurrent or subsequent circumstances. matter of fact is certain, that the fmallest disorder or pillage was not permitted, and that the French commander, in lieu of plunder, rewarded the foldiers and volun-· teers with a considerable gratuity in ready money.

The French found 164 pieces of cannon, and 24 brass mortars, with a confiderable quantity of military stores and ammunition in the works. The public effects, with the British vessels in the harbour, became a prize to the conquerors. The stay of the Marquis de Bouille in the island was very short; but he left a garrison of 1500 men behind him; which, with the strength of the works, and the powerful artillery, in their hands, have hitherto unfortunately superseded all attempts for its recovery.

Many circumstances concurred in rendering the loss of this island grievous. The large sums expended upon its fortifications, and the numerous and weighty artillery sent out for its defence, indicated a full knowledge of its importance in case of a war. Its situation, on which this importance depended, equally pointed out the danger to which it was exposed, and that it must necessarily be the first object of the enemy's enterprize; whilst its naked works and valuable artillery, seemed held out as a prize, to direct and quicken their operations. To increase the vexation, Rear - Admiral Barrington, two ships of the line, and some frigates, was lying at the small distance of Barbadoes, where he had been chained down for more than two months, waiting merely for instructions, which he had been ordered to expect at that place, and which, from whatever cause misfortune, were not yet arrived. Small as this force was, it would have been fully sufficient, had time and his orders allowed it, for the preservation of Dominica, and the protection of the other islands for the

the present, as the French had not a fingle ship of the line in that

quarter.

The defect of intelligence açcompanied that of instructions, or A French doorders how to act. coment executed at Paris on the 28th of June, and published at Martinico in the middle of August, amounting, in effect, to a declaration of war in the West-Indies, afforded the first information of hostilities to Admiral Barrington, and to the neighbouring islands. The loss of two of Sir Peter Parker's frigates, which were taken by the French on the coast of Hispaniola, afforded also the first means of information to that Admiral, as well as to the government of Jamaica, where he was flationed, of the commencement of hostilities.

As foon as Admiral Barrington received intelligence of the invasion of Dominica, he dispensed with the violation of his orders in that instance, and proceeded with the utmost dispatch to its intended re-Although it was impossible he could prevent a conquest, which was only the work of a fingle day, the presence of his small squadron, however, had the happy effect, of removing the panic which had spread through the neighbouring islands, and of effectually curbing the further enterprizes of the enemy. The consequences of the loss of Dominica were experienced, both by sea and land, in the course of the operations of the ensuing West-India campaign.

As Monf. D'Estaing was now to bear a principal part on the West India theatre of action, it will be necessary to take some notice of his fituation and proceedings, from the time of our leaving him in the

harbour of Boston. Neither the care of the governing powers in that town, nor the ideas of benefits received, or to be derived, from the alliance with France, Sufficient, during the stay of the French fleet in that port, wholly to cure the ancient prejudices and hereditary animosity of the populace, with respect to a nation, which they had so long considered as a rival, and so frequently encountered as an enemy. The difference of religion, language, and manners, could not fail to hold a confiderable share in keeping these animosities still alive; although, so far as it can be judged from appearances at this distance, the French have studied more in their commerce with the Americans, to evade the effect of these peculiarities, and have shewn a great deference to the prejudices, and conformity to the manners and opinions of the people, than they perhaps ever practised in their connections with any other part of mankind. Indeed a mode of conduct directly contrary, has for many ages been confidered, as one of the striking characteristics of that nation; and has, not unfrequently been productive of the moit fatal confequences to themselves, as well as to others.

However it was, a most violent affray, in which numbers on both sides were engaged, and the French feem to have been very roughly treated, happened at Sept. 13th. night in Boston. Some of the French were faid to have been killed, and several were certainly wounded; among whom were some officers, and one particularly, of confiderable distinction. As both D'Estaing and the government of Boston, were eager to accom-

 $[C]_4$

accommodate matters in such a manner, as that no sting should remain behind on either side, a great reserve was observed with respect to the particulars of the riot, as well as of the circumstances which led to it; and the cursory impersect sketches that were published, shewed evidently that they were not to be relied on.

A proclamation was issued by the council of state on the following day, strictly urging the magistrates to use their utmost endeavours for bringing the offenders to justice, and offering a reward of 300 dollars, for the difcovery of any of the parties concerned in the riot. And to remove the impression of its arising from any popular animofity to the French, the Boston prints laboured to fix it upon some unknown captured British seamen, and deserters from Burgoyne's army, who had enlisted in their D'Estaing had the privateers. address to give into this idea, and to appear thoroughly satisfied with the satisfaction he received. high reward produced no manner of discovery.

The same spirit operated just about the same time, and in the same manner, but much more violent in degree, and fatal in consequence, between the American and French leamen, in the city and port of Charlestown, South Carolina. The quarrel there began, as at Boston, ashore, and at night, and ended in the last extreme of hostility, an open fight with cannon and Invall arms; the French firing from their ships, whither they had been hastily driven from the Town,

and the Americans from the adjoining wharfs and shore. Several lives were acknowledged to be lost, and a much greater number were of course wounded.

Mr. Lowndes, the president and commander in chief of that colony, in the proclamation which he issued upon the subject, sufficiently points out the causes of the quarrel, by charging the magistrates in the strongest terms, that, along with the discovery and profecution of the they should use every possible means in their power to prevent, for the future, all indecent, illiberal, and national reflections, against the subjects of their great and good ally, as tending to excite refentment and ill-will among those, whom, by interest, treaty, and alliance, they were bound to regard as friends, and who were particularly entitled to their vour and affection. In his message to the affembly, he also strongly recommends the framing of fuch regulations, as would effectually prevent this licentiousness, whether in words or in actions: and that body confidered the matter to he of so serious a nature, that they appointed a committee to revise the laws relative to seamen in that port, and to consider of effectual means for preventing and suppressing roots in the town. reward of a thousand pounds was offered for the discovery of the particular persons, who had fired some guns, which were fatal in their effect, from one of the wharfs. We have not heard that this great reward produced any discovery.

As the northern Colonies, particularly the province of Massachusetts.

govern-

chusetts, do not produce wheat in any proportion at all equal to their own confumption, and that through the continual losses and dangers which their supplies from the southern experienced in their passage, together with some local causes, provisions of all forts had for some time been so unusually scarce and dear in the town and neighbourhood of Boston, as nearly to threaten a famine, it was generally expected, and undoubtedly apprehended by himself, that D'Estaing would have encountered great difficulties, if not actual diltress, from the impracticability of victualling, and the doubt even of subusting, his fleet at that port. He was, however, relieved from these difficulties and apprehensions by a lingular fortune. The New England cruizers happened at that very period to take such a number of provision vessels on their way from Europe to New York, as not only abundantly supplied the wants of the French Heet, but furnished such an overplus, as was julincient to reduce the rates of the markets at Boston, to something about their This fortunate moderate itate. supply was a matter of great triumph to that people.

Nov. 3d. enabled to quit Boston, and to prosecute his designs in the West Indies, with a fleet thoroughly repaired, clean, well victualled, and his forces in full health and vigour. And thus it may be said, without any extraordinary stretch of licence, that to all appearance, a royal fleet owed its preservation, at least in a very great degree, to the industry and sortune of a few privateers.

Previous to his departure, D'Es-

taing had published a declaration, which was to be dispersed among the French Canadians, and was addressed to them in the name of their ancient matter, the French king. The delign of this piece, and an object which was much laboured in it, was to recall the affection to their ancient government, and to revive all the national attachments of that people, thereby to prepare them for an . invasion either from France or America, and to raise their expectation and hope, to no distant change of malters. For purposes they were applied to and called upon, by all the endearing and flattering ties of country, blood, language, common laws, customs, religion, by their former friendships, ancient glory and fellowship in arms, and even by their common participation in the dangers and misfortunes of the last war. To touch the vanity of a people exceedingly prone to it, they were flattered by reminding them, of those peculiar military distinctions, and royal honours, declarations, which would have been the glorious rewards of their prowess in the French service; from which they had been so long debarred, and which were held so dear by all their countrymen. They were taught to consider the French and Americans as equally friends, and almost as one people; whose invasion of Canada, whether jointly or separately, instead of conveying hostility or desolation to them, would be undertaken only to free them from the yoke of foreigners, dwelling in another hemisphere; a people differing wholly from them, in religion, manners, in language, and every thing; whose jealous and despotic

government would sooner or later treat them as a conquered people, and undoubtedly much worse, than they had done their own late countrymen the Americans, to whom they owed their former Their future condition, in the event of this proposed emancipation from the goyernment of Great Britain, was left almost entirely in the dark; although some faint and distant allusion was held out, to a similar state of freedom with that possessed by the British Colonies. This was a tender and jealous subject, and the French commander thought it prudent to leave it involved in obscurity. He seemed not altogether authorized to give up the idea, of the restorasion of Canada to the dominion of France: but he was aware, that an avowal of those sentiments, might have been yet imprudent with respect to that people, and would have been disgusting and alarming in the highest degree to the Americans. He, however, assured the Canadians, in the name of the French king, that all his former subjects, who should relinquish their dependence on Great Britain, might depend on his support and protection.

New York from Hallifax in the middle of September; but so much had his squadron suffered in their unfortunate voyage from England, that although the greater part of them had arrived long before him at that port, yet it was a full month before he was enabled to sail again, in order to obferve M. de Estaing's motions. The same unfortunate disposition of the weather, which had alrea-

dy produced fuch unhappy effects, seemed still to persecute that commander. He had scarcely appeared before Boston, when he was driven of the coast by a violent hurricane, in which the ships again suffered so much, that they were glad to get into shelter at Rhode Island. This afforded the opportunity to D'Estaing, which he immediately embraced, quitting Boston; whilst the damage now sustained, together with the continuance of bad weather, again cramped the operations of the British squadron in such a degree, that it was not until the 14th of December, that Admiral Byron was able to let out in pursuit of him to the West Indies.

In the mean time, as the state of the war, as well as the mode of conducting it, were now greatly altered from what they had been at former periods, and General Sir Henry Clinton being sensible, that no essential service could be undertaken by the army at New York during the winter, and being also apprehensive of the danger to which our West India islands were exposed, determined upon fending such a force to that quarter, as would be at once equal to the protection of our triends, and to the annoyance of the enemy. He accordingly difpatched several regiments of those veteran, and perhaps unequalled troops, who had so long braved every variety of climate and danger in America, to encounter along with a new enemy, all the rage of the tropical funs in the West Indies. This detachment, about 5,000 men, confishing of was placed under the command of Major General Grant; and the transtransports, amounting to fixty, were convoyed by Commodore Hotham, with five men of war, a bomb-vessel, and some frigates.

It was remarkable, that they sailed from Sandy Hook, on the very day that D'Estaing departed from Boston: and that the two fleets were very near each other, both steering the same course, and in parallel lines, during part of the passage, without any knowledge, on either fide, of their relative situation. A violent gale of wind, in which both Heets were equally involved, and the French greatly dispersed, probably faved the British convoy from the danger of encountering fo force. Commodore unequal a Hotham had the fortune and ability, to keep his fleet, which was to much more numerous, whole and together during that storm, to get the start of D'Estaing, and to arrive without the smallest loss at Barbadoes; where Dec. 10th. he joined Admiral Barrington, before Mr. Byron had been able to depart from Rhode Island.

An expedition, without fuffering the troops to land, was immediately undertaken from Barbadoes, for the reduction of the island of St. Lucia; an adventure attended with great and unforeseen peril; but which, in the issue, was productive of no less glory to the commanders and forces both by sea and land, and of the greatest advantage in all the ensuing toperations of war. The reserve of the army, confishing of the 5th regiment, with the grenadiers and light infantry of the whole, under the command of Brigadier General Meadows, were landed at the

Grand Cul de Sac, in the island of St. Lucia, on the 13th, in the That officer, with his evening. detachment, immediately pushed forward to the heights upon the north fide of the bay, which were occupied by the Chevalier de Micoud, the French commandant, with the regular forces and militia of the island. These posts, although very difficult of access, he foon forced: having taken in the conflict, a field-piece with which the enemy fired upon the boats that were conveying the troops to the shore, and a four gun battery, which greatly annoyed the shipping at the entrance of the harbour.

While this was doing, Brigadier General Prescot had landed with regiments, with which he guarded the environs of the bay, and at the same time pushed on his advanced posts, so as to preierve a communication during the night with the reserve. As soon as the morning appeared, the reserve, followed and supported by General Prescot, advanced to the little capital of Morne Fortune, of which they took possession. Chevalier de Micoud made the best defence he was able; was compelled by the superiority of force to retire from one post to another, as the British troops still pressed forward. As the referve advanced, General Prescot took possession of the batteries and posts in their rear; and with an unexampled degree of caution and industry, in a contest with so weak an enemy, was indefatigable in immediately supplying them with artillery-officers, and men, establishing communications and posts for their support, and putting

tehm in the best state of immediate defence, which the shortness of the time could possibly admit.

Whilit thele measures of security were carrying into execution, General Meadows pushed forward under the heat of a burning sun, and took possession of the important post of the Viergie, which commanfied the north tide of the Careenage Harbour; and Brigadier General Sir Henry Calder, with the four remaining battalions, guarded the landing place, kept up the communication with the fleet, and fent detachments to occupy several posts upon the mountains, which looked down upon and commanded the fouth side of the Grand Cul de Sac. A measure which soon after contributed not a little to the preservation of the fleet and army, from a danger then totally unknown.

Celerity in execution, and prudence in securing and immediately turning to account every advantage obtained in war, were never more necessary, hor ever more eminently displayed, than upon this occasion. It affords an useful lesson in a striking instance, that nothing should ever be committed to chance in warfare, which any industry could secure from so doubtful a decision. The force under, the Chevalier de Micoud did not seem to demand much jealousy or caution; and no other enemy was apprehended; yet every measure of security was practifed, which the presence of a powerful, and even superior foe, could have induced. The event fuing morning. proved the wildom of the conduct.

The last French slag, on those posts which were in sight among

the neighbouring hills, was scarcely struck, when M. D'Estaing, with a prodigious force, appeared in view of the fleet and army. Besides his original squadron of twelve sail of the line, and those ships of great force and weight of metal, he was now accompanied by a numerous fleet of frigates, privateers, and transports, with a land force, estimated at 9,000 men. Of the latter, he brought no inconsiderable part on board his ships from France: the 'rest were composed of regulars and volunteers from the different French islands, who, well as the transports and cruizers, had been collected in readiness to join him at Martinico, being intended for the immediate reduction of the Granades, and of the island of St. Vincents; but with the farther view, and no doubtful expectation, of completely sweeping all the British leeward lettlements. In his way, on that expedition, M. D'Estaing received intelligence of the attack on St. Lucia; a circumstance which he confidered as the most fortunate that could have happened, it feeming to afford the means of throwing the whole Britiin force by sea and land, an ealy prey, into his hands. muil be acknowledged, that if he had arrived 24 hours sooner, it feems, in all human probability, that this must have been the inevitable event. As it was, the day being far advanced, D'Estaing deterred his operations until the en-

It will be necessary here to take some notice of the scene of action, and of the situation of the British forces; not considering the

mib

shipping as they lay at the unexpeded appearance of the French fleet; but in that state in which the unremitted labour and industry of a night had placed them, in order to withstand so vast a supenority of force on the following day. The fleet were in the most fouthern inlet, called by the French the Grand Cul de Sac, the transports filling the interior part of the bay, and the ships of war drawn up in a line across the entrance: and that was still farther secured, by a battery on the southern, and another on the northern opposite points of land. The Careenage Bay, which led up towards Morne Fortune, lay between two and three miles to the northward of the Grand Cul de Sac; and the Peninsula of the Viergie, occupied by General Meadows, formed the northern boundary of the Careenage, and covered its entrance on that side. Choc Bay, and Gross Islet Bay, lay still farther north.

Admiral Barrington had intended, upon General Meadows' taking possession of the Viergie, to have removed the transports into the Careenage Bay, as a place of much greater fecurity than the Cul de Sac; but was prevented by the sudden appearance of the The Cul de Sac French fleet. being thus considered as a mere temporary lodging, the idea of an immediate removal prevalent, and no apprehension of an enemy entertained, it will be easily conceived, that the night called forth all the powers and industry of that able officer, in getting the transports warped into the bottom of the bay, to be as remote from danger as possible, and the ships

of war brought into their respective flations, so as to form a line effectually to cover its entrance. His force confisted only of his own ship the Prince of Wales, of 74 guns, the Boyne of 70, St. Alban; and Nonfuch, of 64, the Centurion and Isis, of 50 each, and three frigates.' Such was the weak iquadron, with which the admiral, with the most determined countenance and resolution. waited the encounter of so vast a superiority of force. His own ship, the Prince of Wales, took the post of honour and danger, on the outward and leeward extremity of the line; the Isis, supported by the frigates, who flanked the passage between her and the shore, was stationed in the opposite and interior angle to wind-

However odd it may appear, it seems as if the Count D'Estaing was not yet sensible, that the Britilh forces had extended their operations to far, as to have taken possession of the Viergie, and other posts adjoining to the Careenage; for under this apparent delution, his first motion in morning, was to stand in with his whole fleet of ships of war and transports for that day. But a welldirected fire, which his own ship the Languedoc received from one of those batteries that had so lately changed malters, foon vinced him of his mistake. French were apparently much disconcerted at this unlooked-for circumstance; and not only immediately bore away, but seemed for a time totally at a loss how to act. At length, after much evident hesitation, the admiral bore down with ten fail of the line up-

on the British squadron. A warm conflict ensued; but they were received with such gallantry by the admiral and commanders, and such ocolness, resolution, and firmness, by their brave officers and men, who were also well supported by the batteries from the shore, that they were repulsed, and found it neces-

fary to draw off.

Time being now taken for somewhat of a new disposition, D'Estaing renewed the attack at four in the afternoon, with twelve fail of the line. He now directed his efforts more to the right, from the leeward point of the British line to its center, by which the Prince of Wales uuderwent rather more than a due proportion of the weight of the action. This attack was better supported, and longer continued than the first. The French cannonade was exceedingly heavy, and its whole weight concentrated within a narrower direction than before; but neither the change of position, nor the additional force, were capable of rendering this effort more successful than the for-After a long and warm engagement, the French fleet fell into evident confusion and disorder, and retired from action with apparent loss, without their having been able to make the smallest effective impression on the British line.

No naval engagement, however great in its extent, or decisive in consequences, could afford more glory, than the British admiral, and his brave associates, intolerable. derived from these two actions. On the following day,

motions Arongly indicating that design, it was at length evidently abandoned, and the whole fleet plied up to windward, and anchored in the evening off Gross Islet, about two leagues to the northward.

That night and the following morning were spent by the French commander, in landing his troops in Choc Bay, which lay between Gross Islet and the Careenage. That time was also employed by the British Admiral in preparing for every possible future event; in warping the ships of war farther within the bay, thereby to render the line more compact and firm, and in constructing new batteries on those points of land which covered the entrance. The close connection, equal participation of danger and service, with the mutual dependence, now subsisting between the land and naval departments, united the whole so closely, that they seemed to form but one solid and compact body; and this being farther cemented and confirmed by that admirable harmony which prevailed between the commanders and officers on both sides, served altogether, to spread so high a degree of confidence, hope, and spirit, through the army and fleet, that they totally forgot the vast superiority of the enemy, the precariousness and danger of their own situation, and seemed insenfible to fuch continual duty, fatigue, and hardships, as would, in other circumstances, have appeared

The country which was now the scene of action, being among M. D'Estaing seemed the most difficult and impracto shew a disposition to hazard a ticable, whether with respect to its third attack; but after several face, or to the climate, in which manner be conducted, it is not easy to describe, and it is still harder dearly to comprehend, the complicated fituation of the British posts. The country presented no regular face, but a broken and confused congeries of steep and abrupt hills, scattered among greater mountains, every where interfected by narrow winding vallies, deep defiles, and difficult gullies. General Grant, with the bulk of the forces, confishing of the brigades of Prescot and Calder, occupied all the strong holds among the hills on either side of the Grand Cul de Sac; and commanded by several detached posts, the ground that extended from thence to the Careenage, which lay at about two miles distance. A battery on their fide, and at the fouth point of the Careenage, with another on the oppolite point of the Viergie, defended the entrance into that bay, and, as we have seen, checked the attempt of the French fleet in their design to attain that object. The brigades were also possessed of two other hatteries, near the bottom of the bay, where it narrows into, or is joined by a creek, which passing Morne Fortune, cuts the country for some way farther up. These batteries were covered in front by the creek, and commanded, in a confiderable degree, the land approaches to the Viergic.

Thus, General Meadows, who with the referve, was stationed, and it may be said, shut up, in that peninsula, was, by distance and fituation, as well as that decided superiority, which the numbers of the enemy enabled them

it would feem that war could in any whatever fervice they undertook, totally cut off from the support of the main body, any farther than what might be derived from those batteries we have mentioned. He was indeed in possession of very strong ground, but there were circumitances to counterbalance that advantage. A retreat, however pressed or overpowered he might be, was impossible; and the very circumstance of situation which afforded strength to the peninsula in one respect, rendered it liable to danger in another, as he was exposed to a landing and attack from the sea in the rear, at the very instant that he might have been desperately engaged, or perhaps overborne, in the front. But he was obeyed by men, who might have inspired confidence in a commander much more dispofed to despondency. For although they amounted only to about 1300 in number, they were composed, besides a veteran regiment, of a part of those brave and hardy light troops, who had borne so distinguished a share, in all the most active and dangerous service of the American war.

> Upon the whole, with troops of another cast and character, even without supposing them to be by any means contemptible, the fituation, notwithstanding its advantages, would have been found more than perilous. The critical situation of the fleet and army, with the vast importance of that post, and of the Careenage, which depended on it, cut off, however, every imputation of rashness, from whatever hazard might be encountered in their prefervation.

The effect of those judicious to maintain, in all the parts of politions which had been taken by the

landing, became now fully evident to both armies. Nor was the chagrin and disappointment of the French greater, upon failure of their attempt to gain the Careenage Bay, than it was after their landing, when discovered that Sir Henry Calder's brigade were in possession of the mountains on the fouth fide of the Grand Cul de Sac. the bombarding of the British sleet, from those heights, which so effectually commanded that bay, was the first great object in view in their landing; which, from the strong positions taken by that brigade, was now totally unattainable, at any less price, than that of a general engagement by sea and land; an issue to which the French were not yet at all disposed to bring matters.

Upon a full view and confideration of those circumstances which we have stated, as well as of others, the French commanders determined to direct their first effort separately against General Meadows, and to attack the peninsula, at the fame time, by land and sea. the first of these purposes, about 5,000 of their best troops were drawn out, and advanced in three columns to attack the British lines, which were drawn across the ishmus that joins the peninsula to the continent. That on the right was led by the Count D'Estaing, the center by M. de Lovendahl, and the left column, by the Marquis de Bouille, governor of Martinique. The remainder of their troops were kept disengaged, to watch the motions of Prescot's brigade, and to check any

the British troops on their first attempt they might make to succour General Meadows.

> On the near approach of the columns, they were enfiladed with great effect, by those batteries which we have taken notice of, on the fouth of the bay. notwithstanding this impediment, they rushed on to the charge, with all that impetuofity which is characteristic of their nation. They were received with a coolness, steadiness, and immoveable firmness, which even exceeded the expectation of those who were versed in the temper and character of their enemy. The French troops were fulfered to advance for close to the entrenchments, without opposition, that the British front line fired but once, and then received the enemy on the bayonet. That fire, had of course, a dreadful effect; but the French, notwithstanding, supported the conflict with great resolution, and suffered extremely before they were entirely repulsed. It is said, that seventy of the enemy were killed within the entrenchment on the first onset.

As foon as they had recovered their breath and order, they renewed the attack with the fame eagernels and impetuolity as before; and were again encountered with same determined resolution and inflexible obstinacy. Although they had suffered severely in these two attacks, they again rallied, and returned to the charge the third time. But the affair was now foon decided. They were totally broken, and obliged to retire in the utmost disorder and confusion, leaving their dead and wounded in the power of the vic-

tors.

tors. They were, however, in consequence of an agreement entered into, almost immediately after, permitted to bury the one, and to carry off the other; M. de Estaing having rendered himself accountable for the wounded as prisoners of war.

The diversion attempted by sea produced fo little effect, as not to deserve any particular notice. Nothing could exceed the dispositions made upon this occasion by General Meadows, nor surpass his conduct in any of its parts. He was wounded in the beginning of the action; but could neither be persuaded by his surgeons to quit the field, nor to admit of their affiltance in it, until the affair was decided. It would be needless to make any observation upon the behaviour of his officers Where all were brave, and troops. little notice could be taken of individuals. Major Harris, who commanded the grenadiers, and Major Sir James Murray, at the head of the light infantry, had, from their commands, an opportunity of being more particularly distinguished. It would feem upon the whole, as if there had been a jealous emulation in danger and glory between the land and the naval departments, and that Fortune had taken care to hare the palm so equally, that the contest should still remain undecided.

The loss sustained by the French, exceeded any thing that could have been supposed or apprehended, whether from the numbers engaged, or from the duration of the action. No less than 400 men were killed upon the spot; 500 were so desperately wounded as to be ren-

dered incapable of service; and soo more were slightly wounded; the whole amounting to a number considerably superior to that of the enemy whom they had encountered. The loss of the victors, was comparatively as small, as that on the side of the vanquished was great, and beyond usual example; and it cannot but excite assonishment, that although a good many were wounded, not a single British officer should have lost his life in such an action.

M. D'Estaing continued, in a state of seeming irresolution, for ten days longer on the island, without forming any apparent plan for its recovery, or making the smallest farther attempt by sea or land, notwithstanding the vast superiority of his marine force; which was hourly increased (if such may be considered as an aid) by the number of French and American privateers, which flocked from all quarters, to partake of the spoil, if not of the glory of the enterprize. He, however, at length, found himself reduced to the necessity of relinquishing a contest, which had proved so exceedingly barren both of profit and honour. He accordingly embarked his troops on the night of the 28th, and on the following day, abandoned the island to its destiny. As if it were to crown the climax of his mortifications, he was not yet ' out of fight, when the Chevalier de Micoud, with the principal inhabitants, offered to capitulate; and although they were now totally deserted, and left solely at the mercy of the victors, very favourable conditions were granted to them.

C H A P. IV.

State of public affairs during the recess of parliament. Address and petition from the city of London. Militia embodied. Camps formed. Admiral Keppel appointed to the command of the grand fleet for the home service. Peculiar situation of that commander. Fleet sails from St. Hellens. Licorne, French frigute, stopt and detained. Blameable conduct of the Captain, in firing unexpectedly into the America man of war. Desperate engagement between the Arcthuja, and the Belle Poule, frigates. schooner, brawely taken by the Alert cutter. Another French frigate falls in with the fleet; and is, with the Licorne and schooner, brought to England. Fleet returns to Portsmouth for a reinforcement. Rewards and bounts of the French King, to the officers and crew of the Belle Poule. Admiral Keppel sails again from Portsmouth. Falls in with the French fleet under the Count d'Orvilliers; and after a chace of five days, brings them at length to action. Account of the engagement on the 27th of July. View of those circumstances which were supposed to have prevented that action from being accifive. French fleet escape in the night, and return to Brest. Prudent and temperate conduct objerved by the Admiral. Returns to Plymouth to refit. Proceeds again to Jea, but cannot meet the French fleet.

ROM these scenes of distant hostility, it is time we should direct our attention nearer home, and take a view of those immediate measures pursued by Great Britain, to extricate herself from the dissiculties of that new, singular, and perilous situation, in which she had so unfortunately been involved. A situation, indeed, more singular and perilous, could scarcely be traced in history.

Weakened and diffracted by a domestic contest, which equally confumed her strength and resources; in which victory was attended with consequences, that were always of equivocal advantage, and defeats produced the whole of their natural effects; while the balance of sortune in that single contest was yet so doubtful, that the inability of reducing her revolted colonies, was

held out as an ostensible and sufficient cause for considering and treating them as independent and sovereign states; in the midst of this critical Rruggle, we see Great Britain suddenly involved in a new and much more dangerous war, without any mitigation of the old; we behold her engaged with her ancient rival and hereditary enemy; with one of the most mighty and most warlike powers in Europe, rendered still more dangerous by his vicinity; and in this double warfare with old friends and old enemies, not only bereaved of her natural strength, but a great part of it turned against her, she is lest alone to endure the unequal combat, abandoned by all mankind, and without even the pretence of a friend, or the name of an ally in the world.

Such

Such was the unfortunate situation, such the calamitous picture, which Great Britain exhibited in the year 1778. So aweful a crius; so perilous a state of public affairs; demanded those supreme degrees of wildom in counsel, and of efficacy in action, which are so seldom united with each other, and which are still more rarely united with true patriotism. such situations are sometimes blest with the extraordinary good fortune, of calling forth great talents from inertness or obscurity, it much more frequently happens that they produce a totally contrary effect. For the vastness of the occasion is too liable to dazzle, to bewilder, and to confound, that useful mediocrity of talents and abilities, which, however unequal to the situation, is exceedingly well calculated for the common conduct and purposes of mankind.

However it was, or from whatever causes it proceeded, whether from a fluctuation or discordance of opinions, disagreement in temper and views among the ministers, whether from the want of any pre-Vious or established system, or that the flattering ideas of some partial or general accommodation, still interfered with and counteracted all other modes of proceeding, so it was, that some appearance of irresolution and indecision, which at that critical period prevailed in the counsels and measures of Great Britain, was so palpable, as neither to escape the observations of friends or of enemies. Notwithflanding repeated causes of alarm, we seemed to be taken by surprize. The language of the court, as soon as it could collect itself, was Whiciently firm; and seemed inspired by a spirit of vigour suited to an occasion which called for efforts of an extraordinary kind. It was rather even the tone of indignation and vengeance, than mere constancy and resolution. But this spirit very soon evaporated; and nothing was talked of in a war of conquest and vengeance but self-defence.

The enemies of ministry were loud on this occasion. They said, that by this timid plan, neither suited to the emergency, nor to the language held upon it, the opportunity was lost, by some sudden, great, and signal blow, of reviving our antient name and character; and of inspiring that reverence to our national vigour and military prowess, which it was so necessary for us to maintain and establish with other nations, whether friendly or inimical, at the outset of such a war.

It was supposed, that a double scheme of partial accommodation, the one part avowed, and the other fecret, and founded upon systems directly opposite, was about that period prevalent, and had no small thare in influencing the conduct of public affairs. The first part of this scheme was founded on the idea of detaching America, through the intervention of the Commisfioners, from the alliance with Nothing could possibly have been more essential to the interests, the reputation, and to the grandeur of Great Britain, than the success of this measure. France would then have been left to encounter all her force alone. which, if properly directed, she was yet by no means capable of enduring.

The event of that part of the [D] a scheme

'c'ieme we have already seen. The e ond, was that of detaching France from America; and consequently leaving the latter expoied to that resentment, which, In the other instance, would have been directed against the first. though this part of the scheme, even supposing it capable of succels, could not stand in any degree of real comparative value with the former, yet it held out certain flattering ideas, might even render it, in some degree, a savourite. For the dereliction of America by France, would have left the former open, and now totally hopeless, to that complete and final subjugation, or unconditional submission, which had so long been the great object of court and ministers. But this scheme seemed from the beginning hopeless, though it for a while entertained the imaginations of many. Great Britain had no bribe of sufficent magnitude to purchase from France this dereliction of her ob-If such could have been offered, and offered with effect it must have been before the conclusion of the treaty: but the treaty was concluded.

Every part of the conduct of France from the commencement of the American troubles, either tended directly, or but ill disguised her design, to bring matters to the present criss. To the period of that treaty, however, her policy lay open to the influence of circumstances, and her conduct was, and undoubtedly would have been in any case, governed by them. But when once she had taken the decided and dangerous part, of publicly avowing her sentiments

and views, and of openly binding herself in the face of the world to the performance and support of those treaties which she had concluded with the Americans, it was then not only evident that she had gone too far to recede, but that she had also chosen her ground, and was fully disposed and determined to abide the consequences. So that every hope founded upon her change of system, seemed little better than visionary.

There were some strong indications, that a third, and more comprehensive scheme of pacification than either of the foregoing, was at one time in agitation. was no less, than the conclusion of an immediate peace and alliance with the Colonies, under the acknowledgement of that independence, which it was laid down as a principle, they had already virtually and irretrieveably obtained, and thereby cutting off at one stroke, every cause of war, and of dispute with America. In that case, if a plan of prudence, not very glorious, had been pursued, there was an end of the quarrel both with America and France. If the reduction and punishment of France was the object, the war against her might be pursued with undissipated force. On the very day of the delivery of the French rescript, a paper to that purpose, written by an old and strong advocate for the American war, was delivered at the doors of the two Houses.

If this scheme ever had any substantial being in the ministry, it was, however, but of short duration; and was so far from being brought forward, or any more heard of in that quarter, that when

propositions of a similar nature, were soon after made by the opposition in both Houses of Parliament, and strongly supported, on the ground both of expedience and necessity, they were violently opposed, and accordingly over-ruled (as we have formerly seen) by the ministers.

To some such variety of opinions, with respect to the means of accommodation, the grand questions of peace and war, and the mode of profecuting the latter, may probably be attributed those appearances of fluctuation, and indecision, which, at that period, were so grongly and repeatedly charged, as the characteristic marks of our counsels and measures. And to such causes must be attributed, the reception of the report, of a reproach faid to be thrown out by the French minister, at the moment of his departure from London, viz. " That the British counsels " were so totally undetermined and " indecisive, in every matter, whe-** ther of public or private con-" cern, that he never could get a " politive answer from the mi-" nisters, upon any business, whe-" ther of small, or of the highest " importance."

On the very day March 13, that the French re-1778. script had been delivered to the Secretary of State, an address and petition from the City of London, praying for the adoption of such measures as would most forward the restoration of internal peace, tend to rescue public affairs from unwife and improvident management, and obtain, improve, and secure, the returning confidence of the people, was presented to his majesty. This

piece, which was of unusual length, and a masterly composition in point of writing, contained, in the most qualified language, and the most guarded and respectful terms, a series of the severest obfervations and censures, on (what they termed) those fatal counsels, and that conduct of public affairs and measures, which equally misleading and deceiving the Prince and the people, led to the present dangerous and unhappy crisis, Along with a recapitulation of the losses, missortunes, and disgraces of the war, with a striking picture of the various calamities and miseries, which they áttribute to that public conduct they so strongly condemn, they by means forget to take notice, how repeatedly they had deprecated, and how truly foreboded, in their former applications to the throne, (and in concurrence with the fense of many other respectable public bodies, and of many of the wifest and best of his Majesty's subjects) the present evils and dangers, as well as those greater to which the nation is still liable, as the inevitable consequences of the measures. 'which were pursued; neither did . they pais without notice the inefficacy of their former applications, and the answers which had been given to their addresses and remonstrances upon public affairs.

Among other political observations, all implying or charging neglect or misconduct on the side of government, they particularly noticed in the present instance, that there was no appearance of our having formed any alliance with any of the other great powers of Europe, in order to cover us from the complicated perils so manifestly imminent over this nation, at a time when there was but too much reason to apprehend, that alliances of the most dangerous kind

were formed against us.

The answer, which was longer than usual, seemed also to indicate a greater attention, both to the subject of the address, and to the body whose act it was, than had been always manifested upon similar occasions. It comprehended in substance, that, although it could not be allowed, that the force and resources of the state, had been unwisely and improvidently exerted, when the object was the maintenance of that constitutional subordination which ought to prevail through its several parts; yet, the calamities inseparable from a state of war had been constantly lamented; and, an assurance was given, that his Majesty would most carneftly give all the efficacy in his power, to those measures which the legislature had adopted, for the purpole of restoring, by a happy and permanent conciliation, all the blessings and advantages of peace.

Whatever hopes or motives operated towards a temporizing conduct on the side of England, it was foon perceivable, that no fimilar causes influenced that of France. No fooner was the account conveyed with unusual dispatch to that court, of the immediate effects, which the delivery of the rescript from their minister seemed to have produced in London, than orders March 18th. were instantly issued for the seizure of all those British vessels, which were found in any of the French ports. This example was followed by a similar order in Great Britain, But these measures produced no great effect on the one side or the other, as there were sew ships in

the ports of either.

The order for the seizure of the British vessels, was in three days followed by another measure still more decifive, and which seemed as if it were intended by France, to affix such a seal to her late declaration, as would not only convince her new allies of her fincerity, but put it out of her own power to retract from her engagements with them. This was the public audience and reception given to the three American deputies, Dr. Franklyn, Silas Deane, and Arthur Lee, as ambassadors from the United States, by the French monarch. The deputies were introduced by M. de Vergennes, and received by the king, with the usual formalities and ceremonials, which the etiquette of courts has established on the introduction of ministers from sovereign states. A great and striking event, as any which has been known in the latter ages. Nothing could be defired more mortifying to the Crown of Great Britain.

Certain appearances were, however, still to be preserved by France as well as by England; and the King's ordinance, affording new and extraordinary advantages to the captors of prizes, as an encouragement and spur to the vigour of the marine service, although it was signed on the 28th of March, was kept dormant, without publication or effect, until the beginning of July.

To complete the desensive plan, which was declared to be only preliminary to one more effectual, to be taken up in due time, in Eng-

land.

land, the militia were immediately called out and embodied, upon the riling of parliament; and being joined by the regular forces, the numbers of the one being apportioned in some degree to that of the other, camps were formed at Winchester, Salisbury, St. Edmund's bury in Suffolk, Warley Common in Essex, and Coxheath in Kent. But the eyes and the confidence of the nation, were turned, as usual, towards that naval force, which had so long been the object of its pride and hope.

This hope and confidence were still farther increased, by the appointment of a distinguished, and exceedingly popular admiral, in the highest esteem with his own profession, as well as the public, to the command of, what was called, the grand sleet at Portsmouth. It happened, however, most unhappily, that at this critical season of national danger, our navy was not altogether capable of supporting the expectations which were formed. Some time elapsed before any considerable force could be got together.

We have for some years past acen, that complaints on this subject, and enquiries into the state of the navy, have been repeatedly introduced and proposed in parliament; that direct charges as to points of fact, of the utmost importance, have been frequently made and strongly supported; that these charges have been no less firongly and confidently denied; and that all propositions, which led to any direct and effectual investigation of the subject, have been uniformly rejected by prodigious majorities, as improper and impolitic in their own nature.

The minority charged the mi-

nisters, on the present occasion, with having entertained the King with the vain pageantry of a naval review, and having for this purpose kept the navy from more rational fervice in America, in order to impose on the sovereign, and to hide from his eyes their neglect of his most essential forces. Such means of gratifying royal or popular curiofity in the fair weather of peace, may well ferve to hide defects, and to conceal weakness; but the rough season and searching hand of war, will foon tear off the painted covering, and expose the deception.

Admiral Keppel was destined to the command of that flect, to which was committed the defence of this island, the protection of the homeward-bound trade, and the preservation of the dignity and honour of the British slag in the He arrived at adjoining feas. Portsmouth to take upon him the command, in a few days after the delivery of the French rescript. now appears, from evidence which cannot be controverted, and' which nothing less than the extraordinary events that followed could have brought forward, that he found matters in a very different state, as well from the opinion which had been generally circulated, as from what he had himself been taught to expect. asserted on his trial, and 'it was not contradicted, that instead of a strong and well appointed fleet, capable of undertaking the great objects of service laid before him, he then discovered to his astonishment, that there were only fix fail of the line, which were in any degree of condition for immediate service; and that the paucity or condition of men or thips was not

[D] 4

more

more alarming, than the deficiency of all kinds of naval stores was la-The ministers have mentable. fince afferted, that there were many ships in condition, and sufficient to form a strong squadron; but they were at that time dispersed , on various services; and could not be collected together so soon as they wished, though early enough for use. Whatever merit might have been in this matter, the admiral, accommodating himself to the actual state of affairs, and to the necessity of the time, acted with such prudence, caution, and discretion, as fully prevented that increase of the public alarm and apprehension, which a display of these circumstances must necessarily have occasioned. Without noise, and without complaint, he urged his private applications to the Admiralty with such affiduity and effect, that a new spirit, and unusual degree of vigour, were suddenly feen to pervade the naval department; and fuch industry was used in preparation, that by the middle of June, he was enabled to take the seas, with a fleet of twenty sail of the line, and a promise of speedy and effectual reinforcement.

In this anxious situation of affairs, and in such impersect preparation, great reliance was placed by the public, in the acknow-ledged naval abilities and skill of a commander, the settled same of whose cool and determined courage, might make him dare to be prudent. He had been concerned in many of the most splendid services of the late war, and stood particularly high in the estimation of Lord Anson and Lord Hawke. In the navy he was in a manner adored. It was strongly

expressed by an eminent member of parliament, "that all descrip-"tions of men seemed pleased "with the choice, and to seel "their own security included in

" his appointment." However stattering these circumstances might be, his taking fuch a command, was not without its difficulties, and afforded much room for serious reflection. It is indeed highly flattering to, and one of those meeds of virtue and ability, which perhaps affords the most poignant gratification, that however they may be neglected and laid by, in the halcyon days of quiet and security, they must be fought to with reverence, and called into action with honour, in the seasons of trouble and peril. But the Admiral had, upon this occasion, a great deal to risque, and he expected nothing. circumstances were not such as to prompt him to feek for new perils, and his time of life, and state of health, naturally led to a defire of ease, rather than to the fatigues, hardships, and difficulties, not only of an active employment, but of a most critical service. The wellearned glory acquired in forty years service, was now to be staked upon a fingle cast, and could receive no great addition from winning. And it could not be without much re-Inctance, that a fituation in life, which it would be so extremely difficult in any respect to have mended, should be committed to any new hazard. This is, with

His political situation increased all these difficulties, and evidently rendered the measure extremely hazardous.

few additions, his own natural

and affecting way of stating his

lituation.

zardous. Every officer who has ever been entrusted with a great and important command, must experimentally know, how much his success and his fame depends, upon the support which he has at home. In this support is to be included, the countenance of those ministers, who are in effect his employers, as well as the measure of supply which they mete out for the support of his service. Opposition in parliament, and a difference of opinion in political matters, have, in former times as well as the present, been alledged as a cause of the oppression of officers in military commands. "I go to serve against " your enemies," faid Villars to Louis the XIVth, "but I leave " mine in your closet." Ministers, on the other hand, are apt to accuse them of failure in duty, on account of disaffection to the power of persons whom they hate. is however certain, that in the latter case, this misconduct can seldom happen, without being very evident to the discerning eyes of their own profession. But in the former, the character of a commander may be whispered away, without any direct charge being laid against his conduct, or any avowed censure from those, under whose auspices and instructions he had acted.

In consequence, however, of a royal message, which came through the first Lord of the Admiralty, Admiral Keppel attended in the closet, to receive the commands of his sovereign. And although (to use his own expressions upon his trial) his forty years endeavours were not marked by the possession of any one favour from the crown, except that of its considence in

time of danger, he could not think it right to decline the service of his And this the more especountry. cially, as the nation was represented to him, by those who had a right to be the best acquainted with its condition, to be in no very secure state. In that, and other subsequent royal audiences, he delivered his opinions with that plainness and openness, which were equally suited to his natural, and incidental to his professional character. He particularly took the freedom of observing, that he served in obedience to his Majesty's commands; that he was unacquainted with his ministers, as ministers; and that he took the command as it was, without making any difficulty, and without asking a fingle favour; trusting only to his Majesty's good intentions, and to his gracious support and protection.

Nor were appearances less favourable on the fide of the mi-The business had been fixteen months in contemplation, the first proposal having been made in consequence of the alarming aspect which the state of public affairs exhibited, in the month of November 1776; the notice of his appointment, upon the decisive part at length taken by France, conveyed to the admiral. through the chief minister of the marine, with every appearance of concurrence and approbation; and the bearer of this message, who seeemed to feel no small degree of pleasure in the appointment, (although he afterwards became his accuser) was his particular friend and intimate acquaintance of very long standing. This gentleman, who was vice-admiral of the blue, and likewise a lord of the admiralty, was to ferve in Mr. Keppel's fleet, as third in command. It would be needless to dwell upon the well-founded fatisfaction and confidence, which the assistance of officers, standing in such a degree of intimacy and friendship, must afford to a commander in chief. It feems to meet, so far as it goes, that first wish of every general, to have the choice of those officers on whom he must principally confide, and on whose conduct, his reputation and success must so much depend.

With the force we have mentioned, the greatest national trust that could be reposed, and unlimited discretionary powers, the adlune 13th. The failed from St.

June 13th, Helen's. The trust was 1778. indeed great, for the . state of public affairs was exceedingly critical. It was well known that France had a strong fleet at Brest, and in such a state of preparation, as sufficiently indicated some immediate and important Our great commercial aclign. fleets, loaded with that wealth, which could alone enable us to encounter such formidable enemies, and to support so complicated and extensive a war, were on their way home from different quarters To the protection of the globe. of the commerce of Great Britain, was to be added the defence of her extensive coasts, the fecurity of her valt capital, and the preservation of those invaluable refervoirs of her naval power, in which were equally included her 'sued. present strength, and her suture hope. All these immense objects, were committed to the defence of twenty ships.

The fleet had scarcely arrived at its station in the Bay of Biscay, when an occasion offered to shew, that great discretionary powers are liable to much personal risque, unless the most cordial support is asforded, by those in the administration of public affairs, to the perfon on whom these powers is de-Two French frigates, legated. with two smaller vessels, appeared in light, and were evidently taking a survey of the fleet. The admiral's situation was nice and dif-War had not been declared, nor even reprisals ordered. It was, however, necessary to stop these frigates, as well to obtain intelligence, as to prevent its being conveyed. Indeed it seemed a matter of indispensible necessity, not to mils the opportunity of acquiring some knowledge of the state, fitnation, and views of the enemy. But that fluctuation of counsels, which, as we have stated, seemed to prevail at that time, joined to the peculiar circumstances of the admiral's political fituation, seemed, all together, to render any strong measure exceedingly hazardous. He might have been disavowed, and a war with France might be charged to his rashness, or to the views and principles of his party. this dilemma, the admiral determined to purfue that line of conduct which he deemed right, and to abide the consequences. subsequent behaviour of the French frigates, seemed calculated to afford a justification for any measure of violence he could have pur-

A general fignal for chacing being made, June 17th. the Milford frigate got in the evening along-side of the Licorne of 32

gunss

gans, and in the most obliging terms, required, or rather requested, the French captain to come under the admiral's stern; this was refased, but upon the coming up of a thip of the line, and her firing a gun, the Frenchman stood to her, and was brought into the fleet. The admiral sent a message to leeward, that every civility should be expressed to the French captain, and also information given, that he would fee him as foon as they could come up in the morning; the vessels who had him in charge, received orders to attend to him through the night, and to bring him up without molestation.

In the morning, an unexpected movement made by the French frigate, occasioned one of the convoy to fire a shot across her way, as a figual for keeping her course, when, to the astonishment of the admiral and the whole fleet, she suddenly poured her whole broadfide, accompanied with a general discharge of her musquetry, into the America of 74 guns, at the very instant that Lord Longford her commander was standing upon the gunwale, and talking in terms of the utmost politeness to the French captain. The frigate instantly struck her colours as soon as she had discharged her hre. Several of the shot struck the America; and it seemed little less than a miracle, confidering the closeness of the ships, and the unsuspecting state of the crew, that only four of her people were wounded. Although this behaviour merited the severest return; and that a broadfide, which would probably have sent her to the bottom, was that immediately to be expected, yet, the noble commander of the America, with a magnanimity, humanity, and admirable command of temper, which reflect the highest honour on his character, did not return a single shot.

In the mean time, the other French frigate, called La Belle Poule, which was of great force, and heavy metal, with a schooner of 10 guns in company, were closely pursued by the Arethusa frigate, Captain Marshal, and the Alert. cutter, until they got out of fight of the fleet. The Arethusa having at length got up with her chase, requested the French captain to bring to, and acquainted him with the orders of bringing him to the admiral. A compliance with these requisitions being peremptorily refused by the French officer, Captain Marshal fired a shot across the Belle Poule, which she instantly returned, by pouring her whole broadfide into the Arethula, then very close along side.

A desperate engagement ensued, and was continued with unusual warmth and animofity for above two hours; each fide vying with the utmost degree of national emulation to obtain the palm of victory, in this first action and opening of a new war. The French frigate was much superior in weight of metal and number of men; nor could the at all have spared any part of those advantages. length, the Arethusa was so much shattered in her masts, sails, and rigging, and there being at the same time but little wind for her government, she became in a great measure unmanageable; and they being now upon the enemy's coast. and the French ship's head in withthe land, the latter took that opportunity of standing into a small bay, where several boats came to

her affistance at day-light, and towed her into a place of safety.

During the fore part of this action, the engagement was no less warm between Captain Fairfax, in the Alert cutter, and the French Their force was about schooner. equal; the former carrying ten, and the latter (if we remember The contest right) eight guns. was well supported for upwards of an hour; when the schooner was compelled to strike, with the loss of five men killed, and feven mortally wounded. The Arethusa had suffered so much, that she was towed back to the fleet by the Valiant and Monarch, both of which had pursued the chace. Her loss in men was also considerable, amounting to eight killed, and thirty-fix wounded. That of the Belle Poule was prodigious. The French account acknowledges above forty flain, and fifty-seven wounded. Among the former was the second in command.

They acknowledge that the Belle Poule carried 26 twelve pounders; but they forget to enumerate those of lighter metal, which are said to have amounted to 14 more; and they elumate the Arethula at 28 fix-pounders. Notwithstanding this superiority of force, the brave and obstinate defence made by the Belle Poule, in this first action of a new war, when the terrors of our naval prowess in the last, were not yet forgotten, became a matter of great praise, and wonderful exultation. The King of France took care to nourish this national pride and opinion, as well by the honour and promotion which he bestowed on the captain and other principal officers, as by the pecuniary rewards to those in a more subaltern

degree, and his liberal munificence to the widows, families, or relations, of those who fell in the action. Nor was this attention confined to the officers. The wounded seamen, and the widows of their fellows who were slain, partook, in a proportional degree, of the same bounty; and the whole was crowned with a confiderable benefaction to the ship's company in general. On the other hand, the Captains Marshal and Fairfax, received great praise from their commander, and not more than they deserved.

In the mean time, another French irigate fell in with the fleet, and was detained by the admiral, under colour of the hostility committed, and the extraordinary circumstances of ill conduct with which it was attended, by the captain of the Licorne; but several French merchantmen were suffered to through the flect unmolested, as he did not think himself at all authorized to interrupt their commerce. It was reported, we know not with what authority, that these frigates, with some other vessels, were cruizing to intercept our Mediterranean fleet of merchantmen, which, including those from Spain and Portugal, amounted to about 70 sail. and which were then upon the point of immediate arrival.

From the taking of the French frigates, the admiral derived a source of information of the most critical and alarming nature. He had been taught, as he affirmed, to believe that he commanded a fleet, which if not quite equal in number and force, was yet such, as from a confidence in his officers and men, he might venture, without rashness, to oppose to any thing that could have been brought out

againt

was now close upon the enemy's coast, and within sight of Ushant, when he discovered, to his inexpressible assonishment, from the papers, and other means of information which the capture of the frigates had thrown into his hands, that the French sleet in Brest Road and Brest Water, amounted to 32 ships of the line, besides 10 or 12 frigates; whereas his own force consisted only of 20 of the former, and three of the latter.

His fituation was certainly highly perplexing, and no less critical. was scarcely possible to suppose, that he could have been fent out with such a force, and where objects of such immense importance, as perhaps included no less than the very existence of the empire, were at stake, under any intention of his encountering so prodigious a superiority; and it was yet scarcely less difficult to conceive or believe, that administration in general, or that great department of the state under which he immediately acted, in particular, could have been possibly deficient in information, on the full possession of which the public welfare and fafety so directly hung, and which they could not want means of procuring with the utmost facility.

In so untoward a situation, it was indeed dissicult what to decide on. Want of experience seems as necessary as want of wisdom, to inspire contempt for an enemy. The consequences of a deseat on the enemy's coast, were not in this case, as in the general course of wars, to be measured only by a temporary loss of territory, or substraction of glory. Every thing was at stake. The fortune, and perhaps the being of this

country, were to be committed to the hazard of a fingle die. Our own narrow seas might be swept by an insulting enemy; our open coasts every where exposed to devastation and ruin; and the kingdom to open invasion.

Such were some of the fatal consequences that were to be apprehended from a defeat in the present state of things; and the more efpecially, as that, through the courage of the commanders, and the urgency of the occasion, could only have been accomplished by the absolute destruction of the fleet; whilst the unfortunate deficiency of naval stores and provision which then prevailed within the kingdom, with the difficulty, if not impracticability, under such circumstances, of procuring a foreign supply, and the exposed situation of our dockyards, and consequently of all those ships which were either building or under repair, would, all together, present such an opening to final ruin and calamity, that scarcely a hope could be entertained of retrieving the stroke. On the other hand, to fly from the coast of an insulted enemy, when that enemy was coming out to avenge the insult, would be an incident as new in the naval history of England, as it would seem inconsistent with the present opinion, and degrading to the past renown of the commander.

In this dilemma, the admiral determined that all other considerations should give way, to what he deemed a faithful discharge of the great trusts reposed in him; the primary objects of which, were the protection of his country, and the preservation of her commerce. He wisely thought the stakes were too great to be hazarded against vast

odds, either upon personal, or professional punctilio. It was, however, a difficult conquest. He afterwards declared, when compelled to a public explanation and defence of his conduct, that he never in his life felt so deep a melancholy, as when he found himself-obliged to turn his back on France.—And, that his courage was never put to fuch a trial as in that retreat; but that it was his firm persuasion, that his country was faved by it.

Upon the return of the 27th. fleet to Portsmouth, the admiral had an opportunity of verifying by experience, the necelsity to a commander in chief, especially in critical seasons, and endowed with large discretionary powers, to be well supported in the cabinet, and to meet with a dispofition to a favourable construction and acceptance of his well-directed services, in those nice and doubtful fituations, wherein no specific line of conduct can be laid down for his direction, and in which, either perfonal responsibility must be hazarded, or what appears at the time to be the effential interests of his country sacrificed. He had already gone in two instances to the limits of his discretionary powers. The taking of the frigates, and the return, contrary to expectation and intention, if not to direct orders, from his station, were measures of fuch a nature, as admitted of no medium in their construction. They were either absolutely right, or they must be absolutely wrong. In the former case, they demanded not only immediate, but great approbation; in the latter, the most direct reprehension. The officer, who had committed errors of such magnitude and danger, should not again, by any means, have been entrusted with a command of such

national importance.

The admiral was, however, left in this state of uncertainty; and with so great a trust in his hands, never received the smallest direct or official approbation of his conduct in either instance. seemed to be immediately delivered over, without mercy, to the obloquy and scurrility of those publications, which he confidered as being under the immediate direction of the ministers; and which, from the circumstance of their abuse having been so frequently the prelude to the downfall or disgrace of officers, are particularly considered as being, in some fort, in the secret, and as having the fanction of authority for their centure and condemnation. By these, the admiral's return and conduct were branded with the most opprobrious terms which language was capable of bestowing, and ascribed to the most disgraceful motives; his general character treated with the most indecent scurrility; and as they placed his conduct and his merits in the same scale with those of Admiral Byng, so they boldly and directly threatened him with the fame fate.

The admiral bore all the difcouraging, as well as the disagreeable circumstances he met, with wonderful temper. He made no complaints himself, did every thing to stiffe discontents in others, pressed forward the preparations for his return to sea, without noise or parade, and bore all the unmerited reproach that was thrown upon. him, without being once tempted to a justification, which, by the

narration

sarration of the fact, must necesfarily have criminated the first lord of the admiralty.

The fortunate arrival of the two first of our West-India steets, and of the Levant trade, brought in a supply of seamen, at the most critical period in which they could have ever been wanted. By this means, and the exertions every where used by the admiralty, the admiral was enabled to July 9th. put again to sea, on the 13th day from his arrival at Portsmouth, with 24 ships of the line; and was joined on the way by fix more; the paucity of frigates still continued, there being an addition of only one, to which was also added two fireships. But the ships in general were commanded by men, who, in point of skill, ability and courage, were of the highest ellimation.

In the mean time, the French king made we of the engagement with the Belle Poule, and the taking of the other frigates, as the ostensible ground, for issuing out orders for reprisal on the ships of Great-Britain; and the ordinance for the distribution of prizes, which we have already observed had been passed a considerable time before, although hitherto kept dermant, was now immediately published. Similar measures were likewise purfued in England, as toon as the account of these transactions was Thus nothing of war was wanting between the two nations, excepting merely its name, or rather the formality of the proclamation.

On the day preceding the departure of the British sleet from Portsmouth, the French sleet sailed from Brest, amounting to 32 sail of the

line, and a cloud of frigates. were divided in three squadrons or divitions, the whole being under the command of the Count d'Orvilliers, who was affilted in his own particular division, by Admiral the Count de Guichen. The second was commanded by the Count Duchaffault, assided by M. de Rochechovart; and the third by the Duke of Chartres, (prince of the blood) who was seconded by Admiral the Count de Grasse. M. de la Motte Piquet, although an admiral, acted as first-captain in the Duke of Chartres' ship. On their departure from Brett, the Lively frigate, which had been fent to watch their motions, got so involved amongit them that the could not possibly escape, and was accordingly taken.

The English sleet was likewise thrown into three divisions; the van being commanded by Sir Robert Harland, Vice-Admiral of the Red; and the rear by Sir Hugh Palliser, Vice-Admiral of the Blue. The commander in chief was assisted by the voluntary services of Rear-Admiral Campbell, a brave and experienced officer, who, from ancient friendship, and a long participation of danger and service, condescended to act as sirst-captain in his own ship the Victory.

The two seets came in sight of each other on the asternoon of the 23d of July. It appears from the movements and conduct, both then and after, of the French admiral, that he had no knowledge of the increase of Mr. Keppel's strength, at their first meeting; but considered his sleet as being still in about the same state as to number, in which it had been at the time of quitting its station before Brest. Under this impression,

he seemed disposed for bringing on an immediate engagement; but as soon as the sleets had approached so near, as pretty well to discover each others, force, he seemed evidently to relinquish that determination, and continued asterwards to evade with great caution and knowledge in his profession, all those endeavours which were constantly used on the other side to bring on an action.

As night was near, and that general actions by sea are always to be avoided at that feason, the British admiral only brought the fleet to, in a line of battle, leaving the option of attack to the enemy. fresh gale, and a change of wind in the night, made some considerable alteration in the relative fituation of the opposed sleets. The French had now gained the weather-gage, which afforded them the great advantage, of either bringing on an action, nearly in the time and manner they liked, or of avoiding it totally. Two of their line of battle ships had, however, fallen confiderably in the night to leeward; and the admiral now feeing that they studiously avoided an engagement, and being fenfible of the difficulty of forcing them to that decision, while the wind held in its present state, determined if possible to profit of this separation, and to reduce his opponent to the alternative, of either facrificing two of his capital ships, or of hazarding a general action.

The French commander chose to submit to the risque of the former. Although the two ships were not taken, they were so effectually cut off from the rest of the fleet, that they were never able to rejoin them during the remainder of the cruize;

and another ship, which had soltained some damage during the night in the gale, was exposed to such imminent danger of being taken, as to owe her escape merely to a sudden shift of the wind. By the cutting off of the two sormer vessels, the hostile sleets were placed upon an equality in point of number, with respect to line of battle

thips. For four successive days, the fleet continued constantly to beat up against the wind in pursuit of the enemy; who might have chosen any hour of that time to have come to a general engagement. slackness with respect to action, is not, however, to be attributed to any want of spirit in Mons. D'Orvilliers, the gallantry of that officer being unquestioned; but the motives which operated on both commanders, were as totally different as their conduct. Mr. Keppel had the strongest and most urgent reaions, for pressing on an engagement with the greatest possible expedition; and the same reasons operated, though in a lesser degree, upon his adversary, to abstain from that final issue. The greatest bodies of the British trade were then on their return home. Two East-India, and two West-India fleets, of immense value, were hourly expected. The French fleet, from their order of failing, and the number of their frigates, spread over so vast an extent of ocean, that Mr. Keppel found it necessary to warn the admiralty in his letters, of the unavoidable danger to which any ship that attempted to join him would thereby be exposed. As the British sleet cut off that of France from their own ports, so the fleet of France was spread athwart that

course, which our homeward trade was likely to hold; and from the fituation of both fleets, and the state of the wind, might have taken them in the British admiral's sight, without a possibility of his preventing it.

Nor was this state of things rendered less irksome, nor the apprehentions resulting from it qualified, by any well-founded confidence that it might not be of long continu-On the contrary, our own naval histories record an example in the reign of King William, when the celebrated Admiral Russel was obliged to undergo for two months the mortification, of being almost in the daily view of the French fleet, without his being able in all that time to bring them to action. The admiral had also another motive for his anxiety to bring on an engagement upon any terms what-This motive was founded in ever. his instructions. For although he did not for prudential reasons think fit to produce them on his trial, he made no scruple of declaring freely to the court, that his instructions went directly and absolutely to that point of fighting the enemy.

In this pursuit of the French fleet, the preserving of a regular line of battle, with any hope of bringing them to action, was evi-That signal dently impracticable. was accordingly hauled down from the 23d, and that for chacing to windward kept constantly flying. In this measure, the admiral was supported, not only by his own judgment, but by the practical example of some of the greatest names, who had ever supported or established the honour of the British flag. But the measure was of a nature, which rendered all prece-

Vol. XXII.

dent unnecessary for its justification. The affidgous and continual endeavours of the French admiral to avoid an engagement, afforded full cause for apprehending that he expected a reinforcement, and that, independent of all other motives, would have been sufficient for using every means to bring it suddenly By adhering to a line of battle, the French fleet would have been evidently out of fight in a very short time, and the probable consequence would have been, either the loss of our foreign convoys, or infult to the coast of Eng-The admiral accordingly continued the chace without intermission, keeping his fleet at the same time as much collected, the nature of a pursuit would admit of, in order to seize the first opportunity which a change of wind might afford, of bringing the enemy to a close and decisive action.

On the morning of the 27th of July, the French fleet were at daybreak, as much to windward, and at as great a distance, as they had generally been during the preceding days; and seemed also to avoid an action with as much industry as The vice-admiral of the blue was then rather more to leeward than his station required, and having his mainsail up, it obliged the saips of that division to continue under an easy sail. This induced the commander in chief to throw out a fignal, for several ships of that division to chace to windward. The enemy's fleet were then near three leagues towindward, and going off close by the wind with a pressed sail. The motive assigned for the signal was to collect as many of those ships to windward as could be done, in order to fill [E]up

up that interval between the commander in chief's ship and the viceadmiral, which had been occafioned by the latter falling fo far to leeward; and thus, by strengthening the main body of the fleet, to be ready for any chance that might occur of bringing the enemy to action. And the reason why the fignal was not made to the whole division instead of particular ships, was, that they then must have chaced in a body, which would have retarded the best going ships, by an attendance on their immediate commander. indeed the vice-admiral seemed so sensible of. the object of the signal, that it produced an immediate effect in the conduct of his own ship, by a confiderable augmentation of sail.

Some changes of the wind, and a dark squall, which came on before 11 o'clock, produced several evolutions in both fleets, the nature and effect of which are not easily explained to the satisfaction of It feems upon the whole, landmen. that some sudden thists of the wind, together with the unexpected and unintentional effect produced by an evolution on the French fide, being all improved upon by the most masterly efforts on the other, brought the two fleets so close, that they could not part without an engagement. But as this was a situation not fought, and a decision not wished by the French commanders, they endeavoured to evade its coniequences as much as possible; and accordingly, instead of shortening fail, and lying to, in order to receive the British sleet in a line of battle on the same tack, by which every ship on either side would have been fairly engaged with her

adversary in the opposite line, and the action could scarcely fail of being decifive, they suddenly put about on the contrary tack. By this manœuvre, the heads and course of the ships in each fleet, being directed to opposite points of the compais with those of the other, they could only engage as they passed, instead of lying fide to fide, so as to make an effectual

impression.

Thus it will be easily conceived, that in this course of engagement, any British ship that could fetch the head of the French fleet, would receive and return the fire of every ship from first to last in their line; which would have been still kept up by those that followed, until both fleets had totally passed each other. It necessarily followed of course, that those ships which engaged first, would be the soonest out of action; and that the continuance of each in it, must depend upon the part of the French line which the was able to fetch, and the consequent number of ships she had still to pass. Although this mode of fighting did not at all prevent the loss of men, or damage to the ships, yet it tended greatly to deter, it not totally to evade, the consequences incident to those circumstances; as it prevented the successful adversary from being capable of immediately pursuing with effect, either the blow which he had given to a fingle ship, or the general impression which he had made in the enemy's line. necessity which induced the British commander to bring on an engagement, and the determined perfeverance of the enemy in avoiding it, rendered him, of course, incapable of prescribing the terms.

The French began the engagement, by firing at a great distance at the headmost of Sir Robert Harland's divition, as they led up; who, on the contrary, did not return a hot until they came within a very close distance. The example was followed, or a fimilar conduct pursued, by the fleet in general, as fast as each ship could close up with the enemy; and notwithstanding their being necessarily extended by the chace, they were all foon in As the fleets passed each other very close on the opposite tacks, the cannonade was very heavy, and the effect considerable. The action lasted from first to last something about three hours. the French, in their usual way, directed their fire principally at the rigging, several of the British ships were a good deal crippled, and suffered confiderably in their masts, yards, and sails. The fire on their fide, which was principally levelled at the hulls of the enemy, was not deficient in its effect of another kind.

As soon as the commander in chief had passed the rear of the enemy, and that the smoke was so far cleared as to admit of any observation, his first object was to look round to the position of the ships which were already come out of action, and to consider of the best means of bringing on a close and general engagement, as foon as the remainder of the fleets, which were still fighting, had passed and cleared each other. He soon perceived, that the vice-admiral of the red, with part of his division, had already tacked, and was standing towards the enemy; but observed at the same time, that none of the other ships which were come

out of action had yet tacked, and that some of them were dropping to leeward, and seemingly employed in repairing their damages. His own ship the Victory, had so considerable a share in the action, as not to be in condition for immediate tacking; nor, if it had been otherwise expedient, could he immediately wear, and stand back on the ships coming up aftern of him out of the action, without throwing them into the utmost disorder and consusion.

This movement was however, performed as speedily possible, and notwithstanding the damages sustained by the Victory, she was not only the first ship that wore of the center division, and that got round again towards the enemy, but it was some time before the example could be followed, and not above three or four were then able to close up with her. In this fituation of the fleet, the admiral hauled down the fignal for battle, which he judged improper to be kept abroad, until the ships could recover their stations, or at least get near enough to support each other in action; and in order to call them together for that purpose, he immediately made the fignal to form the line of battle a-head, which is of all others, that confidered by seamen as the most forcible, and as commanding the most prompt obedience.

At this time the Victory was a-head of all the center and red divisions, and had time to unbend her maintopfail (which had been rendered totally unserviceable) while the ships aftern were endeavouring to get into their respective stations. As the vice-admiral of the blue commanded the rear-divi-

[E] 2

sion, which was of course the last out of action, he was at this time a-head of the Victory, which was now become his proper station; yet without regard to the signal, he (on whatever motives, possibly justifiable ones) quitted his station in the front of that line of battle for which it was slying, and passing his admiral to leeward on the contrary tack, whilst he was advancing to the enemy, never came into the line during the rest of the day.

The following is represented as being then the exact situation of the fleet. The Victory was the nearest-Thip to the enemy, with no more than three or four of her own divifion in any fituation, either to have immediately supported her or each other in action; Sir Robert Harland, with fix or seven sail of his division, was to windward, and ready for instant service; the viceadmiral of the blue was on a contrary tack, and totally out of the line; other ships were far astern, and five that were disabled in their rigging, at a great distance to leeward. Thus the admiral could not at that time, which was about three o'clock in the afternoon, collect above twelve ships to renew the engagement.

The French had now got to leeward, and under the expectation of being immediately attacked, had huddled most of their ships hastily together in a kind of cluster, in the operation of wearing, from whence they were gradually stretching out into a line of battle; but upon observing the exposed situation of those British ships which had fallen to leeward to repair their damages, it induced some alteration in their movements, and they began to edge away, with an

evident intention of cutting them off from the rest of the fleet. The admiral instantly penetrated into their defign, and the danger of those ships obliged him suddenly to wear, and to stand athwart the van of the enemy, in a diagonal At the line, for their protection. same time, he dispatched orders to Sir Robert Harland, to form his division at a distance astern of the Victory, in order to cover the rear, and to keep the enemy in check, until the vice-admiral of the blue should in obedience to the figual (which was kept constantly slying) come, with his division, into his proper station. These orders were instantly obeyed by the vice-admiral of the red, who was accordingly formed in the wake of the Victory, before four o'clock.

It was this evolution, which was afterwards made the foundation of one of those principal charges, which were brought against the admital, it being represented " as " carrying the appearance of a flight, and bringing difgrace " upon the British slag, by afford-" ing an opportunity to the enemy of claiming the victory, and of " publishing to the world that the fleet had ran away." it was also this movement, which some of the bravest and most experienced officers in the British service, and who were present at the time, declared upon oath, to have appeared, and to have been confidered by them, both then and after, as a great and necessary manœuvre.

In the mean time, the admiral perceiving that he was nearing the enemy, by the course which he steered for the protection of the crippled ships, and that the vice-

admiral of the blue still continued to lie to windward, and by so doing, kept his division back from joining him, and from supporting the fleet, he made a fignal for all ships to windward to bear down into his wake. This fignal was repeated by the vice-admiral, although he had not repeated that for the line of battle; but as he did not bear down himself, his repeating this fignal seems to have been peculiarly unlocky; it having been interpreted, by the ships of his division, as an order for coming into his own wake, and not for their going into that of the admiral.

These appearances of neglect of duty in the vice admiral of the blue, were attributed to the difabled condition of his ship, to which several witnesses were produced on his trial, and on the credit of which he was afterwards acquitted. The protection of the disabled ships being accomplished, and the French fleet continuing to form their line, ranging up to leeward parallel to the center division, it became the admiral's immediate and most urgent object, to form his as speedily as possible, in order to bear down upon them and renew the battle, whilst it could yet be done with full effect. He therefore, after having repeated the fignal for thips to come into his wake with no better effect than before, fent to Sir Robert Harland, to Uretch away a-head, and to take his proper station in the line; in which he was instantly obeyed, with the usual promptness of that excellent officer; and feeing the vice-admiral of the blue still to windward with his foretopfail unbent, and without any visible effort, either towards setting it to

rights, or for obeying that figual which had been so long slying, he sent Captain Windsor of the Fox frigate at five o'clock, with express orders to him, to bear down into his, the admiral's wake, and to tell him, that he only waited for him and his division to renew the battle. We must observe, that there is a considerable variation, with regard to the exact time at which this message was delivered, in the evidence given upon the trials of Admiral Keppel and Sir Hugh Palliser.

This order not producing the defired effect, and having before hauled down the fignal for coming into his wake, the admiral threw out that for all ships to come into their stations; and again, at seven o'clock, being wearied out with fruitless expectation, he made the fignal for each particular ship of the vice-admiral of the blue's division to come into her station in the line; but before they had complied with this fignal, night put an end to all further operations. will scarcely escape observation, that no signal had been particularly thrown out to the Formidable, the vice-admiral of the blue's own ship: this the admiral afterwards attributed to a motive of delicacy, founded on the long services of that officer, as well as a due compliment to his rank in his double capacity, both as a lord of the admiralty, and as the third in the present command; a delicacy which, whether justifiable or not, brought great inconveniencies on Mr. Keppel; postible erimination; and is not likely to be imitated on future occasions.

Although the French, by their drawing up and forming a line parallel to the British fleet, shewed a [E] 3 deter-

determination of sustaining an engagement, if they had been attacked, they, however, shewed evidently, that they were not at all disposed to urge matters to that final conclusion, by any act of their own; as they had it in their power to have renewed the engagement during every hour of the afternoon; and that with such apparent advantage, from a fituation of affairs which it does not feem could possibly have escaped their observation, that their missing the opportunity appears little leis unaccountable, than the strange circumstance from whence it was derived. Their conduct in the night would have afforded a confirmation of their indispofition to renew the engagement, it their preceding could have left any doubt upon the question. Three of their best sailing vessels were stationed at proper distances with lights, to divert the attention of the British fleet, and to induce them to imagine, that the whole French line still kept that position, in which it had been last seen at the close of day. Under this deception, and the favour of the night, the rest of their seet withdrew with the utmost filence, without lights, and without any other fignal, than the throwing up of some rockets, which appeared about ten o'clock, and made the best of their way to the port of Brest, for which place the wind was directly fair, and where they accordingly arrived on the following evening.

At day light, their fleet had got to fuch a distance, as to be only visible from the mast heads of a very few of the British ships, excepting the three fail we have mentioned, which were still within a few miles to leeward of some of the

The admiral threw out a nearest. fignal for four ships to chace them; but foon perceiving that two of these were not able to carry 10 much sail as would even countenance the pursuit, he soon recalled And taking into confideration the crippled state of his own ship, the distance which the French had gained in the night, their vicinity to their own coasts, and also reflecting, that whatever they might have suffered in their hulls, they had not apparently received any great damage in their method of flight, he concluded apon the whole, that he had not the smallest prospect of coming up with them, and that neither a general or partial pursuit, could have answerd any wise or beneficial purpose. On the other hand, he considered that a vain and fruitless pursuit of a distant and flying enemy on their own coast, with a large swell, and a fresh wind blowing full upon it, and a fleet of large and heavy ships, in the state his own was, would not only have been wantonly exposing it without end or object to great risque and danger, but would also be a misleading and defeating of its operations, by delaying the refitment which was necessary, for carrying on the future service with vigour and effect.

It must be observed, that the account of this action, and the preceding circumstances, is taken from the printed trial of Admiral Keppel. The affair has been fince agitated with violence and heat, between parties with whom we have no concern, and upon a subject of which we have not naval skill sufficient to form any judgment. as the evidence is that of the greatest seamen, and men of the highest honour, upon oath, is for the

the greater part uncontradicted, and received by competent and unimpeached foorn judges, we could not, without the groffest partiality or prejudice, receive it in any other way, than as it was received and decided on by that court in the trial. It is exceedingly rare for historians to be furnished with facts so established.

. The loss of men in the British feet, amounted to 133 flain, and 373 wounded. No officer was killed, and but very few woonded. Several private French accounts estimated the loss on their fide at 2000 in killed and wounded. Their gazette, published by authority, was very flow in giving any eftimate of the loss; they feemed to wait for the account from England; and at lenght fixed it at fome fmall matter more than that acknowledged by the British admiral on his ade. Other accounts, and not ill supported, carried the loss in killed and wounded on that fide, so high 24 3000 men. The French gazette, beades claiming the victory, describes with no small degree of facetiouinels, the atter aftonishment of the French admiral and of his ficet, upon finding themselves, most ###CCOUntably, and unexpectedly, in the harbour of Brest, instead of being, as they imagined, many leagues out at fea, and in full purfut of the enemy towards his own The publisher, however, confoles himfelf with the reflection, that fuch miffakes are, in certain cales, by no means uncommon, and

day, and by fome of our bravest and most experienced officers, that they worked and manageved their thips, with a degree of framanlike address and dexterity, which they never before perceived, in any opportunity they bad, whether of was or of peace, of confidering the maritime abilities of that people. Some have attributed this circumstance to the number of American feamen, who are supposed to have ferved on board the French fleet. We do not, however, know the fact to be at all founded, that there were any fuch number of Americans, at that time in the fervice of France, as could have been in any degree equal to the effect.

However unwilling we are to enter into any discussion of the fubject, the subsequent consequences of this oction render it necessary, that we should here take some notice of that conduct in the viceadmiral of the blue, which has fince been productive of so much public enquiry and judicial investigation. It feems to appear from fome of that fund of matter, which has fince been communicated to all the world, that the conduct of that officer, in not obeying the fignals or orders of his commander in chief, was so little consonant to the refolution which he had immediately displayed in the action, (which is admitted to have been equal, and by his friends flated to be even superior, to that of any other officer) that it excited the most general aftonifhment throughout the fleet. But as this aftonithment was mixed with, and a good deal founded upon, doubt and expectation, when thefe remained ungratified, and that no istisfactory explanation was afforded, that kind of friendly won-

der

[E] 4

ir id

ш

ĸ

der which was first excited, changeed, by no very abrupt transition, into a very high degree of dislike and resentment.

The situation of Admiral Keppel was more trying and difficult, than any, almost, that man can expe-The event of the day, and rience. the consequent escape of the French sleet, were to him, matters intolerably grievous. As the reward of confummate skill, and the most incestant industry, fortune, after five days pursuit of his enemy, presented him with one of those fair opportunities, which she so seldom offers, of doing the most figual fervice to his country, in its most critical exigency, and of raising his own name to the submit of naval renown and glory. To use his own words, he hoped to have made the 27th of July, " a proud day to England." All these mighty advantages to his country, and glorious rewards to himself, were, just when they appeared within his grasp, unaccountably ravished from The action of the day was homourable to British courage, and to British skill; but the fruits of both were lost. The victory was not decifive; and the whole French squadron was in lafety in its own harbour. Murmurs began to prevail through the whole fleet. In Plymouth, the failure of a complete victory was attributed to the admiral's oldest and closest friend, the vice-admiral of the blue. don his own conduct was criticised.

The admiral had seen too much of men and of service, not to be disposed to make great allowances, for those sudden, and often unaccountable, momentary weaknesses and failures of the mind, to which all mankind, in a lesser or greater

degree, are at certain times liable. His veneration to his profession, and to the honour of the navy, which he carried to a pitch bordering on enthusiasm, rendered him exceedingly tender, with respect to calling in question the names of Such charges officers of distinction. or enquiries, however founded, are apt to leave a stigma behind: and in any case, he would have thought it hard, that the well-earned meeds and the fair character, obtained in a life of hard and painful service, should at once be blasted, by the rigid, construction of a single act, or the lapse or weakness of a moment. He had no doubt of the bravery of his vice-admiral, and he did not think error or mistake sufficient grounds for subjecting him to such an ordeal. His nature besides, disposed him to think favourably of others; and a modification of the same disposition, rendered him intractable, in conceiving evil of his friends.

If on the other hand it might be justly said, that no private considerations or motives whatever, were at all to be put in competition with those public ties, which were to operate upon him, as a commander in chief, a statesman, and a lover of his country; it seemed not difficult to shew, that in this instance, his public duty happily coincided with his natural disposition; and that a temperate conduct was the A great trust most perfect policy. and no less public expectation, was reposed in him. Untoward and unhappy as the present was, it was still the business of a wisc man to conform himself to his fituation; and it was no less the duty of a good citizen, than it must be the inclination of a man, who held the the interests of his country dear at his heart, not to be warped by any bye motives, or by any personal resentments, from using every means to convert that situation, such as it was, to her greatest possible benefit.

The great national object now before him was strait and direct; and that confifted, in the using every possible exertion for rendering the fleet fit for immediate service. This was only to be attained by temper and unanimity. A retrospect into the conduct of the viceadmiral of the blue, must necesfarily have suspended the whole operations of the fleet; and that not only in the midst of a campaign. but in one of the most perilous seasons this country ever faw, and when every moment seemed liable to the production of the most extraordinary events. The high degree of power and favour in which that officer then stood, and the official, if not court support, which it was well known he would receive on any question, all tended to render the measure still more ineligible, and to point out the pernicious consequences with respect to the service, and of course the public detriment which it must produce.

The commander in chief accordingly, with admirable temper, and no less prudence, conformed his conduct to the necessity of his fituation; holding up the public security and interests, as the only objects of his direction. He made of the blue; and what seemed much more fingular, that officer, who could not possibly be ignorant of some considerable part of the the admiral himself.

and whose honour seemed to be particularly touched by the public message delivered by Capt. Wind-. for, as well as by other circumstances, did not offer any apology for, nor enter into any explanation

of, any part of his conduct.

The public letter, giving an account of the action, which the admiral was necessarily to write to the Admiralty, and which was of course to be published in the Gazette, became, however to him, a matter of no small difficulty. was not indeed easy to write such an account of that transaction, as would be fitting to meet the public eye, and to undergo its investigation, without a recital of particulars, which it would have been contrary to the system of conduct he was determined to pursue, to have brought into notice. however, chose rather to submit a letter to the censure and criticism of the public, than to depart from that line of action which he had laid down. The letter was very short, very general, and very barren of information. It stated facts to far as it went, threw no blame upon any body, and commended the bravery of the officers in general, and of the two viceadmirals in particular.

This approbation was, ever, afterwards observed to be only applied to the particular circumitances, and to the immediate time of the action; the subsequent transactions of the afternoon, were, in general, thrown into the shade; no charge against the vice-admiral and the causes that prevented a renewal of the engagement, were left in such obscurity, as drew no small share of public censure upon general effect which it produced, Faulknor, who was the bearer of

this

74] ANNUAL REGISTER, 1779.

this letter, was, however, entrusted with a verbal message from his admiral to the first lord of the admiralty, which seems evidently to have been intended to open the way for farther explanation, if the marine minister had required it; and which the obscurity and deficiency of the public letter seemed to demand. The message, (which the captain repeated twice to the minister, without its being productive either of observation or enquiry) was in the following words, viz. "Give my compliments to Lord Sandwich, and tell him I have more to say to him than I think of it proper to put in my public " letter; and if it is his lordship's of pleasure to ask me any question, " I am ready to wait on him."

The admiral having left a proper force to protect the hameward trade, returned to Plymouth to refit. soon experienced the benefit arising from the wife and temperate conduct which he had purfued. Unanimity prevailed among the officers, and every exertion was used in getting the fleet again ready for sea. To use his own words upon his defence, by using the discretion which he thought was in him, he preferved concord in the fleet, promptitude in the service, and dignity to the country. In the mean time a letter was received from the Admiralty, declaring in the most explicit terms, his majesty's full approbation of the admiral's conduct; accompanied with the congratulations of the lords of the admiralty upon his victory.

The fleet afterwards kept the sea, as long as the approaching winter season could admit. The French fleet had also got out of Brest; and still pursued the same principle of conduct in avoiding action, which they had hitherto manifested. Instead of directing their course where they were sure of encountering an enemy, they made their way to the southward, where they were as certain of meeting none; and where their cruize could answer no other purpose than merely that of parade. Thus whilst they were loitering about Cape Finisterre, their own coasts and the bay were totally abandoned to the British sleet, who were in vain endeavouring to obtain intelligence And by this means, of them. whilst our own trade arrived from the different quarters of the world, in a state of security, scarcely exceeded by that of peace, the French commerce became a prey to our cruizers, in a degree, which few former wars have equalled for the time.

The reception which the admiral met with upon his return from fex, both at court and at the admiralty, equalled the most fanguine expectations which he could form, from that approbation already expressed of his conduct. By his Majesty, he was honoured with the most gracious expressions of satisfaction, favour, and esteem; and the behaviour of the first lord of the admiralty, was not less flattering in its degree.

C H A P. V.

Speech from the throne. Amendment moved to the address in the House of Commons. Great Debates. Amendment rejested upon a division. Opposition to the address in general, in the House of Lords, but no amendment Address carried upon a division. Motion to address the Crown, in the House of Commons, for a disavorwal of certain passages in the late manifesto issued by the Commissioners at New York. The motion, after long debates, rejected upon a division. Similar motion by the Marquis of Rockingham, likewise causes much debate, and is rejected upon a division. Protest. Circumstances, which tended to the rendering the late action off Brest, a subject of parliamentary discussion. Admiral Keppel, being called upon, gives some account of that business in the House of Commons. Answered by Sir Hugh Palliser. Reply. Court martial ordered for the trial of Admiral Keppel. Conduct of the admiralty censured and supported: Question, relative to the discretionary powers of that board, much agitated. Bill brought in and passed, for the bolding of the trial of Admiral Keppel on shore, (in consideration of bis ill state of bealth) instead of its being beld a board ship, as before prescribed by the law. Recess.

MANY circumstances contri-buted to render the meeting Nov. 26th. of parliament, at the opening of the session 1778. on which we are now to enter, an object of peculiar expectation to the public. The close of the first campaign of a war with France, opened a wide field for discussion, as well as speculation. The principal officers who had held commands in America, were now returned to their seats in parlia-The Commissioners appointed under an act of the last session to settle the disturbances in America, were likewise returned. And although the unfortunate event of the propositions was well known, much information, with regard to the military, as well as to the civil affairs of that country, was expected from the ability and stations of the gentlemen who were joined in the commission. An opinion of

certain differences between the commissioners and commanders, excited the curiosity of all men; people being ever sure to look on with a peculiar interest, when the importance of public questions is enlivened by a mixture of personal anecdote.

The speech from the throne was replete with complaints, of the unexampled and unprovoked hostility of the court of France. With regard to the events of the war, it was short and inexplicit. Grounding the hopes of success on suture exertions, on the state of preparation, and on the spirit of the people, more than on the actions of the campaign; which were alluded to with a coldness, that might easily be construed into censure. was, however, taken of the protection afforded to commerce, and of the large reprisals made upon the injurious aggressors.

The

The professions of neutral powers were represented as friendly; but their armaments suspicious—The failure of the conciliatory measures, was regretted—The necessity of active exertions by sea and land, pointed out by the situation of astairs, was urged in general terms, without specifying any plan of operations—With regard to the American war, a total silence was observed.

The address of the House of Commons, with the usual profesfions of attachment and support, repeated, in nearly the same expressions, the sentiments contained The opposition in the speech. moved to substitute, in the place of part of the address, the following amendment-" To assure his Majesty, that with the truest zeal for the honour of the crown, and the warmell affection for his Majelty's person and family, the House was ready to give the most ample support to such measures as might be thought necessary for the desence of their kingdoms, or for trultrating the designs of that restless power, which has so often disturbed the peace of Europe; but that they thought it one of their most important duties, in the present melancholy posture of affairs, to enquire by what fatal councils, and unhappy systems of policy, this .country had been reduced from that Iplendid situation, which in the early part of his Majesty's reign, made her the envy of all Europe, to such a dangerous state, as that which had of late called forth our utmost exertions, without any adequate benefit."

It was contended on the fide of opposition, that if the unanimity, so strongly recommended by the

proposers of the address, was indeed an infallible resource in the ruin of public affairs, the minillers, it must be owned, had uled every means to induce the people to concur in its necessity. But, they said, that the utility of a general concurrence in any meafure, depended entirely upon the wildom of the measure in question. That the approbation of measures must be either retrospective, or prospective. With regard to the first, no plans already executed, could be affected by any subsequent difference of opinion. With regard to the latter, as no plan for the conduct of the war was announced in the speech, or even hinted at by ministers, to agree to unanimity upon an object not yet proposed, was perfectly abfurd. Then what was to induce the House to unanimity, but the recommendation of a fet of men, who were known to agree with each other in no one article, of disposition, principle, council, or action? Unanimity, they said, was a plausible and specious word, but the thing could hardly ever exist; because the wife and the ignorant would always differ; and if it ever should take place, infinite mischief would eqsue, as that could only happen through the prevalence of obltinacy, which is the natural and constant companion of folly. That, in the present instance, it would serve only to give fanction to the past, and energy to the future blunders of administration; and to commit the fate of the nation in a new and still more dangerous war to the inability of the same men, who had in so wretched, and so ruinous a manner conducted the old. That, to concur in an address, which conveyed

conveyed an idea of the slightest satisfaction in the present ministers, instead of producing vigour in our own exertions, or terror in our enemies, would only serve to fill Englishmen with despair, and Frenchmen with joy and considence, at seeing that the deliberative government was as abject as the executive was contemptible, and that the incapacity of the one, could only be equalled by the servility of the other.

Confidering the speech from the throne, merely as the words of the minister, it was infisted, that it advanced an absolute salsehood. For the speech asserted, that our arms had not been attended with the faccels which the justice of our casie, and the vigour of our exertions, seemed to promise. they infilted, that the foccess was far greater than could have been expected, confidering the inferiority of our fleets, and the shameful tardiness of our preparations. That, taking in these circumstances, our escaping in any manner from rain or disgrace, might well be accounted as a very high degree of good fortune; and indeed, as fat exceeding all rational expectation. And that consequently, " the speech not only asserted a falfehood, but that it also threw a false, unjust, and illiberal slander, on the commanders in the service of the crown; loading them with a centure which ought to fall on the ministers alone."

They further urged, that the speech included no less than a direct libel upon parliament, in calling the late measures which had been taken to pacify America, the plans of parliament. That the arrival of the commissioners at Phi-

ladelphia, without any knowledge of the intention to evacuate that city, had saddled them from the beginning with the distrust which was held of their immediate employers, and had taken away that appearance of openness, and that opinion of confidence and authority, which form the necessary foundation of every treaty and every pacification. It was asked, whether the glaring absurdity of that conduct was the plan of parliament? Or was parliament called together every winter for no other purpole, than to relieve the ministers from the yearly burthen of disgrace, which was the certain result of all their measures.

The conciliatory propositions themselves were arraigned, as being at once humiliating to England, and unsatisfactory to America. But, it was afferted, that notwithstanding its desects and absurdity, the adoption of that scheme could not be said to be wholly useless—For it had cut up by the roots, every faliacious argument, by which ministers had beguiled the nation into the satal American war, by the universal surrender of all its objects.

With regard to the system to be recommended in the conduct of the war, opposition seemed to hold no second opinion, and to call out, as with one voice—Attack France—France, said they, entered into alliance with America from motives of interest. When she finds herself vigorously attacked, and feels the heavy impressions of war, with all their consequences and distresses, in her own dominions, she will grow weary of the prospect of remote and uncertain advantages, and abandon an ally, from

Whom

whom she receives nothing but a participation of war and calamity. -On the other hand, they faid, the spirit of America is sustained by the powerful incentives, both of liberty and self-preservation. Every effort we make to fubdue that spirit, drives our colonies still more into the arms of France; who, in the mean time, feels no inconvenience from the protection she af-And consequently, every drop of English blood which we shed in America, serves only to cement an alliance, fatal to the power and happiness of the British empire.

On the other fide, the friends of administration seemed rather to follow the example of the speech, by declining to enter into a discussion of the policy of the American war: either, because it was not thought prudent to avow the determination they had made in their own minds, or that they chose to leave themselves open, to embrace whatever system of conduct, the necessity of affairs might hereafter require. But upon the past conduct of the war, and the preparation and distribution of the armaments employed in the summer, they entered into a detailed justification.

They said, that if the seet under Admiral Byron, had been sent out earlier than it was, an opportunity would have been given to the seet under M. d'Estaing, to have joined that at Brest; and thereby, that France would have obtained a superiority in the Channel. That such a conduct would have lest us in a state of weakness at home, of which it would be impossible that the enemy should not take advantage. That, by maintaining the superiority in the Chantaining the supe

nel, we prevented France from making our own seas, the scene of her exertions: and in a manner obliged her to detach and divide her forces. And, what nation would not, if she could, keep the seat of war at a distance from her own territories?

It was likewise contended, that the evacuation of Philadelphia, was a measure dictated by the foundest principles of policy. they said, that on the accession of France to this war, the defence of our own islands, and the attacking hers, became an object, though not, as the opposition would have it, an exclusive object. That this of necessity drew off a considerable body of our troops; and the grand army being thus weakened, it had been judged necessary to diminish the extent of our line, in order to unite and compact our forces. That it was too well known to require argument or proof, that the operation of a closely united force was far more efficacious, serva ing at once to impress terror, and to overpower refistance, than if it had been weakened by extension and distance. That, to garrison every town on the continent of America, was an undertaking for which no army could fuffice; and that an attempt of the fort, was certainly not the method, by which any man could hope to crush the present rebellion. It being therefore necessary to compact the forces into one body, the only question was, when one or the other must be adopted, whether New York or Pensylvania should be abandoned? And, said they, what reafon could be assigned for collecting. the whole army into Philadelphia? The situation is not near so central with

with regard to the colonies as New York; nor is it near so convenient in other respects, whether with regard to the co-operation of the seet, the receiving of supplies, or to the general operations of the war.

These arguments must be allowed to be satisfactory with regard to the measure in question. But the opposers of administration were too acute, not to turn them to their own advantage. They accordingly afferted, that the justification of the individual measure, was the full condemnation of the whole fystem from which it arose. That the advocates of the American war, had themselves now fully demonstrated the impossibi-For they had lity of fuccess. shewn, that every advance which the army could make in America, reduced it to this alternative, either, by retaining the acquisition to divide and debilitate its own Brength, or elfe to stand exposed to the difgrace and mortification, by treading back their own steps, to thew the inutility of all their labours. That no man could dream of conquering a continent, by fitting down in a lingle town. That therefore, while the nation perfifted in carrying on an offentive war in America, whether our army advanced, whether it retreated, or whether it stood still, the effect would be the same; a fruitless, hopeleis, expensive, and cruel, becaple unnecessary, war.

Although the ministers were oblerved to decline entering into a subject, which had already been so often, and so thoroughly debated, and upon which their adversaries always shewed a desire to press them, there arose from a

new and unexpected quarter, an advocate for the continuation of the fystem of coercion. One of the gentlemen employed in the late commission to America, whether the information he received in that country induced him to confide in the operation of force, or whether a nearer view of the object, mixed with a sense of disappointment at the failure of one plan of pacification, had animated him with the hopes of conquest, in a long speech, here and there interspersed with some expressions of diffidence, strongly urged the continuance of an offensive war with America.

He said his view had always been, that force should accompany concession, and that the Americans should see in this country, a manly determined spirit of perseverance: that thereby they might be moved to consider well, between the evils of war in a dubious contest, and the immediate advantages of peace upon honourable and advantageous terms. He said, it was necellary to confirm the minds of your friends, as well as to terrify your enemies; that he believed two-thirds of the people of America, fully defired to return to their antient connection with Great Britain; that nothing but a furrounding army, and the distidence they had in the support of government, prevented that spirit from breaking out into acts hostility with the Congress. And that therefore the failure of the conciliatory plans, was to be imputed to the sudden retreat of the army from Philadelphia, and not to the weakness of the English interest there.

Notwith-

Notwithstanding the general tendency of that gentleman's speech in favour of the views of administration, he declared, that he did not imagine the present ministers were able to draw forth the resources which England afforded, or to apply them with ability sufficient, to compais so important an object as the reduction of the discobedient provinces. But on other hand he was afraid. that those who were likely to succeed them, although they might be possessed of greater capacity, and more of the public confidence, were too desirous of surrendering all the objects of the contest, without any struggle, at all equal to the antient reputation of England. That, he acknowledged the situation to be extremely perilous, and the danger great; but that on such occasions, the noble qualities of the human mind, perseverance, fortitude, and the love of our country, shine in their greatest lustre.

After a very long and vehement debate, the House at length divided, about half past two in the morning, when the amendment was rejected by a majority of 226 to a 107.

The address in the House of Lords, was necessarily supported upon much the same ground with that of the House of Commons. The numerous public and private virtues of the sovereign were largely expatiated upon, in order to place in the strongest point of view, the obstinacy, ingratitude, and baseness, of his rebellious subjects in America; whilst the royal good faith with respect to foreign nations, and his Majesty's religious adherence to treaties, were no less strongly contrasted with the per-

fidious conduct of France. The usual arguments were used for unanimity and perseverance in the American war; for the first, from the national danger; for the second, from the loss of honour and safety which must be sustained in abandoning that great continent to France.

On the other fide, the lords in opposition proposed no ment to the address; but condemning it entirely in all its parts, (as they did the matter of the speech itself) would put an absolute negative on the whole. Here too the topics were in general fimilar to those used in the Enquiry, they said, other House. full and complete enquiry, into the conduct of the war, and into the real state of public affairs was now the proper and immediate object of parliament. This was no season for sending the voice of adulation to the throne. It was now a matter of necessity, that the eyes of the Sovereign should be opened to the real Rate of his affairs; and it would be dishoned to himself, as well as treason to the state, to conceal any part of the dangers of his fituation. The arguments used for promoting the address, appeared to them to be cogent arguments for enquiry. The loss of our honour, the danger of the nation, the discontents in every part of the British dominions, and the diffentions in the navy and army, originating in the ill conduct of government, called for discussion and remedy. They and could only originate, from a weak and a wicked system of government. A system founded upon false principles; upheld by obstinacy, folly, and error, if tending by its own nature to rain and destruction. This fystem, they said, must be totally estaced: new men and new measures must be adopted, before any success can be rationally expected in war, or security or honour in peace.

The lords in administration could not refrain from expressing their abouinment at the new and extraordinary measure, of attempting to reject the whole of the address to the throne, without a substitution of any other in its room. An amendment, they faid, of any of the parts, might have been expeded; or if it had even extended to an alteration of the whole, both as to matter and purpose, it would not have excited furprize: bot the attempt to put a direct and unqualified negative upon the whole address, without offering or intending any other in its room, was a meafore, probably unequalled in the history of parliament. It was fitting, they faid, to examine what degree of confequence the import of this unconditional negative would amount to. His Majesty comes to parlia. ment to feck the aid of his people, for repelling and defeating the rerhdious and dangerous deligns of France, openly leagued with our own rebellious subjects, for the fobversion of his state and

tween this country and America, were now, they faid, totally fhifted; it was no longer a question, as formerly, whether that continent was worth the rifque and expence of recovering, as a part of the British dominions; but the question now was, whether we should fink without resistance, udder the joint force of France and America, and fubmit to whatever terms they were pleafed to dietate, or whether we should endravour by the most vigorous exertions, at once to punish our traiterous and perfidious foes, and by diffolving their unnatural conjunction, to restore the former unity, power, and fplendour of the empire. For as affairs now flood, it was impossible, they faid, to separate France and America, even in idea, as to any purpofe or confequence of the war; and thus, every concession made to the latter, would either afford a direct and fubstantial aid, or convey a base submission to France,

It was by no means a fair inference, they faid, that because from adverse accidents, and circumitances not foreseen or provided againft, we had not yet met with that degree of fuccess, which our exertions afforded reafon for expecting, all coercion was therefore impracticable, America irretrievably loft, and this country incapable of longer fup-porting the war. The real facts would be found in the direct reverse of these propositions. merica was yet far from being invulnerable; the refources of this country were still great; and her fpirit was in no degree broken. They said also, that it was equally illiberal and unjust, to charge [F]thois

ANNUAL REGISTER, 1779. 82]

those accidents and misfortunes, to which all military events are subject, to the want of judgment or ability, in the defign or conduct of the war.

Upon this part of the subject, they entered (as the ministers had done in the House of Commons) into some detail, and some defence, of past measures and conduct. The first Lord of the Admiralty directly denied the fact, as to that fallen, and almost annihilated state of the navy, which had been so strongly urged by a noble lord (in his professional line) on the other side. He acknowledged, that we had been much too flow both in our naval and military preparations; but this tardiness he attributed, partly to the nature of our government, partly to a mistaken lenity, and partly, to the affording a greater degree of credit to the assurances of other powers, than the event shewed they were entitled to.

The lords, on that side, said, that they had no objection to enquiries, provided that they were properly founded, specifically directed, and brought on in a proper But they likewise ob-. ieaion. that enquiries into the ierved, conduct of men in high stations, were matters of a ferious nature; and as they necessarily implied foundation tor ceniure. should not be lightly taken up, nor wantonly played with. They concluded, that the speech imported no more, than a communication to parliament of the danger of the kingdom from the perfidy of France: the address went no further, than a general declaration to support his Majesty in a war against France; a direct and

unqualified negative to the whole, would not only amount to a refufal of that support, but would likewife include a submission to all the machinations, claims, or injuries, to be framed or offered by that Could it then iniidious power. a question with that House, whether they should assure his Majesty of their ready support under present alarming circumstances? If a war with America, should be involved in a resistance to the perfidious and insolent demands of France, that was not imputable either to the ministers, to parliament, or to the nation at large. The war was just; and it was now become a matter of absolute necessity.

To this the lords in opposition replied, that refusing to address conveyed no negative to the support of any system of war or politics. But it conveyed, what they meant it should convey, their fullest determination, not to give the smallest degree of credit or support to the present Ministers, of whose incapacity for the conduct of any system, they were already (as they faid) convinced, by the most conclusive and the most

melancholy experience.

The address was carried upon a division, by a majority of 67 lords, who supported the motion, to 35, who proposed a total negative to the whole.

A copy of the late valedictory manisesto and proclamation issued the Commissioners in New-York, having appeared in one of the public papers foon after the meeting of parliament, some of those passages in that piece, which we have already had occasion to take notice of, drew the attention

of the opposition in both Houses, and induced the Marquis of Rockingham in the one, and Mr. Coke, member for Norfolk, in the other, to move for authentic copies of the original instrument, as a foundation for an enquiry into the subject.

A copy of the pro-Dec. 4th. clamation of the 3d of October being accordingly laid before the House of Commons, Mr. Coke moved for an address to his Majesty, expressing the displeasure of parliament at certain passages of the manifesto, which, being pointed out as particularly exceptionable, were recited in the body of the proposed address; and declaring it to be the sense of the House, that the Commissioners had no authority whatsoever, under the act of parliament, in virtue of which they had received their appointment, to hold out any fuch declaration: nor could that House be easily brought to believe, that they had derived any such authority from his Majesty's instructions. That those Commissioners were sent only to make peace, and not to dethare the mode of making war; even if the mode itself had been less contradictory to the whole purpose of their appointment.

It was therefore requested, "that so much of the manifesto as contained the said declaration, be forthwith publicly disavowed by his Majesty, as containing matter inconsistent with the humanity and generous courage, which, in all times, have distinguished the British nation; subversive of the maxims which have been established among christian and civilized communities; derogatory to the

"dignity of the crown of this
"realm; tending to debase the
"spirit, and to subvert the dis"cipline of his Majesty's armies;
"and to expose his innocent sub"jects, in all parts of his domi"nions, to cruel and ruinous re"taliations."

The motion was strongly supported by the opposition in general, as well as by the mover, upon the ground of good policy and self-preservation, as well as on the principles of humanity, civilization, and religion. They faid, that if we intended to set the example, of overthrowing all the rules and compacts, which civilization and christianity had established among mankind, for lessening the horrors and alleviating the calamities of war, by the introduction of a new and cruel system of hostility, it was absolutely necessary, that we should be armed at all points, and every where prepared, to abide the issue, and to repel the consequences. They asked, if this was the case at present?

They stated, that the northern coasts of England, and all those of Scotland, were exposed to the ravages of the most contemptible That the kingdom of enemy. Ireland, was on every fide open and defenceless. That fingle American privateers had already successfully landed on our coasts; and that even the Houses of our nobility had not escaped their depredations. These were armed with all the powers necesfary, for carrying the "extremes of war and desolation" into their severest degree of execution; but even these freebooters, who are of an order generally considered as being in a great measure [F] 2

lawle's in war, felt themselves bound by those compacts established between nations, and respected those laws and rights of humanity, which this once great and civilized nation, not only intends to violate, but threatens, by the mouth of her Commissioners, so far as in her lies, totally to annihilate. They, however, found themselves happy, they said, in having an opportunity of declaring to their country and to posterity, that they had no share, in bringing forward the calamities, which an avowal of the inhuman and barbarous principles of the manifesto must draw upon the nation.

This war, they said, had been infiduously and constantly called by Ministers the war of parliament; but was parliament to be loaded with the obloquy of conducting it in a manner, which could only fit the ideas of a Cherokee or Onondago savage. Parliament had held forth the mild terms of peace; but surely it must be equally false unjust, and confidered as a libel of the bitterest nature, to charge it with calling to its assistance the tomahawk and scalpingknife, as instruments of reconciliation; or of threatening death and desolation to the innocent multitude in America, if they did not perform impossibilities. For fuch, they said, were the conditions annexed to the threats held out to them. The multitude, if they would escape the extremes of war, were immediately to abandon home, country, property, all the natural connections, and all the commodities of life, and emigrate from the remotest parts, through roads which they would not be allowed to pass, and countries vite all the renegadoes of France

which they would not be permitted to enter, until, in despite of these insuperable bars, they had arrived at New York, (where they could find neither room nor entertainment) there to accept conditions of peace from Commissioners, who were themselves actually enduring some of the evils of war, being that up withthe limits of a garrison, beyond which they durft not shew their faces.

An officer, of high family, rank and distinction, who had lately returned from America, expressed his condemnation of the measure in question, as well as of the Ministers, with whom he charged it to originate, in terms of unusual vehemence. He faid he could not bear with an even temper the indignity offered to his profession, by an attempt to convert foldiers into butchers, assassins, and incendiaries: He liked honest open against his enemy; but he could not endure the abominable idea, of sheathing his sword in the bowels of age or innocence; still lefs would he tarnish the lustre of the British name by acts of barbarity, in obedience to the mandates, or in fulfilling the defigns, of the most infamous administration that ever disgraced a free As a British senator, country. and still more particularly, as the representative of a great manufacturing, trading, and maritime county, which was peculiarly exposed to the retaliation of an enemy, he should think he ill discharged his duty, if he did not with his utmost power oppose a system, which would not be more disgraceful than ruinous in its effects; a system, which would inand America, to ravage our coasts, burn our towns, and destroy our manufactures; and which would justify them in every act of enormity and cruelty, even to the butchering in cold blood of our helpless women and children.

It was pretty generally and strongly asserted on that side, that no peace could ever be derived from the present Ministers. That they had already poisoned and polluted all the sources of conciliation. And that, as they had long since forfeited all considence and opinion with the world, so there seemed to be a common union of mankind, in shutting them out from all negociation, treaty, or connection.

On the other fide, the Ministers, and their immediate friends, expressed the utmost assonishment, at the forced and unnatural construction which was put upon the words of the declaration, and the unaccountable manner in which its plain sense was attempted to be perverted. They declared, that they had never feen a more innocent, humane, sober, conscientious, piece of writing in their They considered it merely, as a fenfible well - meaning address to the Americans, warning them of the dangers which they must necessarily incur by an obstinate perseverance in their rebellion, and particularly in their unnatural connection with France. That they were not to expect that lenity in future, which they had hitherto - experienced during the course of the war, while we still considered them as sellow-subjects, whom we wished to reclaim by the most singular

mildness, clemency and indulgence. That nothing more could
be fairly inferred from those
words which were tortured into so
unaccountable a meaning, than
that America, in consequence of
its leaguing with our inveterate
enemy, should no longer be treated
as a British country, but as a part
of the dominions belonging to
France; as the Americans were
by their alliance become French,
it could afford no cause of surprize or complaint, that they should
be considered and treated as Frenchmen.

The Ministers denied in express terms, their intention of introducing or encouraging any new species of war in America, which should differ from the general practice in Europe; and declared that they reprobated with as much detestation, as those gentlemen who seemed so much alarmed, every idea of hostility that militated against humanity, or which went to the subversion of those laws of civilization, that had been calculated to smooth the rugged face of war. Wanton cruelty, they said, could neither be patronized by the crown, nor encouraged by any Briton: No British Minister would dare to send fuch orders to a British army; nor no British army ever would, or ought, in any case, to obey them, in the commission of acts of wanton barbarity. But they would not admit, that the burning of a warehouse converted into a battery, or the destruction of houses or towns, that were become repositories of military stores, or used as places of arms, could at all come within the description of $[F]_3$

cruelty or barbarity. Such acts had been always practifed by the most civilized nations in Europe; and every thing that could be attempted with a prospect of success, in order to distress an enemy, and to disable him from injuring his adversary, had at all times been held justifiable by the laws of war, and had been confirmed by the practice of all nations. at home, did not the laws of England allow us, in case of invasion, to waste and destroy our own country, wherever the enemy directed his progress, in order to prevent his obtaining provision or forage? and can a doubt then be entertained, as to the justice or right of exercising the same authority, in destroying the country of our open and avowed enemy?

On the other fide it was infifted, that as there was no mistaking the words, so there was no possibility of explaining away the obvious fense of the declaration. Commissioners had declared, that the mode of war was to be totally changed; that it was now to be conducted with a degree of rigour unknown: before horror of they had hitherto refrained from the extremes of war and the defolation of the country:" the change denounced could be no other, than the carrying of these to their utmost extent. could not be pretended, with any face or appearance of truth, that the rigours of hostility had not hitherto been cerried on our fide to the utmost limits, which the laws and rights of war authorize among civilized nations. We had even already acquired an ill name throughout Europe, under the

those limits. If we had hitherto forbore nothing that the practice and rights of war could authorise, the plan now to be prosecuted must go directly to cancel those The laws of war were laws of limitation: for war was constantly to be limited by necesfity, and its calamities and ravages were to be measured and bound in upon that principle. But the extremes of war, and the desolaof countries, went beyond all limitations; and as no necessity could warrant them, they could neither be justified or excused, upon any ground of reason or argument. They supposed a case, to shew the line between the extremes and limitations of war. would, for example, be right and desensible, because it would be necessary, to destroy any fort, garnfon, or town, which afforded immediate strength to the enemy, and enabled him to annoy you in the pursuit of your object; it would be proper to burn any house from which the enemy fired you; the necessity justifies the measure; but it would not be lawful, right, or pardonable, to burn any house or town because it might happen, at some future time, to afford shelter or strength They concluded, to the enemy. that, although the extremes of war, and desolation, were well-sounding words, they were dreadful in their meaning and effect; went to no less than the murder of man, woman, and child, the destruction of countries, and the final annihilation of humanity, or they meant nothing. Nor would the consequences be less fatal to those who introduced so odious and imputation of having exceeded inhuman a system, than to the people people against whom its effect was directed; as all mankind would naturally combine against a nation, which, throwing away every shadow of principle, would venture to recal into the world, all the forgotten cruelties of barbarous ages, and all the horrors of uncivilized war.

While the opposition were thus contending, that the words of the declaration clearly contained that certain and precise meaning which they assigned to them, and that the Ministers as strongly denied their bearing or conveying any such signification, justified the Commissioners, as well as themselves, from the imputation of holding or avowing so horrid a doctrine, and reprobated, in terms no less strong than those used by their antagonists, the principle upon which it would have been founded; the debate suddenly took a new turn, from a circumstance, which was probably as little expected on the one side as the other.

This was an open acknowledgment, by the only Commissioner who had yet returned from America, that every charge made by the opposition against the proclamation, were fully founded in point of fact, both as to principle and doctrine; at the fame time that he defended and justified the measure as well as the principle in all their parts, upon the ground of found policy and necessity. He said, the proclamation certainly did mean a war of desolation; it meant nothing else; n could mean nothing else; but the measure was right and necessa-

ry; regretted he was not on the spot to give it his fanction; and after a violent condemnation of the Congress, declared that no mercy ought to be shewn to them; and that if the infernals * could be employed against them, he should approve of the meafure.

This avowal of a doctrine and fact, which the Ministers and their friends had so totally disclaimed and denied, and confirmation of an interpretation, which they had fo positively charged to the virulence of party, and the ingenious malice of their adversaries, could not but produce some little embarrassment. It was impossible to support a principle which they had. fo recently and so totally reprobated. They accordingly abandoned both that, and the gentleman by whom it was avowed and justified, to the mercy of the opposition, without the smallest interference in behalf of either.

Both the generals who had returned from the American iervice, voted for the address, and condemned the supposed cruelty charged to the proclamation. this debate was particularly diftinguished, by the unexpected and direct attack made upon the American Minister, by the late commander in chief upon that continent. That general, after feeming to attribute the attacks, made upon his reputation and character, to the lenity which he had practifed in the profecution of the war, and observing, that if these did not originate from Ministers, they, at least, were not discouraged or contradicted by them, al-

A fort of machines used for the destruction of towns in the wars with France, towards the close of the last century. though

though they had those means of information in their hands, which fully shewed their injustice and falsehood, entered into a detail of various matters of complaint, which he laid against the noble lord at the head of the American department, relative to his conduct with respect to himself, and to the command with which he was entrusted in America. To these he charged his refignation of that command, and strongly urged, (as did likewise his noble brother) that a parliamentary enquiry should be instituted, in order that the conduct both of the commanders and the minister should be fully examined, justice done on all sides, and the nation acquainted with the true cause of that failure of success, which it had hitherto experienced. He concluded his speech with a free declaration of his own private opinion, amounting to no less in import, than that neither a happy restoration of peace, mor a fuccessful prosecution of the war, could ever be hoped for, while the conduct of American affairs, was continued in the hands of the prefent noble fecretary for that department.

Minister seemed · The noble aftonished at this unexpected 'attack, and entered into a vindication of his conduct with respect to the general, so far as his memory could admit upon so sudden an occasion; totally disclaiming all intention of injury, and all defign of neglect. As to the conduct of the war, if it had not been as successful as might have been wished, it was not only doing him an injustice to suppose him the cause of our miscarriages, but it was suppoing him of much more confe-

quence than he really was, by attributing to him the sole management of the war; he was only an humble fervant of the crown; and if he had not the greatest abilities to recommend him, he had, however, thus much to offer with truth and confidence in his defence, that he had ever acted fince his coming into office, according to the very best of his judgment. He had no wish, he said, to prevent any enquiry, that might be necessary to rescue the character of any gentleman from obloquy; and he trufted, that if ever a parliamentary enquiry should take place into his own conduct, he should be so well prepared to meet it, that his honour and character should come off in triumph.

The question being put, after long debates, the motion for the proposed address was rejected upon a division, by a majority of 209 to

122.

The Marquis of Rockingham, in a speech which lasted upwards of an hour and a half, introduced and supported his motion, 7th. with a great display of know-That nobieledge and ability. and the lords on his fide, called upon in the most pressing and particularly applied terms, themselves to the reverend bench of bishops, to exert that charity, humanity, and abhorrence of blood and cruelty, which were the leading tenets, and distinguishing characteristics of Christianity, upon a subject, which not only came directly within their cognizance, but in which they feemed bound by their character, to take an unequivocal and decided part. They obferved, that all the avowed original motives and objects of the war,

were

were now done away or abandoned, and its nature and principle totally changed. That right reverend body, had hitherto supported the measures of government ia the contest with America, under the firm hope and persuasion, founded upon the faith and repeated assurances of Ministers, that the recovery of our colonies was not only practicable, but easily to be So far, the motive of attained. the war might possibly be honourable, and its object fair; the quettions of fact, or of policy, did not absolutely lie with them. But they were now informed by an authority which they could not question, that of those very Ministers declared to all the world in their manifesto, that a new system of policy was adopted, and the nature of the contest totally changed. That America was relinquished, and the advantages of a connection with our colonies abandoned; and a new species of war was denounced, tending merely and avowedly to revenge, flaughter, and universal destruction.

It could not be even supposed, that they would afford their countenance to lo odious, so barbarous a fystem. They were called upon to exert in their legislative character, the peculiar and most exalted principles of Christianity, in preventing the wanton effusion of human blood, and the destruction of It could not be imamankind. gined, that their natural disposition, would not tend equally with their religious principles, and their professional duty, to the condemnation of all measures of blood, and the utter detestation of all. new and cruel aggravations of the borrors of war. Their interfe-

rence was required in preventing the destruction and sparing the blood, not only of men or of Christians, but of Englishmen, and of Protestants like themselves; and of crushing in the outset an abominable system of warfare, which would, in its progress and consequences, bring ruin and desolation home to their slocks and their doors.

It happened fortunately, they said, that the legal powers, with which they had been invested by the conflitution for such pious purposes, would be found in the prefent instance, fully equal to the duty and emergency. They were the Moderators ordained by the wildom of the constitution, to check, the rage, restrain the pastions, and controul the violence. of mere temporal men. imple votes upon this occasion, would at once fully express their detestation of the inhuman system in question, and, joined with those of the temporal lords who held the fame principle, fully cure its effects. And thus they would afford a new and striking evidence to the world, of the fanctity of their order, the wildom of its legislative institution, and the unsullied purity of their profession.

On the ground of retaliation, besides the danger and mischief to Great Britain and Ireland, the irretrievable destruction, which the sull, and undoubted, adoption of that system by France and America, would bring upon our West India islands, was strongly urged. And they argued, that from the nature of the sugar plantations and works, and the great capital necessarily lodged in them, the desolation caused by a single pri-

vateer

vateer upon that fystem, could scarcely be recovered in an age.

But they particularly reprobated, and indeed their powers of argument, and utmost acumen of cenfure, seemed principally directed, (as well in the debate, as in the fucceeding protest) against those new political principles or maxims, which they charged to the ma-That " what we have nifeito, viz. no interest in preserving, we are called upon by necessity to defiroy," and that, " motives of telt-prefervation, not growing out of any state of circumstances, now in actual existence, but sounded spon a policy directed to future uncertain events, should be suppoled to authorize or jultity, a present general desolation." These principles, they said, would afford a full justification of all the crucity and destruction of mankind, recorded of the most bloody tyrants, and of the most barbarous They would justify Herod in the murder of the Inno-Upon this ground, they flated the following causes of disfent in the protest.—viz. "Be-" cause the public law of nations, " in affirmance of the dictates of "nature, and the precepts of re-" vealed religion, forbids us to " nefort to the extremes of war, " upon our own opinion of their expediency; or in any case to " carry on war for the purpole of e desolation. We know that the of rights of war are odious, and " instead of being extended upon "loofe constructions, and specu-" lations of danger, ought to be 44 bound up and limited by all " the restraints of the most rie gorous construction. We are

restrictive of all other ciple destructive of all other laws; and a rule laid down, by which our own safety is readered incompatible with the prosperity of mankind. Those objects of war, which cannot be compassed by fair and homourable hostility, ought not nourable hostility, ought not end that has no means, but such as are unlawful, is an unlawful end."

The Lords on that side concluded by observing, that no great force of argument leemed necelfary for the condemnation of fo shameful a public instrument, which, springing from a commission under the great feal of the kingdom, would otherwise become a standing record, and monument of national dilgrace; which went to the indiscriminate massacre and extermination of a numerous and widely extended people, two-thirds whom were faid by its framers, to be our warm friends, and inviolably attached to our govern-That such a public disawas abiolutely necessary, lest it should appear in Europe, that a British parliament had given its fanction to the revival of that terocity and barbarism in war, which a beneficent religion, enlightened manners, and true military honour, had to long banished from the christian world.

or rights of war are odious, and inflead of being extended upon administration, or office, who were those constructions, and specuthose only, that took any part on the lations of danger, ought to be that side in the debate, totally denied (as the ministers had done in the restraints of the most rither House of Commons) the interpretation put upon the words, and the construction upon the meaning

meaning of the manifesto, by the opposition. At the lame time they utterly disclaimed, and reprobated even in thronger terms, the bloody principles which were charged to, or supposed to distate the manifesto. But this charge they attributed solely, to a disposition for decrying, however unjustly, all the measures of government, and a defire of creating untounded alarms and uneafinesses among the people. To obviate this design, and to prevent the effects which the strong represen- Colonel Butler. tations and colouring used on the other fide might produce in the House, they entered pretty deeply into a critical disquisition of the words, and what they described to be the fair construction of the proclamation, as well as into a justification of the meaning and intention, and a vindication of the conduct and character of the Com-They concluded by millioners. hoping, that the lords would not iulier themielves to be led away, by a studious and laboured appeal to their feelings and passions, and a forced and unnatural misconstruction and misinterpretation of plain and obvious language, into the passing of a hasty and unjust censure, not only upon the measures of government, but upon a noble lord and gentleman, who were abfent in the service of their country, and consequently incapable of vindicating themselves.

On this occasion, the new Lord Chancellor had an opportunity of displaying in that House, those abilities which had been so conspicuous in another. A great law lord, who has been long out of office, and a right reverend prelate, who is scarcely less distinguished,

by his opposition to many of the measures of administration, than by his eloquence, were no less conspicuous on the other side, in their support of the motion, and in their unqualified condemnation of the terms, principle, and spirit of the proclamation. Both these noble lords took occasion to reprobate, in strong terms, the circumstances attending the destruction of several parts of America, particularly of the settlement of Wyoming, and the cruelties exercised by Colonel Butler.

The question being at length put, the motion for an address of censure was over-ruled upon a division, by a majority of 71, including proxies, to 37.

Thirty - one names appeared to the protest, which, if compared with the number of the minority on the division, was above the usual proportion. That protest, was penned with uncommon ability.

As the naval action of the 27th of July, was now to become a subject of parliamentary discussion, as well as of public attention, it will be necessary to take notice of fome intervening circumstances re-, lative to that business, before we enter upon the subsequent detail. It will scarcely be supposed, that the temper and silence which had been so strictly observed by the commander in chief, relative to. the dilagreeable and unfortunate circumitances which were charged to that memorable day, could operate in any considerable degree upon the conduct of those, who did not look to remote motives of public utility for their guide of action; or that so many thousand seamen, and so great a number of officers,

officers, who were eye-witnesses of a conduct, which had in its nature a questionable appearance, could be induced, by any motives of discretion, or power of example, totally to restrain their words and sentiments

upon the subject.

A general murmur accordingly spread through the fleet, and the loss of a complete and glorious victory, was attributed to the misconduct, and disobedience of orders, of the blue division; infomuch, that some of the officers belonging to that division, whose conduct on that day, as on all others of service, had been highly exemplary, could not avoid seeming to, feel their honour wounded, through the generality of the imputation. It would have been impossible in this country, that fuch a state of things, and fuch a matter of charge or censure, could escape becoming an object of newspaper discussion. But this was probably accelerated in the present instance, by the conduct of those public prints which had been notorious for their attacks on the commander in chief, becoming no less industrious in their unbounded panegyrics upon the vice-admiral of the blue; whole general merits, as well as his fingular bravery and high services in the late action, (in which he was represented as bearing away the whole palm of honour) were emblazoned in to high a ftile of colouring, as could not otherwife be accounted for, than by supposing the piece to be intended merely as an invidious contrast, to that degrading picture which they had already drawn of his commander.

Such ill-judged and inviduous fatires and panegyrics in newfpapers, have frequently done much mischief in this country; and never more than upon the present occasion. The panegyrics just mentioned, drew out comments and A letter observations. (which, without a real fignature, was attributed to an officer who had been in the action of the 27th of July) appeared in one of the papers, in which, the escape of the French on that day, was directly charged and circumstantially laid against, the vice-admiral of the blue, by his disobedience of the lignals and the orders of his commander in chief. In this piece, leveral matters were stated as facts, with which the public had hitherto been unacquainted, and some of which were afterwards, in a very considerable degree, legally and publicly established by evidence, In particular, the message sent by Captain Windsor of the Fox, from the admiral to the vice-admiral of the blue, was now first announced. The vice-admiral was likewise charged with continuing the whole afternoon, with his division, to windward, notwithstanding the repeated fignals that were made, and the message sent, for his coming down to his station in the line.

This anonymous publication occationed a direct application, in London, from the vice-admiral of the blue to the commander in chief. requiring from him a public justification of his conduct, and an express contradiction of those foul alperisons, which, he faid, had been propagated to injure his honour and character. And in order, the more completely to effectuate this purpose, he presented a written paper, which he required to be figued and published by the admiral, containing a statement of

parti-

particulars, to all of which he was to give the fanction of facts by his name. In particular, Admiral Keppel, by signing the paper, was to affert as a fact, that his calling the vice-admiral of the blue, and Sir Robert Harland's divisions, into his wake, on the evening of the 27th of July, was not for the purpole of renewing the battle at that time, but to be in readiness for it in the morning. It was hardly to be supposed, that any expectation was formed of the admiral's compliance with such a demand.

This proposal being peremptorily rejected by the admiral, and possibly, not without some apparent marks of surprize or disgust, the vice-admiral of the blue, Sir Hugh Palliser, immediately published in one of the morning papers, a long statement of particulars relative to the action of the 27th of July, together with an introductory letter figued with his This piece teemed with name. direct or implied censure against the conduct of the commander in chief. It also stated several particular circumstances as facts, which in the course of the subsequent judicial enquiry, were either not properly supported, or were overthrown by direct evidence. Among the latter of these, the vice-admiral's division was faid to have been so scattered and separated by the fignal for chacing, that his own thip, the Formidable, engaged and passed the French line alone, without her having any fecond, either a-head, or a-stern. And the message by the Fox frigate, was said to have been delivered at night, and in the dark, and to amount to no more, than, "That the admiral wanted the ships of that division to come into his wake;" but positively denying, and declaring the assertion to be an absolute salsehood, that Capt. Windfor had said, that the admiral only waited for him to renew the attack.

This extraordinary publication, Rriking directly at the character and honour of the commander in chief, and tending to render him odious to his country, without any vilible cause (excepting that an anonymous paragraph in a newlpaper could be admitted as such) no charge or acculation whatever having been laid against the viceadmiral of the blue, could not fail of exciting the greatest public astonishment. Upon this occasion, Admiral Keppel declared, likewise thought it fitting to communicate the import of his declaration to the first Lord of the Admiralty, that without a full and fatisfactory explanation from that officer, he could not, confiftently with his honour, ever go upon any service, or act in conjunction with the vice-admiral of the blue; for that nothing less than a mutiny could be expected in the fleet, where the writer of fuch 2 letter held any command.

As these matters took place just before the meeting of parliament, they naturally became subjects of observation in both Houses, and were taken up on the first day of the session by the Earl of Bristol, who, having taken notice of the letter in question, called upon the first Lord of the Admiralty for an enquiry into the conduct of the naval officers on the 27th of July, founding his demand more particularly on the declaration made to

him by Admiral Keppel, that he would never resume the command of the western squadron, nor could he ever think of going upon any service with the vice-admiral of the blue, until the transactions of that day were thoroughly enquired into, and sisted to the bottom.

The naval minister expressed the utmost disapprobation of the proposed enquiry. He said the action of Brelt, excepting merely the destruction of the enemy's ships, had produced all the consequences, and all the benefits, which could have been derived from the completest victory. Our trade had been fully protected, that of France ruined, and our fleet rode triumphantly malters of the sea during the remainder of the campaign, whilst the enemy dared not venture to thew their On the other hand, he faid, that the propoled enquiry, would draw on conjequences no less mischievous than a defeat; it would split the navy, both seamen and officers, into cabals and factions, than which, nothing could be more pernicious in its effects, or ruinous to the iervice; idch an enquiry would besides take up a great deal of time; and would require the attendance of all the principal officers, either as witnesses or judges, from their proper duty, at a lealon, when their preience and fervices against the common enemy might be most wanted; and would in a great measure retard, and perhaps defeat, all the measures, of the ensuing spring and fummer. Such an enquiry would besides raise a kind of commotion in the nation, as almost every perfon would become interested on one side or the other; and at its conclusion, it could neither afford the smallest satisfaction to the public, nor answer any one good purpose whatever

pole whatever.

Whilst he expressed his regret, that any misunderstanding had risen between the two commanders in question, he declared himself fully convinced and fatisfied, that they had both performed their duty with the greatest bravery and ho-He said, that no man nour. living had a higher opinion of the admiral than he had, respecting his ability and gallantry as a seaman, and his veracity as a man. Upon the same ground, arising from a like degree of knowledge, he was justified in a fimilar opinion respecting the vice-admiral. He farther observed on that ground, that the admiral, in his official letter, had expressed the highest approbation of the conduct of all the officers of the fquadron, among whom the vice-admital matt of course be included; and that the commander in chief's letter, if no other ground of justification existed, would be, with him, a fufficient reason for not calling for an enquiry.

The House of Commons being in a committee of supply on the 2d of December, this subject was called up in the debate that arole upon the voting of 70,000 seamen for the fervice of the ensuing year. On this occasion, a gentleman, in the course of a long train of strictures upon, and some severe charges against the naval department, both with respect to occonomy and conduct, observed to the committee, that the business of the 27th of July loudly demanded an immediate enquiry, either there or elsewhere; that as Admiral Keppel

had

had declared he could not fail again with the vice-admiral of the blue, it was become a matter of the utmost national importance, and most eagerly expected by the people, that the affair should be speedily and thoroughly investigated: that if either officer deferved centure, it was fitting that it should be passed; or if their difference proceeded from any illfounded jeslousy, that it should be removed or accommodated; but, however it might be, it was effentially and absolutely necessary, in this season of danger, that we should not lose the services of our best and greatest officers, and that if unanimity was not to be hoped for any where else, no differences should, however, prevail among our military commanders. concluded by observing, that as the admiral and vice-admiral were then present in their places, he hoped, one, or both of them, would afford the Houle some satisfaction on the subject, as well for the lake of their own honour, as for that of the public tranquillity.

The minister stood up, probably with a view of qualifying matters, at the very instant in which Admiral Keppel arole to answer the call upon him; but the eagerness of the House to hear the latter prevailing, he proceeded giving some general account of his conduct, from the time of his being called to the command; and in answer to an observation which had been thrown out on a former occasion, not immediately relative to the subject, "that if Admiral Keppel were to go through the befinels of that day again, he would not fight the French in the

same manner," he called upon the gentleman who had made the observation, to take notice, that he was himself then speaking, and that he declared in his proper person, that if he was again to go over the business of the 27th of July, he would conduct himself in the same manner he then had. He said, every thing he could do against the enemy, had been done; he was happy to fay the British flag had not been tarnished in his hands; he was perfectly easy on that head, and should never difavow, or be alhamed of his conduct on the day in question. But, he iaid, that the oldest and most experienced naval officers, would discover something in every engagement, with which they were before unacquainted; and he acknowledged that, that day had presented to him something new. He impeached no man, he said, of a neglect of duty, because he was fatisfied the officer who had been alluded to, had manifested no want of courage, which was the quality most essential to a British ieaman.

He declared that nothing could exceed his aftonishment, when he faw that an officer under his command had made an appeal to the public, figned with his name in a newspaper, and tending to render himself odious and despicable in the eyes of his country, when no acculation whatever had been laid against the officer thus acting; and confessed he had been at first so much shocked, as to have determined never to let foot aboard thip again; as he could not but from thence conclude, that there was an end to all discipline and command in the navy. When the

first emotions, however, subsided, he, upon cooler reflection, only acquainted the first Lord of the Admiralty, that he could never fail with the gentleman in question, until matters were thoroughly explained. He did not believe, he said, the vice-admiral to be a stranger from whence the anonymous attack upon him came. He had himself been the subject of much and frequent newspaper abuse; yet he had not appealed to the public, nor resused to serve his country, when his services were demanded. He did not charge ministers with being the authors or promoters of the abuse against him; they, on the contrary seemed to be his friends, and caressed and fmiled upon him: or if any ministers were capable of endeavouring to cut his throat behind his back, of villifying and fecretly aspersing him, he did not think they were then near him; but if they were, he was perfectly indifferent as to their smiles or their frowns, and regardless of every consequence which might follow from either; and was still ready to serve his country, with the warmest zeal, and to the utmost extent of his abilities.

This necessarily called up the vice admiral to an explanation. He said, the honourable admiral seemed to speak with a kind of reserve, as if there was something behind; he heartily wished him to speak out, that knowing sully what was imputed to him, he might have an opportunity of sairly answering the charge; he held all low infinuations and affected tenderness in the utmost contempt. If there was any real ground of accusation, why not

make it fairly and openly? If not, why infinuate that he had been wanting in point of conduct, at the same time that a testimony was given in favour of his courage? An officer's honour was not less tender with respect to imputations of misconduct, or disobedience of orders, than to those which related merely to the article of courage. Dark and indirect infinuations, were more difficult to be refisted or cured, and accordingly more prejudicial to the character of an officer, than any direct terms of accusation. under such circumstances, that he had been obliged to make that appeal to the public, which feemed to afford so much matter of dislatisfaction to the admiral. It had been infinuated, that he was a hindrance to renewing the action with the French fleet on the 27th of July; feeling his honour thus attacked, he waited upon the commander in chief to have the matter set to rights, the imputation wiped away, and his honour cleared. But finding that he could not obtain that redress. which he had a right to claim and expect, he was under a necessity of appealing to the public; he had stated facts to them, and by those facts he would stand or fall. It was undoubtedly the most disagreeable circumstance in nature, to a man of sensibility, to be under a necessity of saying any thing against a friend; but where an officer's reputation was at stake, the removal of an unjust stigma, was certainly an object that fuperseded all other considerations. He declared, in the strongest terms, that the report of his not obeying fignals, was a direct falsehood;

but that if it had been even true, confidering the circumstances of that day, the public service could not have been affected by it. That however unadviseable the measure might be at present with respect to the public interests or service, it was much his interest to wish for a public enquiry or trial, as he was certain it would then come out, that he had done his duty in every respect, both as an officer and a man. He concluded by again afferting, that he had neither been guilty of neglect of duty nor of inactivity; that he was by no means infirumental in preventing a reaction with the fleet of Mons. d'Orvilliers; that he despised all the means reforted to both within and without doors, to villify and traduce him, as a professional man; and that, conscious of his innocence, he feared neither reports nor affertions, a parliamentary enquiry; nor a public trial.

Admiral Keppel replied, that he did not understand what was meant by indirect charges and inunuations; he had made none: his charge was single, open, direct, and confined to its object; it. Went fully and fairly, to a letter figned, Hugh Palliser, in a public newspaper; that publication, exclusive of what related to the defence or justification of the viceadmiral, contained feveral matters, so objectionable in their nature, as sufficiently justified his adhering to his determination, of never again going to sea with that officer. He had made no other charge against him; but as the vice admiral had now entered upon the subject of signals, and declared it to be no fault of his, that the fleet of France was not VOL. XXII.

re-attacked, he must say, as to that, that he presumed every inferior officer was bound to obey the signals of his commander; and, as he was now called upon to speak out, he would inform the House and the Public, that the fignal for coming into the Victory's wake, was flying from three o'clock in the afternoon till eight in the evening, without being At the same time, he obeyed. faid, that he did not charge the vice-admiral with actual disobedience; and he doubted not, that if an inquiry should be thought necessary, he would be able to justify himself, as he was fully persuaded of his personal bravery. He concluded, that as his country's friend, he was ready to do every thing in his power to promote its interest, and advance its honour: but them were his objects; he had nothing to do with administration, and was little solicitous about any matter, but what related to the due performance of his own duty.

The fixing of fo material a point of charge, induced Mr. T. Luttrel, who had been the means of bringing the subject forward, immediately to sland up, and to move an address to his Majesty, for an order to bring Sir Hugh Pallifer to his trial; but he was called to order by another Lord of the Admiralty, for deviating from the subject of debate; another motion being yet undecided, and that business not properly before the committee. By this means, the matter was deferred for the prefent; but the gentleman who had intended the motion, gave notice that he would revive it on the following day.

[G] Fartly

other matters, and partly from a lack of attendance on some days, which prevented the doing of any business, this lay over for above a week without farther notice. length, Mr. Luttrel having stated the grounds on which he founded his motion, moved for an 11th: address to his Majesty, that he would be pleased to give directions for a court martial to enquire into the conduct of Vice-Admiral Sir Hugh Palliser, in and relative to an action off or near Ushant, on the 27th of July last, between his Majesty's sleet and the fleet of France; it appearing to this House, that the said viceadmiral did not obey the fignals of his superior commander, when preparing to re-engage the ships of the enemy.

The motion being seconded, the vice-admiral, in a speech full of passion and vehemence, complained bitterly of the injurious treatment which he had received from the commander in chief, who instead of justifying his character, when perfonally applied to for that purpose, seemed rather to countenance the villainous infinuations fome dark affassins had thrown out against him. That his conduct since had been no less unbecoming and injurious. For without venturing to come forward in a fair and manly manner, with any open and direct acculation brought formally against him, he had still endeavoured to support the aspersions thrown upon his character, by substantially charging him, in that House, with disobedience, and by feerning to lay the want of success on the 27th of July at his door. But these were infinuations which

Partly from the intervention of which he had determined not to lie under; he was confcious of having performed his duty; nor would he from any motives of convenience, expedience, or public opinion, father the faults of any The truth he said was, that the admiral wanted to load him with the public odium arising from the miscarriage of that day, and compel him to submit to bear the blame of his own palpable mistakes

and incapacity.

The violence of this language having occasioned the friendly interpolition of a gentleman on the court side, who was apprehensive of disagreeable consequences from its continuance, the vice-admiral proceeded with less vehemence to inform the House, that under the circumstances he had described, finding that he could not obtain justice by any personal application, and that no public motives could induce the admiral to bring forward any charge against him, which might afford an opportunity for the vindication of his character, he had been driven by necessity, (not having a right to demand a trial on himself) in order to repair the injury done to his honour, to lay leveral articles of accusation against Admiral Keppel, tending to shew, as he would hereafter demonstrate, that the failure of succels on the 27th of July, with the subsequent consequences and disappointment to the nation, were owing to the misconduct and fault of that commander; and that he had also demanded a court-martial on that gentleman, which the admiralty accordingly granted. He concluded, that the measure he had taken was dictated by selfdefence; that he had taken it with

with the utmost pain and reluctance, as there were sew men living he had a higher esteem and veneration for than the honourable gentleman, as a friend, and intimate acquaintance, whom he had known for many years, and whose intimacy and friendship he had hitherto looked upon as one of the happiest circumstances of his life.

Nothing could now exceed the mixed appearance of surprize, concern, and disapprobation, which prevailed in every part of the House; and the vice-admiral had the mortification to hear his conduct, both with respect to newspaper publication, and demand of a court-martial against his admiral, openly, and without referve condemned, by every gentleman, of whatever fide or party, who spoke upon the occasion. This was still increased by the disapprobation which appeared from his own profession, which was no less general or explicit; several gentlement of rank and distinction in the navy, who were then present, although they expressed great reipect and esteem for the vice-admiral, and shewed the greatest tenderness for his character, could not, however, refrain from an absolute condemnation of his conduct in those respects. Nor was he defended or supported in any degree, either on the fide of the ministers, or even by his brethren on the admiraity bench.

It seemed, however, still to be the general hope as well as wish, on all sides, that some means might yet be adopted, to prevent the matter from going any farther; and by healing the differences between the two officers, to evade those fatal dissentions in the navy,

and consequences to the public, which they otherwise apprehended. In this state, the rising of the gentleman, who was himself the immediate object of concern, could not fail of drawing all eyes and attention, any more than of commanding the most profound filence. Admiral Keppel thanked the gentlemen on every fide of the House, for their friendly partiality in his favour, and for their wishes to prevent an inquiry, which carried in its very face, as well as nature, an implication of centure to his character. their friendly endeavours, he informed them, were now too late. His accuser had laid specific charges of criminality against him, which not only struck directly at his life, but at what was infinitely dearer to him, his honour; and in a few hours after these charges were laid, the admiralty, without farther enquiry, sent notice to him to prepare for his trial by a courtmartial. However disagreeable fuch an event might feem, as the consequence of forty years spent in the service of his country, he should not only meet it with good will, but with great inward satisfaction; he was under no apprehension, that the issue would afford any cause of concern to his friends, or bring any disgrace upon himself; his heart acquitted him of all guilt, and he made no doubt that his country would. He observed, that he was in a situation different from every other man in that House, and such as he had never experienced before; that he should therefore take no part in the present question, nor stay any longer than while he was speaking. He concluded a short, but exceed-

[G] 2

ngly

ingly affecting and pathetic speech, by thanking God, that he was the accused, and not the accuser; and then immediately quitted the House.

The House shewed an unusual, and an affecting degree of sympathy during this speech; and at every pause, as well as at its conclufion, those plaudits, which parliamentary forms will admit of, were almost generally bestowed. Upon his departure, the situation of his by himself in a newspaper publiaccuser became by no means pleafant; as he was under a necessity of hearing such direct and unqualified centure, and general condemnation of his conduct, as few men have experienced in that House, and as he certainly little expected at the time of making his late speech. This was carried to such a length, that a gentleman in his place declared, the whole business carried the appearance of a preconcerted scheme for the ruin of the admiral; and pointed his suspicions directly to the first lord of the admiralty; confidering the viceadmiral, and the other members of that board, as merely instrumental. And notwithstanding violent and repeated calls of order from the admiralty bench, so much was heard upon this subject, that the vice-admiral thought fit to submit to the necessity of declaring upon his honour, that no person whatever had any previous knowledge of his intentions.

A naval commander of distinction, not higher in rank than in public estimation, gave the highest testimony to the numerous public and private virtues of the honour-'able admiral who had just departed. He said, that in forty years acquaintance and mutual fer- that he returned with him to port,

vice, he did not know a fingle in stance of his conduct in all that time, whether as a private or s public man, as a gentleman or a leaman, which did not redound to his own honour, in many cases called forth the applause and gratitude of his country, and in all, merited the approbation of every good and honest man. He took notice, that the only acculation against the vice-admiral, was laid cation figured with his name. For in answer to an anonymous charge, he brought forward and agitated a matter, but little known and less attended to, which was the point of not obeying his admiral's fignals; and having, in that defence against nothing, acknowledged that he had not obeyed them, he thereby established the fact, and became , fubstantially his own accuser. And the fact being thus admitted, it became impossible for the admiral, if he had been even to inclined, to weaken or explain it away; the proof being of that species, which no man could pretend to controvert. Nor could the admiral, he laid, confistently with his own honour, or with the public service, have again ventured to sea with an officer, who had in a public newspaper censured his conduct, and on the day of battle treated his fignals with contempt.

He observed, with respect to the present accusation, that the viceadmiral was present on the 27th of July; that he was a witness to the pretended incapacity and misconduct of his admiral; that he was not only filent as to faults of fuch magnitude and importance to his country, but lavish in his praises;

corresponded with him, continued on terms of the greatest intimacy with him; went to sea again under his command, returned again to port, and in all that time, and during so many different transactions, not a fingle syllable of fault or complaint had been heard. But now all at once, when five months are elapsed, when the vice-admiral confiders himfelf as publicly accufed in the newspapers, and when a motion for bringing him to trial, had been announced and intended in that House, the accused suddenly becomes the accuser, and out start five articles of accusation, each tending directly to affect the life or honour of that man whole intimacy and friendship he acknowledges to have considered as the greatest happiness of his life.

But while this gentleman seemed equally to condemn and regret the conduct of the vice-admiral, he declared he could not refrain from the utmost assonishment at that of the admiralty; and totally regardless of his military or professional fituation, proceeded with no less freedom in its censure. He said, that in the most favourable con-Aruction that could be put upon the conduct of that board, it could not but be acknowledged, that they had, at least, acted precipitately and rashly in this business. That in a matter of such national importance, and where the life and honour of a commander, to high in character, and of such distinguished service, were at stake, a greater degree of caution and deliberation would fcarcely have been more necessary, than it would have been becoming the character of a board entruited with fuch. powers. That in the present cri-

tical fituation of public affairs, this caution was the more necesfary, as it was well known, that Admiral Keppel possessed the confidence and affection of the navy in so eminent a degree, that he was little less than idolized by all British seamen. Under such circumstances, he said, that board should have been exceedingly nice in their conduct, and circumspect in their proceedings; and not the lets to, for the vice-admiral being one of their own body. they received his complaint; or at least before they acted upon it, by taking a fingle official step against Admiral Keppel, they should have thoroughly confidered the grounds of difference, the circumitances which produced them, and the length of time before the accusation was laid; they should have recollected that the accuser was himself accused; and that he stood in a state, which could scarcely be confidered as short of avowed perfonal enmity with his principal, and which might well be suppoled, to be even under the immediate influence of passion, at the very instant of his laying the charges. They should have acted as moderators upon the occasion; they should have given passion time to cool, and have interposed their influence in healing the differences between two brave and valuable officers, at a time when their iervices were io much wanted; instead of blowing up the slame, by rashly and hastily receiving a rash, hasty, and passionate accufation, and thereby drawing on those fatal dissentions in the naval fervice, and those numerous evils to the public, which they had themselves declared, must be the ine-[G] 3

102] ANNUAL REGISTER, 1779.

inevitable confequences of fuch a trial as the present. But as things actually were, he would speak out, and could not but say, that their thus eagerly inatching at an occafion, which affected the protestional character, the life, and the honour, of a gentleman so high and so dear in the estimation of his country, more especially considering the situation, and the particular degree of favour in which his adversary stood, carried such striking marks of the most glaring partiality, as excited his utmost astonishment.

This direct and professional charge against the conduct of the admiralty, opened a new fource of debate, which was warmly agitated on both fides. The commisfioners of that board strenuously infifted their conftitution to be such, that in all matters of accusation, they were obliged to act ministerially; they had no judicial power; but when a complaint was preferred, they were, as a matter of course, and in discharge of their office, not only compelled to receive it, but to give the necessary directions for proceeding to trial. Under such circumstances the board had no option; the accusation being once made, they could not reject; they could not qualify; they must have acted just as they did. Being, however, afterwards hard pressed in argument, they acknowledged in the course of the debate, that if the accusation was loosely or inaccurately drawn up; if it was frivolous and vexatious in its tendency; or if it was destitute of specification; then, indeed, it might have been the duty of the admiralty to look to the tendency

and consequences of such a loose indefinite charge; to which, from its inaccuracy, or want of specification, no proper defence could be made, and from whence, consequently, no definitive issue could But none of these be obtained. matters held in the present instance. The vice-admiral had preferred an accusation, consisting of five separate articles, or charges, properly drawn up, and specifically pointed. What then could the admiralty board do? They must either take upon them to prejudge the truth of those charges, or they must admit them to beliuch as were fit to be lent to the confideration of a court-martial. The first, they could not, dared not do, being totally ignorant of their truth or fallehood; the second, they were compelled to comply with, because the matter admitted of no alternative.

But neither this doctrine, nor the ground of defence to which it was applied, passed without question and censure in the preient instance. The opposition infisted, that the admiralty were not only endowed with discretionary powers competent to the purpole; but that the exercise of them was one of their great and principal duties; it was among the most uleful purpoles of their institution; and they represented their omission of it on the present occasion as highly culpable. They faid, that the restrictions by which they pretended to be bound, and the doctrine they founded upon that pretence, were not only the most ridiculous that could be conceived, but they led to the most ruinous consequences. They would establish establish a principle, which would go to the destruction of all naval service, and to the leaving of every superior officer at the mercy of If the whole fleet his inferior. of England was upon the point of failing, upon the most sudden and critical emergency, whether for our immediate defence against invasion, or for the preservation of our most valuable foreign interests, it would, under this doctrine, be in the power of the most petty officer, in so great a multitude of men and variety of characters, whether through malice, folly, or treachery, to put a stop to the whole design and operation, only by laying some villainous charge against the commander in chief, which would necessarily keep back all the principal officers, either as witnesses or as And thus, in effect, the judges. whole direction of our naval operations, would either be configned over into the hands of the enemy, or committed to the difcretion of folly, of malice, or of madness at home.

But they observed, that the commissioners, finding themselves unable to sustain that monstrous doctrine in its full extent, had, though apparently much against their will and intention, and difguiled under loose and vague terms, virtually given it up. For what less did their acknowledgment amount to, that if acculations were frivolous, vexatious, or unimportant, the board might, and would reject them, than to those very discretionary powers which were contended for on the other side? Either the board is not competent, in any instance, so judge; or, if competent, the

board, in every fuch act, exercises a discretionary power. The conclusion is clear either way; every thing which malice, rage, or folly, can fuggest, is a proper subject to be sent to be enquired into by a court-martial, or the admiralty board have the right contended for; that of judging of the magnitude, extent, and probability of the charge, the circumstances which brought it into exlitence, and every other matter connected with it, which might enable them to be the means of promoting general and particular justice.

It feemed undoubtedly to be a new and fingular circumstance, that a great department of the state, should, to all appearance, endeavour to narrow its own constitution, rights, and authority; whilst, on the other hand, its adverfaries in the opposition were endeavouring to demonstrate its being endowed with those powers, which it totally disclaimed and denied. The different statutes relative to the admiralty, were quoted, examined, and applied on both sides. In effect, the great crown lawyers being hard pressed by their adverfaries, seemed rather to employ their time and abilities in making a defence for the first lord of the admiralty, than in feriously denying the powers of the board at which he presided.

Although some gentlemen still declared their opinion, that the original motion of address for the trial of Sir Hugh Palliter, should, for the sake of public justice be carried forward, as it was concluded, that motives of delicacy would ever prevent Admiral Keppel from becoming his accuser, yet it was more generally concluded on [G] 4

104] ANNUAL REGISTER, 1779.

that side, to let it lie dormant for the present; and to prevent its receiving a negative, it was disposed of by moving for the order of the day, which operated as a previous question, and was carried without

opposition.

It was just at the approach of the recess, when Admiral Pigot, who had during the course of this business, on every occasion, exerted himself with the greatest warmth, zeal and activity, in fayour of Admiral Keppel, made a motion, that on ac-Dec. 16th. count of the exceeding bad state of health, under which that gentleman had long laboured, and the extreme danger to which his life must be exposed, by the confined air, and the want of necessary room on board a ship, during the length of time that his trial would probably last, and confidering the great number of people with which it must be necessarily attended, he might have

leave to bring in a bill, to enable the admiralty to order his trial to be held at some convenient place on shore, instead of its being held aboard ship, which was the mode prescribed at present by the law.

Notwithstanding the modificate tions and alterations which the bill underwent in both House and that it was necessarily brough back from the lords in confequence of their amendments, it was case ried through with wonderful die patch and facility, and received the royal affent on Christmas Example 1 Nor did it meet with the imalical opposition with respect to its page. ticular principle, as tending its direct object, in either hopses while the elogiums on Admiral Keppel which it drew out in in progress through both, especially the lords, would have been deemed by a vain or ambitious man, 🚜. more than a compensation for all the hardships and dangers of high trial.

year of its continuance, went to establish the ruin of both countries; nor would it require a long succession of such years, to render our own destruction inevitable, whatever might become of Ametica.

On the other hand, the ministers contended, that America was reduced to the lowest state of weakness; that her armies were annihilated; that she had already contracted a debt of fifty millions in the profecution of the war; that her credit was so totally sunk, that the congress bills were sold for one fortieth of their nominal value; that her people were starving, and in want of all the necessaries of life: and that in this state of aistress, when they were enduring all the most pressing calamities of war, and every degree of domestic misery, when they were enduring the most intolerable political oppressions, from the tyranny of their nfurped powers of government. That a very great majority of the people abominated the French alliance, and execrated the congress on that account; that the latter had exceeded and abuted their powers in that instance; and that the political and hostile connection with France had not been constitutionally ratified; that is, it had not yet received that species of asfent, which was fundamentally, and essentially necessary, to constitute a real and binding compact on the people of America.

They asked whether such a state of things, when opposed by the blessings of peace, and these accompanied with constitutional treedom and security, did not afford the most probable causes, and

the best founded reasons for expecting, that the colonies, either separately or conjunctly, would co-operate in measures for removing their public and private diffresses; for getting rid of their oppressions, and dissolving such a lystem of usurpation and tyranny? The probabilities were so strong in our favour, they faid, as amount to little less than actual proofs; and to stop short, and llacken our exertions, at the very moment that so fair a prospect was opened, would be such a degree of political absurdity and madness, as no people had ever before exhibited.

As to withdrawing the troops, or changing the object and direction of the war, it would amount to no less, they said, than a dereliction of America for ever. Nor would the evil be confined to the loss or independence of the revolted colonies merely. da, Nova Scotia, Newfoundland, Rhode Island, New York, and the Florida's, mult follow of Our West India Islands courie. could not stay long behind, nor could they afford any benefit while they remained in our hands. And yet, dreadful as these consequences leem, even in idea, the absolute loss to ourselves, would not be the worst part of the evil. But all these vast acquisitions; these unequalled fources of naval dominion, wealth, and power, would be thrown into the balance against us. They would become additions to the power and strength of our natural and mortal enemy.

The opposition answered, that it was to prevent those fatal confequences, and to avoid that dreadful state of public affairs, now too

faith-

5

faithfully described, that they had constantly opposed the measures which led to the lois of America, and endeavoured at all times to heal the differences with our co-Ionies. But the event, which they so much dreaded, and endeavoured to prevent, had already taken place. America was loft. It was to little purpose to waste time in cavilling about the term independence. She was independent in fact, whether we allowed it or not; nor was it in our power to render her otherwise. Were we then to persevere to the last in our folly, and acting the part of a mad and desperate gamester, to throw away the remainder of our fortune, in a fit of vexation for the loss of that which we had already fquandered?

They faid, that the same de-Justive picture of American affairs which was now presented, had, with some occasional alterations in the colouring, been exhibited at the opening of every session fince the beginning of the troubles. The object was, however, at all times the same. It being merely intended to lead the nation, from year to year, still farther on in error and ruin. The Americans had been alternately represented as cowards, as beggars, as an undisciplined mob, as being not only without arms, and all military provision, but being destitute even of the common means of existence, and in that last state of wretchedness, exceedingly well disposed to cut each others throats. And as if there were no bounds supposed to our credulity, nor limits intended to our wonder, they are represented as being in general loyal subjects, and firmly attached try; and we are informed, that the many are not only most unaccountably kept in bondage by the sew, but that they are compelled to take arms in their hands, and totally contrary to their inclination and will, to sight the battles of a vagrant congress, and of a handful of sactious leaders, whom they equally hate and despise, against us, whom they regard and consider as their best friends.

To these representations, they opposed a view of the prodigious force by sea and land, supported at an expence of treasure unknown in any former warfare. which had been so long and so ineffectually employed for the reduction of such a country, detended by luch wretched foldiers. and acting under fuch a feeble and Odious government. A force and a treasure they said, which, under a wise and able direction, might have aspired, and not unsuccessfully, to the subversion of fome one, among many, of the oldest and best established states in the universe. And yet, those soldiers, and that government, have successfully resisted this mighty force by sea and land; and have, for a succession of years, and through a variety of hard and bloody conflicts, baffled the sutmost efforts, of one of the best provided, best disciplined, and bravest armies that ever existed.

The motion for an augmentation of 14,000 men to the land fervice, which was made by the fecretary at war on the 14th of December, although it was agreed to, yet brought out much of this fort of discussion. It also afforded an opportunity for a revival of

those complaints, which had been before introduced upon other occasions, of the undue and glaring partiality, which, it was faid, had been displayed, in the raising of new regiments. The whole tide of favour and preferment, the opposition contended, had been directed to a certain part of the united kingdom, and to a certain description of men, without regard to military rank or fervice, and to the prejudice of many of the bravest and most distinguished English others. While, on the other hand, they faid that some of our nobility; men of the first rank, fortune, family, and diftinction; men also high in military fervice and knowledge; who had offered to raile regiments at their own expence, for that public defence in which they were so deeply interested, were not only rejected; but, in order to put a Rop to all such offers or applications, care was studiously taken, that the mode of rejection should amount to direct infult.

During the recess of parliament, and for fo long after as the eccasion continued, the attention of the nation was drawn, and the minds of the people agitated, in a degree which we have not before known, by the trial of Admiral Keppel; which commenced at Portsmouth on the 7th of January, 1779, and was not closed antil the 11th of the following February. In the mean time, the peculiar circumitances relative to that affair, the conduct of the admiralty, and the new doctrine (as it was charged to be) which they endeavoured to shablish, that they held no discretionary powers of acting in fuch cases, served all

together, to open that general ground of discontent in the navy, which we have since seen unhappily spread, to so fatal an extent, as to seclude several of our first and greatest officers from the service of their country, at the time of her greatest distress and most imminent peril.

This naval disapprobation began early to appear, in a memorial to the King, figned by twelve admirals, including the oldest or most distinguished officers men at home, with the revered name of Lord Hawke at the head of the filt, itrongly condemning the conduct of the accuser through every part of the transaction, and being little less explicit with respect to that of the admiralty, so far at leaff, as they thought it fitting to pronounce a direct opinion on 2 mere question of law; and also flating to his Majesty, in strong colours, the prejudice and ruinous consequences, which the establishment of the precedent and principle now introduced would inevitably bring upon all naval service and discipline.

On the mere point of discretion, these naval commanders express themselves in the following terms: We, who are not of the profession of the law, cannot poittively affert, whether the board of admiralty hath by law any fuch discretion; "but if we had conceived that this board had no legal use of their reason in " a point of fuch delicacy and we should have " importance, " known what terms we on " served. But we never did ima-" gine it possible, that we were " to receive orders from, and be accountable to those who, by « law.

law, were reduced to become " passive instruments to the pos-" sible malice, ignorance, or trea-" son, of any individual, who might think fit to disarm his " Majesty's navy of its best and " highest officers. We conceive " it disrespectful to the laws of " our country to suppose them ca-" pable of fuch manifest injustice and absurdity."—The piece concludes in the following manner: " We therefore humbly re-" present, in behalf of public order, as well as of the discipline of the navy, to your Majesty, " the dangers of long concealed, and afterwards precipitately adopted charges, and of all re-· criminatory acculations of subordinate officers against their commanders in chief; and particularly the mischief and scanand all of permitting men, who are " at once in high civil office, and in subordinate military command, previous to their making " fuch accusations, to attempt to corrupt the public judgment, w by the publication of libels on " their officers in a common newl-" paper, thereby exciting mutiny " in your Majesty's navy, as well as prejudicing the minds of " those who are to try the merits of the acculation against the said " superior officer."

This memorial was presented in the closet to his Majesty, on the last day but one of the old year, by the Duke of Bolton, who had demanded an audience for the purpose, and was himself one of the subscribers. It seemed strongly to mark the general distaits faction of the navy, that, at least, two-thirds of the admirals who signed this piece, were known not to be

in any habits of connection, or communion of interests, with the parties in opposition; and that, on the contrary, several of them had at all times been considered, from their sentiments, conduct, connections, or particular obligations, to be warmly attached to the present administration.

The trial at Portsmouth, seemed not much less to affect the proceedings of parliament, than it did the minds of the people at large. Nothing material was done, or even brought forward in either House during its continuance. The commons met on the 14th of January, and excepting the preparation of a new recruiting bill, (brought in by the secretary at war) which went to the repeal, and was perhaps in some respects an improvement on the former, did little more than meet from day to The Lords met day to adjourn. on the 20th of January, but no public business was brought forward until the middle of the enfuing month. Indeed fome of the most distinguished names, and most active characters in both Houses. attended the trial, during the whole, or the greater part of the time that it lasted.

The event, as well as the circumftances of the trial, are too well and
too generally known, to render
our entering into any detail of the
subject necessary. It will suffice to
observe, that the court-martial,
after a long sitting of thirty days
upon actual business, and a patient hearing and investigation of
the almost endless detail of evidence which it naturally afforded
on both sides, at length acquitted
the Admiral of every charge laid
against him, in the sullest, clear-

est, and to him most honourable terms; farther declaring, that he had behaved as became a judicious, brave, and experienced officer. And that at the same time, confidering themselves as a court of military honour, as well as of criminal jurisdiction, they marked the conduct of his accuser, in the body of the sentence, with the strong and severe condemnation, " that " the charge was malicious and ill founded." It was supposed to be upon the same principle, that the court did not close the trial, and immediately proceed to sentence, as foon as the profecutor's evidence was finished: it appearing then evidently, that the Admiral must have been fully acquitted, upon the very teltimony which was intended to operate against him. But it was generally thought, that the court deemed it a reparation due to the Admiral, to hear the evidence in his favour; and that the world should be acquainted with that unparalleled weight of testimony to his conduct, honour, and character, which was afterwards given by so great a number of distinguished, brave, and experienced officers. The address of the president of the court-martial, ppon restoring his sword to the Admiral, was no less flattering to the latter, than the lentence was honourable.

On the day after these Feb. 12th. transactions at Ports-1779. mouth, the lentence, and the short speech made by the president, being read in the House of Commons, a motion was made, and carried, with only one dissenting voice, "That the thanks of this " House be given to the Honourable Admiral. Augustus Keppel,

" for his distinguished courage, " conduct, and ability, in defend-" ing this kingdom in the course " of the last summer, effectually protecting its trade, and more " particularly, for his having glo-" riously upheld the honour of the "British flag on the 27th and " 28th of July last." The thanks of the Lords, in nearly the lame terms, were agreed to in four days after, with every external appearance of the most perfect unammity.

The general, public, and unufual rejoicings, which took place in luch various and remote parts of the kingdom upon this occasion, seemed to afford a strong presumption, that the people in general confidered this business, to be at least as much a public as a private concern; and indeed the whole manner of celebrating this event, seemed rather as if it had been a great national deliverance, than that merely of an individual. The rejoicings and illuminations in the cities of London and Westminster, were of such a magnitude, as has scarcely been exceeded upon any public occasion whatever. The excesses committed by the populace in the latter, which were directed against the houses or persons of those, whose supposed share in this transaction had drawn on them the odium of the multitude, are frein in every body's memory. They were indeed furious, and had a tendency to shock and disgust many of those who partook the most heartily in the general joy. Even the iron gates and pallisades of the Admiralty, were not sufficient to preserve that building, from receiving strong marks of the popular indignation; nor

iome.

some of the great officers of state free from sufficient cause of alarm, until the troops were brought for-

ward to their protection.

The prevalent spirit was now so Arong, as to seem to operate more or less every where. Nobody was to hardy as to attempt to justify the Lie profecution upon its own pro-For a confiderable per ground. time, the admiralty was only defended upon the plea of official necessity; and the conduct of the profecutor feemed wholly abandoned by all his friends.

Admiral Keppel had received an early letter from the admiralty, acquainting him that the juipention was taken off in consequence of his acquittal, and requiring him accordingly to refume his command; although he complied with this requisition, yet from the cold official terms in which the letter was conched, as well as a maimed quotation it included from the ientence, in which the clause most to his own honour, and that which leaned most upon his adversary, were both equally omitted, it feemed upon the whole to indicate, and was understood accordingly, that that board was no sharer in the general satisfaction which attended the event of his trial. Nor was his reception at court, said to be much more pleasing. circumstances being followed up by others of the same nature, the line of conduct was understood to be io marked and apparent, that it afforded a subject of open discushon at different times in both Houses; the opposition contending, that it tended strongly to spread and confirm an opinion, already too generally received, than

scandalous or disgraceful to government, namely, that the attack upon the admiral's life and honour. was rather the effect of a combination, and of a concerted scheme, framed under and supported by the fanction of authority, than the casual result of private pique, envy, or malice.

On the other hand, the unfortunate officer, who was now become the object of general odium, was compelled, besides the loss of public favour and opinion, to submit to that of honours, of authority, and of substantial emoluments. On the very day that the sentence of the court-martial was disclosed in the House of Commons, a noble Lord, one of his late brethren in office, after expressing some doubts as to the propriety of the notice, he, however, said, that in order to quiet the minds of the people, he would inform them, that Sir Hugh Paliser, had no longer a feat at the admiralty board; his resignation having been accepted that morning. this manner things continued for about a week longer; the opposition waiting, as they faid, to afford an opportunity to the crown, to express its utmost reprobation of the late conduct, and therein vindicate its own honour, by totally dismising the vice-admiral of the blue from its service. At length, when one of the most active leaders of the opposition, was on the point of moving an address for that purpose, information was given, that Sir Hugh Palliser had resigned his lieutenant-generalship of the Mas rines, and his government of Scarborough Caille; that he had also vacated his feat in parliament; which, nothing could be more and only retained his vice-admiral-

112] ANNUAL REGISTER, 1779:

finip, as a qualification for his trial by a court-martial, which the admiralty had ordered to be held upon him.

The strong interests, which were thus agitated, and the spirit of enquiry raised by the past and the depending court-martial, were not eafily laid or qualified, and naturally directed the attention of parliament to the affairs of the navy. This subject was almost the only one in which parties feemed to engage. The members of opposition, directed their attacks almost entirely against the first lord of the admiralty, whom they confidered, in the present situation of affairs, as the most efficient, and consequently as the most immediately responsible, of any of the King's fervants.

No less than three motions of censure, relative to the state and disposition of the navy, and one for the removal of the Earl of Sandwich from his Majesty's service, were made during the prefent fession in the House of Commons. In confequence of an addrefs for the purpose, several extracts of letters relative to the equipment of the Brest fleet, ha-March 3d. that House, Mr. Fox ving been laid before moved the following refolution.-" That it appears to this House, that the fending Admiral Keppel, in the month of June last, to a station off the coast of France, with squadron of twenty ships of the line, and four frigates, at a time when a French fleet, confifting, as there is great reason to believe, of thirty-two ships of the line, and certainly of twenty-feven, with a great number of frigates, was at Breft, and ready to put to fea, was a measure greatly hazardous to the fasety of the kingdom, without any prospect of an adequate advantage."

ments. He said, that subsequent inquisitorial controuls, were a subflitute for that secrecy and dispatch in which arbitrary states are thought to excel, and that it more than compensated for the want of them; as was fully proved, by the irrefistible exertions, and the almost inexhaustible resources, of free states. That, vigour of exertion, and 's tention to duty, are always found where the final account is inevitable; and where no favour, no court cabal, can fecure neglect and incapacity from detection and punishment.

The propriety of entering into the resolution proposed, was supported by the following very embarrassing dilemma. When Mr. Keppel sailed from Plymouth on the 9th of June, with 20 ships, under orders to cruize off Ushant for a certain number of days; the admiralty board must have known that there were then thirty sail of the line ready to proceed to sea in Brest water, or else that board was

1, norant

ignorant of the fact. If the former, it was faid to be an act of the highest criminality, to risque the fate of this country in so great a disparity of force. Had an engagement happened, which must have been inevitably the case, had not the most confummate wildom and love for his country, induced Admiral Keppel, in a case of such infinite importance, to difregard the orders of the ministers, the consequences might have been fatal to the naval power of this country. Our trade might have been ruined, our coasts insulted, and, in the de-Bruction of Portimouth and Plymouth, the feeds of all future navies for ever exterminated.

On the other hand, prefuming that the first lord of the admiralty was ignorant of the real naval force of France, would not the consequences to the nation be the same? And therefore, it was alked, was not his conduct equally criminal? For negligence in men, entrusted with the safety of nations, was very different from the negligences of ordinary persons. In such men, negligence was criminality. And, that men high in office, and in responsible situations, did in effect acknowledge guilt, when they pleaded ignorance in of misconduct and justification neglect.

On the other side it was answered, that before ignorance was suffered to imply criminality, it was absolutely necessary, that the fact in question should be established; that it should be ascertained beyond a possibility of doubt. That the fact which was produced, as the soundation of the resolution now proposed, viz. "That there were 27 ships of the line in Brest Vel. XXII.

" water," was so far from being proved, that it was not even grounded on probability. If the papers found on board the Pallas and Licorne, were adduced as proofs of the fact, nothing could be more vague, indefinite, and inconclusive. For first, supposing the import of those papers to have been ever so precise, it was to be remembered, that they were entirely without date; and in the next place, that they contained nothing more than an order to provide anchorage for such a certain rate and number of ships. therefore contained evidence, not that the ships were ready for sea, but that anchorage was ordered for them when they should be ready. If the written evidence, they said, was defective, the parole evidence, given by Admiral Keppel (who had been examined in his place, relative to the verbal information he received by the capture of the two French frigates) must be no less defective, for it was founded entirely upon the written.

But the evidence, they said, was not more defective in support of the prefumption on which the reiolution was founded, than the circumstances were strong, which went directly to its overthrow. For it appeared, that a number of French merchantmen had been suffered to pals through the British Acet, so late as the 23d or 24th of June. The strength or weakness of the British ficet must have been known to them. And if the Brest sleet had such a superiority as was asferted, what reason could be given, why they did not instantly proceed to lea, in order to meet and to crush so inferior an enemy? But although M. D'Orvilliers was in

[H] possession

ANNUAL REGISTER, 1779. 114]

possession of that information from the 23d of June, he did not leave Brest harbour until the 8th of July; a full proof that, contrary to the words of the resolution, there was no reason to suppose, that there were 32, or even 27 ships of the line in Brest water ready to put to

It was afferted on the same side. that when Lord Hawke was-fent to watch the motions of the French, upon the rumour of an invation in the year 1758, the board of admiralty, upon hearing the enemy had a superior force out, sent him orders to return: although he did not receive the orders until the fervice was ended, that gallant and able officer answered the board in his letter, that he should never relinguish his duty, or return into port, from any trifling superiority of the enemy. They farther ob-Terved, that if the evil, which was supposed or apprehended, had really happened, and that Admiral Keppel had been defeated, was it probable, or could it even be supposed, that a consist with a British fleet of 20 ships of the line, should have left the enemy in a condition to pursue their victory to the de-Rruction of all our naval magazines? The only victory, they faid, which France ever obtained over England at sea, was that over Lord Torrington in the reign of Then, instead of King William. pursting the advantage they had gained, instead of burning Portsmouth or Plymouth, instead " of no more in company. exterminating the feeds of all " future navies," the French sleet, contented with its honours, retired into the ports of France to repair the damages which it had unavoidably sustained. And such, they

faid, must have been the confequences of a victory, if they had obtained one, in the prefent mstance.

On the other fide it was replied, that M. D'Orvilliers continuing in port after the arrival of the merchantmen who had passed through the British sleet, was by no means a proof, nor did it even amount to prefumptive evidence of any weight, that he was not then, with the force which had been stated, in actual condition for proceeding to sea. For it would have been a measure extremely hazardous for that commander, and which, without express orders from his court he could not have ventured, w have trusted himself to sea with 27 fail of the line, before he had received the most undoubted information of Admiral Byron's departure from the channel. For, until he was perfectly fatisfied that the British fleet was divided, he could have had no assurance, that instead of twenty, he should not have encountered Admiral Keppel, with a fleet of 35 ships of the line; which was the force he had cause to apprehend, including Byron's squadron, and three ships, which were ready for sea, and which he had therefore a right to consider, as part of the Heet. For the French merchantmen could report no farther than they saw. They saw three slags, and they might perhaps count 20 fail- of the line; but they could not possibly answer that there were

That this was the scale by which the French regulated their conduct, was evident from what followed. For as soon as Admiral Byron's destination was known in Paris, orders were sent to Brest for the

HISTORY OF EUROPE. [115

fleet to proceed to sea; and M. D'Orvilliers instantly weighed anchor; which affords a strong evidence, that nothing had retained him in Brest, but the difficulty which the French court, as well as their commander, found in believing it possible, that any set of men, should so far abuse the confidence of the nation which they ferved, as to commit, in a delperate contest, that naval power, which it had cost their country fo much blood, fo much treasure, and so much labour

to acquire. They also said, that nothing could be more egregiously mistated or misrepresented, than the evidence acquired by the capture of the French frigates, had been by the ministers. It was not true, that Admiral Keppel had regulated his conduct by vague written or unwritten evidence; nor that the latter was founded upon the for-That gentleman had testified in his place, that the evidence which he had obtained from feveral of the French seamen, who were newly come out of Breit, and whom he had separately examined, all went in the most direct and strongest manner, to corroborate that of the written paper; and that they all agreed in the great circumstances, as to the number, force, and fituation of the French fleet, with such a degree of exactness, as would have afforded weight to the most doubtful testimony. would have been curious, they faid, if it had not of late become so common as to lose the effect, to hear those men, who have the audacity to refuse all means of information to parliament, repeatedly

port of their charges, which they themselves openly and avowedly keep back. It was only the other day, that the opposition had moved for all those documents which would have established their charges, with even the strongest degree of legal evidence; and those very ministers, who now have the effrontery to call for proofs, were themselves the persons, who under the most frivolous and shameful pretences, had procured, in that House, a negative to their motion. It was, however, fortunate, they faid, that thole papers on the table, which ministers could find no pretence or colour for keeping back, would, along with the testimony given by the honourable admiral, afford sufficient evidence for the House to proceed on, and sufficient ground for all the purpoles of the motion.

The question being put after one o'clock, the motion was rejected, upon a division, by a majority only of 34, the numbers be-

ing 204 to 170. This was an unusual division on the fide of the minority. And the minister shewed a degree of passion and vehemence in different parts of this debate, which was not at all cultomary with him. It has been observed by some, who from long experience think they may form an opinion on the appearances of things in that House, that the question would probably have been carried in the affirmative, if the noble lord at the head of administration, having equally perceived the same indications, had not immediately applied himself to prevent their effect. For that minicall upon the opposition for those ster, observing strong marks of dedirect and positive proofs in sup- fection, particularly among that [H] 2

Part of the country gentlemen who ¹apport administration, recalled both them and his other wavering triends so the standard, by openly declaring, that the motion of censure against the first lord of the admiralty, went directly to himself, and to all the other ministers; that there could be no discrimination; as they were all equally concerned in the conduct of public affairs, they were all equally liable to answer for the consequences; there could be no separate praise or centure; whatever reached one, must reach the whole.

Motwithstanding this defeat, Mr. Fox did not abandon, he only shifted his ground; and keeping his object still steadily in view, brought the business forward under another form a few days after. As he had given early notice of his intention, administration rallied all their forces, and the House was even more full than it had been on the preceding debate.

He observed, in opening the grounds of his intended motion, that notwithstanding the general resemblance, and the principle being the same in both, it differed from the former in one respect; that being particular and specific, whereas this went to a general proposition. It included only matter of public and universal notoriety; matter as well known without that House as within; and as fully in the possession of all Europe, as it was of the British parliament or ministers. It called for no specific proofs. He should not trouble one gentleman to state our weakness at home; another to shew our inferiority in North - America; nor would be appeal to the whole world

for the proof, that we had totally abandoned our commerce, our consequence, and our fortresses in the Those forms, so Mediterranean. necessary to substantiate charges, where there was the imaliest room for doubt, suspence, or hesitation, were in this instance totally needless. He well foresaw what other grounds of objection would be taken against his propositions, but he had the latisfaction of knowing, that not a syllable of their contents could be controverted in point of fact; his hardiest opponents must acknowledge them to be literally and substantially true. He would therefore trust his motion to the feelings and conviction of his hearers; he would rest it on that testimony, which every thinking man must secretly submit to, and every honest man avowedly declare; he would appeal to no other tribunal.

He, however, thought it necesfary, by way of illustration, and of bringing so great a variety of matter within iome moderate compais of view and remembrance, to trace the round of public affairs and transactions, both at home and abroad, from the beginning of the troubles. In this courie he took a clear and comprehensive view of the direction, management, operations, and confequences of the war; of the state and conduct of the naval department; he shewed what ministers had done, and what. they had neglected; he recalled, with precision, their declarations, professions, avowed views, and promises, at different periods; he shewed the ample means which that House and the nation had put into their hands, and the sanguine expectations which they had rationally

tionally formed, upon such means, and fuch affurances; and then flated, in what manner those expectations had been answered, and those promises fulfilled. But he did not confine himself to assurances, or to declarations in either House. The great question at issue was, whether our preparations, and the state of our navy, were adequate to the vast sums which had been granted for those services? This was a matter in which there was no occation for promites to fix the public responsibility of miniiters. And it was a matter, he faid, in which there was not, nor could not, be a fecond opinion, either within or without the House.

In taking a view of naval affairs under the prefent marine minister, he drew up a comparative estimate, of the state, condition, and expences of the navy, during certain periods, and under equal circumstances, of that administra-By this tion, and of former times. efirmate he would make it appear, that our peace establishment for the navy, had coit the nation nearly double the money, during the five years previous to the prefent troubles, which it had done in those immediately preceding the late war; and from fimilar calculations he endeavoured to demonstrate a great excels also in our present war establishment; particularly that the expenditure of the navy in the year 1778, exceeded that of 1756, by full half a million. He then entered into a strict inquiry, whether our naval preparation and effedive frength in the present infance, bore that proportional superiority over the former, which the nation had a right to expect from the expenditure. And hav-

ing on this ground, as he said, not only clearly demonstrated the contrary, but that the navy was, in every sense and respect, greatly, and most alarmingly inferior; he from thence inferred just and full cause for the censure of that House, and for the well-founded resentments of

the people at large.

He summed up the whole of a long and severe scrutiny into the conduct of public affairs, the operations of the war, with the management of the marine department, and the state of the navy, the following conclusions: — Either, that ministers acted under the dominion of the groffest and dullest ignorance, or that they were actuated by finister, corrupt, and dangerous motives; and that they. were therefore, in either case, unworthy of public trust or confi-From this dilemma, he faid, there was no escape. Ignorance or treachery, was the only alternative.—His motion was conceived in the following terms: "That it appears to this House, " that, the state of the navy, on " the breaking out of the war " with France, was very unequal to what this House and the nation had been led to expect, as " well from the declarations of his " Majetty's ministers, as from the great sums of money granted, " and debts incurred for that fer-" vice; and inadequate to the ex-" igencies of the various services, " for which, it was the duty of the " ministers to have provided at so " important a criss."

On the other side it was insisted, that the terms of the motion were not supported by the facts stated. That it was exceedingly unfair and irregular to refer to matters which

[H] 3

fell in former debates, and much more so to any thing which might have been said in the other House; but that the absurdity as well as injustice, of passing a vote of cenfure, founded upon such loose and procertain grounds, was to palpable, as not to require observation. They denied the facts, as to what, they said, were the main grounds of the motion; namely, the superiority attributed to the French in the channel, and in America; and with respect to the Mediterranean, they laid, that it was utterly impossible to provide a suitable defence, to every part of possessions fo widely extended as those of Great-Britain; some must be neglected; and in such circumstances, ministers must exercise their discretion and judgment, in attending particularly to the security of those places, which were either of the greatest importance, or the most immediately exposed. No fair or direct inference, they faid, could be drawn, from the comparative Rate of the money granted for naval services, in the the two interims, previous to the breaking out of the last and the present war; nor from that of the fleets, in the year 1750, and 1778. It was well known that the ships were larger now, than at the former period; we had then a number of small fixtys and fixtyfours; none on that imall icale are now retained; that rate has not only been greatly improved in point of fize and strength; but its place has been in a great measure Supplied in the navy, by a number of new feventy-fours, which are built on so large a construction, as to be nearly equal in point of tonnage to our old second rates. So that upon the whole, fairly com-

paring the exertions at both periods, it was not doubted, but that our force, in 1778, would be found sub-stantially equal to what it had been in 1756.

The contradiction given to the facts stated by Mr. Fox, along with the reference to matters in which they were themselves immediately concerned, called up the two great naval commanders, who lately had the conduct of our fleets, on the home, and on the American fer-The noble lord who was newly returned from the latter, and who seconded the motion, (Lord Howe) observed the difficulty he was under in speaking, lest it should be supposed that what he said, might tend to any gloss, or undue explanation, of the affair which he had himself to settle with the ministers, and which he was pledged to that House to bring for-But being on the other hand apprehensive, that his total filence might be confidered as an approbation of measures which he totally condemned; measures, which, he was fully perfuaded, were weak, incapable, and, if longer permitted or purfued, which muk terminate in the destruction of the naval power of this country, and confequently of the country itielf, he held it incumbent on him, as a public duty, to prevent such an opinion from prevailing. other professional matters, which he accordingly entered upon, he declared, that he thought the means put into the hands of administration, were such as enabled them to have a much more respectable navy on foot; that above all things, the Mediterranean ought to have been provided for; he being thoroughly convinced, that it

would be impossible for this country at any time to preferve its naval superiority, while that service was neglected; but much more, when, as in the present instance, it was apparently abandoned.

He concluded, by informing the House of the motives which induced him to retire from the American service. He said, that he had been deceived into his command; that he had been deceived while he retained it; that, tired and difgusted, he had required permission to resign; that he would have returned as foon as he had obtained it, but that he could not think of quitting the British fleet in a state of danger, whilst it had a superior enemy in the American leas to encounter; that on the whole, his fituation was such, that he had been compelled to refign; and that a thorough recollection of what he had felt, and what he had suffered, induced him to decline any risque of ever returning into a fituation which might terminate in equal ill treatment, mortification, and disgust. That the same motives and fentiments which operated with respect to America, must carry equal force, in inducing him to decline all future service, so long as the present ministers continued in office; for that he was sufficiently convinced, by a full and decilive experience, that belides risquing his honour and professional character in such an attempt, he could not, under such counsels, render any effential service to his country.

Admiral Keppel reprobated, in terms of the utmost severity, the daring affertion, as he called it, made in the face of that House, and in defiance of a fact known to

all Europe, by a noble member of the admiralty board, " that the " Brest sleet confisted of only se-" venteen thips of the line," at the time, that under the apprehenfion of a superior force, he had returned from his cruize off that Among other curious particulars relative to naval affairs, which came out in his speech, he observed, that in the years 1765 and 1766, when he fat at the admiralty board, a scheme was proposed and adopted, for keeping at all times, eighty ships of the line of battle, with a proportionable number of frigates, ready for actual fervice; he likewise stated, that if that determination had immediately after been totally abandoned, and even supposing, that the whole navy had been annihilated, at the time that the present first lord of the admiralty came to prefide in that department, it appeared evidently, from the papers before them, that the grants of parliament for the naval service, within his administration, had been so ample, and unusually great, that a fleet of eighty ships of the line, might have been confiructed from the keel, and in actual service at ica, without any additional charge to the nation, by the close of the year 1777; whereas, by that noble lord's own account, we had not at that period, in all stations, at home and abroad, quite fifty, that were in condition for service: and he believed that he should be justified in saying, that we had not forty, fit for real service. He farther declared, that the deficiency in number, was not, at that time, the most alarming circumstance with respect to the navy; for, that he was well warranted in affirming, that

[H] 4

that the ships in general were not opposition, whether with respect to in good condition, nor fit to bear long or difficult services. He also stated, the great loss which the naval service had sustained, from the want of a sufficient number of frigates; said, that when he had been advised with in November 1776, as well as upon a prior occasion, when foreign preparations were likewise so formidable as to excite an alarm, he had strongly pressed the necessity of speedily supplying the deficiency of frigates; notwithstanding which, and the obviousness of the matter, that essential part of the service had been entirely neglected; one confequence of which, among a number of bad ones, was, that great ships were obliged to be sent out, upon every petty occasion, where frigates would answer the purpose equally, if not better; whereby the nation was not only put to an immense and unnecessary expence, in the repairs of those capital ships; but what was still worse, when they came to be wanted for actual fervice, they were found crippled, and in a great measure unserviceable. He concluded his speech, by declaring the admiralty board to be totally negligent, uninformed, and in every way unequal to the administration of the naval affairs of this country.

It was not easy to withstand, upon their own ground, such professional charges and opinions, coming from fuch authorities. In effect, the motion was principally opposed, upon the general allegation of its not being supported by any sufficient evidence, and the conduct of the admiralty defended, by a flat, direct, and unqualified contradiction, to almost every fact stated by the

the present, or to any past state of the navy. Facts and affertions to diametrically opposite, presented an apparent opening for luch doubt, that a gentleman, well understood to be a friend to administration, though seemingly, in certain cases, rather doubtful or eccentric in his conduct, made that uncertainty his ground of argument, why the House could not in conicience come to a vote of cenfure; but, as he also said, that appearances were so strong, as to justify an opinion, that the ministers were culpable in some instances, he would therefore move the previous question, in order to leave the matter open for further enquiry.

The fulness of the House, however, afforded such a confidence to the minister in his strength, as prevented his being content to get rid of the business by a previous question. He said, that the sacts and charges which had been stated, were so direct and important, as to admit of no medium; they must be either established or overthrown; and as they were not yet supported by a fingle tittle of proof, the most regular and parliamentary mode of proceeding, he said, for the present, was to meet them with a direct negative; which, he contended, would not by any means prevent a future enquiry into the subject, if any sufficient evidence could be found for its support.

The question being to be put after twelve o'clock, Mr. Fox arose, and requested that no person would give a vote in favour of his motion, who was not perfectly fatisfied, that the general facts stated in it were fully proved, both

literally and substantially, and that the ministers had failed in their repeated affurances to that House and to the nation.

The motion was rejected upon a division, by a majority of 246, to 174. Although 18 gentlemen, who had not been present at the former division, now voted with the minority, and that they had likewife made one convert from the majority (a gentleman who acknowledged in his speech the force, of that universal notoriety, and internal conviction, which were not generally admitted as evidence) yet we see that these additions, were so nearly balanced by the present absentees, that the increase of number on that fide was trifling.

The discontents in the navy now appeared in the most alarming degree. We have seen in the prelent instance, the determination of Lord Howe. In the preceding debate, Admiral Keppel declared in his place, that after what he had already experienced and suffered at their hands, he could never think of resuming a command, under the present naval administration; that befides its being inconfistent with a due regard to his honour, and exceedingly hazardous with respect to his professional character, he was fully convinced in his mind, that he could not, under their influence or conduct, promote in any essential degree the interests of his country; which was the only motive that could induce him to undertake its fervice. About this time also, or soon after, Sir Robert Harland, Captain Levelon Gower, Sir John Lindsay, and some other officers of high name and distinguished merit, either quitted the service, or declined acting under the pre-

fent system. And so general was the discontent and defection, that it was reported and believed, that no less than twenty, of the most experienced and distinguished captains in the navy, were on the point of throwing up their commissions on one day in a body. Nor was it supposed, that the prevention of this alarming event, was to be attributed, either to official management, or to governmental influence. Thus had the nation, the mortification and grief to behold, iome of her greatest and most popular naval commanders, and of her bravest officers, declining her service, in a feason of no small danger.

The success with which Sir P. J. Clerke had carried his bill for excluding the contractors from Parliament, through that House, in the preceding fession, seemed, so far, to afford some reasonable ground of expectation of success, for the present year; and perhaps he thought it probable, that after so much time for cool recollection, the lords would not think it fitting, to perfift in their rejection of a bill, and their interference in a business, which seemed so peculiarly appropriated to the Commons. as tending merely to the independence and purity of their own body. And this opinion feemed the more feasible, as the lords had, a few years fince, seemed to lay it down as a doctrine not to be departed from, that they should not at all interfere in any measure of regulation, adopted by the House of Common's for their own internal government

However that was, the gentleman in question had moved on the 12th of February, for leave to bring in a disqualifying bill, on

122] ANNUAL REGISTER, 1779.

the fame grounds with those formerly proposed. As nothing could possibly be more mortifying and vexatious to ministers, than the continual renewal or introduction of this subject; which, however it might finally be disposed of, frequently called forth troublefome defences, or humiliating acknowledgments, and always afforded means for the stirring up of some difagreeable or odious matter, so they were now, as ulual, exceedingly tender and irritable upon the occasion, seeming to consider the attack, as if it were no less personal to themselves, than to those who were its avowed and immediate objects. The motion was, however, carried upon a close division, by a majority of 158 to 143; having brought out in its way, no small portion of the usual matter of charge and defence.

Notwithstanding this gleam of fuccess at the outset, the mover had soon the mortification to discover, that his favourite bill, was not likely to prove again troublesome to the lords, for that some considerable change of temper and opinion had taken place in that House apon the subject, since the period of its being canvalled there in the preceding session. Whether it were, that the gentlemen immediately concerned, had found means, in the intermediate time, to justify the purity of their conduct and principles, and to shew the innocence and public utility of their parfuits, in such a manner, as served to convert and bring over any part of their opponents, or from whatever other cause it proceeded, fo it was, that the bill was lost

a committee, after the March 12th. fecond reading; when the question was rejected upon a division by a majority of 41, the numbers being 165 to 124. After which the minister moved that it might be laid by for four months, which was carried without farther trouble.

It would have appeared strange, if that spirit of toleration, which, within a very few years, has spread so wonderfully, though in different degrees, through, almost, every country in Europe, should have passed this alone, which had so long valued itself for its enlightened views and liberal disposition, in all cases whether of civil or religious government, without dispensing any share of that instuence which it so freely communicated to others.

But they must have little attended to such subjects, who do not know the difficulty of shaking off the trammels of superstition, and the inveteracy of prejudice, amongst a people at large; and the still, perhaps, more arduous talk, to cure laws and systems of government of those habitual vices, which have been so long grafted into their conititution, as to appear a part of their original nature. In fact, the number of penal and criminal laws relative to religious doctrines and opinions, which, in despite of a manly and liberal philosophy, still subsisted in our code, would have dilgraced that of a nation far behind us, in arts, science, and civilization.

part of their opponents, or from Although a law had been passed whatever other cause it proceeded, some years ago, for removing some so it was, that the bill was lost of those legal restrictions, which epon the motion for referring it to had more particularly affected our dissenting

differting protestant brethren; yet more still remained to be done in their favour; and that bill was confidered, rather as an opening towards future indulgence, as the ipirit of the times should ripen to a higher degree of liberality in religious matters, than as immediately caring all their present grievances. The relief granted to the Roman Catholics in the preceding lession, had laid the ground fairly open for a present application to parliament for redress; and the liberal opinions known to be held, and profelfrom made, by some of the Bishops on that subject, seemed to obviate the apprehensions of an opposition in that quarter where it was most to be expected and dreaded. Indeed the public losses, calamities, and dangers of the times, seemed to render it now a matter of necesfity, as it had at all times been of duty and wisdom, to unite the interests and affections of all orders and denominations of men in one common bond of union, and to concentrate into one mais, all the firength that could yet be found in the remaining parts of the empire.

In these circumstances. Sir Henry Hoghton, having on the 10th of March opened the way by an introductory speech, concluded by moving, that the House should resolve itself into a committee, in order to confider of granting further relief to protestant dissenting minifters and schoolmasters. The motion being very generally agreed to, Mr. Frederic Montague, by whom it was seconded, was appointed chairman of the committee, and the bill accordingly framed and carried through, under his au-It however brought out some considerable debate in its

course, it being eagerly opposed by a few gentlemen, who still continued wedded to ancient high church doctrines and principles. But this opposition was, in effect, confined only to debate; it being so weak in point of number, that a motion which was made on the 17th of March by Sir William Bagot. and seconded by Sir R. Newdigate, for putting off the confideration of the bill for four months, was supported upon a division by only six voices, to a majority of 77. bill was likewise carried through the lords with great facility; and received the royal affent in the course of the session.

The unhappy consequences of the American war, had, by this time, affected our fister kingdom and island in the most ruinous de-For although the whole amount of her immediate losses, confidered merely as a specific sum in point of calculation, could hold no compartion with that fustained by England, yet the lesser loss, was more severely felt by the poorer country, than the greater, had hitherto been, by that so vastly exceeding it in wealth, and which fet out with so immense a capital in every species of commerce. Other caules, than those losses immediately sustained and directly proceeding from the American war, concurred in accumulating the grievances and distresses of Ireland to most alarming pitch: the ancient restraints upon her commerce, an embargo had been continued from the year 1776. Thus, their great staple commodities of beef and butter, were shut up and perishing in their warehouses, at the very time that their great, their only free, and confequently only valuable

124] ANNUAL REGISTER, 1779.

raluable manufacture, the linen, was contracted under the defiructive and fatal blight of the American war.

Although nothing could add to he diffresses occasioned by the emsargo, yet the circumstances attenling it, or which were sopposed to stend it, ferved to render that meaare more intolerably grievous to be people. It was faid, and feemagly upon good grounds, that it miwered no beneficial or nieful surpose whatever. It neither apseared then, nor fince, that the rench armaments were deferred or aid by, through the want of Irish wovifions; and their West India flands were so far from being rused upon that account, that it was rell known that they were fuphed upon as good terms as our lands with many articles.

So far, they alledged as to the oint of benefit. On the other and, the Irish beheld with grief nd difmay, that the northern parts F Germany, and other countries djoining to the Baltic, were with reat avidity preparing to grasp at at beneficial trade, which was ipping out of their hands. They id already begun the experiment; ere sparing no industry or exmee, in procuring proper falt for e purpose, and proper persons for Arneling them in the art of curing d packing their beef, and had en fent fome confiderable quanies of it to the French market. though these samples could not me in any degree of competition the the Irish beef in point of odness, yet the attempt, or even : idea, was exceedingly alarm-. The vast profits which the iply would afford, through the mels of rents, and the cheap-

ness of cattle in those countri would induce great improvemen both in the articles of feeding a curing; and there are few ign rant, that a branch of trade on loft or transferred, is fearerly ev recoverable. To reader all the circumstances of loss and appr hention the more vexations at grievous, it was univerfally faid that country, and not without for confiderable concurrence both words and opinions in this, th the fource of all thefe mischie was nothing more or left than job, which owed its creation, or least its continuance, merely to ti defign of throwing immense for tunes into the hands of fome fi vourite contractors. Nor was it any avail, how unfounded this op nion might possibly be; the effe was the fame, as if it had been efts blifted by the firmes authority.

Such an unhappy combination of things, must have generated discontent in any people; but there were some local and poculist circumstances relative to Ireland which, exclusive of the internsive weakness, proceeding from vices in her government, and the formes thackies on her trade, served to render the calamity more sudden and conclusive, than it might have been perhaps in some others.

The rent of lands in Ireland within the last thirty years, has been very much increased. Although this rise in the rents, mad have been generally supported by the prices given in those markets which took off the produce of the lands; yet it was afferted by those who were acquainted with the country, that competition, and the spirit of speculation, which had lately produced such permissions ef-

fecti

fects in both kingdoms, had their share in the rife. This speculation failing, and the competition along with it, lands fell; the land owner was distressed, the farmer ruined; and a very general failure of all credit ensued.

Under these unhappy circumflances, the exceedingly numerous populace of that country (where the middle rank of life is but thinly scattered) consisting of the labouring and manufacturing part of the community, were turned adrift, without employment, and consequently deflitute of all the necessaries of life. Although all the means were used, which great and numerous acts of private charity, and liberal public subscriptions, could possibly reach to, for alleviating this dreadful calamity, and that 20,000 poor, were said to have been daily and charitably fed, for some considerable time, in the city of Dublin only, yet all these efforts could only cover a small part of the evil, and it was evident, that nothing less than employment could procure that fubfishence, which their daily laboar had hitherto so usefully provided.

It is probable that much of the extremity of this distress, had arisen from that sluctuation in the state of commerce, which happens in the best of times. But the effects of this sluctuation, being superadded to the peculiar calamities of the time, sunk deeply into the minds of the people of that kingdom. Of course, it called on the attention of many in this; though not so early, nor with so much system on the part of government, as could be wished. The business was, however, in

fome degree brought forward before the holidays, by three members of the House of Commons, who derived their titles from, and whose fortunes principally lay in that kingdom. They stated in strong colours the distresses of that people, and shewed the necessity to ourselves of affording them speedy and substantial relief, which could, as they afferted, only be done, to any effect, by removing those impolitic restrictions on their trade, which owed their rife merely to the narrow spirit of monopoly, operating upon mistaken notions of all. true commercial principles; these restrictions being, in reality, as contrary to the real interests of this country, as they were absolutely ruinous to Ireland. They accordingly gave notice, that they would after the holidays move for a bill or bills, for granting commercial relief to that country.

Notwithstanding this opening, several things seemed to be wanting to afford a prospect of success to the proposed measure. It was to be lamented that no regular plan had been formed, either with respect to the precise nature, or to the extent, of the relief which was to be proposed or expected. The minister took no part in the business. Those of the opposition who supported the relief to Ireland in a former session, supported the present bill.

We shall bring together in one point of view, without regard to time or occasion, a few of the reasons that were urged at the different periods in which this business was agitated, whether in support or opposition to the proposed measure. It was contended on the one side, that leaving all ideas of liberality

liberality and of justice out of the miseries consequently still conquestion, we were now impelled by absolute necessity—by a regard to our own present security, and future preservation, to cherish and preserve the remaining parts of the empire, and to concentrate all the people, in one common bond of union and defence, which could only be done, by a general communion of interests, and participation of benefits. That the people of Ireland expected, and had the strongest right to expect relief. That this was no time, after the heavy loss of our colonies, and of our 'American commerce, to hazard that of our lifter kingdom, whether by invasion or separation, one of which was already threatened, and the other equally to be apprehended, if we did not speedily afford that relief which was expected, and now proposed.

For, they said, that however exemplary and invincible the loyalty of Ireland had hitherto been, and however singular her long enduring lufferings, patience, and forbearance, there were certain fixed limits to those qualities and dispositions of the mind, beyond which human nature was utterly incapable of passing; and was even liable to the danger of recoiling with great violence in the attempt. But if neither of those dreaded events, of separation or conquest, should take place, and that we should still retain the inglorious and unprofitable boast, of remaining the fole tyrants of the dent, that as soon as a peace took

tinued, the people of Ireland would inevitably, under the impulse of the first law of nature, emigrate to America; whither they would convey their manufactures, arts, and their industry. It was already too well known, that the American armies were principally recruited, and their best troops in a great degree composed, of those unhappy emigrants from Ireland, who being driven from their country by want and oppression, were compelled, under an equal necessity, to take up arms in a quarrel, in which they had no natural interest, and to shed their blood in a contest with their friends and brethren.

They stated that the Irish were our best customers in many great articles of our merchandize and manufactures; they shewed the great wealth, with the additional strength and power which we had io long derived from that country; they endeavoured to demonstrate, the infinitely greater advantages of every kind which she was capable of affording, under a wife and liberal fystem of government; and infifted, that the fruits of every benefit we afforded to her in commerce, would come back to ourselves with accumulated interest. To justify their various affertions, and establish their facts, they had moved for various papers, from which they shewed, That the exports from England to Ireland, on an average of ten years, amounted soil, we should even in that case, to 2,057,000 l. yearly. That the infallibly lose all that could stamp exports from Ireland into Engany value upon it,—we should lose land, upon an average of the same the inhabitants. For it was evi- time, did not exceed 1,353,000l. by the year.—That consequently, place, if our oppression, and their the balance of trade in favour of England,

HISTORY OF EUROPE. [127

Bagland, exceeded seven millions sherling in that time.—That this was exclusive of the immense sums drawn from that country every year under the following heads — viz. Rents to absentees—Pensions, and the emoluments of places to those who never saw the country—Appeals in law and equity—Business and pleasure.

and pleasure. They also showed, that the decrease of the exports from England to Ireland, during the last two years of calamity in that country, amounted, upon an average, to no less than 716,000 l. per year, From thence they argued the prodigious loss to the revenue, as well as to the trade and manufactures of this country, which must proceed from a continuance, and a confequent increase, of the distresses of that country. They concluded by aking, whether such a country, and such benefits as we derived from it, were to be wantonly played with, and committed to unneceslary danger and risque? If it admitted of a doubt, whether it were better to afford a just and reasonable indulgence, or to hazard the loss of a nation? — Whether to have the trade, manufactures, and inhabitants of Ireland, transferred to America, or rendered a constituent part of our body politic, of our common stock of wealth, firength, and defence? And whether a kingdom should be sacrificed to a fingle town, to the monopoly of a particular district, or to the ill-judged clamours, and abfurd prejudices, of any body of manusacturers whatever? Gentlemen were requested to profit by expenence; to recollect the small condescension, which, a few years

face, would have preserved and

gratified all our American colonies.

On the other side, it was not believed that the distresses of Ireland were so great as they had been represented; but if the melancholy description was really true, it was not so much to be attributed to the trade-laws here, as to mal-administration there: to faults in the internal constitution of their government, and to general mismanagement in the conduct of their affairs. were matters which should be enquired into and redressed; and without that, no jubitantial relief could be afforded. They faid, that the unhappy consequences of the American war were equally felt in both countries; that Ireland bore no more than her share of the calamity; that if her people were tamilhing, our manufacturers were starving: for that the plenty or cheapnels of provisions were of no avail to those who wanted the means to procure them, and who were rendered incapable of obtaining the means, through the general lack of employment which now prevailed. That in this flate of common distress, however our feelings might be affected with respect to our brethren in Ireland, our sympathy was more strongly, and more naturally attracted, by those sufferings which were immediately within our knowledge; and that however alarming a rebellion in Ireland might be, it could not furely be so much a matter of apprehension as one at home; an event which was to the full as probable, if any addition was made to the fufferings and grievances which our manufacturers already endured, by a furrender of those advantages in trade,

trade, which they confidered as their bring their cargoes directly to Bog-

birthright.

The first propositions held out in favour of Ireland, although not fpecifically applied or moved for, went to the granting of her a general exportation, in all matters, except with respect to her woollens (that article being reckoned too facred, to be yet meddled with)-The establishment of a cotton manufactory, under that right;--with a liberty of trading to and from America, the West-Indies, and the coast of Africa. But these being thought, on the other fide, too geperal and extensive, as well as too alarming to the manufacturers here, they were by 'degrees narrowed, until at length, Lord Newhaven, who conducted this buliness in the detail, entered into a kind of compromise, on the 15th of February, to give up the general outline of relief, and to confine himself to fome particular and specific propolition. He accordingly moved, on the 10th of March, that the House should (on a given day) refolve itselfinto a committee, to take into confideration the acts of parliament relating to the importation of fugars from the West Indies into Ireland.

The object of this motion, was to repeal that clause in the act of navigation, by which all ships laden with fugars, were compelled to

in both, began now to accuse him of the duplicity, which they charged to his prefent fystem of This clamour and reneutrality. proach suddenly brought him to determination; and fetting his face totally against the proposed relief, it was accordingly rejected upon a close division; the question for the speaker's quit- March 18th. ting the chair, in order that the House might, on the day appointed, refolve itself into a committee, being loft only by a majority of 62 to 58.

C H A P. VII.

Detates on the army extraordinaries. Motion for printing the estimates rejetted upon a division. Committee on East India affairs. Resolutions moved for and carried, relative to the violence committed on the late Lord Pigot in bis government. Motion for prosecuting certain members of the late council at Madrass, agreed to. Mr. Fox's motion, for the removal of the first lord of the admiralty from that department, is, after long debates, rejected upon a division. Committee of enquiry into the conduct of the American war. Amendment moved to the motion for the examination of Earl Cornwallis, by the minister, and carried upon a division in Amended motion then put, and rejected upon a division. the committee. Third motion rejected. Transactions in the committee, discussed in the House, and rescinded. Committee revived. Earl Cornwallis, and other witnesses examined, in behalf of Lord and Sir William Howe. Counter evidence proposed, and agreed to. In the interim, General Burgoyne's evidence brought forward and examined. Counter evidence examined. Committee suddenly dissolved.

HE large amount of the army extraordinaries in the preceding year, which exceeded two millions, and, was said, to have about doubled the charge under the same head, during any year of the late glorious war, when our military operations were conducted with such vigour and effect, in every quarter of the world, occasioned much complaint and centure on the March 22d. side of the opposition, and a motion from Sir P. J. Clerke, that the account should be printed for the use of the members. He observed, in support of the motion, that from the great length of the eximate, the fingle copy on the table could not be read, much less examined or comprehended, by the question was brought before them in debate, and a resolution proposed to be passed blindfold upon it. He said farther, that in a matter of such importance to the Vol. XXII.

public at large, in which every man without doors, as well as within was immediately concerned, it was fair and necessary, that they should know the manner in which such immense sums of their money were disposed ot.

The minister opposed the motion, as new, unprecedented, and directly contrary to the practice of the House. The estimate was a matter which undoubtedly concerned the public; but he could by no means admit, that it was therefore to be submitted to the discussion of the populace, and of the coffee-house readers of news-The real public, were the representatives of the commons of England in that House; they had a right to information; but one tenth of the members, until he would never allow, that the people without doors had any fuch right. He also said, that although he was not prepared to answer it precisely, he was fully persuaded, and confident, that the

130] ANNUAL REGISTER, 1779.

affertion was not founded, of the present account of extraordinaries, exceeding that of any year of the late war. But it was, however, to be remembered, that the vast distance of the seat of action, must necessarily enhance the expences of

the present war.

On the other fide, the noble lord was defired to recollect, that if the motion was new and unprecedented, so were likewise the nature, the conduct, and the confequences, so far as the latter had yet appeared, of that war to which the requisition related. They said, that the present enormous account of more than two millions, was a matter not only of the most alarming nature, but which went directly home to every man in England; it as materially affected those without, as those within that House. The whole body of the people of England, whom the noble lord politely refrained from calling a mob, but whom he defignated under the terms of populace and coffee-bouse readers, were the very identical persons, who were to pay this enormous account of extraordinaries, and who feemed therefore to have some right to be informed, and even ianished, as to the expenditure of their own money. They faid, that the extraordinaries charged on this account, amounted to very near 401. a man, exclusive of the standing pay, clothes, arms, and ammunition, of all who ferved in the American army, during the year 1778; and that this enormous expence was incurred in a year, not only distinguished either for inactivity, or ill fuccess; but in which this country had not near so many soldiers to

maintain in America, as she had in the two preceding, when the charge under this head, did not reach to within a million of the present account.

The minister, and his friends, controverted some of the facts and calculations made on the other He observed particularly, that the vast distance of the field of action, placed him under a neceffity of answering the bills drawn upon him when they came; as without that degree of confidence on the side of government, with respect to those who were en-'trusted with the care and supply of the army, it would be impossible to conduct to vait and complex a business. He allowed, that he could not possibly answer for the specific application of the extraordinaries; but he had no doubt that they were properly applied; and if it should happen in any particular instance to be otherwise, the error, imposition, or peculation, would be readily discovered, and speedily redressed, when the particular accounts were, in due time, received and examined.

He still perfished in objecting to the printing of the estimates; and the question being put, the motion was rejected upon a division, by a majority of 130 to 104.—The subject of the extraordinaries was, however, productive of much subsequent discussion, as well with respect to particular articles of the charge, as to the magnitude of the whole, and the indecency, which was charged in very severe terms, of passing so enormous a sum in the lump, by a fingle vote, without examination, and that done at a late hour, and in a thin House.

HISTORY OF EUROPE. [131

The House being, in April 16th. a committee on East India affairs, foon after the Easter recess, Admiral Pigot entered into a detail of the causes which led to, and the circumstances which attended, the appointment of his brother; the late Lord Pigot, to the government and presidentship of Madrass. Having stated, that the great objects and views of the company in that appointment, were, in the first place, the restoration of the King of Tanjore to the throne and dominions of his ancestors; in the second; the purfuit of fuch measures as would restrain the rapacity and ambition of the nabob, from breaking out into fuch future acts of violence and injustice;—and in the last, to endeavour to counteract and remedy that undue, alarming, and dangerous influence, which that nabob had to fuccessfully and glaringly established, in the English council and government in that lettlement.

He then proceeded, in a consected and regular detail; to shew the measures pursued by the late lord, for answering the purposes, and attaining the objects, proposed by his appointment; as also the confequences of those meaforces; taking in, of course, the restoration of the King of Tanjore, the approbation of the counch to that measure, the sublequent revolution at Madrais, the violent leizure and confinement of Lord Figot's person, under a great and military guard, lsvivau marked and striking circumstances which attended his long imprisonment, and his death finally, in the hands of the conspirators.

While he shewed the greatest

sympathy in describing the sufterings and death of his brother, the affection and warmth with which he vindicated his conduct and character, and stated his uncommon public and private virtues, was no less laudable. that ground; to shew the clear uprightness and immoveable integrity of the late lord, he stated, that he had been offered ten lacks of pagodas to withold, only for a thort given time, the reinstatement of the King of Tanjore; that upon his refusal, an additional offer of five lacks more was made, and refused; the whole bribe, amounting in value to about fix hundred thousand pounds in English sterling money. As a farther proof and illustration of this cleanness of hand and integrity of heart, and how far the late lord was superior to that general corruption, which (he faid) faps the whole foundation of the company's trade and government at Madrais, he shewed that he died so little enriched by his then government. that his fon-in-law, Mr. Monckton, had been under a necessity of felling all his houses and effects in India, in order to discharge the debts which he had contracted And yet, said he, what was the return he received for this fingular conduct? for having no fingle object in view while he was in-India but the interests of the company, and a punctual compliance, at all hazards, with their instructions? His personal freedom was violently and difgracefully invaded; and after he had been first deprived of his liberty, and that his life seemed for many months to have been suspended only by a fingle hair, he was at length de-1/1 3 prived

prived of that also.—Would any man

pretend to fay how?

Although the countenance of the committee did not seem to indicate any doubt, with respect to the facts or circumstances relating to the late transactions at Madrass, the admiral defired leave to call a single, but essential evidence to the bar, in order to afford a clear demonstration of the glaring attempts which were made to instruct and to bring them over to support the nabob in his designs, in direct opposition to the orders, as well as to the intentions of the com-

pany.

The gentleman brought forward upon this occasion was a Mr. Dawfon, who was one of the council Madrass, previous to, and during the time of the revolution in that government. His evidence went directly to personal applications made to him at different times by the nabob's lon, and, as ·he understood and presumed, on the part of his father. That on one of these occasions, he had been offered by him a specific bribe, amounting to a confiderable fam of money, only for itaying away for one particular day from the council, on which a question of consequence relative to l'anjore was to be agitated. And, that the commander in chief of the forces, who was likewise high in the council, had advised him to ablent himielf on that day, as was defired. He faid, at first, that his memory did not serve him to fix exactly the precise sum which had been offered as a bribe; but that he was fure, it was at least a lack of rupees; (which amounts to about 12,000l.) Towards the

close of his examination, he however, declared positively, that the fum offered was a lack of pagodas. (about 40,000l.) and not a lack of

supees.

Admiral Pigot then moved three resolutions, stating the matters of fact, relative to the violence fift committed, and afterwards continued to his death, on the person of George Lord Pigot, a member of that House, in his arrest and confinement by and under a military force.—The names of the selfcreated council, the revolution they effected, and the orders they had issued to the military on that occasion.—And, the orders issued by the company from hence, for the trial by courts-martial of those officers, who had arrefted and confined, under a military force, their governor and commander in chief, the late lord.

Although, on a former discussion of this subject, the minister had deemed little disposed to countenance any thing similar to the motions now made, yet on the present occasion, he appeared h sensible of the fixed opinion, and general disposition of the House upon this subject, that he made no direct opposition to the resolutions; and only objected to those words in the first, - being a member of " this House," which, he said, as no breach of privilege was complained of, might better be omit-This objection was not, however, listened to: and the three refolutions were separately carried, nemme contradicente.

The admiral then made his concluding motion for an address,— "Praying his Majesty, that he "would be graciously pleased to give directions to his attorney-"general general to prosecute George
Stratton, Henry Brooke, Charles
Ployer, and George Mackay,
Esquires, for ordering their governor and commander in chief,
George Lord Pigot, to be arrested and confined under a military force; they being returned to England, and now
within the jurisdiction of his
Majesty's courts of Westminster
Hall.'

It was remarkable, that the first gentleman named in the address, and who had been the principal mover and actor in the revolution at Madrais, was, at this critical instant of time, personally present in his place, as a member of the House of Commons, to which he had been lately returned; thereby verifying the prediction which had been thrown out by a celebrated member of the opposition, at the time that this business was formerly agitated in parliament. That gentleman, accordingly entered into some defence and justification of his own conduct, as well as that of his colleagues; resting principally upon the necessity of the meafure, through the violent and arbitrary acts which he attributed to Lord Pigot; and stating the approbation which it received from the governor and council of Bengal, as evidence of its propriety. viudication produced, however, io little effect, that the present motion was carried as unanimoully as the preceding; and the House being then relumed, the report was immediately received from the committee, and the resolutions without any delay confirmed.

Notwithstanding the constant rejection, which the various resolutions of censure upon the conduct

and government of the naval department, proposed by Mr. Fox, had hitherto met with, that gentleman seemed determined not yet to abandon his purluit, and to bring forward the aggregate of those facts, real or presumed, contained in all the former, as the foundation of a new motion, which should be rendered conclusive by going directly to its object. Having accordingly given the usual preliminary notice before the Easter recess of his intention, he moved an address to the throne, for the removal of the Earl April 19th. of Sandwich from his Majesty's presence, councils, and service, on account of misconduct in his office, as first commissioner of the admiralty, and of the general ill state of the navy at the most critical feasons under his administration.

As the mode of proceeding scemed new, and lay open to the following difficult train of objection and reasoning, viz. Have ' not the presumed facts, the motives, and circumstances, which are now laid down as firm ground to proceed on, been already urged, and already rejected, by as many distinct negatives when they were separately proposed? Shall we now agree to come to a general vote of censure upon an accusation, which has been negatived in all its constituent parts? And shall we, as judges, proceed to a direct cenfure, and consequent punishment, of the party accused, after we have already declared to all the world, that not one of the allegations against him is true?—Mr. Fox endeavoured with his usual ability to combat these objections, and to lessen their future effect, by taking

[I] 3

applied.

He argued, that although the House did not concur in a vote of centure on any one of the separate grounds of accusation, it might well concur upon the whole charge collectively taken. The great wafte of the public money, the imposition on the nation, and the lois and danger which it had fustained, through the mifrepresentations, and delufive promifes held out by the noble lord in question, our inadequate state of defence in the preceding month of June, the neglect of reinforcing Lord Howe, at 1 a time when the fate of our American fleet, army, and of our share or hope in that continent, nearly depended upon it, with the abandoning of our trade and fortreffes in the Mediterranean, might none of them fingly, any more than of the other articles of accusation which had been brought forwards, contain sufficient cause of removal, in the opinion of a majority in that House: but taking them in the aggregate, they would furnish matter well worthy of the vote of censure which he proposed, on the clear ground, of wilful neglect, or of gross incapacity.

The reason of such a mode of determining upon a complex charge, he said, was obvious, and came plainly and fully within the inquiintorial power of the House. House was competent to enquire, They to examine, and to censure. might accuse, but could not punish. When criminal charges, reciting specific offences, were made, they could only be decided upon in courts of criminal justice. these occasions the House of Commons, upon impeachments, act as

them up before they were directly the grand inquest of the nation, The present proceeding was of a different nature, and not having a thadow of criminality attending it. did not call for that specification and certainty, which the law justly and wisely requires, when a man is questioned in a court of public judicature, and put upon a trial, on the issue of which may depend his honour, his property, and his life.

> He stated precedents to shew the ulage of the House upon fimilar occasions, particularly with respect to complex and aggregate charges; and drew the line accurately between removal and punishment— Criminal acculation, and charges only of censure. He then went progressively through the various charges of misconduct, incapacity, ignorance, or wilful negligence, which he laid against the admiralty, as arifing merely and directly from those uncontroverted parts of their conduct, which he pointed out, and which were publicly known. He said the business referred to them for their confideration might be comprized within a very narrow compais. whole might be included in a few thort questions, and an answer of no great length. - Was the first lord of the admiralty equal to difcharge the functions of his office, with fafety to the state, and with honour to the nation? Had he hitherto done so? What reasons are there for supposing, that he who has failed in the performance of every part of his past duty, shall act more wisely or capably for the future?—The only answer, he said, that could be deduced from fair and impartial reasoning, supported by common sense and experience, must

EUROPE. [135 HISTORY OF

be, that it would be the last degree of folly and madness to expect, that a person, who by his ignorance and gross misconduct, had brought or fuffered this country to fall from the highest pinnacle of fame, and naval glory, to the last stage of national degradation, weakness, and difgrace, and that rapid fall, contrary to every principle of public opinion and experience, should nevertheless become at once so suddenly illumined, as to prove equal to the arduous task of redeeming her from that calamity and danger, and of restoring her to her former reputation and prosperity.

It cannot be expected, after what we have already seen upon this subject, that any new ground of argument, excepting merely as arifmg from iome new charge, could have been opened in the present debate. Notwithstanding the distinction so ingeniously stated of the separate and collective matter, it was evident, that the real merits of the cause had been discussed and decided, before; and that this was no more than a new mode of bringing the same subject before the House, without the violation of parliamentary rules. The house had already passed its judgment; and the public had passed theirs.

The great injury to the nation in losing at this critical season the service of her best naval officers, and the danger to which the was exposed through the alarming and general discontents which now prevailed in the navy, afforded the only new matter that was brought in support of the motion; for as these misfortunes were charged in the most direct and unqualified terms to the fira lord of the admiralty, it was from thence infilted, that if the other parts of his conduct were even laudable, and that no other cause existed for his removal, that alone was of such importance and magnitude, as to render it a matter not only of expedience and wisdom, but, in the present circumstances, of absolute necessity.

This brought out much direct or implied centure on the conduct of Lord Howe, and of Admiral Keppel, who were charged with fetting that example, and spreading that discontent in the navy, which were to pernicious to their country, and so dangerous to the state. For although the ministers thought it convenient to preserve (in their own persons) some terms with those two commanders, particularly the former (who, with his brother, they wished by all means to wean or divert from that enquiry which they were bringing forward into the conduct of the American war) yet some of those who were, or who seemed to expect to be in their confidence, were so far from being guided by this example, that they missed no occasion during the seltion, of expressing their sentiments with respect to the two admirals, in a manner which carried the appearance of studied and premeditated attack; and without confining themselves to present matter, carried their centures back to the past military and professional conduct of those officers. It was now advanced, that when military commanders grew too great for the state, and let so high a rate upon their services, as to expect a compliance with extraordinary and unreasonable conditions, as the price upon which they would exert them in the defence of their country, fuch proposals should not only be [1]4

rejected

rejected with that contempt and disdain which they deserved; but, however great the professional merits of the proposers, it was fitting, that they should at all future times continue to experience the just indignation of their country, by her contrantly despising those services, which they had witheld in the hour of her distress. It was little to be doubted or apprehended, they said, that there were now, and would be at all times, a sufficient number of brave and experienced officers to be found in the British navy, who only wanted to be brought forward, in order essentially to serve their country, and whose zeal and loyalty would abundantly compensate for the absence of those who had grown beyond her fervice.

This heavy charge and reproach, necessarily called up the two admirals, to a justification of their past and present conduct, which led of course into a fresh detail, of the late and immediate transactions between them and the admiralty; and also brought out, in the course of the debate, partly from them, and still more perhaps from others, no small share of exceedingly bitter charge, retort, and censure, with respect to the conduct and views of the ministers in general, and of that board more particularly, in all matters that related to the military service. They said, that a visible, fettled, concerted, and scarcely disavowed scheme, was now in full execution, for driving from the service by sea and land, or for ruining while in it, not only all whig, or popular, commanders and officers, but all those gentlemen of independent spirit and principles who ventured to think for themselves in political matters, and ho-

neftly to discharge the duty which they owed to their country as &nators. That to this object was facrificed, along with the means of our immediate defence and fecurity, every possible prospect and hope of fuccess, in that ruinous and dangerous civil and foreign war, in which they had wickedly involved the nation. And, that in order to palliate, or in some degree to disguile, this atrocious scheme, from the observation of the public, their first measure was an attempt to ruin the reputation and character, and thereby to deprive of their popularity, and to strip of their good name, those officers whom they had fecretly devoted to destruction.

They charged, that the ministers finding their malice and treachery had failed, in the direct attack which they had made on the life and honour of Admiral Keppel, after all the pains they had taken to inveigle him, merely for that purpose, into the service, they had now only changed their mode, without in any degree abandoning their purpose, so far as it yet appeared to them to be practicable, and were now indirectly trying him a second time at Portsmouth, under the mockery of trying his accuser, against whom there was no charge laid, nor profecutor to support it if there was. They asked to what other purpose the institution of that trial, circumstanced, and attended with fuch extraordinary manuœuvres as it was, could possibly be attributed, excepting to the vain hope, of directing some fide wind from thence which might affect the reputation of the admiral, and that the acquittal of their favourite, might, under their fanction, authority, and management, be perverted

to the purpose of raising some sufpicions, injurious to the honour of those able and distinguished officers, who had either composed the court by which he was tried, or afforded that evidence which displayed to all the world the iniquity of the profecution? For the admiral, they said, had refused, and disdained, to profecute his accuser; and nothing lay against him but the record of that sentence, of having carried on an unfounded and malicious profecution against his commander; and that ientence, no tuture court could reverie, no trial acquit from, nor no power undo. But this attempt, they faid, would be found as vain as it was wicked; and the admiral's reputation, as well as the honour of those brave officers, were far beyond their reach, and superior to all the effects of their malice.

It will not be supposed that such charges were not aniwered or returned with equal acrimony. They were faid to be in falle, in extravagant, so absurd, and so monstrous, that they could only have origigated, from the rage of disappointment, the madness of party, and the malevolence of faction. It was infilted, that the admiralty had behaved with the greatest candour and fairness with respect to the two officers in question. The admiral had been acquitted, and his honour thereby happily cleared. So far, if the admiralty had not acted merely officially, he would have owed them a favour, for affording him an opportunity, which redounded so much to his advantage. As to his adversary, was he to be denied that equal justice, which was so fairly distributed to Admiral Keppel?—Was a trial, in the one

case, an injury, and in the other, a favour? If the vice-admiral was innocent, it was equally sitting and just, that his honour should like, wise be cleared; or if guilty, it was highly necessary that he should be made amenable to the justice of his country.

The House divided on the question at a late hour, when the montion was rejected by a majority of 221, to 118, who voted for the removal of the sirst lord of the admin

ralty. The noble brothers who lately commanded on the American forvice, had omitted no occasion, during the course of the session, of prefling in the itrongest terms, for an enquiry into the conduct of the war, so far particularly, as they were themielves immediately concerned. They supported this urgency of application, and the propriety of the measure, upon the different grounds, of public utility, and of particular justice, stated it to be a matter of great national importance, that the real causes of our failure, hitherto, of fucceis, might be thoroughly Known and understood; as a proper application of that knowledge, could only afford any rational hope of greater advantage in the further prolecution of the war. It was likewise a satisfaction due to the people, for the heavy losses they had fultained, and the immense expences they were at, to let them iee the true state of their affairs; as it would be a farther affurance and encouragement to them to discover that the causes were removed, which had hitherto disappointed their expectations. With respect to themselves, their endeavours to ferve their country, had been productive

ductive of such a torrent of invective, and unceasing obloquy, as had not perhaps been equalled in any former period; although ministers themselves were silent, and had not ventured to bring any charge against any part of their conduct, they had full reason to believe, and the world held the same opinion, that this abuse proceeded wholly from their hireling emisfaries, and pensioned writers. Their conduct had likewise been publicly arraigned in that House, by persons either in office, or who were at least known to be in the confidence and favour of ministers; whilit the latter, thoroughly fenfible as they were of the injustice of the censure, and with the full means of their justification in possession, used not the smallest effort for that purpose. On these grounds, they were under a necessity, they said, of demanding a parliamentary enquiry: that if any blame was due in the conduct of the American war, it might be applied to its proper object; and if they were totally clear from it, as they trusted, they might thereby obtain justice, in the vindication of their honour and character.

On the other hand, the ministers, among other causes, objected to the enquiry, as being totally need-Government had laid no charge against the noble brothers; and on the contrary, several parts of their conduct had met its approbation. As to the abuse or charges contained in newspapers or pamphlets, any more than the opinions held, or censures thrown out by individuals, whether within or without doors, they could not furely be considered of sufficient moment, to authorize the bringing out of an

enquiry, which must necessarily break in so prodigiously upon the time and attention of the House, and that in a session, when there was already so much business of importance before them, and so much more still in expectation, or at least within the line of probable contingency. As to themselves, whatever their private opinions in certain matters might be, they had no share in any attacks that were made upon the characters of the noble brothers without doors, nor arraignments of their conduct within. Of these matters they were to-

tally innocent.

Although the ministers did not approve of the enquiry, they, however, acquiesced in the motions for laying the American papers before the House; which were accordingly brought forward in great aboudance, and continued on the table during a great part of the session. In these were included the whole correspondence between the miniiters, and the commanders on the main service in America, from about the time of Sir William Howe's arrival at Boston, in the year 1775, to his return from Philadelphia, in 1778; together with a great number of accounts, returns, and other papers, tending to shew the state, number, effective strength, and condition of the army, at different periods of the intermediate time; their real movements and operations; as well as the different plans of action which had been proposed, discussed, or concerted, by the ministers and generals.

General Burgoyne was no less importunate in this fession, than he had been ever fince his return, for an enquiry into his own conduct, and into all matters relative to the

Canada

Canada expedition. We have already feen, that his particular fituation under the convention of Saratoga, had been laid down as an insuperable obstacle to his gratification in that respect; and it may be conceived from obvious causes, that his complaints and applications were now full as little attended to as those of the other commanders. expedition, was, northern however, so connected in its consequences with the operations of the grand army, and they io materially affected the event and general fortune of the war, that it was not easy to separate matters so blended in any course of enquity; and this difficulty was increased by the circumstance, that Sir William Howe had been specifically arraigned, both within doors and without, for undertaking the fouthern expedition, at the time that he should have waited to facilitate and support the operations of the other army on the north river. General Burgoyne accordingly feized this opportunity of bringing forward his own business, as necellarily belonging to and inteparable from the rest; so that the House was in possession of the whole correspondence of the three commanders, and of all the documents relative to the different services.

April 29th. had gone so far as to form itself into a committee for enquiring into the conduct of the American war; had made a previous application to the House of Lords for the attendance of Earl Cornwallis, as an evidence, and had listened for two hours, with the greatest attention, to the very clear and able narrative of his conduct, delivered in the plain eloquence of

a foldier by Sir William Howe; yet, the noble lord at the head of affairs, who had all along expressed the utmost disapprobation of the enquiry, was still determined to quash it. It was said in general, that there had been no necessity, nor even occasion at any time for the enquiry; but that if there had, that necessity or occasion was now fully removed, as well by the able explanation of his conduct given by the honourable general, as by the papers before them. That almost every part of the correspondence went to shew, the utmost satisfaction of government, and its warmelt approbation with respect to the fervices of the two noble commanders; that the personal declarations of the ministers shewed that they still retained the same fentiments; and that a doubt could not be entertained in the committee on the subject. That without regard to occasion, the commanders had hitherto been indulged in bringing forward every thing they proposed, merely to satisfy their delicacy; but that end being attained, it would be abfurd to purfue the subject any farther; there was neither charge nor accuser: and it would be merely combating a shadow.

But they went farther, and contended, that if matters had been different, and that an acculation had been really laid against the officers, that House was totally incompetent to any enquiry into, or any decision upon military matters. Military charges and accusations, must be enquired into, tried, and decided upon, in their own proper courts; and no where else. It would be in the highest degree absurd to suppose, that gentlemen lit-

ting in that House, should pretend to judge of the proper distribution of a large military force; of the movements of columns, the evolutions of brigades, or the good or bad dispositions made in a field of The minister seemed to battle. think, that the conduct of ministers was the latent object of the enquiry, with a view of injuring them by a fide wind; of trying them in an oblique and indirect manner; if that was the object, he defired it 'might be declared; that the accuser should stand forth, avow his charge, and compel them to an-When that was avowed, ministers would know the accuser and the accusation; and they would know in what manner to make their defence. If that was not the object, a further pursuit of the enquiry would be futile and needless.

With a view to the incompétency of the House in military matters, upon Sir William Howe's motion for the examination of Earl Cornwallis, the quellion was put to him, "upon what points he " meant to interrogate the noble " lord;" to which the general replied, " to the general conduct of " the American war; to military or points generally and particular-" ly." These words were eagerly feized by the minister, who working them up with the original into the form of an amendment, under that colour nearly framed a new motion, which he knew carried its own rejection along with it. The words of the motion in that flate were-" That Lord Cornwallis be called in and examined relative to general and particu-" lar military points, touching " the general conduct of the Ame-" rican war."

There was scarcely any thing. during the session that drew out fuch severity of censure, and even of reproach, as this manœuvre, or, as it was termed, trick, in debate, now did. It was faid, that so shameless and palpable an evasion of enquiry and truth, and so barefaced an acknowledgment of guilt, had never been ventured upon by any other minister, nor could not have been endured at any other period. The degraded fituation of the noble lord, which reduced him to the necessity of adopting so shameful a measure, in order to screen his associates, and the open acknowledgment which it included, that he durit not venture to trust, even his own flanding majority with their guilt, was expressed in those terms of pity, which convey the forest ideas of contempt and ridicule.

It was contended, that the two objects were so closely united, that there was not a possibility, in the present enquiry, of separating the conduct of the ministers, and of the military commanders. No opinion could be formed with respect to the former, without knowing how far their plans were or were not practicable; nor of the latter, without knowing and measuring the means which had been put into their hands. And from whom was this information to be fought or obtained, but from those officers who had ferved on the spot, and who being employed in indeavouring to carry those plans into execution, were thoroughly acquainted with the sufficiency or deficiency of the means, as well as with the nature and extent of the impediments which were opposed to them? Several questions would come before

HISTORY OF EUROPE.

the committee, which were merely political and deliberative; and these could only be decided upon, by taking the opinion of professional men on the spot; men who knew the country, were informed of the nature of the refiftance expected to be made, and the real motives which gave, or did not give, a preference to the measures pursued, before others which might be proposed. To stop such information, therefore, by a vote of that House, liament into a screen, for preventing an enquiry into the conduct of administration; for if the commander had acted right, it necessarily followed, that the measures of policy were dictated by weakness and ignorance, as they were now attempted to be covered by the most shameful and criminal evation and

imposition.

The point of order was strongly mutted on, and this was said to be the first instance in the annals of parliament, in which the reference of any order of the House to a committee was clogged with any amendment or condition whatever in that committee. The order of the House was specific, for the attendance on that day, and the ex- amination of Lord Cornwallis; and the amendment imported a negative to that order, and accordingly went to a jubitantial contradiction of it. Thus was the dignity of the House of Commons facrificed, and their orders treated with a contempt, which would reduce them in all future times to the condition of waste paper, merely to fave ministers from that punishment, which they had so justly merited, and which the ruin they had brought upon their country fo loud-

ly called for. It was lamented, that any man, or fet of men, should posfess so baneful an influence, and apply it to so deplorable a purpose, as to induce them in such a manner to a furrender of their own inherent privileges; and thus to establish a precedent, which must go to the banishment of all order and regulation from their future proceedings, and to the introduction of anarchy and confusion.

A general officer, who had acwas, in fact, the converting par- quired great reputation in the late war in Germany, who was even then near the top of his profession, in point of rank, and who had fince filled, with no small degree of eminence, one of the highest civil departments of the state, called upon the ministers to declare, whether they denied the competence of the Honse to institute or proceed upon such an enquiry? He dared them to the affertion; and protested, that during thirty years he had fat in parliament, he never faw so gross an attempt to violate the inherent and constitutional privileges of that House; whether with respect to the breach of order, or to what was of infinitely greater importance, the denying that House to have a right of inquisitorial jurisdiction over every department of the state, every establishment, whether civil, military, or criminal.

The minister's amendment was, however, carried upon a division. though by a smaller majority than might perhaps have been expected in so full a house, the numbers being

189 to 155.

The debate was again renewed on the main question, whether the motion so amended should pass, when the question being called for, it

142] ANNUAL REGISTER, 1979:

was rejected, although by a fmaller majority than on the preceding divition, the numbers being 180 to 178. A gentleman of the opposition then moved, in the terms of the original order of the House, " That Lord Cornwallis be called in, " and examined respecting the suber jeck matter of the papers refer-" red to faid committee." This motion was negatived without a And thus the enquiry divition. feemed to have been laid to fleep for ever. The committee was not, however, dissolved; for although a motion for that purpose had been proposed early in the debate by a noble lord in office, it had been withdrawn at the minister's defire, who preferred this scheme of management which we have feen. In firschness, the committee was open to receive any testimony tending to the elucidation of the papers before them, excepting that testimony related to military matters; and the whole subject of those papers was military.

The opposition were, however, determined not to let this state of things rest in absolute quiet; and to try how far the House could, upon recollection, and in its proper form, submit to such an apparent contempt and rejection of its authority, by a committee, a creature of its own making, and fuenished only with confined and temporary powers, directed to a particular object, and revocable at pleafure. The bufinels was May 3d. accordingly introduced a few days after, by a recital of the transactions which had passed in the committee, and a renewal of the motion for the examination of Lord Cornwallis, and the whole

matter of complaint and redset supported with great vigour.

The minister and his friends hat taken but little notice of the charges with respect to the point of order, which had been so strongle urged by the other side in the com-

mittee; left room that groment that on that futhat he the wholitielf, as a powers c

ality, the difference between the orders of one, and the resolution of the other, was merely in terms as they substantially imported the same thing. They were, on questions of importance, equally we attended; and the difference, in his apprehension, was little more, that whether the speaker was in the chair, or whether one of the members presided for the time in his

place. On the question of competent he was now remarkably teodo and did not at all push that ma ter as he had done in the com mittee. He began to perceiv that fuch a principle once la down might go to great length and fuch as might prove highly it convenient to ministers themselve But with respect to the impropries of examining witnesses on militar questions, he was diffuse; at seemed to lay all his strength that point. He observed, that the evidence must be ex parte, could never be deemed, by a rule of reason, fanction of pres dent, or confiltency with the reg lar proceedings of judicature, full

Cical

ciently full and conclusive, either for acquittal or centure. It might family a good ground for belief or perium from the nature of the evidence, as well as the manner in which it would be delivered, no man in that House, or without, could lay any other stress upon it, or give it any higher degree of credit, than merely what exparts evidence was entitled to in the first instance, and what testimony, not delivered upon oath, was entitled to in the second. And that, therefore, neither the censure por acquittal of the honourable general, by a vote of that House, would be capable of changing in a fingle instance, the opinions already formed upon that subject.

He had accordingly always held and still retained his opinion, that enquiries into the conduct of military 'men, were exceedingly improper in that House. When such occasions occurred, military courts were provided by the constitution for the purpose. He considered a court-martial as the only tribunal, where the party accused could procure substantial reparation for his injured honour, and where, on the other hand, in case of failure or neglect, the justice of the nation could be legally and constitutionally latisfied.

He also observed, that if under the appearance of an enquiry into the conduct of military officers, it was intended to bring charges of neglect or incapacity against miniters, be could not but consider it as an exceedingly unfair mode of proceeding. No man had yet avowed that design. And yet he could not see, what other motives there could be, for urging the present enquiry farther. The House

undoubtedly an inquisitorial had power to enquire into and centure the conduct of ministers; but he trusted their conduct was not to be decided upon by the evidence of military men; much leis when that evidence was professedly given on military measures, which they had neither planned nor executed. . If, however, any specific accusation was brought against ministers, as one of his Majesty's considential scrvants, he was ready to have witnesses instantly called to the bar, provided the matter on which they were to be examined was previously stated, and was such as directly and specifically pointed to any one particular measure of administration.

On the other side, it was laid down as a clear and indisputable rule of proceeding in that House, that a committee was always bound by the order of reference made to it; otherwise, there would be svo contradictory powers and clashing jurisdictions in the same body; a doctrine too abfurd and monftrous to be heard or endured. A great part of their business was transacted by committees, particularly by committees of the whole House: if, therefore, it should be adopted parliamentary law, that what the House entertained in one instance and referred to a committee. was io far controllable by that committee, as that the latter had an option to disobey the order of reference, all business would be at an end; and as often as circumstances afforded a pretence, the proceedings of that House would be involved in endless confusion. and in contests with itself. The House was therefore called upon, and requested seriously to restect

144] ANNUAL REGISTER, 1779.

and confider, the fatal confequences that would necessarily ensue, if it did not preferve a proper controul over its several constituent parts.—The question they were to decide upon was short and plain, but it included much matter:—It was fimply this: Shall the House · controul and direct a committee appointed by itself, or shall they controul and direct the House?

- The ground of propriety, with of the officers commenced by that of respect to military enquiries in that Earl Cornwallis. House, was not only abundantly supported, but covered with a superfluity both of arguments and of precedents. The debate, however, hung yet in suspence, when the unexpected part taken by a gentleman high in office, and closely connected with a strong and powerful party, suddenly turned the That gentleman debalance. clared, that although it was with Infinite reluctance that he differed in opinion with the two noble lords in administration, yet he could not avoid thinking the conduct of the committee, even at the time, very extraordinary. He had, however, some doubts upon the subject, which occasioned his going. away, without speaking or voting, on that night. But their doubts were now totally removed. For as he confidered certain words (which he recited) that had fallen from the American minister in the prefent debate, as a direct charge and acculation against the commander in chief, he should think it an act of the greatest cruelty and injustice if the present motion was not passed, in order to afford an opportunity for his vindication and defence.

These words operated like a charm. Nothing would afterwards be listened to from the other side: • The minister altempted several times to ipeak, but in vain. A complete revolution. was effected; and the enquiry, which a few days before had been rejected by a majority; was now-refumed, with an appearance of almost general unanimity. The committee was May 6th. accordingly revived a few days after, and the examination

It would be equally beyond our purpose, and our limits, to enter into any particular detail of this enquiry. It was taken up with much general expectation, and it might, perhaps, be faid hope. The public were in the highest degree impatient for it. Those who had conceived that the total reduction of America ought to have been but the buliness of one easy campaign, were eager to fee the fault fixed upon those generals, whole milmanagement had rendered the war not only io tedious and \cdot so expensive, but at present almost hopeless. Others, wished to fix the fault on the original ill policy of the undertaking, rendered additionally ruinous by the weakness. and contradiction of the councils by which it had been conducted. But as the enquiry might be, as in reality it was, drawn out to a very great length, it foon became evident, that those who originally opposed any enquiry at all; and only had given way, because they were unable to resist the torrent, would prevent it from producing any effect; and this it was not difficult to do, as it was in their power to draw the examination of witnesses into an infinite length; and the attention of all being fatigued by

fuch

fuch a pursuit, attendance would naturally relax along with it; and the business would languish, and

expire of itself.

The officers who were examined. were the following, who were also called in the-order that we state them, viz. Earl Gornwallis, Major-General Grev, Sir Andrew Snape Hammond, Major Montresor, chief engineer, and Sir George Osborne, a member of the House. testimony, taken together, went to the establishment of the following points of fact, or of opinion.— That the force sent to America was at no time equal to the fubjugation of the country—That this proceeded in a great measure from the general enmity and hostility of the people, who were almost unanimous in their aversion to the go-· vernment of Great - Britain; and also from the nature of the country, which was, the most difficult and impracticable with respect to military operations that could possibly be conceived—That these circumflances of country and people, ren-. dered the services of reconnoitring, of obtaining intelligence, of acquiring any previous knowledge that could be depended on, of the state of the roads, and the nature of the ground which they were to traverse, along with the essential object of procuring provisions and torage, exceedingly difficult, and in some respects impracticable— That this latter circumstance rendered it impossible for the army to carry on its operations at any diftance from the fleet; at least, without the full possession, on both its fides, of some navigable river-And that its operations were much retarded, and frequently endangered, by being generally con-Vol. XXII.

strained, through the circumstances of roads and country, to march

only in a fingle column.

It also went to the establishment of the following particular points, in direct contradiction to several charges which had been made against the conduct of the commander in chief, viz. That the rebel lines and redoubts at Brooklyn, in Long-Island, on the 27th of August 1776, were in such a state of strength and defence, that any immediate attack upon them, without waiting to make proper approaches, and without the artillery, scaling ladders, axes, and other articles necessary to the fervice, would have been scarcely less than an act of desperate rashness. —That Lord Cornwallis's halting at Brunswick, when in pursuit of the enemy, in the same year, was necessary, as well with respect to the condition of the troops in point of fatigue and provision, as to their number, and the posts which it was first necessary to occupy, in order to preserve their communication; and that his passing the Delaware, and advancing to Philadelphia, when he afterwards arrived at Trenton, was utterly impracticable, from the total want of boats, and of all other means for that purpose.—That the going by fea to Philadelphia, was the most eligible, if not the only method, which could have been adopted, for the reduction of Pensylvania, and that the Chesapeak was a more eligible passage than the Delaware. — That from the strength of the highlands, and other circumstances, the attempt of going up the North River towards Albany, while Washington was at hand with a strong army, to profit

146] ANNUAL REGISTER, 1779.

of all the advantages which it mult afford, would have been difficult, dangerous, and probably found impracticable in the event. And that the drawing of Gemeral Washington and his atmy, near 300 miles from the North River, to the defence of Penfylvania, was the most effectual divertion that could have been made in favour of the northern army; and at the same time held out the greatest probability, that the delire of protecting Philadelphia, would have induced him to hazard a general action; an event so long and so ardently coveted, as the only means which could tend to bring the war to a speedy conclusion, and which every other measure had been found incapable of producing.

General Howe had endeavoured, in his narrative, as well as in the different speeches which drawn from him on the subject, to establish as an indisputable fact, and demonstrably to prove from the correspondence before them, that he had constantly stated to the American minister, the great difficulty and impracticable nature of the war; and the utter impossibility of subjugating that continent with the force under his command. That he had accordingly accompanied the plans for the operations of the campaign of 1777, with a requisition, in one instance, of a reinforcement of 20,000, and in another, of 15,000 men, strongly flating and arguing, that nothing less could effectually answer the purpose of bringing the war to a fpeedy conclusion. That on the other hand, the minister did not feem to credit, that the difficulties were so great as they were reprefented, nor that so great an additional force as was demanded could be necessary; and placed much of his dependance in the firm perluation, that the well-affected in Pensylvania were so numerous, that the general would be able to raile such a force there, as would be sufficient for the future defence and protection of the province, when the army departed to finish the remaining service. That accordingly, he had promised, only about half the force stated in the second number; that not a fifth of the force, even so promised, was at length sent; and that reinforcement, when it did come, arrived too late to answer any of the original purpoles of the campaign— He likewise stated, and supported by the lame authority, that to far from any concert or co-operation being proposed or intended between him and the northern army, that, that expedition had never even been calually mentioned, in any of the discussions relative to the plans of the future campaign, which had passed between him and the minister. That the first knowledge he had of that design, and which induced him to write a letter to Sir Guy Carleton upon the subject, was merely from public report. And, that the first intimation he received from the minister, that the smallest degree of support would be expected from him in favour of that expedition, was by a letter which he received in the middle of August, in the Chesa peak, when his measures were already taken in pursuance of that plan which he had previously settled with the noble secretary, and when it would have been too late for him in any case to have receded.

HISTORY OF EUROPE. [147

But even that letter expressed no more than a consident hope, that he should be returned soon enough back from the southward to concur in the further operations of the nor-

thern army.

It will be easily seen, that nothing could possibly have been more galling or vexatious to the ministers, than some part of this narrative, and of the preceding evidence. Particularly that part of the former, which stated the general's communication of the impracticability of the American war; or at least the insufficiency of the force appointed to that fervice for the accomplishment of its purpose, at a time that the ministers held out a language and hopes to directly contrary, to the parliament and people of England. The charge of general dilaffection among the Americans, which was laid by the general, as well as the other officers, although more guarded perhaps in terms and specification, was likewise an exceeding tender subject with the ministers. The opposition too never omitted any occasion of reminding them, that from the beginning of the troubles, they had been constantly represented by them, as being the acts merely of a faction in America, who had by a fort of surprize polsessed themselves of the civil and military powers of that country; but that the great bulk, or at least a large majority of the people, were firmly attached to the government of Great-Britain. deed, if that representation was an error, it feems pretty clearly, that the ministers were no less involved in it themselves, than the public. At any rate it was a very favourite opinion; and nothing could be

more grating than this testimony, which went directly to its subversion.

For these and other causes, it was thought necessary to call in question the validity of this evidence, and nothing could so well answer that purpose, as the opposing to it another body of the same nature; for as no decisive victory was to be gained, nor deseat feared in such a contest, the issue must unavoidably be, the leaving the question of fact in doubt and uncertainty; and no more was wanted.

It was accordingly pro-13th. poied, towards, what ieemed, the close of the examination, that other witnesses should be called in and examined, relative to leveral matters which were stated in the present evidence. In support of this proceeding it was advanced, that ex parte evidence had been received, relative to matters of fact and opinion, to military manœuvres, to the propriety of plans, and to the execution of them; and that this had been principally directed to the laying of implied or direct charges against the conduct of ministers, particularly of the noble lord at the head of the Ame-That it was rican department. therefore necessary, fair, and equitable, that witnesses should be brought on the other lide, and evidence received relative to those and to fet aside those points, charges. The noble minister himfelf disclaimed the idea of becoming an accuser; (with which he was charged) but as he was attacked, and charged with being the cause of the miscarriage of the American war, it was necessary he should defend himself; and the [K] 2

150] ANNUAL REGISTER, 1779.

of doing, to the direct overthrow or removal, of every charge or cen-Ture, which had been thrown out, or infinuated, against the conduct of the commander; leaving, however, the question of opinion necessarily open, whether his orders for proceeding to Albany were peremptory or conditional; and perhaps leaving likewise some doubts behind, with respect both to the defign and to the mode of conducting the expedition, under Colonel Baume, to Bennington. In other matters it seems conclusive; and particularly detects two falsehoods, at the beginning of this enquiry in full credit and vigour; the one, that General Phillips, at the time of the convention, offered to force his way, with a specified part of the army, from Saratoga, back to Ticonderago; the other, that the late gallant General Frazer, had expressed the utmost disapprobation to the measure of passing the Hudson's river.

The witnesses were generally of opinion, from what they saw and heard of the temper and language of the troops, that nothing less than the passing of that river, and advancing to fight the enemy, could have fatisfied the army; or preserved the general's character with it; and that even, after all the misfortunes that happened, it was still universally considered as a matter of necessity which he could not have avoided; or which if he had, that it would have been such a failure, as he never could have forgiven to himself, nor been able to justify to his country. Their testimony went likewise fully and decisively to the subversion of that injurious slander, which it was once a fashion with some persons

high in rank and office here to throw out, relative to a supposed natural deficiency of spirit which they attributed to the Americans. Fully masters and judges of the subject, and possessing sentiments more liberal aud generous, these officers scorned to depreciate the character of an enemy, from any resentment for his fair hostility; and declared freely, that the Americans shewed a resolution, perseverance, and even obstinacy in action, which rendered them by no means unworthy of a contest with the brave troops to whom they were opposed. Written evidence was also produced, and supported, that the number of the rebel army, at the time of the surrender, amounted to 19,000 men, of which thirteen or fourteen thousand were men actually carrying musquets.

The examination of General Burgoyne's witnesses being closed, the American minister opened the which evidence, counter brought to oppose that given in favour of Lord and Sir William Howe. The only witnesses, which it was thought expedient or necesfary to examine on that fide, of those whose names we have stated, were Major General Robertson, Deputy Governor of New York; and Mr. Joseph Galloway. None of the officers, ordered to attend, except the general above mentioned, were called upon. Mr. Galloway had been an American lawyer, and a member of the first Congress; and was one of those that had come over to Sir William Howe at the time when the rebel cause seemed nearly ruined, by his great successes at New York, and Long Island, towards the close of the year 1776, and when that violent con-

tention

Philadelphia, which we have formeny taken notice of. The general had immediately afforded a liberal provision for this last witness, (from whose services he expected some considerable advantages, in which, however, he declared himself disappointed) and afterwards advanced him to lucrative, as well as flattering civil employments.

The general tendency of this evidence was to overthrow, invalidate, or weaken, the testimony already given in favour of the commanders. And the points which it principally laboured to establish for that purpose, and for the vindication of the ministers, were the following. The vast majority, who from principle and disposition, were zealoully attached to the government of this country, and confequently enemies to the conduct and tyranny of the ruling powers; this was rated by the first witness at two-thirds, and by the second at four-fifths, of the whole people on that continent. at a proper use had been made of this favourable disposition of the multitude, it might have been directed to such essential purposes, as would have brought the war to a speedy and happy conclusion. That the force sent out from this country was fully competent to the attainment of its object, by the sotal reduction of the rebellion, and the consequent recovery of the That the country of America was not in its nature particularly strong, much less impracticable, with respect to military operations. That the face of a country being covered with wood, afforded no impediment to the

march of an army, in as many columns as they pleased. That the British troops possessed a greater superiority over the Americans, in their own favourite mode of bushfighting, and the detached service in woods, than in any other whatever. That armies might carry nineteen days provision on their backs, and confequently need not be deterred from the undertaking of expeditions, through the want of thole means of conveyance which are now deemed indispentible. That the rebel force, both with respect to number, and to effective ilrength, was, at the most interesting periods, if not always, much inferior to what was reprefented. And, to a general condemnation of the fouthern expedition; along with an endeavour to thew, the great advantages which would have refulted in that campaign, if Sir William Howe had taken possession of the north river, and directed his operations towards Albany.

Several other more direct charges or acculations were brought against the military conduct of the brother commanders, which were chiefly undertaken by Mr. Galloway. Particularly with respect to the going round by the Chefapeak, instead of up the Delaware, on the fouthern expedition; the want of fufficient dispatch and vigour in the pursuit of the rebels from Brunswick across the Jersies, in the year 1-776, to which their elcape was attributed; the not cutting of Washington at Trenton, before he could cross the River, which was contended to be practicable; and the not patting the Delaware, and proceeding to Philadelphia at that time, which, it was afferted, would

[K] 4

have

152] ANNUAL REGISTER, 1779.

have put an end to the war; along with a number of other matters tending to the same purpose.

On this the opposition from time to time remarked, that the greater part of these gentlemen's testimony was founded upon private opinion, hearfay knowledge, intelligence from ablent or unknown perions, and strong affertions of facts, unsupported by any collateral evidence. It was also remarked by them, that the only officer produced, had been very little, if at all, out of our garrisons, since the commencement of the war, and was therefore little qualified, either to give fatisfactory information relative to the disposition of a people with whom he was so little converfant, or to give critical opinion on military measures which he had never seen. As to the witness of a civil description, they said it was fingular, that, although bred a lawyer, and habituated to business, he could scarcely be brought to recollect the smallest part of his own conduct in the most trying, fignal, and possibly dangerous situation of his life, and the most conspicuous sphere of action to which he had ever been exalted, when a member of the congress; and yet, that the same man, a total stranger to the profession, and only flying for refuge to the British army, should all at once acquire an accuracy with respect to military details, and the complicated business of a camp, which could scarcely be expected from a quarter-mastergeneral, and as suddenly become possessed, along with the minutiæ, of that nice discernment and critical judgment, in the general conduct, and all the great operations

of war, which the oldest and most experienced commanders do not

often pretend to. The examination of these two witnesses was spun out, by the intervention of business, and other means, to the end of June. mean time, as it was uncertain what farther evidence might be called on that side, and the session being so near a conclusion, Sir William Howe requested, that, in consequence of the attack made upon his character in the evidence of Mr. Galloway, a day might be appointed, on which he should be permitted to bring witnesses, in order to controvert and disprove those charges. This was refused by the ministers, and did not feem to be approved of by the House, who had got tired of the business, and besides saw no postibility of bringing it to a conclusion, during the short remainder of the fession. The former said, that the general had already met with every indulgence he could reasonably expect; but that the calling in of new witnesses at that time, could not be admitted; that he however had it still in his power to cross-examine Mr. Galloway as much as he pleased.

This was far from affording any fatisfaction to the other fide, who complained loudly, that after the attacks made upon the general's character, the refusing to hear evidence in his vindication, was no less than a denial of justice. They were, however, obliged to submit to what they could not remedy. The committee was resumed on the 29th of June; but an advantage being taken of some little delay, (which he stated not to be above

HISTORY OF EUROPE.

above a quarter of an hour) in Sir mittee was suddenly dissolved. William Howe's not being immediately prefent for the cross-examination of the witness, the com-

C H A P. VIII.

Two enquiries in the House of Lords, tending to the same object, and carried on through the greater part of the session. Enquiry into the state of the navy, and the conduct of the admiralty, instituted by the Earl of Bristol. Motions for naval papers, bring out much debate, and are rejected upon a division. Motion by the Earl of Bristol, for the removal of the first Lord of the admiralty from his employment. Great Debates. Motion rejected upon a division. Protests. Enquiry into the government and management of Greenwich Hospital, conducted by the Duke of Richmond. a compensation to Captain Baillie, late Lieutenant-Governor of Greenwich Hospital. Motion rejeated upon a division. Minority Lords quit the House. Resolutions in windication of the Earl of Sandwich. Hard Case of Captain Baillie. Marquis of Rockingbam endeavours to bring forward an enquiry into the affairs of Ireland. After several ineffectual attempts, a kind of compromise takes place, referring the business of that country to the ensuing session. Mr. Townsbend's motion to defer the prorogation of parliament, rejected upon a division. Spanish manisesto. Address from the Commons. Second address moved by Lord John-Cavendish. Motion of adjournment carried upon a division. Amendment to the address of the Lords, moved by the Earl of Abingdon, and rejected upon a division. Second amendment proposed by the Duke of Richmond; rejected upon a division, after considerable debate. Bill brought in by the minister for doubling the militia, after much debate and proposed amendment, passed by the Commons. Indemnity bill likewise passed. Militia bill meets with great opposition in the House of Lords. Indemnity bill much opposed; but carried through. Protests. Militia bill deprived of its principal effective powers, and returned to the Commons. Debate on a point of privilege. Bill passed. Speech from the throne.

URING these transactions in J the House of Commons, the Lords were principally taken up with two enquiries of an unusual call and nature; and both tending directly, or indirectly, to the same object, to the crimination or cenfure of the first lord of the admiralty. The first of these, was an enquiry instituted into the state of the navy and the conduct of the admiralty, by the late Earl of

Bristol, which went directly and avowedly to the crimination in the first instance, and to the removal in the second, of that nobleman. from the very high and important department in which he had so long prefided. In the conduct and purfuit of this enquiry and object, he was professionally assisted by the Duke of Bolton, and ably fupported by the Duke of Richmond. and some other of the most active

ANNUAL REGISTER, 1779. 154

lords of the opposition. The indultry, patience, and constancy, with which he applied himself to to complicated and laborious a bufinels, encumbered with frequent and tirefome calculation, and with tedious comparative estimates, at a time when he was finking under the pressure of various infirmities, and a victim to the most excruciating diseases, could not but excite admiration; and indeed, however right, or otherwise, his opinions might have been founded, afforded no small indication, that, in a season and fituation which seemed so effectually so that out all personal considerations, his conduct must have proceeded from the most disinterested

and genuine patriotism.

Although the noble earl had on the first day of the session given some intimation of his delign; yet his subsequent state of health was so deplorable, that, on the 10th of February, the Duke of Richmond was obliged to make the motions,. in his name and behalf, for the bringing forward of those papers which were immediately necessary to the enquiry. The demand of papers, tending, it was faid, to expole the state of the navy, and without the knowledge of any important purpose or object in view for the justification of such a measure, being strongly opposed by lurs of those machiavelian arts the court lords, the noble duke was brought to an explanation and avowal, that the ablent Earl intended those papers, along with other materials, for laying the foundations of a public enquiry into naval affairs, and a comparison of the present state of the navy, with that in which it had devolved ' from Lord. Hawke, to the trust and government of the present first lord

of the admiralty; and thereon to ground charge; of malverlation against that nobleman; with a view more particularly of opening the eyes of a great perionage, and that he might not continue the only man in the nation, who was unacquainted with the deplorable state of his navy.

It was, however, the 24th of March, before the Earl of Bristol was able to attend in perion, and he was then to feeble and broken down, as to depend only on his crutches for support while he was ipeaking. His ipeech did not ieem the less vehement for his weakneis.

He affirmed, and said he would prove, that the conduct of the noble lord at the head of the navy, with respect to the great trust reposed in him, was highly criminal; and such as called aloud for the fullest censure of that House, and for the utmost indignation of the people. After describing, what appeared immediately to himself, as most particularly ruinous and calamitous, in the conduct and state of naval affairs, he drew one confolation, he faid, from the ineffectiveness of the attempts made by the marine minister, upon the character, life, and bonour, of Admiral Keppel; and from the fai-(which, he faid, he had so successfully employed on other occasions) when their object was to create an improper and corrupt influence among the British seamen. That noble' lord, he taid, had pow found by experience, that no promiles could allure, nor threats prevent them, from a performance of their duty, and the preservation of their hopour. Havipg been

been called to order for the terms machiavelian arts, he repeated them, and faid he would prove them at a proper time. His intended motions were taken up with that view, and he meant to direct them folely to the criminal conviction of the first lard of the admiralty; he therefore gave this early notice, that the Houle might be prepared, as well as the noble earl, on the 16th of April; he then moved, that the lords might be immoned for that day, when he would enter fully, he said, into the proof and investigation of thole facts, which had induced him to institute the enquiry.

Thus was the gauntlet thrown down, the day appointed, and the lists prepared, for the decision of this contest. The noble lord at the head of the admiralty, justified his conduct with respect to Admiral Keppel, upon the same ground which we have already seen taken upon that subject. And being surprized into some warmth, as well by other attacks, as by what we have stated, he declared that he was afraid of no man living: " That his intentions were upright, his heart was honest, and he had no dread that they would not bear him out against every attack which might be made upon him by his enemies."

Several motions being made on the 30th of March, by the Earl of Bristol, for a great number of additional accounts, naval lists, and other papers, necessary to the support of the enquiry, they were strongly opposed by the noble lord at the head of the navy, upon the old ground, that such communication would be exceedingly improper, and highly dangerous at

prefent, as affording means of information to the enemy, which they could not otherwise possibly acquire. Although the validity of this objection was not acknowledged on the other side, the noble mover offered to modify or contract his motions in any manner that might be thought necessary for preventing the supposed ef-He wished, at the same time, to impress one truth important to his purpose on their lordships minds, which he vouched for, that there was not a fingle iota of the matter which his motions were intended to draw forth. with which the French cabinet was not already perfectly acquainted; and, upon the ground of precedent, that they were literally copied from fimilar motions made and agreed to in the year 1759, in the very height of the late war, and when an invasion was directly threatened from France. Nothing could fay being, however, he deemed satisfactory, and no qualification to the total refusal of the admitted, much debate papers arole, and the former leverity of censure was not only renewed, but it had now, by a supply of fresh matter, acquired additional strength and sharpness.

This proceeded from the recent appointment of a commander to the grand fleet, which was destined for the home defence. They said, that the immediate consequences which had already appeared, of those manœuvres of the admiralty, by which they had driven Admiral Keppel, Lord Howe, Sir Robert Harland, and other distinguished officers, from the service and defence of their country, were in the highest degree alarming and un-

happy

happy to the nation. the loss of these great officers, the admiralty were now under a necessity, of dragging forth Sir Charles Hardy from his intended anal retreat, and from that repose, suited to his time of life, which had been assigned to him in the government of Greenwich hofpital; and after an absence of twenty years from the sea, and having necessarily laid by every idea of a profession, to which he did not even dream of ever returning, is compelled, at an age, likewise unfit for active service, to undertake a talk of the most arduous and difficult nature, and which may probably require the greatest activity and exertion, which were ever yet displayed by a British They defired it might icaman. be understood, that they did not mean the imaliest imputation to the character of that gentleman, nor the most remote infinuation to his disadvantage; their observations were confined merely to his particular circumstances and fitua-But it was, they faid, a matter of the most alarming nature, to see perhaps the fate of England, committed to the hands of a superannuated, and it might be said, a ruiticated officer; who mult confider the appointment rather as an injury than a favour; and was belides confcious, that he was merely an object of necessity, and not of choice, even with his And this state of employers. things was rendered still more grievous and deplorable, by seeing, at the same instant, some of the greatest names and characters, that had ever graced the British navy, or exalted its renown, proferibed from the service of their country,

Through through the rancour and malignity, officers, if n t the treachery, of the adunder a miralty.

Lord Bristol's motions were rejected, on a division, by a majority of just two to one, the numbers being 60 to 30. The lords had been lummo ed on that day, on a motion of the Duke of Manchester's; which was likewise for naval papers, but not r lative to the present enquiry; it being intended to convey censure or criminality against the ministers in the other House, on a charge of lingular neglect. It was afferted, and we believe has not been difproved, that in some time after orders were dispatched from hence for the evacuation of Philadelphia, a fleet of victuallers had been suffered to depart from Ireland for that place, in total ignorance of the design of the ministers, and having accordingly entered the Delaware, escaped narrowly, and by mere accident, from falling into the hands of the enemy. The motion was for the papers necessary to an enquiry into this transaction. As this could not be opposed upon any supposition of danger, from the affording of intelligence to the enemy, the motion was objected to for its generality, in not being applied to the specific papers and dates which were wanted; and also, that it was totally unneceilary, as no ill confequence whatever had arisen from the fact, even supposing it to be exactly as had been represented. This motion was likewise rejected, by a majority of 40 to 28.

The appointment for the Lords to attend on the naval discussion, having been changed from the 16th to the 23d of April, the

Lan

HISTORY OF EUROPE. [157

Earl of Bristol introduced and supported his motion, with an extraordinary degree of ability and The inprotellional knowledge. formation brought out was various, and seems to have been collected with accuracy. He informed the Lords, that he had every one of the papers which they had refused to him then in his hands, but that as he conceived from that refulal, that they were of opinion there would be some impropriety in expoing them to public view, however contrary that was to his own knowledge, and however necessary they might be towards the accomplishment of the great national purpole which he was purluing, be would, notwithstanding, upon that account, refrain from bringing He farther prothem forward. fessed, that in regard to the unhappy circumstances of our fituation, and necessity of the time, he would himself throw a veil over all those parts, the exposure of which could possibly afford any uleful information to the enemy.

He observed, at the close of his speech, that there were various parliamentary methods of removing any minister; and all of which, excepting one, tended to punish as well as to remove;—as, a bill of impeachment, a bill of attainder, a bill of pains and pemalties; ail these went to punish as well as to reshove; but that of addressing the King to remove from his Majetty's councils and prefence for ever, tends only to remove the evil, without inflicting any real punishment on the offender. He had, however, chosen a milder method than any of those, in hopes of the concurrence in general of

who had formerly concurred in fupporting those measures, which had so notoriously brought the navy, and consequently the nation, into their present situation, being now convinced of their pernicious tendency, and how much they had been deceived by artful misrepresentation, would condemn those very measures, which they had then been leduced to approve.

He accordingly moved, "That " an humble address be presented to his Majesty, that he will be " graciously pleased to remove the " R ght Ho ourable John Earl of " Sandwich, first commissioner for " executing the office of lord high " admiral of Great Britain, &c. " and one of his Majesty's most " honourable privy council, from the said office of the first lord " commissioner of the admiralty."

We have had so much occasion, for lome time pait, to itate matter of charge and defence, as they were laid or sustained in both Houles, with respect to the state of the navy, and the conduct of the admiralty, that it will not be supposed that much new ground relative to the subject could now The curious naval be opened. lists, calculations, and comparative estimates stated by the Earl of Briffol, are not properly within our province. The great point of charge, principally laboured by the Earl of Briffol, and to which all the others were far subordinate, was to the following purport, viz. That about seven millions more money had been allotted for the support and increase of our navy during the last seven years, than in any former period; and that, during that time, the decrease and the Lords; and that many of those decline of the navy, had been in

158] ANNUAL REGISTER, 1779.

an inverse ratio to the excess of of July, they were detained for the expenditure. Upon this part, several days through the want of of the subject he exclaimed, as he had done with great energy upon a former occasion—" What is be" come of our navy?—Or, if there of stores in the docks and yards is no navy, what is become of was so great, that the warehouses and other proper recentacles were

" our money?" The noble lord at the head of the navy, defended himself in his usual manner, and with his usual ability. He affirmed his innocence in strong terms, and expressed with great feeling, the confolation and pleasure which a consciousness of it afforded; he declared his fedulous attention to the duties of his office, and the happy excepts which resulted from it, in the prefent high and flourishing state of the navy. He, however, shifted off all personal responsibility; declaring that he was answerable for nothing more than his share, in common with the other cabinet counsellors. With respect to other matters, he gave a flat contradiction to almost every calculation and estimate produced by his noble antagonist, whether with regard to the past or the present state of naval affairs in this country; and did not believe those which. related to France or Spain. Some of the charges brought on the other side, were treated with as little ceremony. One in particular, which stated that the want of stores was so deplorable, that some ships of Keppel's sleet, although under failing orders for the immediate protection of their country, had been stript of their cordage and running rigging, in order to enable Byron's iquadron to proceed to America;—and, that when the former had returned to

port, after the action of the 27th

several days through the want of masts, and other essential articles of supply.—To this it was answered, that the superabundance of stores in the docks and yards was fo great, that the warehouses and other proper receptacles were not capable of containing them; and that the stock of hemp in particular was so vast, that the admiralty found it necessary to oblige the artificers to take some of it off their hands. The noble lord, with great satisfaction and good temper, ended a long speech in a joke, which threw the whole House into good humour.

The Earl of Briftol, however, took care to remind their lordships, that every one of his charges were now fully established; for that his specific accusations were answered only by general aftertions; and terminated by attempts at wit. The debates were long, and most of the lords who are speakers, took some share in them. The question being at length put, the motion for the removal of the Earl of Sandwich was rejected upon a division, by a majority of 78 to 30; being a second time exactly two to one.

It may perhaps be thought singular, that the two royal brother dukes, both voted on this occasion for the removal of the Earl of Sandwich from the government of the navy. It was observed in a subsequent debate in the House of Lords, that the fortune of that nobseman was unequalled in the history of England, namely, in continuing to hold an office of such vast importance in the state, after 39 lords, and 174 members of the other House, had declared

upon record, his being unfit, incapable, and consequently his removal from it necessary.

A short protest, couched in the following terms, was figned by 25 lords—" Becaule, as it is highly " becoming this great council of " the nation, to address his Ma-" jesty for the removal of any " minister for neglect of daty or " incapacity, in order to prevent " public detriment; so we con-" ceive the notoristy of the facts " in this debate sufficiently war-" rants, and the prefent alarming " fituation of public' affairs loudly " calls for, this interpolition."— The Earl of Bristol being the mover, thought it incumbent on him, that posterity should be acquainted with the particular grounds upon which he founded his motion. He accordingly entered a separate protest, of some length, for that purpose. His death, ioon after, rendered this almost the last of his public exertion.

The second enquiry, although not of such magnitude, considered with respect to its national importance and confequence, was, however, upon a subject of an interesting nature; and was continued, with no small share of trouble, labour, and difficulty, through much the greater part of the session. This was the enquiry into the governmeat and management of Greenwich Hospital; the first papers on which were moved for by the Duke of Richmond, on the 16th of February, and the final decision of the Lords delivered only on the 7th of June. As the supervision of this noble foundation lay officially in the admiralty, the enquiry, of course, tended virtually to the censure or erimination of the noble lord at the head of that department; who accordingly understanding it in that light, took such means of defence, as if it had been an avowed and direct personal accusation. The affair was accordingly fully and ably discussed; and a great number of witnesses, as well as no small quantity of written testimony, brought forward.

It would not perhaps be very safe with regard to justice, (if it even lay properly within our line of observation) to give any account of this enquiry, which did not nearly comprize the whole voluminous decail of evidence, with which it was accompanied, the cross-examination and particular objections which it brought out, together with the speeches made by the noble duke, earl, and other lords, which are to be confidered as the pleadings in this cause. this state it has already been communicated to the public, in the accounts which have been published of the parliamentary proceedings of that time; and the able fpeech made by the first lord of the admiralty in his own defence, has likewise appeared in a separate, and, probably, corrected publication. We also trult, that the printed case of the late unfortunate lieutenant-governor, Captain Baillie, is in most hands.

The chief matters of abuse which appeared in the enquiry, were the two following; first, some improper variations in the new charter from the old, and some suspicious management with relation to it; and, that Captain Baillie, the licutemant-governor, who had shewn great zeal and aftivity in detecting abuses, and particularly had pro-

ANNUAL REGISTER, 1779. 160]

secuted to conviction the butcher, who by contract supplied the hospital with provision, for fraudulently furnishing meat of a bad quality, when he was paid as for the best; had, on his part, been profecuted by the officers of the house on actions brought by those, whom he had charged with abuses —in which actions they were defeated—Yet the convicted butcher was continued in one of the courts, and had his contract renewed, and the acquitted Captain Baillie was turned out of his office to starve, without any provision or compenfation whatsoever.—The other details it would be impossible to enter into, and difficult to form a judgment on, as the several particulars of charges, icem to have been some better and some worse supported.

It will be sufficient to observe, that as the Duke of Richmond had constantly disclaimed every idea of any acculation against the first lord of the admiralty, and declared that he took up the enquiry merely for the fake of public justice, and the benefit of the poor. pensioners, so, upon its close, and the summing up of the evidence, he did not move for any vote of centure against that nobleman; but only proposed the bringing in of a bill, for remedying those grievances in the hospital, and those malversations in its government, which he supposed he had proved. And as he confidered the lieutenant-governor to be merely a flexible opposition to those inno-

structive to the government and interests of the hospital, he thought it an act of the most necessary justice, that such an officer should receive a reaionable compeniation, for the losses, sufferings, and perfecution, which he had sustained; the more especially, as his place, which was properly to be confidered as a freehold, was, at a market price, worth a very considerable sum of money.

He accordingly moved, that, in confideration of Captain Baillie's having been illegally removed from his office, by the board of admiraicy, and of the zeal he had uniformly shewn during the course of seventeen years service in the said hospital, the House should address his Majesty, to confer on him some mark of his royal fayour.

The motion was rejected, upon a division, by a majority of 67 to 25.

A lecellion of the minority lords immediately took place, as foon as the division was over; but the court party were far from being content with a bare victory, and seemed determined to affix such a stigma upon such enquiries, as might prevent any trouble of the same nature for the future. Three lords successively moved three separate motions, each of the incceeding surpassing the preceding in energy and effect. The prit went to a simple declaration, that nothing had appeared in the courie of the enquiry, which called for victim to his integrity, to a faith- any interpolition of the legislaful and diligent discharge of his ture.—The second, that the book duty, and particularly to his in- which had been referred to the committee, (Captain Baillie's case: varions, which the noble duke, as of the royal hospital, &c.) conwell as himself, deemed totally de- tained a groundless and malicious

the Earl of Sandwich, and others, the officers of Greenwich hospital. —And the third declared, that the revenues of Greenwich hospital had been considerably increased, and that it had derived several other specified benefits and advantages, under the administration of the

present noble lord.

It icems upon the whole probable, that the issue of this enquiry went as far beyond all expectation on the one side, as it fell totally short of it on the other. The fate of Captain Baillie has been much and generally commiserated. His case, indeed, seems very hard; and it can scarcely be doubted, that if the affording him a compensation, could have been separated from the idea of conveying censure on the first lord of the admiralty, that it must have been liberally granted. How far the present decision, along with the ruin of that gentleman, may operate as an example, in exciting the integrity and diligence of the servants of the public, in the future execution of their respective offices, must be determined by experience; but that it must produce a full effect, while ever it is remembered, in restraining all indifcreet zeal for the correction or reformation of abuses. will scarcely be questioned.

The season was now far advanced, which demanded a recess council; that nobleman pledging from the toils of a very troublesome and laborious session. The affairs of Ireland were, however, becoming every day more alarming; but notwithstanding the repeated efforts of the opposition in both Houses, the ministers de-Vol. XXII.

feptesentation of the conduct of feated every attempt towards en-. quiry upon that subject. Marquis of Rockingham had taken up the business, on the of May, in a very long and able speech, in which he equally shewed his intimate and extensive knowledge of the subject, and displayed, in striking colours, the deplorable distresses, the grievances, and the very alarming circumstances, which attended the prefent situation of that country. He accordingly urged, in the strongest terms, the necessity of providing immediate remedies for those evils, and the fatal consequences to which any delay must be liable. He was opposed, partly with respect to the lateness of the season, and partly with respect to the niceness and difficulty of the subject, in which the interest of both countries were so materially affected, and at the same time that they clashed, so complicated and intricate, that any scheme for the relief of one, without injury to the other, must require long application and study, minute enquiry, and the most mature deliberation. The repeated. subsequent endeavours of the noble marquis, and of the Earl of Shelburne, who were likewise conitantly supported by other lords in opposition, brought on, however, at length, and near the close of the session, a kind of compromise with the lord president of the himself, that in good faith, and so far as he could venture to answer absolutely for others, a proper plan for accommodating the affairs of Ireland, should be prepared and digested by the ministers, during the recess, and in [L]readireadiness to lay before parliament at the opening of the ensuing session.

Notwithstanding the lateness of the season, the affairs of Ireland, with the unfinished state of the American enquiry, and the confequent censure which lay upon the commanders, from the unexpected charges and evidence brought against them, without any opportunity of calling witnesses to their vindication, were taken as grounds by Mr. Thomas Townshend, for June 15th. an address to the King against the prorogation of parliament, until the business and matters stated in the motion, were finished or settled. This motion brought out much miscellaneous debate, and was at length rejected upon a division, by a majority of 143 to 70.

But the following day presented a new face of affairs, and opened a new scene of business, by the disclosure of one of the most alarming events which could well have happened, in the already embarrassed and critical state of the nation. This was the hostile manifesto which was presented by the Marquis D'Almodovar, the Spanish ambassador, and accompanied with the notice of his immediate departure from this country.

The minister othered in the manifesto, as of oal, with a royal message, in which they were acquainted with the consequent recal of the British ambassador from the court of Madrid. His Majesty also declared in the most solemn manner, that his desire to preserve and to cultivate peace and friendly intercourse with the Court of Spain, had been uniform and sincere; and that his

conduct towards that power, had been guided by no other motives or principles, than those of good faith, honour, and justice. Great furprise was expressed at the pretences on which the declaration was grounded, as some of the grievances therein enumerated, had never come to the knowledge of his Majesty, either by representation on the part of Spain, or by intelligence from any other quarter; and that in all cases where applications had been received, the matter of complaint had been treated with the utmost attention, and put into a due course of enquiry and redrefs. It concluded with the firmest considence, that the Commons, with the same zeal and public spirit, which his Majesty had so often experienced, would support him in his resolution to exert all the power, and all the resources of the nation, w refift and repel any hostile attempts of the court of Spain.

The Spanish manifesto, was a loose, and rather a strange fort of a composition; dealing almost entirely in generals; without any clear arrangement or distribution of matter; without any accuracy in the stating, or much specification of time, place, or circumstance, with respect to facts, it seems to throw charges about at random, without any attention to their direction, or care about their effect. Nor is the reasoning much more conclusive. Yet it affords one instance of precision, perhaps unequalled in all the proceedings of the corps diplomatique, from the commencement of their earliest records. That is, where it specifies in one line, that the whole number of infults and injuries

which Spain had received from Great Britain, amounted lately, to just one hundred.

The manifesto, however, establiffed one fact, and that of sufficient consequence; namely, that Spain had taken a decided part with France and America against Great Britain. It also afforded an information not before known to the public, although we think it had been mentioned as a matter of reprobation by some gentlemen in parliament. That was, that Spain had been employed as a mediator between England and France, and had been actually negociating a treaty of peace between the two nations for above eight A principal part of the refentment expressed or implied in the manifesto, seems to derive its source from the conduct of Great Britain with respect to this negociation; the cabinet being directly or indirectly charged, (in the loofe manner of that declaration) with difingenuity or infincerity, in protracting and spinning it out, without any fixed or real intention of peace, and using Spain as its instrament in that purpose. This icems repeated or confirmed at the end of the manifesto, where it is supposed, that the experience of other nations in the conduct of the British ministry, will prove a justiheation of the decisive measures adopted by the Spanish monarch.

It feems to appear, that the negociation now in question was conducted upon the same ground and which was treated with such indignation and disdain by Mr. Secretary Pitt, in the late war; viz. of France and Spain as one common object, and comprising their lettlement in the same treaty. The full effect of that family compact, which had been overlooked or neglected at the treaty of Paris, now unhappily appeared in its most

dangerous aspect.

It could scarcely be expected that the disclosure of this alarming event, which had been so long and so often predicted by the minority, should not have brought out some reproach upon the mi-They were accordingly reminded, with great feverity, of their blindness, obstinacy, and abfurdity upon that subject. Of the contempt with which they had treated every timely warning of the danger, and the exultation and triumph which they constantly expressed, at the folly and ignorance of the opposition in entertaining fuch ideas. Spain could have no interest in joining our enemies: Spain had colonies of her own, and would not fet so bad an example as to afford aid or fuccour to our rebellious colonies: Spain was befides naturally attached to Great Britain; and if it were otherwise, she was not able to enter into a war. Even the honour, fincerity, and undoubted fidelity of the court of Spain, were held up as facred; and the venturing to call them in question, by reasoning from the effect to the cause, and shewing her design from her apparent preparation, was resented as a high degree of prophanation. Such were the language and docprinciple, the bare proposal of trines, they said, constantly held out, and perfisted in to the last moment by the ministers. And thus was parliament and the nathe confidering the separate claims tion kept in a constant state of delusion, until they were awakened $[L]_2$ from

from their dream, by the sudden erails of the mighty rain which was falling upon them. delutions fermed ever to increase, as we approached to the decifive moment of their detection. And thuse ministers, who were utterly incapable of governing the affairs of their own country with propriety or falety, had the matchless effrontery of setting themselves up as flatefinen and politicians for the House of Bourbon; and of knowing the interests of France and Spain, better than they did themfelves.

But notwithstanding the strong restrictions and charges on the conduct of ministers, both Houses were unanimous in their determination, of supporting the war against the House of Bourbon, with all the powers, and all the retources of the nation. The continuance of the war with America, and the mode of applying the unlimited me ins which were to be granted, as o sing the only difference of opinion.

The mide to the throne in money to the total manage and ground in the total manage and ground in the total manage and ground to the total manage of Constitution in the total file of the constitution in the total manage in the

his majefly would give immediate orders, for the collecting of his fleets and armies in such a manner, as that he might be enabled to exert the whole force of this country, against the united force of the House of Bourbon. The secretary at war having then asked, whether the words "whole force," were intended to include the force in America; and being answered in the affirmative, he immediately moved for an adjournment.

It was contended in support of the motion, that it was impossible to support the American war, and to oppole France and Spain with effect, or even with lafety. the British dominions in Europe were now at stake, which necesfarily demanded our first care and concern; and that the British force should therefore be in Europe, as well for their defence, as for carrying the dangers and calamities of war home to our enemies. That could only afford a rational hope of curing their malice and injudice; and of compelling them to reseasce their ambitious and ichaious dealgns. That to employ the great body of the force, and to extra A the resources of this kingain in North - merica, would to privide game if France and Stairs and to put us in a lituation a a mercetrice war; in which, in inter the things of con to the fit, where was to be lost a which is called

the service, besides the service and service.

The service are requently as an apperogative, as an apperogative, and are serviced.

That even, the

HISTORY OF EUROPE.

epen council of the nation was exceedingly ill calculated for such discussions, and for charging itself with the executive conduct of the flate, at any time; but more particularly in a war of so complicated a nature, and in a feason of such critical emergency as the present. And that at most, whether the council was right or wrong, it could only amount to a recommendation to ministers to do their duty; to do that, for the due and wife performance of which, the conflitution had already made them responsible. It was added, that supposing the measure to be the wifest that could be adopted, and supposing it to be even already resolved on, it would be extremely improper to announce the defign to our various enemies, and thereby afford them an opportunity of preparing for and baffling the effect.

The motion of adjournment was carried on a division, by a majority of 156 to 80.—Some members on both sides expressed their strongest wishes, that some measure might be taken, in a feason of so much danger. to induce Lord Howe and Admiral Keppel to afford their services to the public. A noble viscount, in particular, acknowledged that private confiderations were mixed with his public, in his concern on that account; and that without the imallelt difrespect to the Officers now employed, he could not avoid security of his estates and property, that those great commanders were at the head of our fleets.

The address in the House of Lords met with an oppolition of a different nature. A moble earl, after immediately ex-

pressing the strongest resentment and indignation against those ministers, to whom he directly and, politively charged all the calamity which had fallen upon the British empire; and who, he said, at the, fame time that they were employed in breaking down and trampling upon the fences of the constitution at home, were, for the completion of the same nefarious system, equal-. ly industrious in sowing the seeds, of discord and civil war, and of ipreading distress and ruin through all our dependencies, until they had at length exposed us, enfeebled and worn down, to the enmity and threatened destruction of our natural rivals, and hereditary ene-, mies, moved a clause by way of amendment to the address. clause, with the bitterest censure upon past conduct, went to a total change of system and of men, as the only means of restoring contidence and union, and of prefervation left for the political existence of this once great empire.

As the Duke of Richmond intended a motion, which being less pointed and more general, was hoped to meet with a much greater concurrence, the noble earl was intreated to withdraw or postpone his amendment; he was, however, inflexible in his determination of abiding by his motion, if he were even fure of being alone in its The question was acsupport. cordingly put, and the clause rethinking it a great addition to the jected upon a division, by a majority of 62 to 23.

The duke, then, after urging unanimity, and shewing its absolutenecessity in the most pressing terms, moved an amendment to the iollowing purport.—That in a moment, so critical as that which

refents itself to the confiderof parliament, the moft I this country has ever exseed, it would be deceiving lajesty and the nation, if, at me time that they lamented stal effect of those councils, i, by dividing and walting the of the empire in civil wars, thereby incited our natural ies to take advantage of our and diffracted condition, they not to represent to his mathat the only means of rethe powerful combination 1 now threatened this country, i be, by a total change of that n, which had involved us in oresent difficulties in America, eland, and at home; by fuch s, attended with prudent ceny, and the due exertion of a and united people, they ed that his majesty, under the nce of Divine Providence, 1 be able to withfland all his ies, and to restore Great Brito its former respected and y fituation.

fupported the motion with sould ability. He said, that could not consider past misages; he would not refer to former circumstances, which t tend to create a diversity of on. His amendment was led on the broad basis of pubnion and public strength, and numbed to direct the attention the throne and of the bouse, e real, and actually existing mstances of the nation, and spress the public with a due of their condition a full

of their condition; a full rledge of which, could only re union, confidence, and viin exertion. He entered fully separately into the confideration of the three principal objects of the amendment, America, Inland, and the home defence. By the home defence, he meant our naval force in the European leas. He was forry to find, that thirtyone ships of the line, composed the whole naval force on which this country was to rely at prefent for protection and fafety. At the same time that he understood, and could not doubt the authority, that the French and Spanish fleets in the European feas amounted to about double that number, all now fit for actual fervice. But a prefent circumstance, which alarmed him exceedingly, was the authentic intelligence he had received, that a French fleet, confifting of 28 thips of the line, with feveral thoufand land forces on board, had failed from Brest on the 3d of the prefent June, and were at that moment, if they chose it, masters of the British channel. On this occasion he said, that although he did not intend to enter into any retrospective matter, he could not refrain from expressing his utmost aftonishment at the conduct of the first Lord of the Admiralty; whether it were with respect to the unpardonable neglect of his duty, if he did not know that the French fleet were to fail about that time, or to his direct criminality, if he was apprized of that event, in not having the grand fleet in timely readinels to meet the French at their coming out to fea, inflead of thus abandoning our commerce and our coasts to their mercy.

After placing, in a very clear point of view, the state of our public assairs in every quarter, he observed, that the extent of the danger, instead of finking as into

abject

abject despondency and despair, should rouze us to the utmost exertions of our native courage, our talents, and natural powers, with the most unlimited application of our means, of whatever fort. It was the duty of man to struggle with difficulties, and to furmount them by resolution and activity; and whatever he was bound to bear or perform in his individual capacity, he was bound to bear or perform as a member of the community. Every man, he said, was called upon in the present calamitous and dangerous situation, to affift by his purse or his person. Those who were qualified to fight would fulfil their duty generously that way; those who could pay, must contribute to the service of their country in the manner they No exemption were best able. could be admitted. It was a season of peculiar urgency; and the means of defence must correspond with the fituation. Those who were bleft with affluence must contribute largely. When the safety of the flate was at stake, all reasoning was at an end.

But if the means were freely administered, it was equally necesfary that they should be wisely applied. Indeed the one can never any more than effect, without a confidence in the other. To attain that confidence, a total change of that system, to which our present fituation, and all our past losses and misfortunes were attributed, was absolutely and indispensibly necessary. Without that, nothing could be done. With it, notwithfinding the prodigious combinagruction, he had the fullest confidence in the spirit and exertion of a free and united people.

His idea was, immediately to abandon the American war, at least for the present; and to employ the great military force, which was doing worfe than nothing there, against our enemies. If such a measure was not the means of recovering America, it could not be the cause of losing it. America was already worse than loft. It was the drain of our treafure, and of our best blood; it was the great cause of division in parliament, and in the nation. If that unfortunate war was once abandoned, and with it the system which gave it birth, and upon which all the councils from whence we derive our calamities were founded, we should again see union at home, vigorous and successful exertions abroad, the people again placing a full and proper confidence in those who were entrusted with the conduct of public affairs; and, he had not a doubt, that Britain, as the had often been before, would prove more than a match for the whole House of He concluded by put-Bourbon. ting in a refervation, that when he should be called upon to pledge his life and fortune, such a pledge, be afforded, to its proper extent, on his part, must be met with by that species of security, which is ever understood to be the condition of so sacred a trust. He must have one grand test of the wisdom of future measures; and that was an immediate change of the ruling fystem.

Some other lords on the same fide, particularly the Earl of Shelburne, could not confine their ideas tion of power leagued for our de- to a change of system only; no good, they said, could be done, [L] 4 Without without a total change of men, as well as of system. Those phantoms of ministers; those things, they said, who had been tricked out in that garb and likeness,

merely for the purposes of delusion, and who had been employed as the service instruments of carrying that destructive system into execution, must be totally done away. If there was a hope, they

faid, of ever restoring this country, in any degree, to its pristine selicity, the evil must be traced to its very source. The noble lord at

the head of the naval department underwent, upon this occasion, no small degree of censure and reproach; and was not only considered as one of the principals in that system which was so repro-

bated, but was charged directly, and to his face, with having been the means through his ignorance, incapacity, and official neglect, of first inviting the French attack,

and then bringing on the Spanish war.

That noble earl, undoubtedly, from a due attention to the present did not Rate of circumitances, think fit to interrupt the public business, by entering into any defence or exculpation of his conduct. Neither did the lords immediately in administration, enter into any further discussion of the arguments or politions stated by the Duke of Richmond, than what related merely to the withdrawing of the troops from North America. That measure, which they considered as a total and everlatting dereliction of the colonies, they opposed upon the same ground which we have fren taken in the House of Commons. The only new matter which appeared upon this subject, was

the information given by a noble viscount, now one of the secretaries of state, but lately Ambassador at the Court of France. This was a fact which came officially, at that time, within his knowledge; viz. that "in one of the private arti-" cles of the treaty, figned in Fe-" bruary, 1778, between France and the Congress delegates, it is fpecially provided, that the co-" lonies and France shall never " agree to any terms, until the " former are acknowledged inde-" pendent by Great Britain."— This secret article he said afforded the ground of his dissent, to any proposition for withdrawing the troops, as it was evident from thence, that it was not in the power of America to treat upon any terms short of independence; and fuch a measure could theresore produce no effect in conciliating the colonies, or in dissolving the combination.

The Duke of Richmond's proposed amendment was rejected, upon a division, by a majority of 57 to 32 lords.

This rejection brought out a long and argumentative protest, signed by twenty peers, being in effect the substance of the debate, and concluding with a complaint, of the present sullen and unsatisfactory silence of the ministers, with respect to several specific enquiries; and declaring, that after doing their utmost to awaken the House to a better sense of things, they take that method of clearing themselves from the consequences which must result from the continuance of such measures.

The first and great measure of national defence, adopted and pursued by the minister, in opposition

to the consequences of that dan-June 21st. gerous combination, now first openly avowed by the court of Spain, was a proposal in the House of Commons, for increasing the militia to such a degree as should double its present Although the opposition number. confidered the measure as probably impracticable, and even dangerous, from the apprehensions they had of its being violently opposed by the people at large; and that along with several other causes of objection, they faw it would go in its effect to the annihiliation of the regular or standing army, in cutting off its usual and only means of supply from the recruiting service; yet, they faid, that in a feason of such imminent public danger, they could not oppose any icheme, which carried a rational appearance of conducing to the public security. They would only use their endeavours to correct and improve, but they would by no means obstruct, any proposals of that nature. But although they fo far concurred, they were not at all latisfied that the measure was well or wifely chosen; nor could they think any fystem of warfare, which went merely to the defensive, as that did, could be productive of honour or advantage to the nation. They thought the raising of new regiments would be infinitely better; and they severely reprehended the ministers for the continuance of that wretched system of policy, which had hitherto led them to reject with indifference, and even with contempt, the liberal and patriotic offers made by several of the peers in opposition, for immediately railing regiments at their private

expense for the defence of their country. But that narrow predilection in favour of men of a certain description, and particularly of the northern part of the island, was still, they faid, predominant, and would continue while there was any thing left to bellow, or to lose; and thus the Duke of Rutland, the Earl of Derby, and others of the oldest English nobility, and supporters of the throne and conftitution, met with indifference or infult, in their generous offers for the defence and protection of their country. It was bitterly observed, on this occasion, that all the generous and difinterested offers for the service and preservation of their country, in this season of the greatest peril which she had ever known, came from those only, who were called the leaders or partizans of faction, and who were constantly represented as enemies to government; whilst not one of those who had grown rich in her spoils, or great in her ruin, neither minithers, contractors, court favourites, or king's friends, had offered to raise a single man, or to expend a shilling in her defence.

The minister seemed rather undetermined and irresolute about his bill, which he acknowledged to be merely an expedient. He called on all sides for assistance; and as there was an end of all particular party in this respect, the House was divided into as many parties as individuals, each proposing to add or subtract something. The first idea was, that government should be enabled to add 31,500 men to the militia, or, in other words, that it should be augmented to double its present number; the

matter

matter being fill left open and diferetional, at the option of government, whether any, and how far tne augmentation should take place. Among a multitude of particular opinions, three seemed more prevalent and general. One, for adopting the proposal as it originally flood; the second, for a mixed scheme, which, with a smaller augmentation of the militia, proposed the raising of distinct volunteer corps, and the third, were against any augmentation of the militia, and would trust to the calling out and arming of the country in case of necessity, and to the spirit and patriotism of the nobility and gentry in raising forces, according to the offers which had been already made. Among the variety of amendments proposed, that by Lord Beauchamp, was the only one of any consequence that was carried through. That was a clause for the raising of volunteer companies, which were to be attached to the militia regiments of the county or district to which they belonged; and for this purpose, the lord-lieutenants of counties, were empowered to grant commissions to officers, as high as the rank of lieutenant-colonel, in proportion to the number of men they were able to procure.

The committee having 23d. fat till past midnight upon this bill, the House was no sooner resumed, than they were surprized by the introduction of a bill of another nature, by the first law officer of the crown. The purpose of this bill was, to take away, for a limited time, the legal exemptions from being pressed to serve on board the navy, which several

descriptions of men and of apprentices, appertaining to the lea, or some degree to maritime affairs, had hitherto enjoyed; and also for suspending the right of suing ont a writ of babeas corpus, for such breaches of those exemptions, as had already taken place from the 17th of that month, or as might still take place, before the final ratification of the bill.

It can scarcely be imagined, however the necessity of the time induced an acquiescence, that a measure of that nature could have passed without censure, and without much and warm discussion. The manner of bringing it forward, at so late an hour, and in a very thin house, already fatigued and worn down, by sitting so many hours to business, was even more reprobated than the measure. the House of Commons, it was likened to every thing that was most odious. The opposition likewife condemned the measure itself, upon many accounts; but more particularly, for its being a breach of that public faith between the legislature and the people, which should ever be held sacred.

The learned mover justified those circumstances which were to feverely condemned, by acknowledging that they had been deligned and choien, for the purposes of secrecy and dispatch; and to prevent the effect of the bill from being defeated, by the knowledge of its defign, which the public prints would have spread through the whole nation. He justified the measure itself upon the ground of that necessity from which it originated; and observed, with his usual acuteness, that he could not avoid

avoid being aftonished at the horror which was now expressed with respect to compulsion, when they were but newly risen from a committee wherein they had been for ten hours engaged in framing a compulsive law, whereby arms would be forced into the hands of 30,000 men, whether they liked them or not.

The opposition totally denied the jukness of the observation; as the one case, though exceedingly hard, was clear from any injustice, whilst the other, with equal hardship, carried the most manifest injustice. They lamented the fate of their country, which, being exposed to the most imminent danger from without, had, at the same time, its confutution torn to pieces within: and all those most valuable parts of it, which had hitherto excited the admiration or envy of mankind, were now doing away in the gross, or mangled and perishing in the detail.

In fact it is much to be doubted, whether there was any advantage to be obtained by this bill, which could fairly warrant some of the stronger parts of it. The urgency of the time, however, prevailed over every other confideration, and the indemnity bill (as it was called froms its retrospective effect) was read twice on that night, and committed for the following, or rather the same day. And on that day, after a good deal of debate, both the indemnity and militia bills, were carried through all the forms and passed.

Both the bills were combated with great vigour and ability in the other House, by the Marquis of Rockingham, and some other

of the lords in opposition. It was, however, to the surprise of all parties and people, that the militia bill was found not to meet with that favour from the lord prefident of the council, and several other lords on that fide, which was, and with good reason, expected from a confideration of its author. indemnity bill was more fortunate, and after several proposed amendments, which were rejected, and one, in favour of colliers, which proved effective, it was at length carried, upon a division, by a majority of 51 to 20 lords.

A former division had taken place upon a question of re-commitment, which was lost, by a majority of 50 to 24.—Fourteen peers entered a protest relative to that question; and another was entered upon the last, which was signed only by fourteen lords.

In the mean time, various proposals of amendment, modification, and substitution, were made with respect to the militia bill. Duke of Richmond's knowledge in military affairs, supported by his uncommon abilities, gave him a superiority on this subject, which he displayed with great effect. Some of the court lords even acknowledged, that the objections and arguments, on that fide, were io strong, that they could not be answered. Nor were the lord-lieutenants of counties, in general, at all fatisfied with the bill.

In this state of June 30th. things, the question being at length put, whether the clause, empowering his Majesty to order the militia to be augmented to double its present number, stand part of the bill, it was carried in

the

the negative, by a majority of 39 to 22.

It was remarkable, that the lord president of the council, and both the secretaries of state, voted against the compulsory principle of this bill. The division was singular, in placing 22 lords on the one side, and the whole opposition on the other, in situations which they rarely experienced on either. Two of the right reverend bench, undoubtedly through their ignorance in military assairs, were surprized into a minority on this occasion.

Thus disembowelled of all its original substance, the skeleton of the militia bill was returned to the Commons, with nothing of efficacy remaining, except the solitary supplemental clause added by Lord Beauchamp for the raising of volenteer companies. And thus the minister was exposed to the bitter taunts of the opposition, who obferved, that that spirit of disunion and discord, which administration had so industriously and successfully spread, through every department of the state, whether civil or military, and through every part of the empire, had now feized the cabinet, and was equally visible among themselves. The minister could not conceal his chagrin, nor refrain from complaining of the conduct of his colleagues in the other House.

A new question now arose, which brought out considerable debate. For the militia bill being considered by several, as to all intents and purposes a money bill, they insisted, that no amendment of the Lords could be admitted, without a surrender of their own most valuable and peculiar privilege; and that,

therefore, the bill must be totally rejected. The minister was, however, so eager, that something should be done, that might at least carry an appearance of looking towards the public defence and security, that it was determined, in the present instance, to overlook the point of privilege. Ingenious arguments were accordingly used, and nice lines of distinction drawn, to shew that the present was not properly a money bill; and thefe were combated, and attempted to be disproved, with equal ingenuity. The bill was, however, carried upon a division, by a majority of 63 to 45.

As the repeated attempts of the opposition in both Houses, for obtaining an 'address to prevent the prorogation of parliament, had failed of success, that event now took place. In the speech the July 3d. from the throne. most cordial thanks were returned, for the many great and essential fervices they had rendered to his Majesty and their country, during the course of their long attendance in Parliament. Entire approbation was expressed, to the zeal which they had manifested in the support of the just and necessary war, in which he was engaged, and of the attention which they had paid to the state of Ireland. It was obferved, that the events of war had afforded the court of France no reason to triumph on the consequences of their injustice and breach of public faith; and it was trufted, that by fpirited and prosperous exertions, that ambitions power might be brought to wish that they had not, without provocation or cause of complaint, intulted

HISTORY OF EUROPE. [173

infulted the honour and invaded the rights of the crown. With respect to Spain, whatever colour might be attempted to be put upon the unjust proceeding of that court, his Majesty was conscious that he had nothing to reproach himself with; the warmest acknowledgments were made, for those clear demonstrations of loyalty and affection to his person and government, which parljament had shewn upon that occasion; and it was confidered as a happy omen to the fuccess of his arms, that the increase of difficulties, served only to augment the courage and constancy of the nation. The additional burthens on the people were fincerely regretted. And it was said, that

sufficient thanks could not be paid to the Commons for the confidence they had reposed in him, and for the chearfulness and public spirit, with which the large supplies for the current year had been granted. It was impossible to speak of the continuance of the rebellion in North America without the deepest concern; but they had given (the Crown and Parliament) such unquestionable proofs of their sincere disposition to put an end to those troubles, that it was still hoped, that the malignant defigns of the enemies of Great-Britain, could not long prevail against the evident interest of those unhappy provinces.

174] ANNUAL REGISTER, 1779.

C H A P. IX.

Hostilities in the East Indies. Sea-sight between Sir Edward Vernon and M. de Tronjolly. French squadron abandon the coast of Coromandel. Siege of Pondicherry. Gallant defence by M. de Bellecombe. Capitulation. State of affairs in Georgia and the Carolina's. Loyalists defeated in North Carolina. American General, Lincoln, arrives in South Carolina to oppose Major General Prevost. Rebels defeated at Brier Creek. General Prevost passes the Savannah, and penetrates into South Carolina; advances to Charles Town; retires. Action at Stone Ferry. General Prevost takes possession of the island of Port Royal. Expedition from New York to Chesapeak Bay, under the conduct of Sir George Collier and Major General Matthew. Great damage done to the Americans in the neighbourhood of Hampton and Norfolk. Expedition up the North River; Stoney Point and Verplanks taken. Expedition to Connecticut, under Sir George Collier, and Governor Tryon. Surprize of Stoney Point by General Wayne. Recovery of that post. Attack woon Paulus Hook. Lieutenant Colonel Maclane besieged by an armed force from Boston. Relieved by Sir George Collier, who destroys the whole rebel marine in the Penobscot.

T has happened unfortunately for the repose of a great part of mankind, that while the active and enterprizing spirit of the Europeans has extended their commerce and intercourse to the most distant parts of the world, their contentions have kept an equal pace with their discoveries, and have been either disseminated amongst, or in some degree affected the remotest nations; experience thereby overthrowing all that system of general benefit, which a speculative philosophy might otherwife have hoped, from a free and easy communication between all the different communities of men. Such indeed is the nature of man, that it may be a question of no small doubt, whether the proscriptive laws or policy of China and Japan against the admission of foreigners, are not founded in true wisdom; and however fatal they

may be to the progress of science, of arts, and of general know-ledge, whether they do not lay a fairer and more permanent soundation of public security and private happiness, than more liberal institutions. It is at any rate clear, that the adoption of this policy, would have saved many great nations from unexpected ruin, and from general desolation.

Whilst the effects of the contest between France and England, were gradually spreading thro' different parts of the old and of the new western world, its rage was speedily communicated, and unexpectedly broke out, in the remote regions of the east; in a quarter of the globe, naturally and originally appertaining to the most peaceable, as well as to the most unmixed and primitive race of mankind; a race more ab-

horrent

harrent of blood and cruelty than

any other.

It seems that the English Bast India company, well seeing the consequences which the French treaties with America, and the delivery of the rescript at the court of London, must necessarily produce, did not think it fitting to regulate their policy, by that temporizing system of conduct, which apparently took place between the principals. They saw that semblance of peace could not long be preferred; and that no intermediate state, however coloured or disguised, could be kept long free from all the consequences of war; and they well judged, that long before any account of their proceedings in the east could be received in Europe, these consequences would take such effect, as to afford a fufficient cover and lanction to their measures.

The company had not forgotten, the imminent danger to which her settlements, and indeed her existence in India, had only a few years ago been exposed; when, in a season of profound peace, France had clandestinely conveyed so great a military force to the illands of Mauritius and Bourbon, that the feemed to owe her deliverance more to fortune or accident, than to any timely knowledge the had of the defign. Such a force might foon again be formed in those islands, with the same privacy as before; and from the shortness of the passage to Pondicherry, might drop to fuddenly and unexpectedly upon the ground of action, that nothing could be hoped to relift its progress.

Under some or all of these con-

fiderations, the company determined not to hazard the security of their invaluable possessions, by paying too great an attention to formalities, which carry no farther value, than what their immediate interest induces the respective parties to affix upon them. A bold and decifive measure, for the final reduction of the French power in India, was accordingly resolved immediately upon, very soon after the delivery of the French rescript; and the business was conducted with such laudable. but, for such a body, unusual secrecy, that the smallest idea of the defign, until the effect was publicly disclosed by the accounts from India, did not transpire, even in

this country. The company had also the fortune, that the instructions were conveyed with unusual expedition to Madrass; and preparations were accordingly immediately made for undertaking the siege of Pondicherry. Major General Monroe. who now commanded the company's troops on the coast of Coromandel, had assembled part of the force destined for Aug. 8th. the fiege, on a spot of ground called the Red Hill, within four miles of that

Hill, within four miles of that city, pretty early in the month of August. It was not, however, until the 21st of that month, that they were in sufficient strength to invest that fortress closely. On that day the troops advanced so near as to take possession of the bound hedge, (a planted fence, which at some distance surrounded all the works) within cannot shot of the fortifications, by which all communication with the country was entirely cut off. Some farther

ments, possibly arising from nate, and from the difficulty ing means for the conveythe artillery and stores, still d the progress of the works, he oth and 7th of September, ch days the besiegers were I to break ground both on the and the south sides of m, under a determination of g on both attacks at the me.

ious to these operations by Sir Edward Vernon, who aded the fmall British nace in those seas, sailed from is at the end of July to block dicherry. His squadron conf the Rippon of 60 guns, the ry of 28, the Sea Horse of e Cormotant floop, and the ine Bast Indiaman. He had y arrived on his station, when ained fight of the French on under M. de Tronjolly, ng of the Brillante of 64 the Pourvoyeuse of 36 eighounders, the Sartine of 32 and two French India ships for war.

. A very close and oth. warm engagement enwhich lasted above two when the French thought quit the action. The Engtips had fuffered also too to continue long after in ne fituation; but were preduring the night, for the which they expected in the g. The French had, howo much the worst in this aciat they were in no disposit all for its renewal, and accordingly, at day-break, out of fight. It appeared that they had got into Pony that night to refit; whilf,

from the contrary winds, and a northern current, Sir Edward was not able to recover his flation until the 20th of the month, at midnight. In this time he had been joined by the Besborough Indiaman, which supplied the place of the Valentine, then on her way to Europe. Early in the morning, a French vessel from Europe and the Mauritius, fell in among the British ships, and was taken. At the fame time, they could perceive the French (quadron, under an eafy fail, flanding out of Pondicherry road. An immediate engagement was now expected and prepared for, and nothing was left undone by the commodore, in order to close, as speedily as possible, with the enemy; but the alternate failure, and contrary direction of the winds, rendered all his efforts ineffectual. As the French commander had, however, as great and interesting an object in view, in keeping the town free by fea, as Sir Edward could have in shutting up the port, he made no doubt that the action would take place on the following morning as a matter of course, and on the fide of the enemy, in a great measure of necesfity.

Under this perfusion, he shood in for Pondicherry road at the approach of night, where he cast anchor, expecting the enemy would have done the same; more especially, as their motions during the day, had not indicated any design of avoiding an engagement. The French commander, however, seems to have consulted more the preservation of his ships, than that of the town. He accordingly, taking advantage of the night, abandoned Pondicherry, and a gardison

HISTORY OF EUROPE. [177

tilon which deserved better fortune, to their fate; and was fo expeditious in his means of elcape, that the French squadron were totally out of fight in the morning; nor were they at any time after seen or heard of on the coast. three days after, the Sartine frigate, which had lost company with the squadron on the night of the late action, being ignorant of the present change of circumstances, had advanced so far in her way to get into Pondicherry, that when the discovered her mistake it was too late to be remedied, and she was accordingly taken by the Bri-Thus was Pondituh irigates. cherry as closely blocked up by sea as by land.

This success of Sir Edward Vernon served greatly to facilitate the operations of the besiegers, and might have seemed sufficient, to have spread universal dismay and despondency among the besieged.

The batteries were

Sept. 18th. opened under the powerful fire of 28 pieces of heavy artillery, and 27 mortars. withstanding the dismantled state in which Pondicherry had been restored to the French at the contlution of the late war, the fortincations feem to have been in no contemptible condition at this time; or if they were otherwise, the deficiency of Arength was amply supplied by the gallantry of M. de Bellecombe, (who was both governor of the town, and general commandant of all the French fettlements in the Indies) and the resolution of his brave garrison; who, nearly cut off as they were from every hope of fuccour, persevered to the last extremity in a determined and noble defence.

Vel. XXII.

The artillery of the befiegers, however, soon gained an evident superiority, and they were indefatigable in carrying on their approaches; but the alertness and obstinate defence of the garrison, rendered caution a matter of necessity; and together with the violent rains that then frequently fell, could not fail of confiderably retarding their works. Notwithflanding these impediments, matters were so far advanced towards the middle of October, as to render an attack on the body of the place practicable. By that time, the besiegers had, on the south fide, pushed a gallery into the ditch of the town, made a practicable breach in the bastion, called L'Hospital, destroyed the faces of the adjacent bastions, and prepared a bridge of boats for passing the ditch. Nor was the attack on the north fide of the town in much less forwardness. The besiegers had there also destroyed the face of the opposite bastion, and had constructed a float for passing the ditch, which they were to bring into use, at the same time that their fellows were passing it to the fouthward. These two attacks were to be accompanied by 'a third, which was to take place by the lea fide to the northward, where the enemy had a stockade running into the water: And when the general affault was refolved on, Sir Edward Vernon landed all his marines, and 200 seamen, to support and invigorate the attacks.

An exceeding heavy rain, which occasioned a great and sudden swell in the water of the ditch, on the very day preceding the intended storm, checked the design for the [M] present,

taken in the Ganges, as well as on the coasts of Coromandel, that hostilities had been commenced in some of those parts so early as the first of July. The factories at Chandenagor, at Yaman, and at Karical, with the settlement at Malulipatam, are particularly spetitled in these proposed conditions; and others feem to be supposed. This extension of the capitulation, to past acts, and to places, was, however; deemed inadmissible by the conerors.

We are now to turn our attention to the other fide of the globe; and to relate the effects of this war in the place of its origin. The reduction of Georgia by the royal forces; soon afforded sufficient cause of alarm, and matter for trouble, to the two Carolina's. The Loyalists, or in American language the Tories, in the back parts of North Carolina, ceiving hope and courage from that event, were speedily in motion. We have formerly feen, that these people were numerous in the back of the southern colonies, particularly in those we have now mentioned; and although the loss and defeat which they had fuftained under their leader Mac donald, in the beginning of the troubles, with other disappointments and losses of less magnitude, had considerably broken their ipirit, and obliged those who were least venturous, or who were most attached to their families and fetticments, to an apparent submissi from to the conditions prescribed by the victors, yet neither submissions por conventions were sufficient to referain the effects of that invincible aversion which they bere to

their present governors and governments, nor to prevent their watching, with the most eager attention, for any new opportunity that might offer for their again having recourse to arms, and endeavouring to shake off so grievous a

yoke:

The most hardy and desperate of these people, had long been in the condition of outlaws, and had attached themselves to the Indians, and others of their own description; in the incursions on the fron-The nature and remoteness of the country, afforded them an opportunity of keeping up a free intercourse with their old friends, neighbours, and fellow sufferers in the same cause, who still continuing at home, had apparently submitted to the present government. circumstance necessarily served to nourish and strengthen that disposition and spirit which we have From these circumstances, and from the cast of mind and of manners acquired by their constant intercourse, whether as friends or as enemies, with the favages, they were ever ready to take up arms; and many of those, who continued in the occupation of their farms, and affumed the character of hving peaceably at home, occasionally joined the parties which were openly in arms on the frontiers, and bore a share in all the devastation they committed.

About 700 of these people accordingly assembled in arms, in the back part of North Carolina. It does not seem probable that their hopes could have extended to the bringing about of a revolution in that province by any force of their own; and the distance, with other circumstances, assorted

[M] 2

well-

ANNUAL REGISTER,

well-founded expectation, that they who are accustomed to the aid of could have received any timely support for its accomplishment. Their alertness and zeal were, however, stimulated into action by the accounts of General Prevost's success. But their usual ill fortune still stuck by them; and before they were able to do any thing of moment, they were attacked and entirely defeated by fome of the nearest militia, having lost near half their number, in killed, wounded, or taken. About 300 of the remainder, however, found means to make their way good in a body to the back part of Georgia; from whence having proceeded to the nearest British posts, they by degrees joined the royal army. It appears that the loyal party, even in this quarter where it was strongest, (being in a great measure composed of emi-, grants from North Britain) was infinitely inferior to the ill-affected; and that without the great and continual assistance of the royal army, the well-affected inhabitants, in no part of America, were in a condition to make head against the rebels.

South Carolina was the great and immediate object of hope and fear. Its great distance from the main army, and scene of action, together with the disticulties of the way, rendered relief flow; and there were other sufficient circumstances, to make it uncertain. Money is justly considered as the great finew of war; and its want, necessarily cramped all the military operations of the Americans; posed from the vicinity of the the defect, however, increasing, in proportion to the distance of the service, and the consequent increase of the expence. Those

boundless resources, are apt to conceive no other impediment, than what may axise from the counter operations of the enemy. But a people scarce of money, new in government, and consequently destitute of those sources and establishments, which the industry and policy of ages have been accumulating or forming in antient itates, experience other more insuperable difficulties than marching or fighting in their military operations. Under a due consideration of these circumstances, of the mighty force, immense wealth, and unbounded supply of that great power with which they were contending, together with the vast extent, the remote fervices, and complicated nature of a war; carried on equally by sea and by land, on every fide and on every quarter, but still blazing up more fiercely and strongly in the very center of life and action, it mutt ever excite the altonishment of mankind, and perhaps be hereafter confidered as an inexplicable paradox, by what means the new American colonies could have been able, for so long a time, to have fultained, in any manner, fach a contention.

Although a detachment of British troops under Colonel Campbell, had penetrated as far up the river as Augusta, which lies 130 miles higher than the town of Savannah, yet the length and difficulty of the communication, and the danger to which it was exenemy in South Carolina, the river being the only boundary between the two provinces, induced General Prevost, in some time after,

after, to recal that party, and to contract his posts in such a manner, that Hudson's Ferry, at 24 miles distance, was the upper extremity of that chain which he formed along the frontier from the capital.

In the mean time, General Lincoln, with a reinforcement of continental troops, had arrived for the protection of South Carolina, and was poiled at Purrylburgh, on the north fide of the river, and about 20 miles above the town of Savannah; a circumstance to which probably may be attributed the measure adopted by General Prevolt, of collecting his force within a closer compais. A body of the provincial troops, and militia of the Carolina's and of Georgia, amounting to about 2,000 men, were higher up the river, under the command of a General Ashe; and upon the retreat of the detachment from Augusta, were ordered by Lincoln to leave their baggage behind, and passing the river into Georgia, to take post in a very strong situation on Briar Creek; intending thereby to cover the upper part of the country, where the disaffected to the royal cause had, on the departure of the British troops, again assumed. their wonted superiority.

Lieutenant Colonel Prevost, who was posted at Hudson's Ferry, about 13 miles lower down the river, formed a design of surprizing Ashe in his strong post; a measure which did not seem very practicable, as Briar's Creek, which covered his front, was for several miles too deep to be forded; the Savannah, and a deep morass covered his lest, and he had 200 horse to guard his

right. The design being ripened for execution, General Prevolt made such dispositions and movements on the borders of the river. between Savannah and Ebenezer, as were sufficient to attract and take up the attention of General Lincoln, during its profecution. The colonel, in the mean time. having divided his force in two parts, advanced one, with two pieces of cannon, towards Briar Creek, with an apparent view of attacking the enemy, where they were invulnerable, in front. other division of his force, confisting of the second battalion of the 71st regiment, three companies of grenadiers, some light infantry and horse, amounting inthe whole to about 900 men, he led himself a circuitous march of about 50 miles, in order to gen round, or to cross Briar Creek, and thereby turning the right, to fall unexpectedly upon the rear of the enemy.

The success of the enterprize was infured by the injudicious conduct of the American General, Alhe, who, in the moment of peril, had detached his light horse upon some unprofitable expedition, and thereby laid himself open to surprize, and left the only weak part of his camp exposed and uncovered. The surprize was accordingly as complete March 3d. as could have been 1779• The Ameriwished. cans were, surprized in open daylight, and received the first notice of danger, from the havock which the British troops made in their camp. Whole regiments fled without firing a shot, and numbers without even attempting to lay hold of their arms. The deep $[M]_3$ marth,

marsh, and the river, which should have afforded security, became now the instruments of their destruction. Blinded by their slight and terror, many were swallowed up by the one, and drowned in the other. Several of the officers, with a regiment of North Carolina men, took bravely, however, to their arms, and gained some honour by an inessectual desence.

. The rebels lost feven pieces of cannon, almost all their arms, their 'ammunition, and what bag-' gage they had been under a neceffity, of bringing with them. About 150 men were killed, and 200 taken, among whom was Brigadier General Elbert, the second command, and one of their best officers, besides some others of The number lost in the Savannah and the swamp is not known; and the loss on the fide of the victors was to trifling as not to deserve mention. By this defeat, the province was again cleared of the enemy; and although the general did not think it prudent to advance his posts far upwards, yet those which he retained were freed from infults; his communications were opened with the back country; the loyalists, both in Carolina and Georgia, were encouraged to join the army; and his force being collected, was ready to act upon any immediate fervice which might offer.

Such continued, pretty nearly, the fituation of the two small hostile armies until the latter end of April. Separated by a river, which neither of them could venture, to pass in the sace of the other, they were both secure in their posts, and each covered his respective province. A movement

at that time made by General Ling coln, presented, however, a new face of affairs, and opened a way for confequences, which he evidently did not apprehend, and which he undoubtedly would not have hazarded if he had. In order to protect either a meeting, an election, of delegates for the province of Georgia, which was appointed to be held at Augusta in the beginning of May, he quitted his fituation on the lower part of the river, which effectually enabled him to fecure Charles Town, as well as to cover the province in general, and marched with the best part of his army towards that place. Indeed it did not appear easy to suppose, that this measure was liable to any dangerous consequences. The were then out, which feemed to render the river in itfelf a sufficient rampart; but the deep swamps on the other side feemed utterly impassable; or if these could even be evaded, the general appearance of the flat flooded country along the coaft, every were interfected with rivers' and creeks, seemed to forbid all military operations at that feafon on that side. But Lincoln did not traft entirely to natural difhe besides lest, under ficulties: the conduct of General Moultrie, body estimated at about 1500 men, and composed chiefly of the provincial militia, to guard the passes of the river and swamps.

This movement inspired General Prevost with an idea of attempting to penetrate into Carolina. He considered, that offensive operations were necessary to support and increase the reputation of the British arms in that quarter; that his

force

force was already considerably increated by the accession of loyalists from that province as well as Georgia, from whence there was reason to hope, that his appearance in the country might induce great bodies of the well-affected to declare in his favour; and, in any case, it would be the fure means of obliging Lincoln to abandon his defign, and would at the same time afford an opportunity of procuring a plentiful supply of provisions, which he wanted.

Under the influence of these considerations, he passed the river April, with a force which, so far as can be gathered, may be estimated at about 3,000 men. Moultrie's militia were struck with such a panic, at feeing the British troops traverfing a country, and emerging from swamps which they deemed impassable, that they made but a weak refistance in defending the several strong passes which might have effectually checked their progress; and at length, as the country became more practicable, gave way on all fides, and retired towards Charles Town,

had triumphed over the extrathe country, together with the feeble refistance of the enemy, sercould ever flacken or damp, failed for its relief. not to improve this disposition, which was so favourable to them. They assured the general, as a mat-

ter of undoubted certainty, that Charles Town would surrender without resistance, at his first appearance. The object was fo important, and the temptation so great, that inclination and duty must have been equally urgent to its acquisition. Nor did it seem well in the power of a commander, in a matter of so much consequence to the state, to have slighted the information of those, who had the best means of knowing both the state of the place and the disposition of the people; it would be no easy matter afterwards to shew that in different parts near the end of it deserved no credit, and that the design was utterly impracticable. General Prevost, notwithstanding, did not think it fitting entirely to rely upon his own opinion, and therefore called all the field officers of his army to confultation upon the subject, who unanimously concurred in their advice for his advancing directly to Charles Town. The conduct of General Lincoln ferved greatly to strengthen this opinion, who was fo positively perfuaded, that General Prevost intended nothing more than to forage the country, that it was not until The facility with which the army some days after the British forces had passed the river, that he could ordinary natural impediments of be induced to return to the defence of the capital. But when he was at length convinced of the real ved to extend the views of the ge- danger of that city, he immediately neral to objects of greater moment, detached a body of infantry, mountthan those which had operated in ed on horseback, for the greater exengaging him to undertake the ex- pedition, to its defence, and collectpedition. The loyalists, in the ea- ing the militia of the upper coungerness of their hopes and wishes, try, returned with his whole force, which no failure or disappointment to act as circumstances might offer

In this situation of things, the British army were some days march a-head of Lincoln, in the way to Charles [M] 4

Town, and Moultrie's Charles Militia, and Polaski's Legion, retiring from one creek and river to another towards that place, as they were pressed by the former. many bridges and passes could not · be gained without some skirmishes, but the resistance was still so weak, that they were attended with no circumstances of any consequence; it is however to be observed, that as the families and effects of Moultrie's Militia lay pretty generally in the line of march, these considerations touched them so closely, that his force suffered a continual diminution from the outset, which, besides the weakness it produced in lessening his numbers, served necessarily to dishearten those who remained.

At length the Bri-May 11th. tish army arrived at Ashley River, which they passed, a few miles above Charles Town, and advancing along the Neck formed by the two rivers of Ashley and Cooper, took post within little more than cannon shot from the works of that city. A continued fuccession of skirmishes took place on that day and the ensuing night, which, though necessarily attended with loss on both fides, were of no farther consequence to either. On the following morning, the general summoned the town to surrender, and held out very flattering conditions to induce them to a compliance. The negociation continued during the day, and a proposal was made by the city for a neutrality for their province during the continuance of the war. This being rejected on the one side, as the favourable conditions proposed by the general were on the other, the negociation was broken off in

made by the inhabitants and garrifon, for vigorously repelling a general assault which was expected to

take place in the night.

But General Prevolt, anding himself totally disappointed in every hope that had been held out to him relative to Charles Town, had other objects of serious consideration now before him. found that no offers he could make were sufficient to induce the enemy to a surrender, and that their coustenance shewed the fullest determination of defence; that their lines were defended by a numerous artillery, and flanked by their armed shipping and gallies; and that Gen. Lincoln, with a force at least equal, if not superior to his own, was fast approaching. On his own fide, he had neither battering artillery, nor a naval force to cooperate with his land forces; which were two articles so indispensably necessary for carrying the place, that their want seemed an insuperable bar to every hope of success. And if he were repulsed with any confiderable loss, which was much to be apprehended, his fituation, involved as he was, in a labyrinth of rivers and creeks, furrounded on all fides by a fuperior enemy, and his retreat continually impeded by swamps and difficult passes, seemed scarcely to admit of a hope, that any part of his small army could have been preserved.

Under these considerations, he prudently decamped on that very night, and having previously taken care to leave a proper guard for the security of the pass at Ashley Ferry, he had by morning returned to the south side of that river, without interruption, or the

knew-

knowledge or smallest suspicion of the enemy, who had been the whole time standing to their arms, under the momentary apprehension of a furious attack. From thence the army passed to the islands of St. James and St. John, which lie to the fouthward of Cnarles Town Harbour, and from their cultivation and fertility afforded good quarters and plenty of provisions for the troops. These begin that almost continued succession, and sometimes labyrinth of islands, into which the sea, with its numerous inlets, and the frequent rivers and creeks, have divided that low flat country, which extends along the coast from Charles Town to Savannah; the channels by which they are intersected, or separated from the continent, being in some places very narrow and inconsiderable, are in others so great, as to afford excellent harbours or roads for thipping.

In these islands the army impatiently expected those supplies of ammunition and necessaries from New York, which they exceedingly wanted. The first ships which had been dispatched with these supplies had the ill fortune of being either taken, destroyed, or driven back by the enemy. The arrival of two frigates of war, at length removed the distresses of the troops, and enabled the army to return to

the fouthward.

The object now with the general was to take and hold possession of the island of Port Royal; a meafure which held out many present and future advantages, among would afford good quarters and an eligible situation to the troops, during the intense heats and the very

unhealthy season, which were then either prevailing or approaching. By this means also, he would hold a fure footing in South Carolina, from which it was not in the power of the enemy to move him, until the long expected and wished for reinforcements arrived, which might enable him to proceed effectually the reduction of that colony. In the mean time, no position could be better chosen for covering Georgia on that fide; the excellent harbour of Port Royal, was the best station in that quarter for the royal shipping, and its vicinity to the town of Savannah, with the open communication between both places, served all together to render it

a post of great importance.

While the greater part of the army were engaged in the operations of moving from one island to another, and of establishing the different posts which it was thought necessary to occupy during the sickly season, General Lincoln thought it a proper opportunity to attack Lieutenant Colonel Maitland, who was strongly posted at the pass of Stono Ferry, which feems to be on the inlet between the continent and the island of St. John. The Colonel's force confisted of the first battalion of the 71st, and one Hesfian, together with the Carolina refugees; the two battalions being so weak and reduced, that his whole number is faid to have amounted only to about 800 men. The post, however, besides its natural advantages, was well covered with redoubts, an abbatis, and artilwhich it was not the least, that it lery. On the other side, the American force is represented as amounting to 5,000 men, and eight pieces of cannon.

ANNUAL REGISTER, 1779. 186]

June 20th. tack with great spirit, and supported it for about an hour; but were received with such a countenance, and fuch coolness and firmness, and so much galled by the fire of an armed flat, which covered the left flank of the post, that they were then obliged to retire with confiderable loss. The assailants attribute their retreat to the strength of the redoubts, which their light field pieces were totally incapable of making any impression on, and to a strong reinforcement, which arrived from the island of St. John, during the action, to the support of the post. The royal forces lost some officers as well as men; and above a hundred of both were wounded. The Americans lost some officers of name; and it cannot be doubted that their loss in general was considerably greater. The army met with no obstruction in its movement to Port Royal; and the season put an end to all operations on either side in that quarter.

In the beginning of May, Sir Henry Clinton concerted with Sir George Collier, who now commanded the marine at New York, an expedition to the Chefapeak, and a descent upon Virginia, as measures, which more than any other that could be undertaken, would contribute to the embarrassment and

diffress of the enemy.

· A sufficient naval and land force for the intended purposes, was accordingly dispached from New York, under the conduct of Sir Geo. Collier, and Maj. Gen. Ma-The fleet having successfully passed between the Capes of Virginia, the Railonable man of

They made the at- war, with some armed tenders, were left in Hampton Road, to block up that port, and to intercept the navigation of the River James; while Sir George Collier, having shifted his pendant to a frigate, proceeded with the smaller ships of war and transports up Elizabeth River. The town of Portsmouth being their immediate object, and the fleet delayed by some circumstances of wind or tide in its passage, the general and troops, impatient of delay, and apprehenfive that the enemy might have time either to strengthen their works or receive fuc-May 10th. cours, were landed at some distance, and marched directly

tow. ds that place.

The town was open and defenceless, but the passage to it by water was covered by Fort Nelson, which had been constructed at about half a mile's distance for that purpose. But the garrison of the fort, knowing that no fuccour was at hand, and that the fort was incapable of any effectual defence, to avoid being furrounded and made prisoners, abandoned it at the approach of the army, who of course took posfession both of that and the town. The town, or remains, of Norfolk, on the opposite side of the river, fell likewise into their hands. Upon the approach of the fleet and army, the enemy burned feveral of the vessels in these ports, which were two large among French' ships, loaded with a thoufand hogsheads of tobacco; the celerity of the invaders having, however, checked the destruction pretty early, several others were faved, and fell accordingly into their hands.

The

HISTORY OF EUROPE. [187

The general pushed on detachments to take possession of two strong posts several miles in front, which from the nature of the country, served to cover the approaches to his camp from any fudden attempt of the enemy. In the mean time, the British guards having marched eighteen miles by night to the town of Suffolk, on the Nantemond river, arrived there at day-break. They found the place had been halfily abandoned at their approach; and they immediately proceeded to the destruction of a very large magazine of provisions, together with the vessels and naval stores which they found there. fimilar destruction was carried on at Kempe's landing, Shepherd's, Gosport, Tanner's creek, and other places in that quarter; nor were the frigates and armed vessels less active or successful in their service, on the rivers, and in the near parts of the bay.

Within 'a fortnight, that the fleet and army continued upon the coaft, the loss suffained by the Americans was prodigious. Several thousand barrels of pork, with other provisions in proportion, which had been prepared for Walhington's army, and a great quantity of stores, were destroyed at Suffolk and Shepherd's. In other places there articles were brought off. Above 130 ships and vessels of all forts, were destroyed or tak. Of these, 17 prizes were brought away; among those 'destroyed or taken, were some privateers, and vessels of force. All those upon the stocks were burned; a confiderable quantity of naval stores brought off; and every thing relative to the building or fitting

of ships, that was not conveniently portable, destroyed.

The commanders received from the loyalists, according to their usual custom, such flattering accounts and politive affurances, of the general disposition of the people of that colony to return to the obedience of their fovereign, and their impatience to see the royal standard erected amongst them, that Sir George Collier could not avoid representing the matter in his letter to Sir Henry Clinton, in the full view in which it appeared to himself. If it was not, however, thought fitting to adopt the measure in its full extent, he strongly urged the great advantages which would accrue from fending them such reinforcements, as would enable them to hold a footing in the country, by converting Portsmouth into a place of arms, and rendering it thereby a fure asylum for shipping; purposes, which from its fituation, it leemed well calculated for answering, and which would have totally destroyed the trade of the Chelapeak. On the other hand, it was a place removed from fuccour, and in a manner furrounded with the greatest forces of the enemy. It is evident that Sir Henry Clinton saw these matters in a very different light, from that in which they were viewed by Sir George Collier. He fent an order for their immediate return. The fleet and army, with their prizes and booty, (having first demolished Fort Nelson, and set fire to the store-houses, and all the other buildings in the dock-yard at Gosport) arrived safe at New York before the expiration of the month.

188] ANNUAL REGISTER, 1779.

An expedition which General Sir Henry Clinton was upon the point of undertaking up the North River, probably contributed to the more speedy recal of the forces from the Virginia adventure. The enemy had for some time been ongaged, and at great labour and expence, in constructing very strong works, at the two important posts of Verplanks Neck, and Stoney Point, in the Highlands. These posts, which are on nearly opposite points of land, the first being on the East, and the other on the West side of the North River, were of the utmost importance for keeping the communication open between the Eastern and Western colonies, the great pass called King's Ferry lying directly between them. As these works were nearly completed, but not yet defenfible, the general thought it the proper season to avail himself of the industry of the enemy, and to reap the fruits of their toil. Washington, who lay with his army at Middle Brook, in Jersey, was at top great a distance to interrupt the execution of the defign; nor could his efforts at any rate have extended to the eastern side of the river. We have already had occasion to see the prodigious advantage, which the naval command of that great river and boundary afforded to an army, in any fingle or double scheme of operation on either fide.

The troops destined for this service, under the command of Major General Vaughan, were only newly embarked, when they were joined by the sorce returned from the Chesapeak, and proceeded all together up the North River; the naval depart-

ment being under the conduct of Sir George Collier. On the following morning, General Vaughan, with the greater part of the army, landed on the East side of the river, about eight miles short of Verplanks; whilft the remainder, under the conduct of General Pattison, and accompanied by Sir Henry Clinton, advancing farther up, landed within three miles of Stoney Point. Upon the appearance of the ships, the enemy immediately abandoned their works; but took care to let fire to a large block-house. Upon the approach of the troops to take possession of Stoney Point; they, however, made some shew of resistance, by drawing up on the hills; but they did not venture to abide the con-Ai&.

The Americans had finished a small, but strong and complete work, on the opposite side of the river, which they called Fort la Fayette; this was defended by four pieces of artillery, and a small garrison of between 70 and 80 But this little redoubt, though strong in itself, was effectually commanded by Stoney Point, which lies at about a thousand yards distance on the opposite shore; and it being exceedingly difficult of approach from its own fide, at least for the conveyance of artillery, the attack was accordingly intended from the other. For this purpose, General Pattison, with infinite fatigue and , labour, and the most indefatigable perseverance during the night, overcame the difficulties of dragging the heavy arrtillery, from a very bad landing place up a steep precipice, to the top of the hill; and his exertions and arrangements Welc

were so effectual and judicious, that by sive on the following morning, he had opened a battery of cannon, and another of mortars, on the summit of the difficult rocks of Stoney Point, which poured a storm of sire over on Fort la

Fayette.

The attack was supported by Sir George Collier, who advanced with the gallies and gun - boats within reach of the fort. cannonade was continued on all fides during the day; and as foon as it was dark, Sir George ordered two of the gallies to pass the fort, and anchor above it, in order to prevent the escape of the garrison by water. In the mean time, General Vaughan with his division, having made a long circuit through the hills, was at length arrived, and had closely invested the fort on the land side. The garrison seeing that all possibility of escape was now cut off, and that their hre was totally overpowered and 10st in the magnitude of that which they received, furrendered their little fortress on the following morning, and themselves prisoners of war, without any other flipulation than that of humane treatment. The boldness of their derence certainly merited iome praise, although we do not know that it was paid on either side.

The general gave immediate direction for finishing and completing the works of both posts, and for putting Stoney Point in particular, in the strongest state of defence. And, for their better support and protection, as well as with a view to the further operations of the campaign, encamped his army at Philipsburg, something about half way down the river to

New York Island; which he likewise rendered a post of some importance, by throwing up works, in order for the establishment and preservation of a free communication in suture. By the loss of these posts, the rebels in the Jerseys were under a necessity of making a detour of above ninety miles through the mountains, to communicate with the countries East of Hudson's River.

The state of the hostile armies on both sides with respect to actual force, together with the want of money, and the paucity of military provision on one, necessarily limited the views of the opposite commanders, and prevented their undertaking any decifive or extenfive operations. They were each in a firong state of defence, and neither had such a superiority of torce, as could compel his adverfary to relinquish the advantages of his situation. Washington was besides in expectation of foreign, aid; and it would have been little confishent with his usual character of caution and judgment, to have run the hazard, by any previous attempt, or halty measure, of weakening his natural strength in such a degree, as might render him incapable of profiting by the assistance of his ally, and the American arms and force, of course contemptible in his eyes. The campaign was accordingly languid, and its operations confined to the furprize of posts, and to defultory excursions; to the last of which, the Americans were now, as at all times, exceedingly exposed, and upon no footing of equality with their enemy.

his army at Philipsburg, something The numberless small cruizers, about half way down the river to whale-boats, and other crast of that

190] ANNUAL REGISTER, 1779.

that nature, from the Connecticut coasts, which infested the sound, lying between that colony and Long Island, were so watchful and constant in their depredations, and their lituation afforded them such opportunities, that they had nearly destroyed the trade to and from New York on that side, to the very great discommodity and distress of that city, as well as of the fleet Upon this account, and army. General Sir Henry Clinton, and Sir George Collier, determined on a course of desultory invasions along that coast, with a view of curing the evil, by cutting off the means of depredation in the de-Ifruction of their piratical craft, and so far as it could be done, of their other vessels and materials for building.

Governor Tryon, who was likewife a general officer, was appointed to the conduct of the land fervice in this expedition; his force amounted to about 2,000 men, and he was seconded by Brigadier General Garth, an officer of distinguished merit and ac-July 5th. tivity. The fleet having arrived at Newhaven, the forces were landed, and took possession of that town, and of a battery that covered the harbour, without any great loss, although they met with every impediment in their power, and no small share of irregular resistance from the inhabitants and neighbouring militia. The fort, and every thing for naval or military purposes, were destroyed. The town was spared, although first doomed to destruction, owing to some measures obferved by the militia, in not molesting the troops on their retreat.

The fleet departed from New-

haven to Fairfield, where the troops were again landed, and again opposed. Here the town was set on fire, and every thing of value con-The same measure was iumed. repeated in the subsequent and concluding expedition to Norwalk; where the militia being more numerous, and the refittance greater, than in the former places, both that town, and the small one of Greenfield, were totally destroyed. The loss sustained by the Americans in this last act of the expedition was very great. Besides that of their houses and effects, a considerable number of ships, either finished or on the stocks, with a still greater of whale boats and small crast, with stores and merchandize to a large amount, were all deitroyed.

Whether it was, that this course of destruction was contrary to the intention and approbation of Sir Henry Clinton, or from whatever other cause it proceeded, it was suddenly stopped in its career, by an order from that general for the immediate return of the troops. The loss sustained by the royal forces was very trising, considering the opposition they met with; the whole number, in slain, wounded, and missing, being under 150, of which, not above a seventh were killed on the spot.

The fires and destruction which marked this expedition, were attributed to different causes. Partly to the resentment excited by the rebels, in their firing from the tops and windows of their houses; partly to the zeal of the loyal American resugees, who were implacable in the resentment which they bore to their countrymen on the opposite side, and who from

that

that spirit, along with their intimate knowledge of the country, were particularly necessary in these enterprizes; and, as it was laid, in some inflances to military necessity, the burning of the houses lerving to malk the retreat of the Major General Tryon, troops. however, justified, the measure, in his letter to the general, upon the fair principles of policy; and faid, he should be very forry, if it was thought less reconcileable with humanity, than with the love of his country, duty to the king, and the law of arms, to which America had been led to make the awful appeal. That the usurpers had professedly placed their hopes of levering the empire, in avoiding decisive actions, upon the waste of the British treasure, and the escape of their own property, during the protracting of the war. That their power was inpported by the general dread of their tyranny, and the arts practifed to inspire a credulous multitude with a prelumptuous conhdence in the forbearance of the royal forces. And, that he wished to detect this delusion, and, if politible, without injury to the loyalists.

Whatever force or justice there might be in these arguments, the measure of burning and destroying the country seemed an improper accompaniment, to an address of invitation which was circulated among the inhabitants, urging them to return to their duty and allegiance. Mr. Tryon, however, regrets in his letter, the burning of their places of worship; but justly observer, the great difficulty of assigning any fixed limits to a conslagration, where the buildings are close, and the houses com-

posed of such very combustible materials as boards and shingles. This expedition afforded abundant matter, for the renewal and increase of that loud clamour, which the Americans had so long raised, and so widely extended, relative to the cruel, and unheard-of manner, in which, they pretended, that the war was conducted on the royal fide. Nor did it leem to produce any great effect with reipect to its immediate object, of checking the depredations of the American cruizers; for so bold and numerous were they, that in a very few days after, two of the royal floops of war were taken by them.

The surprize of Verplanks and Stoney. Point, drew Washington and his army from the Jerseys, to the high, strong, and mountainous country, above those posts, and on both fides of the North river. General Sir Henry Clinton's object was, to draw him down, if possible, from these fastnesses into the flat country, and thereby to bring on a general engagement in that fort of ground, which would have been adapted to the exertion of those peculiar advantages, and that decided superiority, which the royal army possessed. This was among the motives which ledto the Connecticut expedition; and others of less note, were undertaken upon the same principle. It was, however, a matter of no imall difficulty to lead Washington into such an error; nor could any art in the laying or covering of the design, afford more than a very doubtful prospect of its success.

Whilst the hostile armies were thus watching each other motions with

HISTORY OF EUROPE. [193*

was their knowledge of the place had induced them to expect; the works being covered by a deep morals, and which at this time was also overflowed by the tide. The Americans say, that neither the deep morals, the formidable and double rows of abbasis, or the mong works in front and flank, thuid damp the ardour of their terops; who, in the face of a that incellant and tremendous fire of mulquetry, and of cannon landed with grape flot, forced their way at the point of the baymust through every obstacle, until the was of each column met in the center of the works, where they arrived at nearly the fame in-**Ant**

General Wayne was wounded in the head by a musket ball, as he passed the last abbatis; but was meliantly supported, and helped through the works, by his two theve Aid de Camps, Fishbourn and Archer, to whom he acknowissiged the utmost gratitude in his public letter. Colonel Fleury, who we may perceive by his name to be a French Officer, had the honour of Rriking the British standeed with his own hand. for Steward, and several other ofmers, received great praise; as did in particular the two Lieutenants, Gibbons and Knox, one of whom led the forlorn hope on the right, as the other did on the left; and who had both the fortune to escape unhurt, although the first loft rendeen men out of twenty in the attack.

There is scarcely any thing in the transactions of war, which affords more room for surprize, and feems left to be accounted for, than the prodigious disparity between the Vol. XXII.

numbers flain in those different actions, which feem otherwise fimilar, or greatly to correspond, in their principal circumstances, nature and magnitude. Nothing could well be supposed, from its nature and circumstances more bloody, in proportion to the numbers engaged, than this action: and yet the loss on both fides was exceedingly moderate. The fate of Captain Tew of the 17th regiment, who fell in this action, being rather fingular and unfortunate, was accordingly regretted. He had been less for dead on the field in the last war; and perhaps no other officer in Europe had furvived so great a number of wounds, as he had received in the course of his service. Promotion had been long promised and expected; but through the want of any particular interest to support that claim, which his long iervices, ment, and particular fufferings, seemed, indeed, to render unnecessary, he sinished his military career at the head only of a company.

Nothing could exceed the triumph of the Americans, upon the success of this enterprize, and the vigour and spirit with which it was conducted. It mast, indeed, be acknowledged, that, considered in all its parts and difficulties, it would have done honour to the most veteran soldiers. Washington, the Congress, the General Assembly, and the Supreme Executive Council of Pennsylvania, feemed emulous in their acknowledgments, and in the praises which they bestowed upon General Wayne, his officers, and troops. In these they particularly applaud the humanity and clemency shewn to the vanquilited, when, (they' [**N**]

my)

fay) by the laws of war, and sti- ports of the fleet, having Brigadier mulated by resentment from the remembrance of a former massacre, they would have been justified in putting the whole garrison to the iword. Nor were real or honorary rewards to the officers forgotten. The total number of prisoners amounted to 543, and the flain of the garrison, according to the American account to 63; which taken together do not differ very widely from the imperfect return fent in a hurry by Colonel Johnson; taking it for granted, (as was undoubtedly the case) that those whom he reckons as milling, are included in either part of the calculation. The trophies, artillery, and stores, were not, in respect to the nature and extent of the post, inconsiderable.

As foon as Stoney Point was taken, the artillery was directly turn-· ed against Verplanks, and a furious cannonade enfued, which necestarily obliged the shipping at the latter place to cut their cables, and fall down the river. The news of this disaster, and of Webster's situation, who also expected an immediate attack on the land fide, no sooner reached Sir Henry Clinton, than he took the most speedy meafures for the immediate relief of the one polt, and the recovery of the other. The whole British land and naval force was accordingly in mouon. The general, with the main arm, advanced to Dobb's Ferry: the cavalry, with a detachment of light infantry, pulhed forwards to the banks of the Croton river, in order to ane the enemy on that tide, in their attempts by land against Verplanks; and Sir George Collier, with the trigates, armed vericle, and trans-

General Sterling, with three regiments on board, proceeded up the river.

But however great the importance or value of Stoney Point, Washington was by no means disposed to hazard a general engagement on its account; more especially in a fituation, where the command of the river would afford fuch decifive advantages to his enemy in the disposition, and sudden movement of their troops, whether with respect to the immediate point of action, or to the feixing of the passes, and cutting off the retreat of his army, as might probably be attended with the most fatal consequences. He informs the Congress in his letter, that it had been previously determined in council not to attempt keeping that post, and that nothing more was originally intended, than the destruction of the works, and the bringing off the artillery and stores. Sir Henry Clinton regained the post, after it had been three days in the possession of the enemy, and placed a strong garrilon in it.

A few repetitions of such success, would have rendered the Americans so daring and adventurous, that the advanced polis on the royal side, must have been kept in a constant state of alarm and danger. But Fortune was not always in the lame humour; not could they often find officers of men, who were capable of acting with such vigour and spirit, as those who had succeeded in the florm of Stoney Point. On 19th. the very day that Brigadier Sterling had taken pollelion of that post, an enterprize sufficiently daring in the design, and exremely

HISTORY OF EUROPE, 195

tremely well conducted in the outfet, but which failed wretchedly in the execution, was undertaken against Paulus Hook, which lies almost epposite to the city of New York on the Jersey side. It seems that the strength of the post, had induced such a remissions on the side. of the garrison, that the enemycompletely surprized the place at three o'clock in the morning, and carried a blockhouse and two redoubts almost without any resistance. In that critical moment of exigency, Major Sutherland, the commander, threw himself haltily, with forty Hessians, into another redoubt, from which they kept so warm and incessant a fire, that the Americans scandalously deserted their new polts, with as much expedition, and as little difficulty as they had been attained; thus, by a retreat as disgraceful, as the attempt had been apparently bold and well conducted, they abandoned a conquest already evidently in their. hands, without having had courage even to spike the artillery, or to set are to the barracks. The commandant had the fortune to redeem his character, by the gallantry with which he retrieved the conlequences of his negligence.

But at the heel of these transactions, intelligence of an alarming nature was received from the eastward, which suddenly called Sir George Collier, with the greater part of his naval force; away from taken in the summer from Hallifax by Colonel Macleane, with a view of establishing a strong post on the river Penobicot, in the eattern confines of New England, where that colony borders on Nova

Scotia, and amidst these new and! weak lettlements, which the Maslachuletts people have established in that quarter, lince the last war, and formed into a county underthe name of Lincoln. The forcewith which he arrived in the Pcnobscot about the middle of Junes. confisted of a detachment of 450 rank and file of the 74th regiment. and 200 of the 82d; which were convoyed by three floops of war. Here Colonel Macleane began to: construct a fort, in a situation perfeetly well chosen for annoying the.

enemy.

This transaction occasioned an unusual alarm at Boston, and the most vigorous measures were adopted by that government to prevent its completion. Orders were immediately given for an expedition. to the Penobscot; and in order tosecure armed vessels and transports, as well as failors, an embargo of forty days was laid on all their ihipping, As a further encouragement, the state gave up its share in all prizes that were taken. to the captors. A very confiderable naval armament, (for io new a Rate) under the conduct of Commodore Saltonstall, was accordingly fitted out with extraordinary expedition; and a body of troops embarked under the conduct of a General Lovel.

On the other fide, the works of the new fort, notwithstanding that the utmost diligence was used. New York. This necessity origi- in their construction, were yet so nated from an expedition under- far from being finished, as to afford but very imperfect means of defence, against any great superiority of force. Colonel Macleane had, however, the fortune to receive intelligence of the armament preparing at Boston, a sew days [°N] 2 before

LEGI ANNUAL REGISTER, 1779.

before its serival; upon which, he immediately changed his plan of operation; and infred of proconding further in the construction of works, which there could be no that for completing, applied himfelf with the greatest assiduity, to the putting of the post in the best prefers thire of defence, which its Lituation, and the shortness of the incise, could admit. In this, as in every thing elfe, he received the most cordial and efficacious support and affiduace from the officers and crews of the three royal frigues in the river, who committed themsolves with the greatest chearfulress to abide the fate of the garrison.

Ar length, the hof-July 25th, tile and dreaded feet, to the annunt of 37 fail, appeared in fighe; and foon after, their armed wellels began to cannonade the ships of war, and a battery of four twelve possibles, which had been thrown up on the bank of the river for their protection. It appass, that the works of the fort were commenced about the middle of a small peninsula, the western point of which run pretty deeply. ings the river; and the whole, fo far as we can judge, forming a fore of hook, within which was included a little bay or harbour, wherein the frigates were stationed. The commander had the precauties to intreach the islamus or neck, which joined the peninfula to the continent, by which he was fecured on the back. The weak fide of the peninfula lay to the harbour, the entrance to which was, as we have feen, defended by the frigates, and the four gun battery; and the opposite side teems not to have admitted of a landing. From

this fituation, the only spatials means the enemy possessed for approaching the fors, was by effecting a landing on the west point; and even there, the ground was naturally so strong and difficult, as to assord no small room for hope to the commander, that he should be able to protract their operations for some considerable time, which was the great object he had in view, as holding out the prospect of expected relies.

The fire of the chemy was h well returned, that their thing found it necessary to retire; upon which their fleet anchored off the west and of the peninsula. They renewed the attack upon the shipping on the following day; but again repulsed as fore, they feemed, for the pretent, to give up all hope of fuc-'ceeding on that side. They made several attempts to land, both oa the first night, and after, in which they were also conflantly repulsed by the piquets, who were advantageously posted on the point for their reception. To the great furprize, however, and disappointment of the commander and garriion, they made good their landing under a violent camponade, oa the morning of the 28th, and obliged the piquete to retire to the fort.

The attention of the commander, his officers and garrison, were now necessarily confined to the strengthening and defence of their works; operations in which they were equally indetatigable and seccessful. On the third day after their landing, the sorter their landing, the enemy opened a battery at about 7.50 yards, distance; and in a few days after, another, somewhat sear-

er;

HISTORY OF EUROPE, [1979

er; but although the canaonade that the robels had totally abundonfrom both was very brisk and well fapported, the works were carried on in the fort with the fame spirit and intinitry as before. Thus the besite god exhibited the fingular phievemenon, of acquiring a daily accellion of internal firength and Secrity, ander the immediate af-

stalls of the enemy.

In the mean time, the Americans having crested a battery on an illand at the entrance of the harbour, the frightes and thipping thought it decessary, upon a confultation between the land and naval force, to retire farther within the bay or creek; and having also landed guits to cover their own battery, the estamander was thereby enabled to withdraw the fostr twelve pounders for the defence of the fort. For about a fortnight the cannonade was supported with great spirit on both sides; at the end of which time, the commander received intelligence from a deferter, that a general storm was axed upon, it being intended to attack the thips and the fort at the lame inflant. Upon this informa-'tion, he immediately threw up a mall work, covered with light artillery, at about 150 yards diftance, in the front of the fort; thus adding a further fecurity and cover to the body of the place.

Whilst the commanders, gazriion, and fearren were in impatient expediation of the attack, and without the smallest apprehension to the event, an unufual quiet being observed on the enemy's Ang. 14th. fide, very early in the morning, it induced a closer inspection, in consequence of which it was foon, to their inex-Preffible after ishment, discovered,

ed their camp and works in the night, and had re-embarked both their forges and artillery. Nor were they left long in the dark as to the caple of this myslerious event; for while they were endezvouring to profit in fome degree of

*i98]] ANNUAL REGISTER, 1779.

rine, as Boston now suffered. The Warren, a fine new frigate, of 32 eighteen and twelve pounders, with five others, from 20 to 24 guns, one of 16, and one of 18, were all blown up. Six armed brigs or floops, from 14 to 16 guns each, with one of 12, met the fame fate. The whole number of armed vessels destroyed or taken, including two, which the fquadron took on their passage, amounting to nineteen. A force, little, if at all inferior, whether with respect to ships or guns, to the navy royal of England, for several years after the accession of Queen Elizabeth.

Twenty-four sail of transports were likewise destroyed, and some provision vessels taken. As nothing could be more despicable than the conduct of Saltonstall, so no man could be more execrated than he was by his countrymen. It is even

faid, that the indignation and rage of the land forces role so high upon the common difgrace which they were obliged to share in, that they could not refrain from coming to blows with the feamen, in the course of their subsequent return by land. It must, however, be acknowledged, that the Americans were not able to cope with the royal squadron, in an open and regular sea fight, and that the superior force and weight of metal of the Raisonable, afforded sufficient cause of terror to frigates. But the passes, windings, and fhallows of the river, might have served much to lessen that superiority; and at any rate, excepting the effusion of blood, the most desperate resistance could not have been attended with more fatal consequences than their ignoralinious flight,

second pro-, wice in the e ine hollile till pretty usat respect, ince D'Estaing and or woment.

sate, not-

Piquet was then on his way from France with a strong reinforcement to D'Estaing; and no common or ordinary convoy would have been sufficient for the protection of the trade, in case of its falling in with his squadron.

No wildom in the delign, nor judgment in the execution, can at all times prevent measures from proving unfortunate; as the prefent did in a high degree. The first consequence of the departure of the fleet was the loss of the valnable island of St. Vincent's; a los which would have been still more thought of, if it had not been speedily followed by a greater. The circumstances attending the loss of that illand were rather extraordinary, and have not yet been explained in any manner which could afford latisfaction to the pub-A handful of French from Martinique, under the command only of a naval lieutenant, estimated by one account at 300, and by the governor's own at 450 men, not above half of which were regulars, ventured to land upon a hostile island, garrisoned by seven companies of regular troops, under the conduct of a lieutenant-colonel, the garrison also exceeding the invaders in number, and the illand inhabited likewise by a people, who had always thewn the utmost fierceness and eagerness for war, when it was accompanied with the hope of plundering the unfortunate Caribbs of their lands; and yet this island, so circumstanced as to garrison and inhabitants, was delivered up to the enemy, without the firing of a fingle shot on either side.

The expiculation was signed only

by Governor Morris, and French lieutenant; nor can we help thinking it fomewhat fingular, that the name of no other other, civil or military, on the part of the illand, should appear to it. conditions were fulficiently favourable to the inhabitants, being in general drawn upon the model of those at Dominique. The natural effect of that oppression and inhumanity, which the mordinate covetoulnels of the planters, had induced them some years ago to exercile upon the Caribbs, and through which they led government into that disgraceful war we have feen for their extermination. was now apparent; that people having immediately joined the French upon their landing, and it may well be supposed, had no small share in inducing them to undertake the expedition. terror with which the inhabitants now regarded that people, is also obvious, from the fervency with which they claim the French protection against them in the articles of capitulation. It is not impossible but that terror contributed to the otherwise unaccountable surrender of the island.

D'Estaing had the fortune of being joined by the reinforcement under M. de la Motte, with a supply of troops, and of what was at least equally necessary, of naval and military stores and provision, during the absence of the British sleet. His great superiority by land and sea, now necessarily called him to action, and the island of Granada was the immediate object of his enterprise. He arrived off that island with a sleet of six of the line, with ten or twelve.

*202] ANNUAL REGISTER, 1779.

twelve frightes, and, according to their own report, near 10,000 land forces, including the marines, on board. The whole defence of the island lay in about 150 folliers and artillery men, and three or four hundred armed inhabitants; and its firength confided in a fortified or entrenched hill, which commanded the fort, harbour, and ca-

pital town of St. George.

The French landed between two and three thousand regular forces, under the conduct of Count Dillon, on that evening; who the next day invested the nill, and made the necessary preparations for carrying it by frorm on the following night. The governor, Lord Macariney, made every possible preparation for desence; but it seems probable, that he unfortunately placed a greater reliance on the natural and artificial strength of the post, than an experienced military commander would have done. The French fay it was deemed to afford so perfest a security, that it was rendered a depont for plate, jewels, and other most valuable moveables. However that was, or whatever the Itrength of the post, the desence was extraordinary, confidering the nature and amount of the force by which it was defended; and although D'Estaing headed a column of the French troops in person, they were repulfed in the first onfet; but the superiority of number was at length decisive, and they carried the lines after a hard conflift, which lasted about an hour and a half. The French are said to have had 300 men killed or tendernels shewn by the officers and wounded in this affault; but they private men of Dillon's Irish regido not acknowledge any such num- ment to the inhabitants, their conber in their own public account. Their loss was, however, confider-

able, and chiefly arole from a welldirected fire from some vessels in the road, which galled them exceedingly in their approach.

The cannon which they had taken on the top of the hill, being turned at break of day against the fort, which then lay at their difcretion, the governor was under a necessity of proposing, what he had before rejected, a capitulation. D'Eming treated the flag with great haughtiness; would grant but an hour and a half for framing the proposals; and when they were presented, rejected them in the grots, and in the most peremptory manner. He, however, tramed some terms himself, with which they were immediately to comply, without the smallest deviation on their side, or relaxation on his, But these were of so extraordinary a nature, that the governor and principal inhabitants thought it better to trust to the law and customs of nations, to the justice of one court, and the interpolition of the other, by surrendering at difcretion, than to bind themselves to such unexampled conditions.

Nothing could be more urfavourable to D'Estaing's character, than the accounts of his conduct in his new acquisition, which were spread about at that time. continuance in the island of Granada has been represented as a constant scene of severity and oppression. It was said that his soldiers were indulged in the most unbridled licence; and that if it had not been for the humanity and dition would have been too deplorable to be endured or described.

HISTORY OF EUROPE. [203*

In the mean time, Admiral Byron had returned to St. Lucia, where he arrived on the first of the month; his fleet being now weakened by the convoy which he had sent with the trade to England. He there received the first intelligence of the loss of St. Vincent's; upon which intelligence he concluded with General Grant, that they should proceed with the land and naval force for the recovery of that illand. In their passage for that island they received the unwelcome information, that D'Estaing had attacked Granada; their advices were very imperfect; did not flate the French fleet at any thing near its real force, and represented Lord Macartney to be in a condition which would enable him to hold out for some days. Nor had they yet received any intelligence of de la Motte's junction with D'Estaing. They accordingly changed their course and intention, and proceeded for the relief of the Granades.

. In this state of ignorance, with respect to the strength of the enemy, and the circumstances of the illand, the British commanders arrived within fight of the French fleet, at the break of day, on the 6th of July. Their force confisted in 21 thips of the line, and a fingle frigate: and they were accompanied, and as things fell out exceedingly incumbered, by a somewhat greater number of transports which conveyed the troops. The enemy had been at anchor off the harbour of St. George's; but having received previous information of the approach of the British sleet, they were then mostly getting under way, and those which had not already hoisted their anchors, immediately flipped their cables, and kept stretching out to sea. As the objects of the hostile commanders were totally different, it is necellary to explain them, for the better comprehending the nature of the ensuing engagement. The British admirals wanted to bring the enemy to the closest action that was possible; not only as a mode of fighting which at all times afforded the greatest advantage to their side; but as affording the means, besides the relief of the island, (which they made no doubt of) of obtaining that decisive superiority in those seas which they wished to establish. On the other hand, M. D'Estaing sought for no other profit or advantage than the preservation of his new acquisttion; that was to him a sufficient victory; he was in no disposition to feek honour at the hazard of that, in the doubtful iffue of a bloody and desperate conflict with a British fleet, if it could possibly be avoided; but he would, notwithstanding, risque all things, sooner than give up what he had got.

Such motives operating on both fides, and the French ships being cleaner, and consequently sailing much better than the English, which threw the choice with respect to the mode of fight in a great degree into their hands, the action was necessarily partial, and could not, without some change of circumstances, have become ge-For the few British ships neral. which could first reach (or in sea language fetch) the enemy, were exposed to the encounter of a prodigious superiority of force, and consequently sullained great damage, before they could be supported

ANNUAL REGISTER, 1779. 204

lows; and thefe were again, in their turn, to experience the same disadvantage; while several ships of the rear division, were never sole to come at all into action; and a Mill greater number of the fleet in general, could not obtain that share in it which they wished.

The first figual made by the admiral, on seeing the disposition, and discovering the intention of the themy, was that for a general chace; and the second, (he being yet ignorant, or rather milinformtd, as to their strength) was, for the ships to engage, and to form es they could get up; and even when the superiority of the enemy was discovered, the figual for thate was full continued, with the addition of that for a close engagement. About half past feven the action was commenced by Admiral Barrington, in the Prince of Wales, with the captains 8awyer and Gardner, in the Boyne and Sultan, having elosed with the van of the enemy. That difringuilhed commander, with his brave colleagues, made and supported the attack with a spirit and resolution, which would have stamped the highest honour, where there had been none acknowledged before. But being obliged to endure the whole weight of fire from that division of the enemy, for a considerable space of time before they could be supported, they fulfored accordingly; and belides the damage to the ships, and loss of men, the vice-admiral was himfelf Wounded.

The saperiorly which the French thips possessed in point of failing, Hill enabled them to elude every effort which was made by the Bri-

ported even by their nearest fel- till commanders, to bring on a close and a decifive engagement. The former, indeed, sometimes happened in particular inflances; but it was only, when the evolutions on both fides, and the eagernels on one, threw a few of the British ships into a lituation, which obliged them to endure a confid, with a much greater humber of the enemy. Thus, the Grafton, Collingwood; the Cornwall, B4wards; and the Lion, Cornwallis. sustained the whole fire of the French fleet, as it passed them juccellively on a tack; and Capmin Fanshawe, of the Monmouth, having gallantly attempted, fingly, to arrest the progress of the enemy's van hoping thereby to bring on a general action; it will not be wondered at, that as his delign failed, his ship should be livde The Safbetter than a wreck. folk, Rear-Admiral Rowley, (who had been left originally for the protection of the transports) with the Fame, Butchart, had likewife suffered confiderably in similar litualions.

The peculiar circumflances and fituations of the fleets, including perhaps their difface, together with the opposite views of the commanders, brought on a contation of action about twelve o'clock; and although it was renewed at two, and at other times, in lesse degree, during the evening, yet nothing effential was done on dither side. The object of the British commanders was now recally thangod, from what it had been at the commencement of the engage-Some of the thips had pushed their way boldly during the heat of the action, to the very entrance of the harbour of St. George'&

HISTORY OF EUROPE. [205*

George's, thiploing thereby to administer courage at least, if not succepts to their supposed friends. in the garrison; but, to their utmed adonithment, they not only beheld French colours on the fort, but were fixed at by the batteries. Their main object, in the relief of the island, was therefore no The island was already lest! and their total interiority of torce by sea and land, rendered them utterly incapable of attempting its recovery. They had been equally disappointed with respect to the force of the French fleet, as to the fituation of the island. The care of the transports, had been a contant clog upon them during the action; and their protection now, along with that of the disabled thips, were the great and only objects of confideration.

Three of the disabled ships were a great way a-liern; and one of them, the Lion, had suffered so extremely, that being incapable of attempting to rejoin the fleet, the was obliged to bear away fingly, in the best manner she could, before the wind; and had the good fortune to arrive some time after in Jamaica, although in point of coodstion little better than a wreck. is seemed in the power of the French to have cut off the two other duabled thips; but they would not hazard the attempt, as x would have been the means of bringing on a close and decisive action. Indeed nothing could more clearly show D'Estaing's inflexible determination on that point, which can only account for his conduct, than, that with fuch a superiority in his line of battle, and such a number of large and front frigates, he neither attempted to cut off the

transports, or the two disabled ships; nor would even venture to detach a single ship in pursuit of the Lion.

In these circumstances, the Britith admiral feat instructions in the evening to the Monmouth, (which was in much about the same condition with the Lion), as he likewife did to the transports, to make the best of their way to Antigua St. Christopher's. His line being now reduced to nineteen ships, of which several were greatly disabled, was drawn up at the close of the evening, at about three miles distance from the enemy; in full expectation of being attacked in the morning, as he did not think it possible, that with so great a superiority, the French commander would fuffer the transports to be carried off without pursuit M. D'Estaing or moleltation. evidently held a different opinion, and returned with his fleet to Granada during the night.

The Generals Grant and Mexdowes, were spectators of an action in which they could not partake, and felt the highest military rapture, at the many extraordinary exertions of gallantry which they law exhibited by their naval friends; and being ignorant of the superiority with which they were contending, had raifed their expectations to the full confidence of becoming sharers in a triumph and consequences which could not take It was odd enough, that the two wrecks, the Monmouth and the Lion, should fall in with each other at fea; and that being mutually disfigured, Capt. Corpwallis, at least, mistook the oppo-

fixe for an enemy, and was accord-

ingly bringing up his tout venet

with

with the greatest eagerness, to the encounter of the other, which was not in quite so bad condition.

The loss of men in the British fleet, amounted to 183 killed, and 346 wounded, of whom there were four officers in each lift. This was sufficiently moderate; but the other circumstances of the action were exceedingly grievous; for the great damage sustained by the ships, particularly in their mails and rigging, (and for which the distant fire of the enemy was so peculiarly calculated) was a misfortune difficultly remedied in that quarter, and which must have been any where attended with a confiderable This afforded fo loss of time. prodigious a superiority of force to the French, that while that continued, it was impossible any longer to dispute the empire of the sea with them in the West Indies. Such a state of things, could not but fpread a great and general panic through all the British Islands; and although D'Estaing did not follow up his new conquest by any farther attempts; yet upon learning the weak state of his enemy, he did not neglect to return the former visits he had received at Martinico, by parading for a day with his whole force in fight of St. Christopher's, as if it were to challenge him to action.

All accounts concur in describing the French loss of men in this action to be predigious. The lowest estimate we have seen, states it at 2700, of which the slain amount to 1200; but other accounts go higher considerably than three thousand. So great a number of land forces, being crowded on board ships, which are always rated at a high complement with

, ,

respect to their crews, will in some degree account for fo great a loss; to which may be added; that this engagement confilted in a great measure on one side, of a succession of fierce and desperate assaults, which made a dreadful impression in those particular points to which they were directed. The French account, published by authority, gives no farther specification of the loss, than what relates to the officers, which could not be conceal-The number of officers, which we find by these lists, to have been killed or wounded, was confiderable, both in the naval and the land departments. Of the former, three commanders of ships were killed; and it seems singular, that the captain and five lieutenants fell in one ship.

The French claimed a victory, on the ground, that they gained their object, in the preservation of their acquisition, while the English lost theirs, in being obliged to relinquish the Island. The French King's letter to the Archbishop of Paris, for a thanksgiving, on this occasion, has been published.

The alarm excited in the British West India Islands by the superiority of the enemy was not long lived; for D'Estaing's operations were destined to another quarter; nor could he probably have atchieved any thing farther there if it had been otherwise. The footing which the British forces had gained in Georgia and South Carolina, was highly distressing in its present effect, and still more alarming, with respect to its probable consequences, to the Americans. The scene of action was so remote from the centre of force, and the feat of council, that the war there

was in a great degree beyond their reach; and the British marine force, afforded such decisive advantages to the operations of their troops, in countries every where bordered by the sea, and chequered by inland navigations, as could scarcely be counteracted with effect, by any moderate superiority at land.

America had as yet received no very essential service, with respect to the direct operations of the war, from any co-operation of the The attempt on French arms. Rhode Island, in conjunction with D'Estaing, was productive of expence, danger, and loss, without. Nor did the the smallest benefit. conduct of that commander afford much more of fatisfaction, than the expedition itself did of advantage. On the other hand, the michief and danger to the fouthern provinces, had taken place during the height of the connection; and was perhaps scarcely compensated for by the recovery of Philadelphia; even throwing that event into the scale, as an indirect consequence of the French al-Lace, and supposing that the Briuin forces would not otherwise have abandoned that capital. It could not besides but be very galling to the Americans, that the protection, equipment, and supply, afforded to the French fleet at Boston, should produce no better effect, than that immediate descrition of their coafts, which exposed them to the fouthern invation. Upon the whole, their new alliance had not as yet produced those high advantages, which were undoubtedly held out in the warmth of speculation; nor even that proportion of them, which might have been reasonably

was in a great degree beyond their expected, as well from a considerareach; and the British marine tion of the motives which led to the force, afforded such decisive advantages to the operations of their affairs, and the means and power of troops. in countries every where the ally.

Under some of these considerations, or the impression of all, the French court determined now to afford some essential aid to their new allies, by directing D'Estaing's whole force to their affiliance; or probably it was a part of the original plan of the campaign, that as foon as he had acquired that effective superiority in the West Indies, which they were refolved to endow him with, he should proceed to the execution of the latter mea-That commander, accordingly, having first waited to see the French homeward-bound West India trade clear of danger, proceed-' ed, with about 22 ships of the line, and fomething less than half the number of large and heavy-metal frigates, in all the pride of a conqueror, to sweep the coasts of North America. His first object, which was expected to be accomplished with little difficulty, was the destruction of the small force under General Prevoft, and consequently freeing the southern colonies from all their present alarm and danger. The second, was of greater importance, and likely to be attended with much greater difficulty and danger; and that was, a delign to attack, in conjunction with General Washington, the British force at New York, by fea and land at the fame time: and thus, by the reduction of that island and its dependencies, along with the consequent ruin of the opposite fleet and army, to bring the war on that continent to a final conclution.

Through

ANNUAL REGISTER, 1779

Through the fudden and unexpetted appearance of the French fleet on the coasts of South Carolina and Georgia, the Experiment man of war, of fifty guns, and three royal frigates, being totally unapprehentive of danger, and upon leparate fervices, had the misfortune of falling in with them, and thereby adding to their triumph and The first under the command of Sir James Wallace, was on her passage from New York to the Savannah with supplies: and although the had been already difmaked in a violent florm, the made a gallant and desporate desence against an irresistable superiority of force, in the view of the hostile

General Prevolt was at this time at the town of Savannah; has the bester, if not the greater part of his force, was still on the island of Port Royal, in South Carolina, where we have already feen it took pust after the retreat frem Charles Town. enemy were makers by sea, that corps had no other means of joining the main body, but by the numercus inland savigations which The ininterlect that country. texcepting of an express by the Americans, who conveyed orders to Colonel Maitland from the general, for speedily joining him with the whole effective body under his command, delayed the measure so long, that the enemy had time to feige the principal communications before it could take effect. This rendered the junction of that corps with the garrison, upon which only any hope of defending the Savannah could be founded, a matter of great doubt, difficulty, and danger. The address of Colonel Maitland, the zeal of his troops, with the distinguished services of Lieuzenant Goldesbrough of the navy, were happily found superior to all these obstacles.

As D'Estaing was obliged to communicate with the government at Charles Town, relative to the movements of General Lincoln, who was to act in concert with him in the intended reduction of Georgia, this probably induced forme delay with respect to his own operations; so that although he asrived on the coast about the first of September, it was more than a week after, before the whole fleet, amounting to above 40 Sept. 9th. imi, anchored of the bar of Tybee, at the mouth of the river Savannab. For the three or four succeeding days, the French were taken up in passing their troops, in small American vessels, through the Offshaw inlet, and landing them at Beaulieu, about 13 miles from the town of Savannah: at the same time that their frigates were occupied in taking possession of the lower river, and of the different inlets; approaching as near_ to the town and lines, as the circumitances of water or of defence would admit.

On the 15th the French, with Polaski's American light horse, appeared so near the British lines, as to skirmish with the picquets; and as the sorce under General Prevost, did not admit of his having any other object in view than the more descree of the town, his posts were contracted within the cover of the artislery on the works. On the sollowing day, M. D'Estaing sent in a haughty summons to the general, to surrender the place to the arms of his most Christian Majetty.

IIXX .

The commander had the works. the address to carry this point. Meffages paffed backwards and forwards; and at length, a truce for 24 hours was agreed upon, to afford time for deliberation,

During this interval, the fortunate arrival of Colonel Maitland, with the troops from Port Royal, prefented a new face of affairs, and furnished a fresh stock of strength and spirits to the defence. An anfwer was accordingly returned, that they were ununimoully determined to defend themselves to the laft man. Nothing could prevent the failors (who had been all drawn from the ships to construct and man the batteries) from expressing their usual ardour, by giving three lord cheers, upon firing the figual gun for the recommencement of hostilities.

 On the day after delivering the fummons, Count D'Estaing was joined by General Lincoln, as he had been before by Polaski. The allies took feparate but adjoining tamps; and each began immes diztely to carry on their approaches as in a regular siege. Their joint or separate force cannot be very exactly ascertained. The French are faid to have landed, from first to fast, about 4,800 regular troops, belides fome hundreds of mular-. toes and free negroes, whom they had brought from the West Indies. Lincoln's force was continually increating; it was improfed not much to exceed 1,500 men at the time of his junction with D'Estaing; and this the more especially,, but was afterwardir estimated from 3,000 to 3,500 men.

No account has been given of t been time to convey the 'the number of the garrison; but from the thipping, for the 'it would feem, from the exceeding ion, fuch as they were, of weakness of the battalions, and an [*0] examina-

examination of various relative circumfunces, that taking is all descriptions of men, provincial troops, loyalifis, under whatever denomination, and failers, that the whole could not exceed 3,000 men.

The spirit, vigour of exertion, and perfeverance in toil, which were exhibited in carrying on the defensive works, at least equalled, if not exceeded, any thing of the fort we have read or heard of. From the general to the private centinel, from the commanders of the royal frigates to the common feamen, every man without diftinction was employed in the hardest labour, and chearfully underwent his share of the toil. At the time that the general received the French fummons, the lines were not only weak and imperfect, but were not protected by above eight or ten pieces of cannon; and at the conclution of the fiege or blockade, the works (by the sid of the thip guns, and the unceasing exertion used in landing and bringing them forward) were covered with a numerous artillery, amounting to near acc pieces. Nor was the labour or exertion greater than the judgment used in In this respect, their direction. Captain Moncrieffe, the engineer, equally excited the admiration of friends and of enemies. British forces indeed owed much to his skill and ability; and were accordingly unanimous in their acknowledgments of his fervices; while the French officers declared, that his works and batteries fprung up every night upon them like champignons. He gained great boncur, and merited more fubflantial rewards.

The enemy were by no me idle in their endeavours to int rupt the works; but their effe were ineffectual. In the me time, they spared no industry carrying on their own; and about a week after the fum-24 mons, had pushed a sap to within 300 yards of the abba to the left of the British cen Although the flate of Gene Prevoft's force, rendered him ceedingly sparing of his men, in the few conflicts which t place, the enemy were constan and confiderably lafers. Al midnight, between the 3d and 4th of October, the enemy be a beavy bombardment; and day-light, they opened a vehen cannonade, with 37 pieces of vy artillery, and nine mort from their land batteries, and cannon from the water. This nonade was continued, with t or lefs activity, for five days. effect fell mostly upon the to where, belides the deftruction boules; women, children, negroes were the only fuffe All others were in the wo and these continually acquired ditional firength, inflead of taining any effential damage, ing the violence of this ca nade.

time acquainting him, that wn wife and family, should be g the first to profit of the inence, After a delay of three , during which the time was up by the discharge of canind shells, the request was not refused, but the refusal was yed in unulual and infulting age, in a letter figned both incoln and B'Estaing. The pts made afterwards by the th officers, to charge this harft. cruel refusal, as well as the of it, to the brutality of the rican general, are by no means ent to exculpate D'Estaing his full share in the transacand in the difgrace belonging however it may ferve to their confcionfacts that the ıs indefentible.

atever D'Estaing's merits e as a naval commander, he to have committed two capifors in this adventure by land. irst was, his not immediately ing the British lines in their al weakness, and before ral Prevoft was joined by el Maitland. The reasons nay be used against this meare obvious, and may be anl with little difficulty —The l was, that as he did lofe ch time in carrying on reapproaches against field , he should have still conto proceed by fap, until d fo far obviated the deof the enemy, that his might engage them upon ing approaching to equal in the final affault. If to t be opposed, that his fleet wy capital fhips was exposed eat risque and danger, by to long without thelter, apon ospitable coast, which could

not afford any, and in a motical feason of the year; it well be answered, that this circumstance afforded the firmotive for immediately attains enemy; and consequently afford no reasonable cause so laying that attack, whilst the fensive strength on the other was daily increasing.

Whatever motives operated the French commander in the instance, it seems as if his to or patience failed him, in we the slow result of sap in the set It is possible, that his apprehad already cost him more than he expected; that the ance was also much greater; as his batteries produced very effect upon the British work was disappointed in that relikewise; and that he siplaced too great a considerate superiority of his force, and

goodness of his troops.

However that was, after & heavy cannonade and both ment for feveral hours, the attacked the British lines, Oft. with their utmost force, and with great fury, a little b day-light. The firing bega. the left of the British lines, foon after became general. was fill too dark to perceiv movements of the enemy, and certain where their principa tacks would take place, no ch was made in the disposition of British troops; but each com: waited coolly in its post, pres for, and expecting, whatever i nappen.

The nature of the ground both flanks of the lines, we favourable to the approache the enemy, that the defect of not be remedied by all the

[*0] 2

Thus an attack was to be expected, instant of death, in the body of towards either or both of the the third enemy whom he had points. A swampy hollow way on slain with his own hand. His the right, might bring the enemy place was instantly and equally was not so well covered; but the valour. ground being firm and clear, seemed better calculated for the bious and bloody, particularly at operation of regular troops, or at least more inviting to them, than that on the other fide. The French being likewise encamped on that fide, it was expected that they would direct their whole force to that point; and that the attack on the other, if really undertaken, would be left to the Americans.

The grand attack was, however, directed to the right, whither D'Estaing in person led the flower of both armies, and was accompanied by all the principal officers of lines, and charged the enemy with each. They advanced in three columns, under cover of the hollow we have mentioned; but it seems, that through the darkness, they took a greater circuit, and got deeper in the bog, than they needed or intended to have done; a circumstance, which besides a loss of critical time, could scarcely fail of producing some disarrangement The attack was, or disorder. however, made with great spirit, and supported with an extraordinary degree of oblinate perseverance. A redoubt on the Ebenezar road, was the scene of much action, loss, and gallantry. It was obilinately defended by Captain Taws; the enemy planted two stand of colours on it; the parapet was covered with their dead; at length the brave captain fell, gallantly fighting in his redoubt;

and endeavours of the engineer. his sword being plunged, at the under cover to within a very small supplied by Captain Wickham; distance of some of the principal who, with better fortune, disworks; on the left, the approach played acts of the most figual

> While the conflict was fill duthat redoubt, the skill and defign which operated in the construction of the new works, were displayed with great advantage. Three batteries which were occupied by teamen, took the enemy in almost every direction; and made such havock in their ranks, as caused some little disorder, or at least occasioned a pause in their violence. At that critical moment of decifion, a body of grenadiers and marines advanced fuddenly from the fuch rapidity and fury, throwing themselves headlong into the ditches and works amongst them, that in an instant, the redoubt, and a battery to its right, were totally cleared of them. The victors did not pursue their advantage with less vigour than they had gained it. The enemy were broken, routed, and driven in the greatest disorder and confusion, through the abbatis into the swamp. whole was performed with fuch rapidity, that three companies of the most active troops in the army, who were ordered to sustain the grenadiers, could not, with all their celerity, come in for any share of the honour.

> Although it was then day, yet the fog and the smoke together caused so great a darkness, that the general could form no accurate judgment,

ont, either as to the condir the dispositions of the eneend as a constant firing was ard in different parts of the thefe circumitances, all togeprevented his venturing to the enemy, in their flight onfuñon acrois the morais. were, however, every where ed; but as that was done ere with less difficulty, so lois was proportionally final-As the day cleared, the works itches near the Ebenezar represented such a spectação led and wounded, as some of ficers and foldiers faid, had been equalled at Bunker's At ten o'clock, the enemy led a truce, with leave to he dead, and carry off the ed; the first was granted; refriction laid in point of e as to the reft.

loss of the enemy, in killed ounded, was, by the lowest itions, estimated from a thouo twelve hundred men. The acknowledged 44 officers, bout 700 private men, on fide only. The amount of nerican lofs was not acknow-. It was faid, that nothing itual reproach, and the most : animofity, now took place n the new allies. Each acthe other with bad conduct performance, and being the of his own particular loss race. It was even faid, that ops on both fides were with ty restrained from proceedextremities; and that the and American commanders incipal officers, were as little with each other as the prisen. It was likewise sopthat a firong previous jealoufy had sublisted on the Ame can side, from D'Estaing's su moning the place to surrender the arms of the French King only

However these things might nothing was thought of after either party; but the means of g ting away, with the greatest po ble speed and safety. But it 1 necessary to mask this purpose, fill supporting the appearance of blockade. The removal of French heavy artillery, bagga, fick, and wounded, was partilarly a work of time, labour, a difficulty. Great civilicies n passed between the French cal and the British lines; and nu berlefs apologies were offered, the refulal with respect to the n men and children. They we now pressed to place themselves the fituation which they had th requested; and a particular st of war and commander were nat ed, for the reception of Mrs. P. voft, her children, and compan The answer was blunt and fi dierly; that what had been on refused, and that in terms of i fult, could not in any circumstan be deemed worth the acceptance.

The celebrated Polish Count P latki, whole name has been to ofth mentioned in the American wa was mortally wounded in this a tion. M. D'Estaing himself w forely wounded in two place Major-General de Fontange, wi fome other French officers of d flinction, were likewise wounde The loss on the British side was i. conceivably imall. Too mue could not be faid in praise every order of men who compose the defence of the Savannah, TI loyalists of both the Carolin, were distinguished; nor should

be forgotten, that the captains and failors of the transports took their station in the batteries, with the same alacrity as their brethren in

the royal service.

In something more than a week,

Oct. 18th. upon the clearing up of
a fog, it was discovered,
that the French and Americans had
abandoned their camps in the preceding night. Some pursuit was
made, but it was soon found, that
they had broken down all the
bridges behind them, and pursued
their respective routs with the
greatest celerity. It was computed,

that the French did not lose less in every way, than 1500 men on this adventure. Their commander found his fleet as much out of heart and condition, and nearly as fickly as his army. He accordingly totally abandoned the coast of America. about the 1st of November, and proceeded with the greater part of his fleet directly to France; the reft having returned to the West-Indies. Such was the beginning and ending of M. D'Estaing's American campaign; and such the issue of the great defigns he had formed, and the mighty hopes he had conceived

Ĵ'ANÛAŔÝ.

THE new year was usherat gale of wind that has been ienced fince the remarkable that happened in the beginof the present century. It is lible for us to spare room to erate one-third of the mifand accidents it produced: it to say, that the danger niverfal; and that every pubnd private building in and the metropolis, as well as the ng in the river, fuftained damage from its tempestuous ice. We shall add the folg accident, as a proof of the of our affertion.

flack of chimnies was blown at the Queen's palace, which through the roof into the nents, of three of the young es. Their Majesties got up ent into all the apartments, if any of the children or fawere hurt, but no disaster appened to them; though it text to a miracle, that the Princes above mentioned were lied in their beds.

vices from Oxford, Cam-, Norwich, and almost eve-, and town of the kingdom, L. XXII. also mention great damages to have been sustained in public and prevate property, from the san cause.

By the above gale of wind, gredamage was done to the shippin all around the island. The You East-Indiaman, just arrived fro. Bengal, was run albore in Ma gate Roads; and from various as counts received from the fea-port: it is computed that upwards (300 vessels have been lost, in which a confiderable number of marine have perished. What is very re markable and providential, th fouthern channel felt none of it fury, fo that the fleet of merchant men and convoy, which had ju failed from St. Helen's, proceede on their voyage without knowin: that fuch a fform had happened.

Extract of a Letter from an Office on board the Ruffel Man of Was dated Spithead, Jan. 1. containing an Account of the runnin, down of the London Eaft-Indiaman.

turday last the 26th ult. with one of the finest fleets ever scen; but alas! we met with our usual ill luck. On Monday last, off Berry Head, it blowing a fresh breeze and under close-reesed top-sails th

the wind at fouth-west, being near the London East-Indiaman, and finding we could not weather her, the on one tack and we on the other, we bore away, during which, the clapped her helm a-weather, and we ran right on board, which flove to her bow; in half an hour the lunk, and the greater part of her crew perithed; out of 160 only 50 were raved! it was a most dismil icene to behold the men flanding on the gunuel as the went down. What rendered the scene itill more melancholy, a man of war's boat with leveral hands, who very humanely, at the risque of their own lives, had picked up ten or eleven of the London's crew, and were endeavouring to fave more, got directly over the place where the went down, the fuction of which was so great, that it drew the boat under, and they all perished. More of the crew would have been saved, but that they were kept at the pumps too long, in order, if possible, to save the thip. Our head and cut-water are entirely gone, and our bowsprit, I believe, is sprung, as we carried away the fore-malt and bowsprit. We taved about twelve or fourteen The Resource was sent by the admiral to take care of us, tearing we might prove leaky; but, thank God, we are not, though her anchor went through our bow."

At fix o'clock in the morning, a dreadful fire broke out at Greenwich - hospital, which hurnt most furiously. At ten which the chapel (the most beautiful in the kingdom,) the dome on the south-east quarter of the limiting, and the great dining-tall, were entirely consumed. The

reservoirs at the top of the buildunfortunately almost ing were empty, and no water to be had for some time, but by a line of pensioners who handed buckets from the Thames; but this supply was so very inadequate, that the fire raged for several bours with unrestrained fury: a great many of the wards were destroyed, and the west wing, in which is the beautiful painted - hall, was in great danger, as the wind fet that way. About eleven o'clock several engines arrived from London, and the fire was got under in the evening. The damage done is immense, and it will cost a very large fum to restore the hospital to its former beauty and elegance. Thefire began in the taylor's shop, wherein the men had been at work the preceding day; but had mingled holiday rejoicing too much with their labours.

The following are the wards burnt down at the late fire at Greenwich-hospital, viz. King's, Queen's, Prince of Wales, Duke of York's, and Anson's, besides two or three others considerably damaged that are in that quarter: the walls however of the mall, together with that of the chapel, remain nearly entire. The grand hall has not sustained the least injury, the fire being consined to the south-east quarter.

Being the day appointed for the trial of Admiral Keppel 7th. at Portsmouth, at nine in the morning Admiral Pye, as admiral of the white, and president of the courtmartial, hoisted his stag on board the Britannia. See Appendix.

ter which they broke the windows, &c. of several individuals whom they knew to be Catholics. The magistrates this day issued a proclamation desiring masters to keep in their servants and apprentices; notwithstanding which, great numbers affembled in the evening in the College-court, with an intention, as they faid, of knocking down the house of Principal Robertson, who, they imagined, favoured the Popish bill: fortunately a party of Dragoons arriving before they could effect their purpole, they dispersed, and lest the city in peace, on being assured by the magistrates, that all thoughts of bringing in the bill were laid aside.

This day, by virtue of a commission from his Majesty, upwards of 300 glass lamps. the following bills received the royal affent, viz.

The bill for more speedy and expeditious recruiting his Majesty's

land forces and marines.

The bill for better regulating his Majesty's marine forces when on thore.

The bill for allowing the importation of fine Italian organzined thrown filk for a limited time.

The bill for the better preservation of the oyster fishery at Whitstable; and also to several private bills.

The Lieutenant and Midshipman who entered the house of Mr. Axford, and impressed his shopman, received judgment on Wednefday in the Court of King's bench, to pay each a fine of 13s. 4d. and to be imprisoned for one who took the gates from the hinges, month in the King's-bench.

Was tried in the Ecclefi- yard. 9th. astical Court, Doctors Com-

brought by the Rev. Mr. Sellon Rector of Clerkenwell, against the Rev. Mr. Taylor and Mr. Jones, for preaching in Northampton Chapel without leave of the incumbent (Mr. Sellon), or a licence of the bishop; when the judge condemned the defendants in costs of fuit, and ordered a writ of monition to that up the chapel.

Last night when the news 12th. arrived from Portsmouth of the honourable acquittal of Admiral Keppel by the Court-Martial, the windows of the houses in the principal streets of London and Westminster were illuminated with lamps, candles, &c. and different devices, and the portico of the Mansion-house was illuminated with

The bells of several churches were rung, guns fired, and other demonstrations of joy prevailed.

A guard, both horse and foot, was placed before the house lately occupied by Sir Hugh Palliser, ia Pall-Mall, which went off about one, foon after which, the mob having first broke all the windows of that house, proceeded to break open the door, destroyed great part of the furniture, and threw the rest out of the windows. The guard was again fent for, and feveral of the rioters taken in the house, and committed to prison.

The windows and doors of Lord George Germain's house in Pall-Mall, were likewise demolished.

Most of the windows of the Admiralty were destroyed by the mob, and thereby got into the Court-

Court of Common Counciled, and a motion made and ed, that the thanks of the be given to the Honourable has Keppel, which was agreed

other motion was made, and estion put, that the freedom of ity be presented to Admiral in a box made of heart, richly graamented. Agreed

Yesterday one James Donally was brought before the Fielding in Bow-street, rd Fielding, eldest fon of the of Deabigh, charged with pring, at two different times,

viz. on Saturday and Monday (the first of which times he go away from his lorothip, who the attempted to secure him) to extor money from his lordship, by threat ening to accuse him of unnatura And this day he wa Crimes. again examined, when the Hon Mr. Fielding, the younger fon o Lord Deabigh, appeared also, and fwore, that on Saturday last the prisoner attacked him in the same manner, threatened to accuse him of unnatural crimes if he did no give him money, and infolently bid Mr. Fielding take care wha he was about, as he, Donally would charge him with the fact at fuch a time that Mr. Fielding could not prove an Alibi. Old Bailey expression obtained half a guinea from Mr. Fielding; but the villain, not content with it, although the whole Mr. Fielding had in his pocket, infifted on more, when Mr. Fielding went to a Grocer, whom the Earl of Denbigh dealt with, and borrowed a guinea, which he also gave to Donally, when the latter went away, and Mr. Fielding was obliged to return home for another half guines to go to the play. He was immediately committed for a highway sobbery on Mr. Fielding.

The sessions ended at the Old Bailey, when the above mentioned James Donally was capitally convicted of the above of sence. The prisoner in his desence urged a point of law, and submitted it to the judges, Buller and Perryn, whether it was a street robbery. He also said that the charge was never thought of till Mr. Fielding came to the publicossice in Bow-street, where Sit John Fielding put it into the pro-

[N] 4 fecutor

secutor's head. This was positively denied by Lord and Mr. Fielding, on oath. Judge Buller observed to the jury, that the latter part of the prisoner's defence was an high aggravation of his offence; for he accused Sir John Fielding of subornation, and Lord and Mr. Fielding with absolute perjury. With regard to the former part of it, his lordship observed, that to constitute a highway robbery there was no necessity for corporal fear; for if a person gives his money under terror of mind, and compulfively, against his will, or for fear of loss of character, it is in law established to be a capital offence; nor was there any necessity for a person so giving his money to be in dread of his life by a charge exhibited against him: it was sufficient that the money was obtained under terror of mind, &c. Under this direction the jury found him guilty; but Judge Buller respited sentence until the opinion of the twelve judges can be had, he taking the verdict of the jury; that " the money was obtained under terror of mind."

On the same day, the following convicts received fentence of death? Robert Dare, for robbing his mistress of a gold slide; John Richmond, for house-breaking; James Wooley, for stealing stockings; John Huddey, for burglary; Naphthali Jacobs, a Jew, for stealing kitchen furniture, &c.; William Germain, for horse-stealing; Fred. John Eustace, for stealing linen, &c.; Sarah Hill, for stealing wearing apparel; Thomas Norman, for a street robbery; Rowland Ridgley, who in December session was convicted of having in his possession a certain implement for coining, and whose judgment was respited for the opinion of the judges.

A new writ was ordered to be issued for electing a member for Scarborough in the room of Sir Hugh Palliser, who has accepted the place of steward of the three Chiltern hundreds.

The amount of the employments refigned by Sir Hugh Pallifer, viz. his feat at the Board of Admiralty and his Lieutenancy of the Marines, amounts to no less a sum than

4,000 l. per annum.

About one o'clock this 20th, day, the deputation of aldermen and commons of London, waited upon Admiral Keppel, at his house in Audley-street, where they delivered him the freedom of the city of London in a box made of heart of oak, ornamented with gold. Having refreshed themselves, they set out at 3 o'clock, in the following procession, to dine at the London Tavern, in the city: The two city marshals on horseback, their horses adorned with blue ribbons; Alderman Crolby, as senior alderman, in his own coach, with a failor behind carrying a blue flag, with the word KEPPEL in large red letters: next, that of the admiral, in which he rode with Lord R. Cavendish on his right hand; after them two or three naval officers, the other aldermen, commoners, and city-officers in their own car-At Charing Cross the riages. mob, who were now become very numerous, taking off the admiral's horses, drew him themselves; and three failors, after displacing the coachman, got upon the box) where they hoisted the slag from

At Shrewibury feven-two

for murder) executed.

At Stafford four—one of (George Balthop, for murdoman who attempted to him) was executed.

At Taunton four - three

prieved.

At the above affizes came trial of Count Rice for the of Viscount Du Barré. Whevidence on the fide of the was closed, the Count, in a defence, flated the comment and progress of his count with Viscount Du Barré ne follows:

"My acquaintance, fair with Viscount Du Barré orig at Paris in the year 1774. I mily were then foliciting so your at Vienna, and my o tions at that Court, whi thought might be services him, engaged his attention ed from that period, till before his death, in an ine of mutual good offices lity. An expensive line of confiderable loffes at play, ly involved him in difficul-extricate himfelf from e often borrowed large money from me. I have in fion letters, which I shall duce, acknowledging the of various furns of money, s bills and notes of hand, mount of fome thousands of fill uspaid, and which, e embarrassed state of his I must look on as totally

gouty humour, which fell bowels and legs laft fumdoced fome English physimet at Spa to recommend of the Bath waters. Ded, as it appears by thefe written z few days before off for England, to play no and to regulate his affairs ndence, he resolved upon turfion, in order to attend ealth, and reftore his peace d. He frequently folicited eccompany him, to which I confented; and accordingly e to England together at a and proportional expence. ik a house at Bath, and iere upon the fame terms, he weeks we continued to Bath on our former and ned intimacy, and, though count Du Barré was a man impetuous temper, without erial disagreement, till the nate dispute, which termin the lofs of his life, and ninent hazard of mine. It less here to enter into the of that dispute, or impute

blame to the deceased, who can no longer vindicate his conduct."

The Count, after fome pathetic observations on the sufferings he had undergone from his wound, concluded by referring to the evidence already given, as fome reasons, he faid, prevented his calling the feconds before the Court with propriety; and committed himfelf with confidence into the hands of his Jury; persuaded, to use his own words, that, in order to determine justly upon his conduct, in the crime imputed to him, they would put themselves in his situation, and adopt those feelings by which he was necessarily actuated on the unfortunate occasion.

Mr. Justice Nares addressed the Jury in an affecting speech; remarked to them in particular the unusual backwardness the prisoner had shewn in this transaction, and his humanity to the unfortunate Viscount after his fall, and directed a verdict for Manslaughter. The Jury, after a short consultation, desired to know if they might not totally acquit the prisoner; and after a sew minutes deliberation, pronounced him Not Guilty.

This day, by virtue of a commission from his Majesty, the royal assent was given to the following bills, viz.

The bill for laying additional duties on certain goods under the inspection of she Commissioners of Excise and Customs.

The Bill for allowing the importation of certain-goods fold to foreigners in British-built ships.

The bill for the better encouraging the white herring-fishery.

The bill for better encouraging the Irish linen manufactory.

The

certain expiring laws.

The bill for better regulating lottery office keepers; and also to several other public and private conceived this design as the only bills.

This evening, as Miss Reay was coming out of Coventgarden theatre, in order to take her coach, accompanied by two friends, a gentleman and a lady, between whom she walked in the Piazza, a man stepped up to her without the smallest previous menace, or address, put a pistol to her head, and shot her instantly dead. He then fired another at himself, which, however, did not prove equally effectual. The ball grazed upon the upper part of the head, but did not penetrate sufficiently to produce any fatal effect; he fell, however; and so firmly was he' bent upon the entire completion of the destruction he had meditated, that he was found beating his head with the utmost violence with the butt end of the piftol, by Mr. Mahon, apothecary, of Covent-garden, who wrenched the pistol from his hand. He was friends he soon after quitted it, and carried to the Shakespeare, where assumed the gown. his wound was dreffed. In his pockets were found two letters; was carried into the Shakespeare one a copy of a letter which he tavern for the inspection of the had written to Miss Reay, and the coroner. other to his brother-in-law, in Bow - street. epistles is replete with warm expressions of affection to the unfortunate object of his love, and an concern; he wept exceedingly, and earnest recommendation of his pas- lamented with every other token of sion. 4

The bill to revive and continue without Miss Reay; and fince he had found, by repeated application, that he was shut out from every hope of possessing her, he had refuge from a milery which he could not support. He heartily wished his brother that felicity which fate had denied him, and requested that the few debts he owed might be discharged from the disposal of his effects. When he had so far recovered his faculties as to be capable of speech, he enquired with great anxiety concerning Miss Reay; being told she was dead, he defired her poor remains might not be exposed to the observation of the curious multitude. About five o'clock in the morning Sir John Fielding came to the Shakespeare, and not finding his wounds of a dangerous nature, ordered him to be conveyed to Tothill-fields bridewell. This ill-fated criminal was a clergyman; about four years ago he was an officer in the army; but not meeting with success in the military profession, by the advice of his

After Mr. Hack and has subscribed to many had wiped a flood of tears frot public charities, to give the eyes, he pulled out a sheet of a high opinion of his fine per from his pocket, and read merous feelings. By these substance of which was nearl this purport: " My Lord, I stand arraigned for a heinbus co and if found guilty, must i the death that the laws of country have allotted in fuch c and as I have taken away the of one whole life was dearme than my own, I therefore meet my unhappy fate with t tude and refignation, and business; yet, there having knowledge the justuels of my either are nor candle used in tence." The Judge afters

fummed up the evidence, and gave his charge to the Jury in an excellent speech, in which he said, that the letter sound in the prisoner's pocket, directed to his brother-inlaw, was sufficient to conclude he was not insane. The Jury, without going out of court, sound him guilty, when the Deputy-recorder passed sentence on him, and he was executed the Monday sollowing.

This days the fessions ended at the Old Bailey, when the following convicts received sentence of death, viz. Thomas Fox, for stealing a mare from Richard Clewin, at Hendon, and on another indicament, for stealing a mare from William Hands in Northamptonshire; John Harris, for a burglary in the dwelling. house of William Prior, in Coventrystreet, and stealing a quantity of china; Capt. James Major, for fending a threatening letter to Sir William Musgrave, threatening to murder him; Elizabeth Lambert and Mary New, for robbing Mary Beachman on the King's highway; James Hackman, Clerk, for the wilful murder of Martha Reay, spinster; William Walker, sor burglariously breaking open the house of James Pentecross, in Shoe-lane, and stealing a quantity of copper, brass, &c. . Christopher Foley and Peter Weldon, for coining and counterfeiting the King's hilver coin, called Sixpences, at the house of Weldon, in Oat-lane, Noble-street; three were fentenced to hard labour on the river Thames; eleven were burnt in the hand, and ordered to be kept to hard labour in the house of correction for divers terms; nine were ordered to be whipped, and feven-

teen discharged by proclamation; John Vincent, convicted of felonioully killing and flaying Mary Dollard, a woman with whom he had cohabited many years, by shooting at and wounding her in the back and shoulder, with a gun loaded with powder and shot, of which wound she languished some time, and then died, in the parish of Fulham, was branded, and ordered to be imprisoned one year in William Stenson was Newgate. convicted of feloniously counterfeiting the copper money of this kingdom, called Halfpence, and ordered to be branded in the hand, and imprisoned one year in Newgate.

One Browne was tried for wilfully setting fire to his house at Wapping, which occasioned the late dreadful conflagration. An Alibi was proved, on which the Jury, without going out of court, brought in their verdice, Not Guilty.

Soon after came on the trial of Thomas Hilliard, for wilfully setting fire to his house in Bird-inhand Court, Cheapside; he was acquitted on a point of law, viz. that the choset he set fire to, was not any part of the dwelling-house.

The Judges met in the evening at Lord Chief
Justice De Grey's house in Lincoln's imn-fields, to give their opinion on the case of James Donally, convicted the session before last for a robbery on the person of the Hon. Charles Fielding, son of the Earl of Denbigh, when Counsel were first heard, viz. Mr. Howarth in behalf of the crown, and Mr. Graham in behalf of the prisoner, who having withdrawn, their Lord-

ships

fingly delivered their opinion. of whom were clearly of opithat the threat of the prilowhen he demanded Mr. Fielmoney, viz.,. "You had comply, or I'll take you bea magistrate, and charge you an unnatural crime," was ilent to an actual violence, vas fuch a method as in comexperience was likely to ocfear, and induce any man rt with his property. Lord field with great energy ob-, that it was a specious mode bbery of late grown very on, invented by fraud to the law, but which would ffer itself to be evaded. God knows what numberless robof this kind would have perpetrated by these detestvictches on timorous minds, ir Lordships had been of a nt opinion.

gular steps to be taken to obtain the warrant.

Came on before the Barons of the Exchequer the hearing of a cause, wherein a gentleman of the town of Kingston upon Hull was plaintiff, and the Rev. William Huntingdon, vicar of Kirk The fuit was Ella, defendant. for the tythe of a small quantity of potatoes, value 17s. which the plaintiff claimed as impropriator; when, after a fair hearing, it was determined that potatoes are a imall tythe; and the vicar's claim to all the small tythes being allowed, the Barons decided the cause in favour of the vicar, and ordered the plaintiff's bill to be dismissed.

Extract of a Letter from Winchester.

" On Monday night a large 8th. body of French prisoners confined in the King's house here, found means to let themselves down into a vault in the north wing, from whence they cut a hole through the foundation of the building, and undermined the ground for some distance; and had it not been for an accident occasioned by their eagerness in getting out, in which a boy's arm was broke, and whole fudden cries instantly alarmed the centinels, it is supposed some hundreds would have got off undiscovered, but, owing to the above, only eleven made their escape."

The bill for veiling in quer in Scotland. the two universities, &c. the exclusive right of printing almanacks, was read a second time; when a petition from Mr. Carnan, and other bills. bookseller, was also read, praying to be heard by counsel against the Elect of the Bath assembled said bill, which was granted; in the Prince's Chamber, West-

skine were both admitted to the bar, and on pleading the law against monopolies, and the legal determination of the courts of Chancery and Common Pleas, the bill was rejected on a division 60 to 40.

This day the following bills were passed by commission:

An act for the further relief of Protestant Dissenting Ministers and Schoolmasters. -

An act to repeal so much of several acts of Parliament as prohibit the growth and produce of tobacco in Ireland, and to permit the importation of tobacco of the growth and produce of that kingdom into Great Britain, &c.

An act for granting a bounty upon the importation into this kingdom of hemp, of the growth of Ireland, for a limited time.

An act for granting a drawback of the duties imposed by an act of the last session of Parliament upon all foreign wines exported from Great Britain to any British colony in America, or to any British fettlement in the East-Indies.

An act to enable the Chancellor and Council of the Duchy of Lancaster to self and dispose of certain fee farm rents, and other rents,

An act for altering the times of holding the Martinmas and Candlemas terms in the Court of Exche-

An act for better fecuring the duties on itarch.

And to several road, inclosure,

This morning the Knights when Mr Dave port and Mr. Er- minster. About half past eleven o'clock

ock the procession began to the bey, after walking round which entered Henry the Seventh's sel, where they were installed

the usual formality.

the Knights installed were Sirert Gunning, Bart Sir James Iphus Oughton, R. H. Sire Blaquiere, Sir George Holiam Gordon, Sire William e, Sire Guy Carleton, Sire Edughes, Sire Henry Clinton, Hector Munro, Sire James Harnd the Earl of Antrim.

r J. A. Oughton, Sir Edward hes, Sir Henry Clinton, Sir is Harris, and Sir Hector ro, were installed by Proxy.

is Royal Highness Prince Frek sat as Great Master, and did ofiness with ease and wonderful riety.

galiery was erected over the of the chapel, in which the e of Wales, with two of the es his brothers, the Duke of agu, &c. fat to see the cere-

e Queen, and others of the children, were placed in a y built for that purpose, near reat western door of the Abfrom whence they had a full of the procession through the y to and from the chapel.

e whole ceremony was finishhalf after two, and in the
g a grand ball was given by
nights who were installed, at
king's Theatre in the Hayet, at which upwards of 1000
to nobility and gentry were
t.

This day James Mathifon was tried at the Old , for a forgery upon the of England.—There perhaps

never appeared in any court tice to capital, nor to inger man in his stile as this pr He has reigned longer in h lainy, and has executed it more dexterity than any tha bably ever preceded him. practice for some time pas been to go to the Bank, an out a note:-this he counter passed the copy, and after time returned the original The frequency of his applic at last however excited suspi which, added to fome other cumflances, ariling from hi pearance and figure in life was taken up. On his appr fion, he denied the acculcalled himfelf a watch-maker faid he lived by the honest ex of his employment; but wh was brought before Sir John I ing, he was there known to b person who had been charged forgeries upon the Bank at lington; and being told t that his name was Mathison not Mathews, as he had giver he immediately loft all confid and taking it for granted there were circumstances ale discovered entirely sufficient for conviction; he faid, it was t lefs to conceal any thing t and gave an ample informatic his various frauds, and his a of carrying them into execu The particular forgery on w he was charged to-day, was, uttering a twenty-pound l note, Bank of England, at ventry. The note was prodin Court, and witnesses t brought to prove its having ! negociated by him. This fact ing citablished, the next circ flance in confideration was, [0] #

prove that the note was absolutely a counterfeit one. This his profecutors were totally unable to do, by any testimony they could adduce, so minutely, and so dexterously had he feigned all the different marks. The note itself was not only so made as to make it altogether impossible for any human optic to perceive a difference, but the very hands of the cashier and the entering clerk were also so counterfeited, as entirely to preclude a positive discrimination, even by these men themselves. The water mark too, namely, England, which the Bank of bankers have confidered as an infallible criterion of fair notes, a mark which could not be refembled by any possible means, was also so hit off by this man, as to make it not in the power of the most exact observer to perceive a difference. Several papers-makers were of opinion that this mark must have been put on in the making of the paper, but Mathifon declared that he put it on afterwards by a method peculiar to himself, and known only to himself.—The extreme similitude of the fair and false notes had such an effect upon the Judge and Jury, that the prisoner would certainly have been discharged for want of evidence to prove the counterfeit, if his own information, taken at Fielding's, had not been produced against him, which immediately turned the scale against him, and he was found guilty.

aist. This day the sessions ended at the Old Bailey, when sive convicts received judgment of death; twelve were sentenced to hard labour on the river Thames; thirteen were ordered to hard la-

bour in the houses of correction, several of whom were branded; four were ordered to be whipped; and sixteen discharged by proclamation.

A respite, during his Majesty's pleasure, was sent to Newgate for William Walker, a prisoner under sentence of death for burglary in the house of James Penticross.

Also a respite, until the 16th of June, was sent to the same jail for Capt. James Major, a prisoner under the like sentence, for writing an incendiary letter to Sir William

Mulgrave.

Sir Thomas Clavering, 22d. Gen. Johnstone, and Miss Maria Clavering, niece to Sir Thomas, attended the quartersessions at Hicks's-hall, to prosecute the articles of the peace exhibited the day before against John Craggs, Esq. late a lieutenant in the East-India Company's forvice, on behalf of Miss Clavering. By the articles, it appeared that Miss Clavering lived in Orchardstreet, Oxford-street, with her uncle; that for three months past the lieutenant had followed and purfued her with fuch an unwarrantable attachment and affection, as justly alarmed the fears of Miss Clavering; that on the 12th of May he wrote her a letter, in which, among other terrifying expressions, he made use of the following words:

"There is no distraction of mind equal to that I suffer for you. Go where you will, I will follow you, which may be attended with consequences too fatal to mention here; and as for myself, I have nothing but my life to lose." Miss Clavering also declared, that she did not exhibit the articles from

malice

alice or hatred, but folely to otect herself, as the was in fear los of life, or bodily harm. or form's fake, Sir John Hawns asked Miss Clavering, if eyer e had given any encouragement his addresses? To which Miss avering replied in the negative, d faid the had wrote to him, by r uncle and friends orders, deing him never to fee her more. appeared on the examination at he followed her to Court, to lifbury, Briftol, Bath, &c.

The lieutenant was called, but d not appear; when the Bench, nfidering his conduct and terriing threats, ordered that he be prehended, and held to the ace, as well to all his Majesty's bjects, as to Mils Clavering in sticular, to find fureties in 500 l. ch, and himself in 1000 l. for ren years, at the fame time anting a warrant against him, th an order of Court for an ur's notice of bail, with refences therein to Sir John Fielding take bail.

Messrs. Kelly, Lindsay, Carter, ll, Durell, and another, fix estminster school-boys, were likele tried for an affault on a man

Dean's-yard, Westminster, in nuary lait, when they beat and ounded him in a most shocking anner, and after that Kelly, th a drawn knife in his hand, d, . If you don't kneel down d alk pardon, I will rip you up,' ich the man was compelled to to fave his life.

Hill and Durell pleaded not guilthe rest pleaded guilty. Hill s acquitted for want of evidence, 1 Durell found guilty, but fined y is on a doubt of his being

principal among thefe young ruffians. The facts b fully proved, the other four fentenced to a month's impri ment in Bridewell, and tool, to be paid among them; bu they would in court alk the pr outor's pardon on their knees they had compelled him to theirs, the court would take the imprisonment: they absolute ly refused asking pardon on t kness. The featence flood: for about an hour, when the ther of Carter, one of the f applied to the court, and them that his fon was elected Christ-college, Oxford, and 1 go there in a few days, or lole benefit of that election. On the court took off his impri-

This being done, some of magistrates moved, that the might have their imprisons taken off also. This was strot opposed by the chairman, Sir] Hawkins, and several other je ces, but on a division it was car to take off the imprisonment: againít 7.

They then were directed to n the profecutor fatisfaction, and (aid, as he had before offered take 501, belides his cofts, would take it then. The frie of the boys paid the profecute court 50 l. and Mr. Denton, attorney 201. for the costs, w to his honour, carried on the p fecution with a fpirit due to attrocious barbarity of the po

claffical bravoes.

Paterfburgh, May \$1. On S day the new-born Great Duke baptized at Zarico-Zelo, by name of Constantine; the

press was the sponsor. After the ceremony the foreign ministers and nobility dined with her Imperial Majesty at a table of two hundred covers. On this occasion several promotions were made in the civil and military departments.

ton, aged 107.

In Derbyshire, J. Simpson, aged

JUNE,

Yesterday the following bills received the royal assent by commission:

The bill to prevent frauds by

private distillers.

The bill to prevent frauds and abuses in the payment of wages to persons employed in the bone and thread-lace manufactory.

The bill for the preservation of

the river Lee.

The bill for granting to his Majesty certain duties on licences to be taken out by persons letting to hire horses for travelling post.

The bill to continue the act of the 16th of his present Majesty, for the punishment by hard labour of offenders; who shall become liable to be transported, &c.

The bill for taking off the duty upon all salt used in curing pil-

chards.

The bill to indemnify persons who have omitted to take the eaths to qualify themselves for offices, &c.

The bill for discontinuing the duties on cotton wool, the growth and product of the British colonies in America.

The bill for allowing the importation of goods into this kingdom from Asia and Africa.

The bill for dissolving the marriage of the Marquis of Carmarthen with his now wife.

And several road and inclosure

bills.

Came on before Sir Francis
Buller and a special jury, an
action brought on behalf of the
owners of the London East-Indiaman, who charged Captain Drake,
of the Russel man of war, with
wilfully and neglectfully running
down the London; and laid their
damages, arising from his conduct, at 50,000l. The jury were
out for about a quarter of an hour,
and returned with a verdict in savour of the defendant.

By a list of the number of empty houses in the city of London, as returned by the deputies of the several wards, the total appears to be 1,104, the rents of which are calculated to amount to 26,375 l.

An important queltion, in the cause between the Rev. Mr. Sellon, of Clerkenwell, and a clergyman of Northampton-chapel, came before the Ecclesiastical Mr. Sclion instituted a Court. fuit against the clergyman, for quitting the cure of fouls in his own proper parish, in Northamptonshire, and for intruding into parish of Clerkenwell, and there reading prayers, preaching, and doing other ecclesiastical offi-The clergyman protested against the proceedings, and set up a plea, that he was a chaplain to Lady Huntingdon, and that the right and privilege of peerage exempted him from the jurisdiction of the spiritual court, and that the

the matter ought to be tried only by the peers of the realm. This point was very ably and fully arqued; and after a hearing of three lours, the judge declared that the lefendant was subject to the jurifliction of the court, and that the uit must proceed against him.

Were called to the bar, 3th. by the fociety of the Inner Temple, Mest. Pepys, Franklin, nd Bond. The celebrated Mr. Iorne was likewife a candidate, ut rejected. The fociety, upon is fignifying a defire of being alled this term, having, or preending to have a doubt upon the ropriety of calling him, applied the other inns of court to be formed by them, whether they idged it proper, that a clergyman full orders should be admitted the bar ?—Answers importing eir determination that it would improper, being received from I the inus, that gentleman was in inlequence refused.

This morning Prince the William Henry, his Mafly's third fon, fet off for Portfouth, to go on board Admiral igby's ship, the grand sleet gog out on a cruize. His Highness as midshipman in the Prince

corge.

This day the following bills reived the royal affent by virtue a commission from his Majesty,

The bill to amend the act for ing a tax on auctions and fales.

The bill for the augmentation of

: judges falaries.

The bill for granting to his Maty additional deties on vellum,

rchment, and paper.

The bill for vesting in the East lia company, for a limited time,

certain territorial acquific tained in India, &c.

The house and servants to The bill for raising 1,50 by loans, and the bill so 1,900,000l. by Exchequer

And Bromfield's, Seal; Sewell's divorce bills.

Lately was deposited in the library of the Univerfity of Edinburgh a cabine dals, presented by Prince chaw, Countels of Wol containing, 1. Sixteen failors, lately to Ipswich for the murder of a can, at whose house they wimpress a man, and thei found special, were brought the Court of King's-bench, ceive the final decision court; when, on some det the verdict in not fixing the der on any one in particular

[0] 4

whole were judged innocent, and thought fit: that the actual maxconsequently discharged.

of a great number of prifoners in the King's-bench, prefented a petition to the court, with an affidavit annexed, praying their lordships interference and support, against feveral complaints therein stated, and ill treatment they have received from a number of affociated prisoners, who had, in opposition to all law, in defiance of the marshal's power, and contrary to all ideas of honesty and humanity, erected themselves into a kind of tribunal, disposed of the property, and inflicted corporal punishment on all who refused to comply with their violent and un-

just commands. Mr. Beacroft said, that a Capt. Philips and a Mr. Chillingsworth had fashioned a Court of King'sbench within the walls of the prison, and that the former stiled himself marshal, the latter his deputy. That, assisted by about 80 more, they issued precepts, summonses, orders, decrees, executions, &c. against the persons and property of prisoners, and committed many flagrant acts of oppression and injustice, which Mr. Beacroft observed did not call for any particular motion, but might be submitted in the gross to -the wildom and humanity of the court. The petition and affidavit were read, which formed nine difdefent complaints to the court. That there were only 140 rooms in the prison, and near 600 prisoners; that they were dispossessed of their rooms, at the will and discretion of the above court; that their property was also seized on and disposed of as that court

/ shal of the King's-bench had not Mr. Beacrost, in behalf visited the bench above three times in the last year: that the above court consisted of prisoners, who had long been inuitled to their discharges: that they resuled to go out, because in that case they would be obliged to give up their property to their just creditors: that that court by their oppressions and extortions had even raised the price of rooms from sol. to 701. per annum; that they claimed them by seniority, and let rooms out, not chusing to live in them on that account: that numbers of them had been long supersedable, or intitled to their discharges under infolvent acts and lords acts: and lastly, that such was the violence and enormities committed by them, that it was dangerous to oppole or refuse to obey, and therefore prayed the court's interpolition. This complaint Lord Manffield said called for immediate redress, but in doing that he confessed himself at a loss how to steer, as in doing justice to the distressed prisoner, he might injure the creditor, who equally called for his attention. The court were forming several resolutions thereon, which seemed to militate against its own intention, such as dilcharging those intitled to their discharges, &c. when Mr. Dunning framed the following order of court, that every prisoner who had been supersedable six months, and who had not been superseded, should be discharged immediately, unless such pritoner should be charged with a fresh action, and that then he should lose the benefit of his feniority.' This fully met the intention of the court, and Lord

idom of it, as many priloners itled to their discharges would ocure friendly actions to keep on in prison, merely for the te of holding the rooms, which s order would effectually flop. he court also came to another reation, which was, that every isoner should inhabit the room held; and lastly, that Capt. ilips be brought up on Monday at, as the head of the affociam, to answer personally for the olence and outrages committed diffressed and injured prisoners, him and his desperadoes; by e first order near 100 prisoners il be discharged, and new ones tain rooms on moderate terms.

ed Mansfield faid he faw the

Yesterday, pursuant to d. an order of the Court of ing's-bench, on Friday laft, ept. Thomas Philips was brought a prisoner from the King'snch prison, touching the Court King's-bench within the prison, which court Captain Philips ted as Lord Chief Justice, and whom complaint had been then ade, as guilty of many acts of pretion to his fellow prifoners, his affumed character. Captain iilips, in his affidavit, stated, at the court was formed before became a prifoner; that foon er his confinement, he was unamoully elected Lord Chief Juse, and that the court was not his substituting, but committed his prefidency. That the court s highly ferviceable to the commity, preventing confusion and order, and enforcing regula-

Mr. Beacroft, counsel for the itioning prisoners, the foremok whom is a maker fmith, made

no observation to the court on the alledged offence or open defence, but moved, " That as the Lord Chief Justice of the King's-bench prison, stood charged in execution as a prisoner at the fuit of the crown (for imuggling), and as there were also several detainers lodged against him, as well for criminal as civil matters, he be removed from the feat of his jurifdiction, to the New Jail in the Borough.20 Lord Maussield recapitulated his former abhorrence of the illegal and oppressive measures of that felf-created court, declared, that if it was continued, the members thereof should be proceeded against with the highest severity; and as an example, ordered his brother justice to be instantly carried to the confined purlicus of the New Jail. His lordship mentioned also, that one handred prisoners were, on examination, found to be difchargeable, and who were voluntary prisoners, in the benefit of letting out rooms, and for the convenience of imagging, of which number was the Lord Chief Juffice Philips, and that a very confiderable feifure had been made on 8atorday laft. Mr. Philips was immediately put into a coach, and carried to his new lodgings.

This day was held a Common Hall at Guildhall, for the choice of such officers belonging to the corporation as are annually elected on this day. As soon as the common cryer had opened the court, Mr. Alderman Townsend came forward with a letter in his hand, which he faid he had received from Mr. Oliver, one of the representatives in Parliament for this city, which with their leave he would read,

The

The purport of it was, that being obliged to fail for the West Indies fooner than he expected, he begged Mr. Townfend would acquaint the livery of his intention to relign his feat in the House of Commons, but would not accept of a place from the crown to vacate it, till such time as he had their concurrence, and therefore defired him, at the first Common Hall that was called, to acquaint the livery thereof, and not make the intention known till that time, lest any advantages might be taken of it;-that their determination might be fent him, and his answer received time enough to choose a member in his room before the next Leftion.

The above was received with great applause; Mr. Townsend affuring the livery that Mr. Oliver knew he would not make any bad use of the prior knowledge of the intended vacancy, as he did not intend to offer himself as a candidate.

The election for sheriffs then came on, when the several aldermen that had not served that office were called over, viz. Mess. Kirkman, Woolridge, Wright, Pugh, and Sainsbury; the first of these had a great number of hands, the second was hissed immoderately. Mess. Wright and Pugh had almost all the hands up, and Mr. Sainsbury was very much clapped.

Messer. Mackreth and Taylor, who had been drank to by the mayors, and Messer. Watson and Bloxam, proposed by the livery, were put up, and were received with clapping of hands; on which the election was declared in favour of Mess. Pugh and Wright; but a poll was demanded for Mr.

Kirkman, which was withdra by his own defire, in a handle speech. The rest of the offiwere re-chosen; and a new conner elected.

JULY.

An action brought by Sir Alex. Leith, Bart. against Mr. Pope for false imprisonment, a malicious prosecution for a tended selony (which was tried the Old Bailey, and the plain in this action honourably acqued), was tried before Sir Will De Grey at Guildhall, and a selicit of 10,000 l. damages give the plaintist.

Vienna, June 26. This cap was greatly alarmed this more about nine o'clock, by the bling up of a large powder maxine in the out-skirts of one the suburbs, in which about startillery-men were employed filling cartridges, whereby m lives were lost. The roofs many houses in the adjoining burb were considerably damaged it is feared that numbers people may have been maimed

defiro

froyed. Prince Charles Lichflein, the governor of the town, at immediately to the fort, and possible assistance was given, e Emperor himself arrived from xenbourg with the utmost expeion; and, by his Imperial May's orders, all means were used give the speediest relief to the viving sufferers.

His Majesty went to the House of Peers, and gave the

al affent to,

An act for removing certain difulties with respect to the more edy and effectual manning of Majesty's navy, for a limited ie.

An act for augmenting the mia. And to one private bill.

I'wo hundred and twenty-two s received the royal affent, ich is the greatest number own in one fessions for many irs.

A proclamation was issued, charging all officers civil and itary, in case of an invasion, to see all horses, oxen, and cattle provisions, to be driven from sea coast to places of security, t the same may not fall into the ds of the enemy.

Cunningham, who distinguished stelf at the beginning of the

erican troubles, and who took

Dutch mail, was brought prier to Falmouth in the Granm packet from New York, and

ged in the caftle there.

The fessions at the Old Bailey, which began on dnesday, ended, when the sefollowing received sentence of the James Barret, for a rape; b. Rickets, for house breaking; the Brannon, and Martin Gal-

lavan, for a highway Lucy Johnson, (a bl. robbery in a house of Rt. Roberts, Wm. M' stealing a horse, and for being an accessary fast.

The same day was Old Bailey, an indictme by a butcher in Whitech a young gentleman of for publishing a libell reflecting in the groffelt the chastity of the daughter, to whom the paid his addresses, which ing with fuccess, he made a fong, that in a charged the object of h with being a strumpet. ployed a man to fing ditty in the open mar father, being informed thor, went to him, at fwered, ' What, does you? then you may wea daughter was now b fport of the market, an even pointed her out t of fpectators, who join ridicule. Mr. Howar the profecution very g allowed that the fong t culoufly laughable, tha had a right to exercife ble features; but when of humour had fubfided agree with him, that cale that called for th rious confideration; the a family, the reputation tuous woman, had bee loufly defamed by the and meditated contrivadefendant. Mr. Morgi other fide, kept the cour of laughter, by a speech

contrasted to that of Mr. Howarth; but the attempt to turn the whole case into a trisling, unguarded step of his client, failed, as the Recorder, in his charge, considered it in an alarming point of view, as a preconcerted scheme to ruin the young woman, and destroy the happiness of the samily. He was found guilty, paid 201, costs of the prosecution, asked pardon in court, and agreed to recant his resections

in the public prints.

Last week was tried in the Court of King's-bench, Guildhall, London, before Sir Francis Buller, and a special jury, the right of a claim fet up by the city of London, to a duty of fixpence per load on hay fold in Smithfield, not the property of freemen of London. claim was disputed by several of the inhabitants of Finchley, who fet up a contrary claim to an exemption from paying the faid duty. On the part of the city of London, it was contended, that the corporation thereof were by immemorial custom, and royal grants, intitled to the receipt of hay-toll in Smithfield-market, from all non-freemen; and that the inhabitants of Finchley had, repeatedly, as was proved, paid the faid hay toll; to which case was added the testimony of divers old toll-gatherers, who deposed that they took the duty of all non-freemen whatever. The defendants fet up a claim to an exemption granted in favour of the Bishop of London, and his men or tenants, by King John, whereby they were relieved from the payment of fuch duties and tolls; to which they added the teftimony of divers old witnesses, with depoted that they had fome

thirty, forty, or fifty years fold hay at Smithfield, with paying the fix-pence per load late years demanded, and receibly the collectors of duties tolls in that market; but as it not appear that Finchley was manor belonging to the Bisho London, at the time the afore exemption was granted to his nants, and as the exceptions respect to the payment of the puted duty were dobious, a dist was given for the city of I don.

The extreme heat felt in course of last week occasioned above observation, the truth which may be depended uponthe middle column, or afternoon the heat has been fo grea fearcely ever to have been ren bered in this climate; and confirmation of its intenfences, Fotter, in his last published of vations on the South - Amer islands, which are in the to zone, and of course under a v cal fun, directly over their he with no shadow, says, that heat is generally from 80 deg to go; now, upon inspectio

above column, there will be nd four days out of feven above on the 16th even at 83, a great ght indeed for us.

On Friday last died, in the 31st year of his age, at ford, that king of horses, Old ask, late the property of the Earl Abingdon, and sire of many of first racers ever known in this intry; among which are Eclipse, ansit, Shark, Pretender, Magio, Leviathan, Masquerade, &c.

capt. Caton, formerly master of a ship in the merants service, but having acquired fortune had quitted the sea, was ring the course of the month cibly seised by a press gang on public exchange at Bristol, and ried on board a tender. He since been released, but not fore his friends had applied to navy board, and had moved a habeas corpus to procure his largement.

Digo. One Jean Aragus, a nae of the village of Lastua, in Tury, near Raguía, died on the 6th March last, in the 123d year of age, leaving descendants to the th generation, confishing of 160 rions, all living in the fame vilge: he had his health to the last, is bleffed with an extraordinary emory and found judgment, and fled his last moments without in, extending his bleffing to his rrounding family. He always ed a life of labour, and walked great deal, a very little time bere his death walked a very conerable diffance to mais, accordg to his utual custom. The emsyment of his early days was to nduct the caravant; he afterwards took to farming, purfued with great indu ligence, and fuccess; lived very temperately, known honesty and goo made him esteemed when deathe Turks themselves, not very apt to esteem a different persuasion frelves.

AUGUST

At Newcastle was t before Mr. Justice Buller, a Special Jury, an iffuby the Court of Excheq long contested cause be Rector of Simonburn at cupiers of ancient far that parish, relative to made by the former of tithe in kind. The qu the determination of th this issue was, whether of 1d. which Dr. Scot is for Hay-tithe, did or d tend to grafe agifted or unprofitable cattle? Af hearing, the jury gave against the rector upon est evidence, to the entir tion of the learned judge the cause.

At the affizes for the ty of Surry was tried, he Lord Mansfield, a cause the inhabitants of Walw plaintiffs, and the Con of Sewers defendants, ter in question was, a house no way benefits Sewers, or any of the missioners works, had a be by them affessed.

learned debates for upwards of three hours, the jury gave a verdict for the plaintiffs.

deputy - recorder The made the report to his Majesty in council of the seven capital convicts now under sentence of death in Newgate, when the five following were ofdered for execution on Wednesday the 25th instant, viz. Michael Brannon and Martin Gallavan, alias Gallaway, Lucy Johnson, a black woman, Thomas Ricketts, and James Barrett. Johnson was afterwards reprieved, and the others executed.

The two following were respited during his Majesty's pleasure, viz. Kenneth William Williams M'Kenzie, alias William Murray,

and Patrick Doyle.

This day the Duke of Northumberland, preceded by the Rev. Mr. Sellon, with many of the commissioners for pavements, and inhabitants of Clerkenwell: the artificers and workmen, with the several enfigns of their respective employments, and followed by a train of justices of the county of Middlesex, closed by Sir John Hawkins, chairman, went from Hicks's-hall to Clerkenwell-green, where his Grace laid the foundation stone of the new Court-house to be there erected in the room of Hicks's-hall. The following is a translation of the inscription placed under the stone:

" The first stone of this Sessionhouse, erected for the use of the county of Middlesex, and for other good and necessary purposes, for the better performance of the - King's service in the said county, in pursuance of an act of parliament made and palled in the 18th taking into consideration the pre-. year of the reign of King George

the Third, was laid by the most noble and puissant Prince Hugh Duke and Earl of Northumberland, Cufos Rotulorum of the faid county, at the request, and in the presence of the Commissioners appointed for building the faid Session-house, on Friday the 20th day of August, 1779."

The woman who set her house on fire in Warwicklane, was examined before Alderman Pugh, at Guildhall, when it appeared that her goods were infured for 700 l. though all she had in the house was not worth 601. When she gave the alarm of fire, the thought the house past recovering, being in flames in several places; and she particularly made an outcry after a box, which she faid was full of lace and other goods to the value of 3001. but when found, was full of nothing but combustibles. She had set it on fire, and the back part of it was burning, as were several other pieces of furniture in the same She behaved with uncommon audacity, and charged the person who was chiefly instrumental in her detection with a criminal intercourse with her maid, a

[P]

which he gathered in July nine apples; in August it blossomed again, and is at present full of fruit, some as large as Black-birds eggs. This may afford matter of curious inquiry to botanists.

A most daring and in-15th. human murder was committed on the afternoon of this day near the eighteen mile flone, between Hoddesdon and Ware in Hertfordshire, about four o'clock, the usual hour that the stagecoaches from Hertford pais that fpot. A person going to Ware about three o'clock, observed four Irifh haymakers coming out of that town, and upon his return heard the groups of a person from the bottom of a pit overgrown with bothes, close to the road. examining the place, an unfortunate creature was discovered weltering in his blood, and so shockingly bruifed and mangled about the head and face, as to render any knowledge of him imposible, andess from his dress. He expired in a few minutes after he was taken up. A fuspicion arose that he was one of the four men feen coming out of Ware, and that he had been murdered by his companions. A pursuit was immediately set on funt; and through the great activity of fome of the inhabitants of Haddefilon, three of the four men were taken about eight o'clock, at a private lodging-house out of the public road; and after a feparate examination, in which was much variation in their accounts of themfelves, and upon the oaths of very credible witnestes, who saw all four in company near the frot, they were on Thursday the acchtaicly lodged in Heritoid goal, to

generally supposed that the unturate object of their cruelty prudently saved more money the test, as his pocket was cuand above thirty shillings supon one of his courades, other two having no apprecians of sublishing on the rose

At Enfield, aged 86, Benj. Bodidington, Esq; formerly an eminent Turkey-merchant, and one of the survivors in the annuities granted by King William the Third, who received 1000 l. clear yearly income; they are now reduced to three. For some years past the surplus of the interest, by the original constitution of the tontine, has been applied to the uses of government.

At Eltham, Mr. and Mrs. Gambrey, brother and fister, at the age of 96 and 93; a twin fister to the lady is left a survivor: the father of the above died a few years since in the south of France, at the

age of 109.

OCTOBER.

A Court of Common Council was held, when, according 5th. to the notice inserted in the summons, the court proceeded to take into consideration the motion, That 600 l. be the salary of the person who shall be elected recorder in the room of John Glynn, Esq; deceased, and on the question being put, it was carried unanimously in the affirmative.

A motion was made, and question put, that the salary of the late recorder be paid to Michaelmas last, the same was resolved in the affirmative.

Manchester, O.A. 9. During the course of the week several mobs have assembled in different parts of the neighbourhood, and have done much mischief by destroying the engines for carding and spinning cotton wool (without which the trade of this country could never be possibly carried on to any

at extent). In the neighbourd of Chorley, the mob deftroyand burned the engines and dings creeted by Mr. Arktht at a very great expence. thousand, or upwards, at-ed a large building near the e place, on Sunday, from they were repulsed, two ers killed, and eight wounded, n prisoners; they returned agly re-inforced on Monday, destroyed a great number of dings, with a vast quantity of hines for spinning cotton, &c. George Saville arrived (with e companies of the York miliwhile the buildings were in es; the report of their intento desirgy the works in this brought him here yesterday . At one o'clock this mornwo expresses arrived, one from an, another from Blackburn, ating immediate affiftance, declaring the wiolence of the gents, and the shocking deations yesterday at Bolton: it ought they will be at Blackthis morning, and at Preston our this afternoon. Sir George red the drums to beat to arms alf after one, when he conwith the military and magis in town, and fet off at the of three companies foon after o'clock this morning for Chorthat being centrical to this , Blackburn, and Wigan, ain Brown, of the arth regi-, with 20 invalids, and Capt. naion, of Col. White's regi-, with about 100 young re-, remained at Preston, and s further (ecurity, Sir George e offered the justices to arm f the respectable house-keepf they would turn out to defend the town, which was immediately accepted.

In confequence of these preparations, the mob did not think prudent to proceed to any furth violences.

An order was made laft term in the Court of King's-bench, that all those pr foners who were under confineme in that prifon, and whole action were supersedable, should, if the did not fue out the fame before certain day, be struck off the book and turned out of the prison: th reason of this order was, that number of prifoners who were i poffession of rooms, remained i the prison for the purpose of le ting them to advantage, by whic they gained a weekly income (one pound three shillings, receiv ing twenty-four shillings, and pay ing only one shilling to the man shal for his rent. As there wer not rooms for those debtors wh were obliged to be in prifon, th court thought it a hardfuip, an on Thursday their order was pu in execution, when near 100 wer discharged for the above reason, to the great joy and comfort of the prifoners, who now will get habi tations for one shilling per week for which they had paid twenty-

This day the contest for the office of recorder of this city was determined in the court of aldermen, by a majority of one is favour of Mr. Serjeant Adair; for that gentleman there were 13, for Mr. Howarth 12. The only absentee in the court was Mr. Alderman Lee.

Yesterday the report was 14th. made to his Majesty of the convicts under sentence of death in Newgate, when the following were ordered for execution on Wednesday the 27th Inst. viz. Isabella Condon, for felomoully and traiterously making, coining, and counterfeiting the current filver coin of this realm called fixpences; John Field, for feloniously and traiterously making, coining, and counterfeiting the current filver coin of this realm called thillings and fixpences; William Chamberlain, for stealing out of a letter which came to his possession as a forter of letters in the General Post-office, Lombard-street, a promissory note for payment of 101. to William Cunningham, Esq; or order; Margaret Creamer, for feloniously assaulting John Scarlet on the highway at Saltpetre-Bank, and robbing him of two guineas and other money; Sarah Budge, for ficaling in the dwelling-house, of John Whitfield, goods, value 40 s. and upwards; Thomas King, for stealing in the dwelling-house of Robert Anderson, a quantity of silver plate and other things, value 40s. and upwards.

The following were respited:

James Lake, for feloniously affaulting William Wheatley on the highway near the Nine-Elms-turnpike, and robbing him of a gold watch and some money; Jeremiah Hetherley, for privately stealing in the shop of Mesirs. Burton and Busby, three hats, value 5s. and upwards; Mary Jones, alias Wood, for privately stealing in the shop of William Jones, in Oxford-street, goods, value 41. and upwards.

Dunwich, in Suffolk, Oct. 19. The violent blowing weather we have had for several days has done a great deal of damage amongst the thipping on our coast; every tide presents to our view a melancholy tcene of dead bodies, and pieces of wrecks thrown on the lands. It likewife did great havock on shore, blowing down rows of large trees, barns, outhouses, &c. and unroofed dwelling-houses; in short, the damage done amounts to many thoufands of pounds. A man, his wife, and several children, were buried under the ruins of a house, and all killed.

Extract of a Letter from Edinburgh,
October 8.

This morning a mutiny among the Western Fencibles, broke out here. Part of those who were in the Calle drew up the bridge and excluded their officers, while another party at Leith threw away their firearms, and drew their swords, threatening death to all who came near them. The mutiny it feems was by Lord Frederick occahoned Campbell's having purchased at London, purses for his regiment, which constitute a part of the Highland dress, and on receiving the arrears 3 s. 6 d. was stopped from each man for his purse, at which the men

MCIC

CHRONICLE.

e greatly diffatisfied, faying they d purchase them for 1 s. 8 d. 2 e. Lord Frederick very pruly told them, that he would them their puries at 1 s. each, take the loss upon himfelf: this did not pacify them; they inned mutinous, and the whole was in an uproar. Six of the leaders were taken into cuftoand a body of dragoons furded the rest. Being satisfied respect to their purses, ano-mutiny was discovered, seveof them absolutely refusing to y cartouch-boxes, which must e readered them quite ufcless oldiers. On this the officers ched the whole body down to h, as on an ordinary field day, out cartouch-boxes, and on r arrival in the Links, to their rife, they found a complete ment of dragoons drawn up e, without the knowledge of one but the commanding offi-

The cartouch-boxes being after them in a cart, the were ordered immediately to them on, which they were pelled to do. Five of the ers of this riot were immeely furrounded, tried by a irt-martial, and most severely pped; after which the regiit was divided into different bo-, and fent to Dundee, Dun-, and other places, in order to p them separate. Three comies which were left in the Caftle guard, hearing how their comions had fuffered, feized the tle-gates, drew up the bridge, threatened the governor; apon ch the dragoons immediately rched to Edinburgh, and two spanies difmounting, proceeded the Castle, which they found had n opened, and marched in. One of the Highlanders made a one of the officers, who knocked him down, and for way through, fo that all the were taken prifosters; fer them, it is imagined, will The dragoons fill keep gua Caftle.'

Last week the Elaborator at Woolwich blew up to accident, but fortunately a were lost.

At a court of aldermen a Guildhall, the recorder was requested to wait on the F Lord Weymouth, one.of jefty's Principal Secrets State, praying his lordfhi present to his Majesty, in t of that honourable court, members of that body, und ing the royal clemency h extended to Grant, Jonqua Jones, and Basrington, w convicted in September fel Guildhall, of an outrageou on the marshals and sever officers of this city, they conceive the mercy of the reign would be converted it gerous confequences to th and therefore begged the to be restrained to a servic dia or other foreign parts court ordered the recorder sent the said address to his who was pleased to ann court's memorial by fayi the fentence should be alter as was entirely agreeable city's request.

Coxbeath. On Friday ni a corporal and fix men wer ed at Mr. Collins's house mation having been given general's, that for fevera past an attempt had been break open his house); al past eleven three men as

to force the outer front door; the guard went out privately at the back door, and came on them suddenly (just as they had opened the inner door and entered the house) and in securing them, the corporal received a ball from a pittol, which that him dead; they were foon overpowered (but not till two of them were desperately wounded) and conducted to the camp. They prove to be three privates belonging to the Gloucester, and were immediately given over to the Captain Provost, till the coroner sits on the body of the deceased corporal, when they will be delivered over to the civil law.

of the Royal Exchange Atfurance Company have generously
voted a piece of plate, value one
hundred guineas, to be presented to
Captain Pearson of the Serapis, as
a testimony of their approbation of
his bravery and conduct in protecting the valuable seet from the Baltic under his care.

They also voted a piece of plate, value fifty guineas, to Capt. Piercy, of the Countess of Scarborough, with the same compliment.

Capt. Drew, from London to Quebec, was run down by the Russel man of war (who a few months ago run down the London East-Indiaman) in the night, in a gale of wind, and all the crew perished.

Liston, Oct. 16. The Marquis de Pombal, late Prime Minister of State, who, during the present reign, has been a continual object of persecution and hatred, is at last condemned to perpetual imprisonment. Two members of the council were for taking his life; but her Majesty, hearkening only to her natural elemency, mitigated

his punishment. This is probably the last time that this Minister will be heard of till his death.

DIED, in the county of Glamorgan, Mr. Fluellyn Pryce, aged 101, whose organs had been so little affected by the weight of years, that within these three years he directed a village-group of singers in some variations for the Sunday. He had never used spectacles till within sisteen months of his dissolution, and possessed a great flow of spirits, attended with sound health and activity; which blessings were the result of his abstenious manner of living.

At his house on Four-tree Hill, Ensield, William Bridgen, Esq; upwards of 70, Alderman of Farringdon Within.

NOVEMBER.

The corporation of Kingston upon Hull, have voted the 3d. freedom of that place to Captain Richard Pierson, and Capt, I homas Piercy, late of his Majesty's ships Serapis and Countess of Scarborough, for their gallant and brave conduct in the engagement with the squadron under the command of Paul Jones.

Extract of a letter from Darmouth.

The following is an exact account of the cargo of the Spanish ship the N. S. de Piedat, taken by the Dart privateer of this port, and now safe in our harbour; she is upwards of 600 tons burthen, has been built seven years, mounts 16 carriage guns, had 70 nien, was sitted up for close quarters, and yet struck to the Dart, after siring only two guns, though she mounts but 14 guns sourpounders,

CHRONICLE.

ers, had but 60 men, and is to tons burthen:

17 filver dollars,

949 dollars in gold doubloons,

31 ingots of gold, 5 ingots of filver,

42 bales of fine beaver,

of 1 hides in the hair,

3 bales of fine wool,
2 ditto fine fur.

five of the ingots of gold and (the value of which is not a) the rest of the cargo, as far as been known by the bills of (though it is supposed there re on board) amounts to ol."

At the quarter fessions held at Preston for the coun-Lancaster, it was unanimously d, that the fole cause of the that have lately happened in ounty is owing to the erection tain engines for the manufacof corton; that the erection ie engines have notwithstanden of the greatest utility to punty by the extention and vement of the cotton manuy; that the destroying them e county would only be the of transferring them to anocounty; and that, if a total as put to the erection of them e legislature in Great Briit would only tend to their thment in foreign countries, great detriment of trade in For these reasons the court to the resolution of transmito one of his Majesty's Secreof State a copy of their prong, intimating a defire at me time that a special coma may be issued for the trial ringleaders now in Lancaster

A Spanish ship, of between 600 and 700 tons, laden with sugar, coffee, log and hard dollars, bound fre Havannah to Cadiz, valu 200,000 l. is taken by the A lican privateer, and carried in bon.

Extract of a Letter from 1 dated, Nov. 15.

"The present expectation free trade, or rather the disa disappointment, agitates body here to a degree the can hardly imagine. In or compel England to grant popular measure is, to gemoney-bill for fix months instead of two years. Some best friends of this country, a most fensible, seem to this not the most effectual or a mode, as being too early claration of war, till we a fused what we ask; but the

234] ANNUAL REGISTER, 1779.

obliged to concur, as it is the only scheme which can procure unanimity among opposition, and is so much the popular cry, that every county and town have instructed their representatives to vote for it. This morning the mob, not choosing to wait for a parliamentary decision, took the matter into their own hands, and were of opinion, that the furest method of succeeding in their object of a free trade, was to destroy the enemies of Ireland; they therefore marked out the Attorney General, Sir Henry Cavendish, and Mr. Monk Mason, as the proper objects of their fury. About twelve o'clock they marched in a prodigious croud to Mr. Scot's, the Attorney General's house, with an intention of destroying it, but some of the patriotic leaders of this country contrived to get there, mixed among the mob, and at last persuaded them to leave it, after destroying the windows on the ground floor, and doing some small damage to the next story. They then marched to the Parliamenthouse, and detached a body to the four courts, who rushed in, in fearch of Mr. Scott, who kept out of their way, and of Sir Henry Cavendish, whom they seemed particularly anxious to find. On being disappointed, they returned to the Parliament-house, and swore all the members whom they could find going in, to be true to Ireland, and vote for a short moneyfull. The lawyers corps were applud to by the lord mayor, and fold, that they flood high with the jumple, and would probably be able in difficulty them; they met, and present to go man mad among them. ble Velverium, who is one of the

corps, made a most excellent speech, which had great effect on them, and was wonderfully well timed; they then decoyed them away, marched them through several of the streets, and prevailed on them to disperse."

The application for a new 22de trial lately made by Mr. Pope to the Court of Common Pleas (in the cause of Sir Alexander Leith against Pope) on the plea of excessive damages, has proved fruit-less, the court on Saturday last hav-

ing discharged the rule.

A Common Hall was held at Guildhall for the election of a chamberlain of this city, in the room of Benjamin Hopkins, Esq. deceased. About one o'clock, the lord mayor, aldermen, recorder, &c. went upon the Huslings, when the recorder came forward, and addressed the livery in a well-adapted speech, wherein he stated the peculiar privileges which were vested in the people at large by the constitution of the city, of electing their own officers, &c.

There were only two candidates, John Wilkes, Etq; and William James, Etq; each of whom addressed the livery in a short speech; after which they were put up, and the show of hands appeared sive to one in favour of Mr. Wilkes, upon which he was declared duly elected; but a poll was demanded in favour of Mr. James.

The election for bridge-master in the room of the late Mr. Borwick, then came on, when there was a very great show of hands in favour of Mr. Bustar, against sive other candidates; the second on the list was Mr. Betts; on which Mr. Bustar was declared duly elected:

Mr. Fox having, in debate one day last week, anierted with fome degree of afpen a particular species of arnt frequently made use of by riends of the Minister, viz. it had as the ministry were, was not certain that the naa would be at all bettered by ing their opponents;" a Adam, who had made use at argument in the fame decalled on Mr. Fox some days. for an explanation. The folg letters paffed on the above on.

St. Alban's Tavern, o'clock afternoon.

"Mr. Adam presents pliments to Mr. Fox, leave to represent to him, considering, again and ag had passed between them it is impossible for him to character cleared to the without inserting the follo ragraph in the newspapers

"We have authority to public, that in a convert passed between Mr. Fox Adam, in consequence of bate in the House of Con Thursday last, Mr. Fox that however much his sp have been misrepresented not mean to throw any restection upon Mr. Adam

" Major Humberston the honour of delivering you, and will bring your a To Hon. Charles James

"SIR,

" I am very forry that terly inconfistent with m propriety, to authorife th any thing into the newfi lative to a speech whic opinion required no ex You, who heard the speknow that it did convey nal reflection upon you, felt yourfelf in the pr upon which I animadvert account of my speech in papers is certainly incom certainly unauthorifed by therefore with respect t have nothing to fay.

" Neither the convert passed at Brookes's nor t are of a secret nature, as have any wish to relate the to shew the other, you are persectly at liberty so to do. I am, &c.

To —— Adam, Esq."

Chestersield-street, balf past 3,, Sunday, Nov. 28.

"SIR,

" As you must be sensible that the speech printed in the Newspapers reflects upon me personally, and as it is from that only that the public can have their information, it is evident, that unless that is contradicted by your authority, in as public a manner as it was given, my character must be injured. Your refusal to do this, entitles me to presume that you approve of the manner in which that speech has been given to the public, and justifies me in demanding the only satisfaction that such an injury will admit of.

"Major Humberston is empowered to settle all particulars; and the sooner this affair is brought to a conclusion, the more agreeable to me. I have the honour to

bc, &c.

To Hon. Charles James Tox."

In consequence of the above, the parties met, according to agreement, at eight o'clock in the morning. After the ground was measured out at the distance of sourteen paces, Mr. Adam desired Mr. Fox to fire, to which Mr. Fox replied, "Sir, I have no quarrel with you; do you fire." Mr. Adam then fired, and wounded Mr. Fox, which we believe was not at all perceived by Mr. Adam, as it was not distinctly seen by either of ourselves. Mr. Fox fired without effect; we then interfered, asking Mr. Adam if he was satisfied? Mr. Adam replied, " Will Mr. Fox declare he meant no per-

fonal attack upon my character? Upon which Mr. Fox said, this was no place for apologies, and desired him to go on. Mr. Adam fired his fecond pistol without effect; Mr. Fox fired his remaining pistol in the air, and then faying, as the affair was ended, he had no difficulty in declaring he meant no more personal affront to Mr. Adam than he did to either of gentlemen other prefent. Mr. Adam replied, "Sir, you have behaved like a man of honour." Mr. Fox then mentioned, that he believed himself wounded, and, upon his opening his waistcoat, it was found it was so, but, to all appearance, flightly. parties then separated, and Mr. Fox's wound was, on examination, found not likely to produce any dangerous consequence.

Richard Fitzpatrick, Second

to Mr. Fox.

T. Mackenzie Humberston, Second to Mr. Adam.

A Court of Aldermen was held, principally for the purpose of declaring Mr. Wilkes duly elected Chamberlain, and to receive his proposal of securities; when Mr. Wilkes proposed Geo. Hayley and John Sawbridge, Esqrs. Aldermen, Thomas Scott, and Rene Payne, Esqrs. to be sureties in the penalty of 40,000 l. for the due performance of the office of Chamberlain, which the Court unanimously approved of.

Mary Howard, a hawkee of ballads, went volontarily before the mayor of King made oath, that the and of Jones, a pedlar, were the who murdered Mr. and Mr. and

John Staples, for extoring money from Tho. Haris Crosby, by threatening him with an abominable Timothy Fuzpatrick, for money; and John Tay stealing a letter, in which bill of exchange for 30 l. a cuted at Tyburn, pursuant sentence.

The fessions ended at the Old Bailey, when the following prisoners received of death viz. John Hostealing 352 filk hand, and other goods to a commount, in the dwelling

Mr. Davidson, pawn-broker, in Bishopsgate-street; William Kent, for robbing Henry Otto, one of his Majesty's messengers, of his watch and money, on the highnear Gunnersbury-lane; Hugh Mulvey, Benjamin Fetter, John Wiley, and John Woolmore, for a burglary in the dwellingbouse of Mr. Farley in Coldbathfields, and stealing some wearing apparel, &c.; nine were ordered to be kept to hard labour for the benefit of the navigation of the river Thames, four to be kept to hard labour in the House of Correction, and 13 discharged by proclamation.

Last week a court of 12th. Common Council was held at Guildhall, to re-consider the order of the committee appointed to consider what mark of respect is most sit to perpetuate the memory of the late Earl of Chatham; when after some debate it was agreed to erect a statue in Guildhall over the Hustings, facing Alderman Beckford's; and it is to be executed by Mr. Bacon, at an expence not exceeding 30001.— The thanks of the Court were also voted to several peers for their fleady behaviour and spirited conduct in the House upon all occasions for the good of their country.

One evening last month, a carpenter going accidentally through
the transept of Ely cathedral, saw
the chamber adjoining to the lantern on sire; he got assistance, and
they tore up the slaming boards,
and threw them down into the octagon; and thus saved that beautiful part of the building the lantern, and possibly the whole
church. The sire is supposed to

have been occasioned by the usual carelessness of plumbers who had been repairing the lead.

On Wednesday morning, the 15th, a barbarous murder was committed, in a copie at Goodwood, in Suffex, the feat of his Grace the Duke of Richmond. on the body of Thomas Hewitt, one of his Grace's grooms, by one Burnett, a poacher, in company with three others, who on the same morning had been destroying game in the above copie, and who, on meeting with the deceased and two of his Grace's park-keepers. immediately fell upon them, and besides killing the above unfortunate man, they so unmercifully beat one of the keepers, that his life was in danger for several days. Hewitt, we are informed, had thrown Burnett several successive times, and it is believed would have secured him, (as Burnett acknowledged) had hath lince he not unfortunately in the scuffle fallen backward over a wheeltrack, in which fituation his inhuman antagonist seized him fast by the throat, and never quitted his hold till he had killed him, when the murderers immediately fled, leaving behind them some of their hats, and a bag containing three brace of pheasants. Coroner's Inquest fat on the body of the unfortunate Hewitt, and brought in their verdict Wilful Murder; in consequence of which, two of the criminals, James Burnett and George Dilloway, who were foon afterwards apprehended and taken, were committed to Horsham gaol, to take their trial at the next affizes for the said murder. The other two offenders, Charles Dilloway

T recites an act of the George the First, for p ing frivolous and vexations

Abstract of an Act for extend Provisions of the Tave George the First, intitled to prevent frivoleus and w Arrefts.

and fets forth, that by the faid act no person shall be held to special · bail upon any process issued out of any superior court, where the cause of action thall not amount to the fum of ten pounds, or upwards; mor out of any inferior court, where the cause of action shall not amount to the sum of forty shillings, or

upwards.

It further recites, that the power of arrest and imprisonment on melne process, issuing out of such Inferior court, where the cause of action does not amount to ten pounds, is found by experience to be attended with much oppression to great numbers of his Majelly's Subjects; for remedy whereof, it enacts, that from the passing of this act, no person shall be arrested or held to special bail, upon any process issuing out of any inferior court, where the cause of action shall not amount to ten pounds, or supwards; but the like copies, of process shall be served, and the like proceedings had thereupon in Juch inferior court, as are directed to be had, by the said recited act, In such inferior court, in all cases where the cause of action shall not amount to the sum of forty shillings.

It further enacts, that in all inferior courts (having jurisdiction to the amount of ten pounds or upwards) the like affidavit shall be made and filed of such cause of action, and the like proceedings mall be had thereupon, as are directed by the said recited act, where the cause of action amounts to the fum of forty shillings, or up-

wards.

It then recites, that so much of the feveral acts passed for the recovery of debts within certain dif-

tricts and jurisdictions as authorise the arrest and imprisonment of defendants, where the cause of action amounts to less than ten pounds, be

repealed.

That, in case of final judgment obtained in any inferior court, the certificate of the Judge of such inferior court to the superior court at Westminster shall enable such saperior courts to issue writs of exetion to take the person and effects of the defendant out of the jurisdiction of fuch inferior court.

It also enacts, that on a judgement in an inferior court, where the damages are under ten pounds, before any execution shall be stayed by writ of error, the defendant shall give security to prosecute his writ of error with effect.

And then enacts, that no cause shall be removed by Habeas Corpus, unless the desendant shall enter into recognizance for payment of the debt and costs.

Abstract of the late Act passed to pievent Smuggling.

FTER the first of August, A a penalty of 3001. is laid on any master of a ship coming from abroad, having more than 100 lb. of tea on board, (not being an East - India ship) or more than 100 gallons of foreign spirits in casks under 60 gallons (besides two gallons for each feaman on board.)

Foreign spirits imported from any part of Europe, in a vellel containing less than 60 gallons, are forfeited, with the thip, furni-

ture, &c.

When any tea, coffee, or goods liable to forseiture, is found on rd any thip coming from ton parts, at anchor, or hovering hin two leagues of the coast, the , if not above 200 tons, is fored, with her farniture, &c.

every person who shall sell costea, cocoa-nuts, or make or chocolate, must paint over his r, 'dealer in coffee, &c.' on

alty of 200 l.

very importer or dealer in fom spirits, must paint over his r, 'importer of or dealer in ign spirits,' on penalty of 50l. very dealer in tea, foreign spi-, &c. who shall buy any of the goods of any perion that has the words aforefaid over his r, is liable to an additional pey of 100 l.

very person, not a dealer, who l buy any tea, fpirits, &cc. of person that has not the words efaid over his door, will forfeit

all foreign thread-lace importafter the first of August to be ked at each end at the Custom ife; and perform poffeffed of ign lace may have it marked he nearest Castom House, makoath that the duties were paid. Il foreign thread-lace found in kingdom after the first of Feiry next, not márked, will be eited. And any person counriting the mark, or that faall or have in his cultody lace with consterfeit mark, will forfeit h and be adjudged to fland in pillory two hours; and their rs, abetters, and affiftants, will iable to the fame fine and pumeat.

uty on Post-Horses, Ge. which same.

Abstract of an Act for recruiting bis Majesty's Land and Sea Forces.

TUSTICES of peace, Commisfioners of the land-tax, and Magistrates of corporations, in the commission of the peace, are impowered, within their several jurisdictions, to impress all ablebodied, idle, and disorderly perfons, who cannot, upon examination, prove themselves to exercise some lawful trade or employment, for their support: and are to order a general search for all persons under this description. Persons convicted of running goods or fmuggling, in a penalty not exceeding 401. may be raised and levied in like manner, in lieu of the punishment to which they are otherwise liable: as are persons convicted of running away and leaving families chargeable on their parishes. Bailiss-sollowers are left open to the powers conferred by this act, being expressly declared not to exercise an employment within the meaning of it? The men, thus enlisted, are to be free from bodily infirmities; between the ages of sixteen and , fifty; if under the age of eighteen, they must be five feet three inches high; and, if above that age, five feet four inches high, without Moes.

No person, intitled to vote at an election for a Member of Parliament, is liable to be impressed either as a soldier or a seaman.

The inhabitants of every parish and township are to assist in the execution of this act; and a reward of ten shillings is to be paid for the discovery of any proper person, so that he be enlisted. Persons obstructing the powers of the act are subject to a penalty of 101.

Persons impressed under this act are intitled to their discharge on demand after sive years service, provided the nation be not then engaged in war; in which case they must serve during the continuance of the war.

Persons who enter voluntarily into his Majesty's service are to receive three guineas bounty money, to enter into immediate pay, are to be discharged at the end of three years, or of the war then in being, on demand; are exempted asterwards from statute duty, parish offices, and the militia service, and may set up and exercise any trade, agreeable to the statute 3 Geo. III. c. 8.

To prevent the inconvenience of impressing men during the time of harvest, labourers working at hay or corn harvest, who procure certificates from the parish where they live, which are to be furnished gratis, are thereby protected from May 25 to October 25.

This act is to remain in force until May 1, 1780; and repeals the act 18 Geo. III. cap. 53, passed last year.

Proceedings at the Trial of Admiral Keppel.

N the 7th of January the fignal was made for all the admirals

als and captains of his Majesty's t to come on board the Britanin Portsmouth harbour. When were affembled, the names the admirals and captains on rd, according to their rank femiority, were called over by uge Jackson, Esq; the Judge ocate, till a sufficient number vered to their names to comthe Court, those being passed r who had been furnmened to evidence on the trial. This g objected to by the Hon. stain Wallingham, the Judge rocate read the following cale, the opinion of his Majefly's orney and Sollicitor General Mr. Cust thereon, to the Ift:

be 22nd of Geo. II. chap. 33. feer the 25th day of Decemer 1749, it shall be lawful for he faid Lord High Admiral of Great Britain, or the Commisioners for executing the office. f Lord High Admiral Great Britain; or the Commisioners for executing the office f Lord High Admiral for the ime being, and they are herey respectively authorised from ime to time, as there shall be ccation, to direct any flag ofcer or captain of any of his Aajesty's ships of war, who hall be in any port of Great critain, or Ireland, to hold Courts Martial in any fuch ort, provided fuch flag officer r captain be the first, fecond, r third in command, in such ort as shalf be found most exedient and for the good of his Najesty's service; and such flag ficer or expenie, so directed to old Courts Martial, shall prede at foch Court Martial;

" any thing herein contained If the contrary notwithstandis Seat. 1216. " That from " after the 25th of Decem " 1749, no Court Martial to " held or appointed by virts " this present act shall consi. " more than Thirteen, or of " than Five persons, to be 14 posed of such stag officers, cape " or commanders then and there se sent, as are next in seniority t " officer aubo prefides at the (Martial."

Notwithstanding the word Italic in the 1216 station, the u at Courts Martial has been, officers who have given evid at the trials, not to fit as mem of the Courts: although they fenior to others who fat, and fequently would have fat as n bers if they had not been exaed as witneffes.

The Lords Commissioners of Admiralty having lately rece a complaint in writing, char an officer of rank in the royal i with one of the offences spec in the Articles of War, which created and fet forth by the ab mentioned act of parliament; 1 Lordships have therefore tho fit to issue their order, or was in writing, to Admiral Sir ? mas Pye at Portsmouth, requi him forthwith to affemble a C Martial for the trial of the officer. And it having been gested to their Lordships that I ral officers and commanders of King's ships at Portsmouth (on account of their feniority, fit as members of the faid C Martial, if the letter of the fedion in the faid act is confor to) will be (ummoned as withe either in support of the charg in behalf of the accused,

ANNUAL REGISTER, 1779. 256]

to advise their lordships, whether in case such senior officers should be called upon to give evidence at the trial, they may likewise sit as members of the court martial?—And also,

Whether the court can be legally held without the senior officers (who shall happen to be called upon to give evidence) in case it is necessary for their juniors to fit as members, in order to make up the, number required by the statute to constitute a court?

"The usage of the service is very material upon this case, for naval courts martial are evidently considered in the statutes concerning them, as known and established courts, consequently in matters not especially provided for, the settled course of proceedings must have great weight—That the characters of witness and judge are not consistent, is very obvious; and though in the common law of ral of the red. England there is no challenge to a judge, yet in the only instance we know where judges were called upon to give evidence in a criminal case, [Kelyng's Rep. 12.] it is observed, that they sat no more during that Trial. - By a strict and literal continuction of the statute of the 22d of Geo. II. chap. 33, sect. 12. neither the prosecutor, nor the prisoner, would cease to be judges.—But this construction would be absurd, and the act must from common sense admit as the ulage is, that officers to whom there is a just ground of exception, or who have a just ground of excuse, shall not be in-

You are therefore requested cluded in the number of those of whom the court is to be composed; consequently if any officer entitled by his rank to fit, is either profecutor, party, or witness, the person next in seniority must supply his place, and the court to composed, will be legally held according to the intent of the act.

AL. WEDDERBURN. JA. WALLACE. F. C. Cust.

Then the Judge Advocate read the order sent by the Lords of the Admiralty to Sir Thomas Pye, admiral of the white, to hold the court martial, dated the 31st December, 1778, signed Sandwich, T. Buller, Lisburne; and for adjourning to the Governor of Portsmouth's house.

The following members were then sworn, agreeable to act of Parliament,

President, Sir Thomas Pye, admiral of the white.

Matthew Buckle, Esq; viceadmiral of the red.

John Montagu, Esq; vice-admi-

Marriot Arbuthnot, Esq; reasadmiral of the white.

Robert Roddam, Esq; rear-admiral of the white.

Captains. M. Milbank

Francis Samuel Drake Taylor Penny John Mourtray William Bennet Adam Duncan Philip Boteler James Cranston

Then the Judge Advocate was fworn not to disclose or discover the opinion of any particular member of the court martial, unless thereunto required by act of Parliament.

The

APPENDIX to the CHRONICLE.

The court was then adjourned the house of the governor of timouth, when the President red the Judge Advocate to read

charge.

he Judge Advocate then read Hugh Pallifer's letter to Philip hens, Eiq; Secretary to the niralty, dated London the 9th December, 1778, defiring the ds Commissioners of the Adilty to order a court martial be held for the trial of the ourable Augustus Keppel, adal of the blue, for misconduct neglect of duty on the 27th 28th of July, 1778, as memed in the inclosed paper conng the charges againft him. he charge was then read as WS:

barge of Miscondust and Neglest Duty against the Henourable dmiral Keppel, on the 27th ad 28th of July, 1778, in diversishances undermentioned.

That on the morning of the of July, 1778, having a fleet hirty thips of the line under his mand, and being then in the ence of a French fleet of the number of thips of the line, aid admiral did not make the ffary preparations for fight, did out his fleet into a line of bator into any order proper eifor receiving or attacking an sy of fuch force: but on the rary; although his fleet was dy dispersed and in disorder, by making the fignal for fethips of the vice-admiral of blue's division, to chace to ward, increased the disorder ant part of his fleet, and the were in confequence more ered than they had been be-: 20d whilft in this disorder,

ot. XXII.

he advanced to the enemy made the fignal for battle.

That the above conduct w more unaccountable, as the my's fleet was not then in der, nor beaten, nor flying formed in a regular line of on that tack which approach: British fleet (all their # plainly indicating a defign to battle), and they edged dow attacked it whilst in disorde this un-officer-like conduct, neral engagement was not be on, but the other flag-office. captains were left to engage out order or regularity, whence great confusion e fome of his ships were prevente ting into action at all, other not near enough to the e and fome from the confution into others of the King's and did them confiderable da. and the vice-admiral of the was left alone to engage and unsupported. In these stances the faid Admiral E negligently performed the dut poled on him.

II. That after the van and ter divisions of the British passed the rear of the enemy admiral did not immediately and double upon the enemy those two divisions, and cor the battle, nor did he collect together at that time, and ke near the enemy as to be in a nefs to renew the battle as as it might be proper; but o contrary, he flood away beyon enemy to a great diffance t he wore to fland towards again, leaving the vice-admit the blue engaged with the ex and expeled to be cut off.

III. That after the vice-ad of the blue had paffed the h

IV. This indeed of alleaning to recew the engagement, as in the preceding articles is already d, and as he might and ought to have done, the admiral wore and made fall directly from the eveny, and thus he led the whole British deet away from them, which gave them

in reportunity to rally unmolefied, and an form again into a line in immie, and to stand after the inch dest; this was dilgraceful we me British stag, for it had the appearance of a flight, and gave me French admiral a pretence to CHE THE VICTORY, and to publish w me world that the British fleet ran away, and that he purfued it with the firet of France, and ofterra a came.

V. That on the morning of the 23.a of July, 1778, when it was perceived that only three of the French fleet remained near the Bruid, in the fittation the whole had been in the night before, and that the rest were to leeward at a greater distance, not in a line of butte but in a heap, the admiral and not cause the feet to pursue me dving enemy, nor even to enace the three faips that fled after the rest; but on the contrary, ae led the British feet another way, arrectly from the enemy.

By mere inflances of milloondust mi reglect, a glorious opportunity was our of doing a most effectial nervice to the state, and the boson or the British many was tarnished.

When the evidence on the part of the projection (which lasted to the year of Jan.) was gone through, tae admiral opened his defence with the following (peech:

guitus Keppel, before the Court Marrial, in spening bis Defence, Jan. the 30th 1779.

Mr. Prolient and Gentlemen of the Court,

I AM brought before you, after forty years fervice, on the charge of an officer under my com, for a variety of offences, i, if true or probable, would eatly aggravated by the means e had, from a long experience, lowing my duty, and by the motives of honour, which to have incited me to perit to the very utmost extent of bility.

Hugh Pallifer, an officer uny orders, conceives that I have very irregularly and very oly in the engagement with rench fleet on the 27th of aft; so very irregularly, and ry faultily, that I have tarthe luftre of the navy of

лd.

feffed with this opinion, on our to port after the action, he letter from the Lords of the ralty put into his hands, give, in the most explicit terms, ajesty's approbation for a conwhich he now affects to deferves the utmost disapion, and the severest cenand he, with the other adand captains of the fleet, to it was likewife communicated, lly acquiefces in it.

h the fame ill opinion of onduct in his bosom, he to fea again under my ind; he goes to sea under ithout having given the ent to his thoughts, either y of advice to myfelf, or of int to our common lupe-

afterwards corresponds with terms of friendship; and in prespondence he uses exis, which convey a very nd of my zeal for the fervice. er all this I came home; I ceived by his Majesty with

the most gracious expressions of fa vour and effeem; and I am re crived in the most flattering man ner by the first Lord of the Admi-

raity.

Several weeks paft, when length, without giving me any previous notice, the Board of Admiralty fend me five articles of charge, on which they declare their intention of bringing me to my trial; thefe charges are brought by Sir Hugh Pallifer; who nearly at the fame time publicly declared, that he had taken this step from an opinion, that he himself lay under an imputation of disobedience to my orders, and that this imputation was countenanced by me. I may fay, without the least hesitation, that if I should be cenfured on fuch a charge (which in this court, and with my cause, I think impossible) there is an end of all command in the navy. every fubordinate officer can fet up his judgment against that of his commander in chief; and after feveral months of infidious filence, can call him to trial, whenever he thinks it useful for the purpose of clearing away imputations on himfelf, or in order to get the start of a regular charge, which he apprehends may possibly be brought on his own conduct; there can be no fervice.

If the charges of my accuser could be justified by his apprehensions for himself, he has taken care to prove to the court, that he had very good reason for his fears; but if these charges are to be confidered as supported upon any rational ground, with regard to the nature of the offence, or any fatisfactory evidence with regard to the facts, as against me, he makes

[R]-2

that figure, which, I trust in God, all those who attack innocence will ever make.

In your examination into that judgment, which my officer, in order to depreciate my skill and to criminate my conduct, has thought proper to fet up against mine, you have very wifely, and according to the evident necessity of the case, called for the observations and sentiments of all the officers who have ferved in the late engagement; fo far as they have been brought before you by the profecutor, I take it for granted, you will follow the fame course with these that I shall produce. If this should not be done, an accuser, (according to the practice of mine) by the use of leading questions, by putting things out of their natural order, by confounding times, and by a perplexed interrogatory concerning an infinite number of mancauves and fituations, might appear to produce a flate of things directly contrary to the ideas of those who saw them with their con eyes. I am aftonished, that, when an officer is accused, by another of crimes, which, if true, must be apparent to a very ordinary observation and understanding, that any witness should, on being asked, refuse to declare his free fentiments of the manner in which the matters to which he deposes have appeared to him: I never wished that any gentleman should withhold that part of his evidence from tenderness to me; what motives the accufer had for objecting to it, he

the five special articles of sarge, you may depend upon shall give full, minute, and ctory answers, even on the vand mistaken principles on some of them are made. I beg leave to point out to that there is a general false stion, that runs through the 3 in censuring me for mistaken as of what my duty was; and it bad foundation he has laid hole matter of his charge.

hink myself particularly for, in being able to make out
vidence, at this distance of
with so much exactness as
I do, the various movements
were made or ordered in the
of the 27th of July: it is a
of good fortune which cannot
happen to a commander in
the same circumstances.
extensive naval engagement,
the movements preparatory
subordinate officers, if they
strentive to their duty, are
employed in the care of their

own particular charge; and there but little leifure for exact of fervation on the conduct of the commander in chief; it is the bufiness to watch his fignals, at to put themselves in a condition obey them with alacrity and effect thing, and he is looking towards thing, and he is looking towards another, it is always a great chair whether they agree, when the come to form an opinion of whole.

You are fensible, gentlemen, to one of the things which distings a commander in chief, is to kn how to catch the proper mome for each order he gives. He is have his eye on the enemy, rest ought to have their eyes him. If those subordinate office who are inclined to find fault whim, do no mark the instant time with the same precision which does, their judgment will of be erroneous; and they will blat where perhaps there is the great reason for commendation.

Befides it must be obvious, wh we consider the nature of gene engagements, that in the mu tude of movements that are maand the variety of politions which thips are faccessively four with regard to one another, wh in motion over a large space, fay nothing of the imoke) this scarcely ever appear exactly in t fame manner to any two thi This occasions the greatest p plexity and confusion in the s counts that go abroad, and for times produces absolute contrad tions between different relators; a that too without any intentional fa in thate who tell the story. wherever the commander in ch is placed; that is the center of

 $\{R\}$ 3

the operations; that is the true point of view from which they must be seen by these who examine his conduct; because his opinion must be formed, and his conduct regulated by the judgment of his eye upon the posture in which be fees his objects, and not from the view which another in a different, and perhaps distant position has of them; and in proportion as he has judged well or ill upon that particucular view, taken from that partienlar position (which is the only point of direction he can have) he deserves either praise or censure.

On these principles I wish my manceuvres to be tried, when the proper confideration is, whether they have been unskilfully conceived, or as the charge expresses it, in an un-officer-like manner. But my reasons for preferring any one step to another, stand upon different grounds; all that he charges as negligence was the effect of deliberation and choice; and this makes it necessary for me to explain, as fully as I think it right to do, the ideas I acted upon.

I am not to be confidered in the light in which Sir Hugh Palliser icems to confider me, merely as an officer with a limited commission, confined to a special military operation, to be conducted upon certain military rules, with an eye towards a court martial, for my acquittal or condemnation as I adhered to those rules, or departed from them. My commission was of a very different fort. I was entrusted with ample discretionary powers for the immediate defence or the kingdom. I was placed, in some fort, in a political as well as a unlitary fituation; and though, at my own defire, for the purpoles

of uniformity and secrecy, my initructions came to me through the Admiralty alone, yet part of them originated from the Secretary of Sate, as well as from the board. Every thing which I did as an officer was folely subservient and subordinate to the great end of the national defence. I manœuvred; I fought; I returned to port; I put to sea; just as it seemed best to me for the purpose of my destination. I acted on these principles of large discretion; and on those principles I must be tried. If I am not, it is another fort of officer; and not one with my trust and my powers that is on trial.

It is undoubtedly the duty of every sea officer, to do his utmost to take, fink, burn and defroy the enemy's ships wherever he meets them. Sir Hugh Palhier makes some charge on this head, with as little truth, reason, or justice, as on any of the others. He shall have a proper aniwer in its proper place; that is, when I come to the articles. justice to the principles, which directed me in my command, I must beg leave to tell you, that I should think myself perfectly in the right, if I pottponed or totally omitted that destruction of ships in one, m two, or in twenty instances, if the pursuit of that object scemed to me detrimental to matters of more importance, otherwise it would be a crime for a commander entrofted with the defence of the kingdom, to have any plan, choice, or forefight in his operations; I ought to conduct myfelf, and I hope I did, in each particular, by my judgment of its probable effect on the issue of the whole naval campaign, to which all my actions ought to

tye a relation. Without attendg to that relation, some particua of my conduct on the 27th and the of July, cannot appear in the the which I imagine they are fairly, itled to; and some circumstances my lenity towards Sir Hugh Paler, will incur a censure they do t deserve.

I have reflected again and again that bufiness; and if I were to be ce more in that fituation, I am rfuaded that I should act in all pects very much in the same unner. I have done my best and noft; not merely to comply with article of war (I should be amed that such a thing, at such time, could have engaged my ughts) but to defend the kingm; and I have reason to thank d, that whatever obstructions I a with in fervice, or whatever aders and accusations have folred me afterwards, the kingdom been defended.

My capacity may be unequal to trust which was placed in me, is certainly very unequal to the rm wishes I have ever felt for a service of my country. There-e if I had intrigued or solicited command, or if I had bargained any advantage on accepting it, I ght be blamed for my presumptought, and on accepting it, I sher complained of any former glect, nor stipulated for any future wisheation.

It is upwards of two years ago, it is in November, 1776, that I seived a message from Lord Sand-th, brought to me by Sir Hugh lifer, that the appearance of reign powers in our disputes, ght require a fleet at home; I that he had his Majesty's or-

ders to know whether I we dertake the command. that I was ready to attending my answer in person King.

Being admitted into the gave such an one as seem factory to his Majesty; a ing delivered my opinion openness, I ended with a tion of my willingness thim, in the desence of the try and its commerce, who should be honoured with h mands, and as long as m permitted.

The appearance on the foreign powers not contin suppose,) to give so much . heard no more of the ci from November 1776, to F or March 1778. At that had hints conveyed to me might foon be wanted. I ready to obey the King a been fixteen months before when required to ferve, I I or three audiences of his before I left London finally my flag. I must remark, took the freedom to express Majesty, that I served 1 dience to bis commands; was unacquainted with his sters, as Ministers; and tha the command as it was, making any difficulty, and out asking a single favour; to his Majesty's good int and his gracious support as tection.

Circumstanced as I was, have no finister and no an views in my obedience. I rigreat deal, and I expected n Many things disposed me risek my ease than any ne ployment, and gave me

: above reproach.

very foon found how necessary as for one in my fituation to well supported by office. On first going to Portsmouth, th was in March last, I was e to believe, that I should see rong and well-appointed fleet y for tea. An opinion of that was circulated very generally. re were not more than fix thips he line affembled and in any lition to go upon fervice; of n, all I shall say is, that on reving them with a scaman's eye, gave me no pleasure. Whilst ontinued at Portimouth, I bee sour or five more arrived. I rned to town without making noise. I represented amicably flate of things. I was told that thips were collecting from other is, and from fea; and I must that from that time forward, st diligence was ufed; as much, lieve, as was possible. If there not, we never could have faileven with the force we went out

On the thirteenth of June, I fet from St. Helens with twenty s of the line; well enough sipped; that is, neither of the nor the worft I had feen. I hardly on my station, when a v occasion occurred, to shew , how much a commander, enited as I was, must take upon afelf; how much he must vene on his own diferetion, and w necessary it is for him to have proper support. The circumnce of my falling in with the ench frigates, Pallas and Lime, and of the chace and the gagement with the Belle Poule, honourable to Captain Marshal) are fresh in your men undertook the affair at a risque. War had not been d nor even reprisals ordered. tuation was singular; I m disavowed, and a war with laid to the account of m ness. There was not some discourse of that te among people whose opinion moment.

I represented what I has and to this hour I have not a one syllable of direct or off probation of my conduct.

I found however that the of the ships was important state; the papers I found it and the intelligence I rece that means, filled me with serious apprehensions. I the enemy's coast with two of the line; there were this in Brest road and Brest was frigates more than treble more.

My orders to fail with fhips could not have been supposition of my having with a superior force.

I know what can be a English officers and Eng. men, and I trust to it as t any man. I should not be raged by fome fuperiority me in Chips, men, and me I have never had the folly spise my enemy. I saw engagement, under fuch flances of decided superic the part of France, would the very being of this k If our fleet foould be defir was evident that the Pren become masters of the that campaign at leaft; we could ever repair the lo very clear to me, when I

266] ANNUAL REGISTER, 1779.

the state of our naval stores at that time, and the extreme difficulty of a supply, as long as the French should continue superior in the channel.

It is impossible to say to what such a calamity might not lead; I was filled with the deepest melancholy I ever felt in my life. I found myself abliged to turn my back on France, but I took my resolution. I again risqued myself on my own opinion. I quitted my flation; my courage was never put to such a trial as in that retreat; hat my firm persuasion is, that she country was faved by it. Those in power, who must have understood the state of the sleet, and of the kingdom, were the best able to discern the propriety of my conduct. But I was permitted to go out again in the same important command, very unworthy of the trust if I had done amis: very deserving of commendation and thanks, if at my own sisque I had preserved the country from no flight danger; one or other of these was certainly the rase; but the fact is, that I was continued in the command, but did not then receive, nor have I yet received, any more than I had on the former occasion of taking the French ships, one word of official approbation.

All these discouraging circumstances did not above the zeal I felt for the fafety of my country, or disgust me with its service, or dissurb my temper. On my return so Portimouth I made no complaint; I did every thing to stifle discontent, and to get forward for Tea again, without divulging the true lituation of affairs, although I found myself in publications, which

are confidered as countenanced by authority, most grossly abused, and threatened with the fate of Admiral

Byng.

I had returned to Portimouth on the 27th of June, and on the muth of July, finding my fleet made up to twenty-four thips of the line of battle, with four frigates, and two fire-ships, I sailed again in obedience to my infructions, trusting to such reinforcement as I was given to expett would join me at Plymouth, off the Lizard, and at fea: by feveral reintorcements of ships, manned as the exigency would permit, the fleet was made up to thirty fail of the line. After this, although I was much short of a proportionable number of frigates, and mult naturally be subject to many inconveniencies from that want, I had, on the whole, no just cause for uncafiness. The greatest part of the ships were in good condition, and well appointed; and where any thing was wanting, the zeal of the commanders abundantly suplied it.

The appearance of the French fleet confirmed the ideas upon which I had returned to Portlmouth; for on the 8th of July, the day before I left St. Helen's, they failed out of Brest thirty-two fail of the line. On the 23d the fleets of the two nations first came in fight of each other. the French admiral found me much thronger than he expected; and from thence he all along thewed, as I conceived, a manifest difinclination to come to an engagement. I do not say this as meaning to call his courage in question, very far from it; I am certain that he is a man of great bravery;

But

the might have many very resable motives for avoiding a deve action.

Many objects of the French, l those very important, might obtained without a battle. On part, I had every motive which ild make me earnest to bring it and I was refolved to do fo enever and by whatever means I old.

I should be criminal indeed if I d not, for I had every motive for bring to prefs on an action; the eatest body of the British trade s then on its return home. Two st-India and two West-India Scete immente value were hourly excted; from the course it was proble they would hold, and from e fituation of the French fleet, ey might be taken in my fight thout a possibility of my preventg it. Bendes this, I know that o fleets, where one of them oofes to decline battle, may be r a long time near one another, thout any means of bringing on engagement,

I cannot be certain whether the count I have read be quite exit: but it should appear by that count, that in King William's ign Admiral Ruffel continued for vo months almost in the daily view f the French fleet without havg it in his power to fight them: do not think the thing at all im-

offible.

I had also other reasons for the resteft anxiety to bring on an enagement upon any terms that I

ould obtain it.

These reasons are weighty; and hey are founded in my inftrucions. I gave notice to the Adniralty, that I might find it ofeful o my defence to produce those

infiractions on my trial. communicated to me his M: pleasure thereupon, and in. sne, that they could not a that my inftructions should before my council, or be pr at the court martial. furprised at this answer, as ceived that those who were better judges than I could what was matter of flate, never have thought of patt in a fituation which might me, in my defence, to p the instructions under which ed, when at the same tim meant to refule me the fa natural means of my justifi It is my undoubted right think proper, to avail my them. On former trials the been generally fent down w accufation, that the conduct Admiral might be compare his instructions. But leavi Admiralty to reflect on th priety of their conduct, it part to take care of my o have always been willing any hazard for the benefit flate. I fhall not produce th structions; I have not even ed them to my countil, no municated their contents. declining to make ale of 🛢 rights cannot, in a like cal after, affect the right of an man.

The world will judge of (dom and equity of orderin under fuch circumstances.

On the 27th of July, I a an action with the French were beaten, and obliged t into their own port. No c doubt but a commander is who is to reap the princips of the glory, will be ear have his victory as compleat as possible. Mine did not answer to my wishes, nor to my just expectations. I was fully resolved to renew the engagement: why it was not renewed, will appear when I come to the particulars of the

charge.

As to my conduct after the engagement, I might have pursued a fruitless and a most hazardous chace of some few ships (I know not to this hour with certainty what they were, nor does my accuser): if I had had my mind filled with notions unworthy of my station I might easily have paraded with my shattered fleet off the harbour of Brest. I chose rather to return to Plymouth with all expedition, to put myself once more in a condition to meet the enemy, and defend the kingdom. But on my return I took care to leave two men of war of the line on a cruize to protect the trade. By the vigilance of the commanders, and the happy effect of the late advantage, the expected fleets all came in fafe.

At Plymouth I lost no time, and omitted no means of putting myself in a state fit for action. I did every thing to promote an unanimous exertion; and I found my endeavours well seconded by all the admirals and captains of the fleet. This benefit I acquired, by avoiding a retrospect into the conduct of the Vice-admiral of the blue; for if I had instituted an inquiry or trial, it would have suspended the operations of the whole fleet, and would have sufpended them in the midst of the campaign, when every moment was precious, and the exertion of every officer necessary. The delay

which the present court-martial has occasioned to the service, even at this time, is evident to all the world. How much more mischievous would it have been at that period? I was sensible of it, or rather, to speak more correctly, my mind was so fully taken up with carrying on the great service which was entrusted to my care, that I could not admit the thought of misspending my own time, and wasting the flower of the British navy, in attending on a court-martial.

My letter to the Admiralty was written in the spirit which directed my conduct at Plymouth. All my letters were written with the same spirit. My letter published in the Gazette has been brought before this Court, for the purpose of convicting me of crimes, by the person whose faults it was intended to cover. He has attempted, very irregularly in my opinion, to call upon witnesses for their construction of my writing. No one has a right to explain my meaning, where it may be doubtful, but myfelf; and it is you, Gentlemen, who are to judge whether my explanation is fair.

That letter (as far as it goes) is an account of the action strictly true. It is indeed very short, and very general, but it goes as far as I intended it should. It commends Sip Hugh Palliser; it does what I meant to do.

I meant to commend his bravery (or what appeared to me as such) in the engagement. As he flood high in command, to pass over one in his station, would be to mark him. It would have conveyed the censure I wished for such good reasons to avoid, and I should

have

ve defeated the one great object and in view, the defence of the tion. In that letter I expressed to my hopes of bringing the ench fleet to action in the morn-

had fuch hopes; and my acfer, even in the fecond edition his log-book, shews that I was t wholly angrounded in my exflations, fince he has recorded nfelf as of the fame opinion. I d, that I did not interrupt the ench fleet that evening in the mation of their line. I fhall ew you by evidence (if it should t have already fully appeared) at I was not able to do it, and at any random firing from me unr my circumstances would have en vain against the enemy, and a fgraceful trifling with regard to yfelf.

You have feen my expressions, d fach is their meaning with reurd to both the French and Sir ugh Pallifer, so far as they apied to the particular times to hich they feverally belonged. at there was an intermediate time ith regard to both, of which, hen I wrote my letter, I gave no count. I intended to conceal it. do not conceive that a commaner in chief is bound to disclose all Europe, in the midst of a ritical fervice, The real state of his eet, or his opinion of any of his fficers,

He is not, under such circumcances, bound to accuse a British dmiral. To me, such an accuaction, under almost any circumcances, is a very serious matter. whilst a possibility of an excuse for a officer remains in my mind, I am in my disposition ready to lay sold of it; and I consess to you, that until Sir Hugh Pallifer I had brought out to this Court particulars, I attributed much to his misfortune, or mistake, I now find myself authorized nor did I think his conducto exceptionable as he himse proved it.

After the engagement, be thought fit to explain to me the fons of his not bearing downy wake, to enable me to the action, and I did not think

enquire into them.

I apprehend that a power of fing over faults or militakes i vice, (into which the very beficers may be surprized) to be times as necessary, if not telepline, yet to the end of a cipline, the good of the service any punishment of them can bly be; and one of the ill of this prosecution will be, to terrify a commander in the of one of the most valuable of his discretion.

By using the discretion we thought was in me, I pre concord in the steet, prompin the service, and dignity country. In my opinion, complaint of such a mag would have produced infinit chiefs.

Nobody can imagine, the that moment, an acculation Vice admiral, who was befill Lord of the Admiralty, continued the moment and continued to our naval oper and even to the quiet of the lic.

My letter was written upon the principles which now honeftly and faithfull before you, and which I full your judgment. If I have

ANNUAL REGISTER, 1779. 270]

more indulgent than was wife, the public has had the benefit, and all the trouble and inconvenience of my indifcretion has fallen upon myself. I never had a more troublesome task of the sort than in penning that letter, and it has ill answered my pains.

If I have not shewn myself able at concealment, it is a fault for which I hope I shall not lose much credit with this court martial. shall not be very uneasy if I have been thought to have wrote a bad letter, if I shall be found, as I trust I shall be found, to have done my duty in fighting the enemy.

The intrusion of my letter into the trial, has made it necessary for me to explain it. I now proceed with the account of my conduct.

I got ready for sea again, with my usual temper and disposition to accommodate; after this I kept the sea as long as I could. The French fleet carefully avoided my ftation. I could obtain no distinct intelligence of them though I omitted no means to procure it.

In consequence of this, their defertion of the leas, their trade fell into the hands of our privateers, to a number and value that I believe was never equalled in the fame space of time. His Majesty was pleased to speak of it in his fpeech from the throne, and to attribute it to the good conduct of fome of his officers.

When I considered this; when I confidered the direct approbation of my conduct, and the circum- probable, and likely to be real, I stances which attended my ap- cannot be guilty of the criminal pointment, it was with difficulty negligence and want of knowledge I persuaded myself that I was in my profession, with which I

treated as a criminal, and ordered, without the least ceremony, or previous enquiry, to be tried by a court martial, on the acculation of my officer, my old friend, one over whose faults I had so lately cast a veil; the very person who was a messenger and congratulator of my original appointment. I acknowledge it was for fome time before I could sufficiently master my indignation, and compose myfelf to that equality of temper with which I came hither, and with which I have heard such shocking and reproachful matter and words read to my face, in the place of support I was made to look for. I feel very much inward peace at present; and the event I confider with much less concern for myself, than for the fervice. Your judgment, I am fully perfuaded, will be wife and well weighed, and fuch as will be of credit to yourselves, and of advantage and encouragement to that part of the military which is most interesting to this kingdom. On my part, I trust I shall entitle myself not only to an acquital, but to an honourable reparation at your hands, for the malicious calumnies contained in the charge against me.

Thus much I have faid as to the general matter which has arisen on the trial, and the circumstances by which that trial has been brought on, as well as to the motives and principles which regulated the discretion that I conceive was in me. If these motives were awake, when I found that I was fland charged. As to the charges

themselves.

afelves, let the first article be again, and I will answer to

re Advocate. First Article of the Charge.

HAT on the morning of the of July, 1778, having a fleet hirty ships of the line under command, and being then in prefence of a French fleet of like number of thips of the the faid admiral did not e the necessary preparations ight; did not put his fleet inline of battle, or into any orproper either for receiving or king an enemy of fuch force; on the contrary, although his was already disperfed and in der, he, by making the fignal everal ships of the vice-admiof the blue's divition to chace rindward, increased the ditorof that part of his fleet, and hips were in confequence more ered than they had been be-; and wailft in this diforder, idvanced to the enemy, and e the fignal for battle.

hat the above conduct was the unaccountable, as the enefleet was not then in difornor beaten, nor flying, but ed in a regular line of battle, hat tack which approached the sh fleet, (all their motions ily indicating a defign to give le) and they edged down and ked it whilft in disorder. By un-officer-like conduct, a gel engagement was not brought but the other flag-officers and ains were left to engage withorder or regularity, from nce great confusion ensued; e of his ships were prevented

getting into action at all, other were not near enough to the enmy; and fome, from the confusion fired into others of the King's fhip and did them confiderable damage and the vice-admiral of the blo was left alone to engage fing. and unsupported. In these is flances the faid Admiral Keppel a gligently performed the duty in posed on him.

The Admiral. Mr. Prefident, (this charge, I answer, that I has never understood preparations for fight, to have any other meanin in the language and understance ing of feamen, than that each paticular ship under the directic and discipline of her own officer when in pursuit of an enemy, be 1 every respect cleared and in read ness for action; the contrary of which, no admiral of a fleet, with out reasonable cause, will presume and as from the morning of the 24t. when the French fleet bad got . windward, to the time of the allio the British fleet was in unremittis purfuit of them, it is still more dist cult to conceive, that any thin more is meant by this charge, tha what is immediately after convey ed by the charge that follows i namely,

> " That on the same mornin " of the 27th, I did no " put my fleet into a lir " of battle, or into any o " der, proper either for re " ceiving or attacking 'a " enemy of fuch force."

By this fecond part of th charge, I feel mylelf attacked i the exercise of that great and bros line of diferetion, which every o ficer commanding either fleets (armie

description to the Court to the Court to the Court to the Court to descripting to that the the that that in which with the moment of accompatible with

to this, I must to the Court to the motions from their first

a secovering the a second of July, I figures for the order

of battle, which I effected towards the evening, when I brought to, by fignal, and lay till the morning, when perceiving that the French fleet had gained the wind during the night, and carried a pressed sail to preserve it, I discontinued the figual for the line, and made the general figual to chace to windward, in hopes that they would join battle with me, rather than suffer two of their capital ships to be entirely separated from them, and give me the chance of cutting off a third, which had carried away a topmast in the night, and which but for a shift of wind I must have taken. In this, however, I was disappointed, for they suffered two of them to go off altogether, and continued to make every use of the advantage of the wind.

This assiduous endeavour of the French admiral to avoid coming to action, which, from his thus having the wind, was always in his option, led me to believe he expected a reinforcement; a reflection which would alone have been sufficient to determine me to urge my pursuit in as collected a body as the nature of such a pursuit would admit of, without the delay of the line, and to seize the first opportunity of bringing on an engage-

ment
But I had other reasons no less

If by obstinately adhering to the line of battle, I had suffered, as I inevitably must, the French seet to have separated from me; and if by such separation the English convoys from the East and West Indies, which I have already stated in the introduction to my defence to have been then expected home, had

n cut off, or the coast of Engd been insulted, what would e been my fituation? Sheltered ler the forms of discipline, I baps might have escaped punish. nt, but I could not have escapcensure; I should neither have aped the contempt of my fellow zens, nor the reproaches of my a conscience.

Moved by these important conrations, supported by the exples of Admiral Ruffel, and er great naval commanders, line than I had on the more in fimilar fituations had ever the former day; and I com de strict order give way to reaable coterprize, and particuy encouraged by the rememnce of having myfelf ferved ler that truly great officer Lord wke, when, rejecting all rules l forms, he grasped at victory an irregular attack; I detersed not to lofe fight of the ench fleet by being outsailed m preferving the line of battle, to keep my fleet as well colted as I could, and near enough affilt and act with each other, cafe a change of wind or other ourable circumstance should ene me to force the enemy to ac-١.

Such were my feelings and reitions when the day broke on morning of the 27th of July :which time the fleet under my nmand was in the following ition: Vice-admiral Sir Robert rland was about four miles dift on the Victory's weather arter with most of the ships of own division, and some of ofe belonging to the centre; d Vice-admiral Sir Hugh Palliat about three miles distance, point before the lee beam of the ctory, with his mainfail up, Vol. XXII.

which obliged the thips of vilion to continue under a fail.

The French fleet was as to windward, and at as g distance, as it had been th ceding morning, standing fresh wind close hauled on t board tack, to all appeara voiding me with the fame is as ever.

At this time, therefore, no greater inducement to fo have formed it without grea creating my distance from French fleet, contrary to th of operations which I have a submitted to the judgment Court.

Time Vice-admiral of the next charges,

> " That although my fi " already dispersed, " disorder, I, by 1 "the fignal for " thips of his divi " chafe to windwar " creased the disor " that part of my " and that the thip er in confeduence " (cattered than th " been before; and " whilst in this disc " advanced to the " and made the fig " battle."

In this part of the charg is a studious design to mist understanding, and, by leav times and intermediate eve make the transactions of hal appear but as one moment.

It is indeed impossible to without being possessed w

· • [8]

idea, that at half past five in the morning, when I made the fignal for fix of the ships of the Viceadmiral of the blue's division to chace to windward, I was in the immediate prospect of closing with an enemy approaching me in a regular line, and all their motions plainly indicating a design to give battle; instead of which, both the fleets were then on the larboard tack, the enemy's ficet near three leagues to windward, going off close by the wind with a pressed. sail; my reason therefore for making that fignal at half past five, was to collect as many of the ships to windward as I could, in order to strengthen the main body of the fleet, in case I should be able to get to action, and to fill up the interval between the Vanny and the Vice-admiral, which was occasioned by his being far to leeward; and it is plain that the Vice-admiral must have himself understood the object of the figual, fince it has appeared in the course of the evidence, that on its being made the Formidable set her mainfail, and let the reefs out of her topsails: and indeed the only reafon why it was not originally made for the whole division was, that they must have then chased as a division, which would have retarded the best going ships, by an attendance on the Vice-admiral.

Things were in this fituation, when, about nine o'clock, the French fleet were and stood to the fouthward on the starboard tack; but the wind, immediately after they were about, coming more while in the confusion of getting Southerly, I continued to Rand on till a quarter past ten, at which time I tacked the British sleet together by fignal; and foon after windward out of my reach alto-

we were about, the wind came some points in our favour to the westward, which enabled us to lie up for a part of them; but in a dark squall that almost immediately came on, I lost sight of them for above half an hour; and when it cleared away, at eleven o'clock, I discovered that the French sleet had changed their position, and were endeavouring to form the line on the larboard tack, which finding they could not effect without coming within gun-shot of the van of the British fleet, they edged down and fired on my headmost ships, as they approached them on the contrary tack, at a quarter after eleven, which was instantly returned; and then, and not till then, I made the fignal for battleall this bappened in about half an bour; and must have been owing to the enemy's falling to leeward in performing their evolution during the squall, which we could not fee, and by that means produced this sudden and unexpected opportunity of engaging them, 23 they were near three leagues ahead of me when the squall came

If, therefore, by making the fignal for the line of battle when the van of my fleet was thus suddenly getting within reach of the enemy, and well connected with the center, as my accuser himself has admitted, I had called back the Vice-admiral of the red, the French fleet might either have formed their line complete, and have come down upon my fleet into order of battle, or (what I had still greater reason to apprehend) might have gone off to

gether; for, even as it was, the enemy's van, instead of coming close to action; kept their wind, and passed hardly within random shot.

My accuser next asserts, as an aggravation of his former charge,

"In a regular line, on the tack which approached the British sleet; all their motions plainly indicating a design to give battle."

Both which facts have already been contradicted, by the testimony of even his own witnesses. That the enemy's fleet was not in a regular line of battle, appeared by the French admiral being out of his station, far from the center of his line, and next, or very near, to a ship carrying a viceadmiral's flag; and from some of their ships being a-breast of each other, and in one as they passed the English sleet, with other apparent marks of irregularity: indeed every motion of the French fleet, from about nine, when it went on the starboard tack, till the moment of the action, and even during the action itself, I apprehend to be decifive against the alledged indication of deligning battle: for, if the French admiral had really designed to come to action, I apprehend he never would have got his fleet on the contrary tack to that on which the British fleet was coming up to him, but would have shortened fail, and waited for it, formed in the line on the same tack; and even when he did tack towards the British fleet, the alledged indication is again directly refuted,

by the van of the French fleet hauling their wind again, instead of bearing down into action, and by their hoisting no colours when they

began to engage.

Notwithstanding these incontrovertible truths, my accuser imputes it to me that a general engagement was not brought on; but it is evident, from the testimony of every witness he has called; that a general engagement was never in my choice; and that, so far from its being prevented by my not having formed the line of battle, no engagement, either general or partial, could have been brought on, if I had formed it: indeed; it is a contradiction in terms, to speak of a general engagement, where the fleet that has the wind, tacks to pass the ficet to leeward on the contrary tack.

Such was the manner in which, after four days pursuit, I was at last enabled, by a favourable shift of wind, to close with the sleet of

France.

And if I am justifiable on principle, in the exercise of that discretion which I have been submitting to your judgment, of bringing on, at all events, an unwilling enemy to battle, I am certainly not called upon to descend to all the minutize of consequences resulting from such enterprize; even if such had ensued, my accuser has afferted, but which his own witnesses have not only failed to establish, but absolutely refuted. It would be an infult on the understanding of the Court, were I to offer any argu= ments to shew, that ships which engage without a line of battle cannot so closely, uniformly, and mutually [S] 2

276] ANNUAL REGISTER, 1779.

tually support each other, as when circumstances admit of a line being formed; because it is self-evident, and is the basis of all the discipline and practice of lines of battle: but, in the present case, notwithstanding I had no choice in making any difposition for an attack, nor any possibility of getting to battle otherwise than I did, which would be alone sufficient to repel any charge of confequent irregulacity, or even confusion, yet it is not necessary for me to claim the protection of the circumstances under which I acted; because no irregularity or confusion, either exitted or has been proved; all the chacing thips, and the whole fleet, except a ship or two, got into battle, and into as close battle as the French fleet, which had the option by being to windward, choic to give

The vice-admiral of the blue himself, though in the rear, was out of action in a short time after the Victory; and so far from being left to engage fingly and unsupported, was passed, during the action, by three ships of his own division, and was obliged to back his mizen topfail to keep out of the fire of one of the largest ships in the fleet, which must have continued near him all the rest of the tune he was passing the French line, as I shall prove she was within three cables length of the Formidable, when the firing ceased. Please to read the next article.

Judge Au vocate. The second ar- dient) without throwing them into ticle of the charge is, " That after the utmost confusion.—Sir John " the van and center divisions of Ross, who very gallantly tried the " the British fleet passed the rear " of the enemy, the admiral did court of the momentary necessity

" ble upon the enemy with those " two divisions, and continue the " battle; nor did he collect them " together at that time, and keep " lo near the enemy as to be in " readiness to renew the battle, " as foon as it might be proper; " but, on the contrary, he stood " away beyond the enemy to a " great distance before he wore to " stand towards them again, leav-" ing the vice-admiral of the blue " engaged with the enemy, and " exposed to be cut off."

The Admiral. Sir, In answer to this article, the moment the Victory had passed the enemy's rear, my first object was to look round to the position of the fleet, which the smoak had till then obscured from observation, in order to determine how a general engagement might best be brought on after the fleets should have passed each other. I found that the viceadmiral of the red with part of his division had tacked, and was standing towards the enemy with topgallant sails set, the very thing I am charged with not having directed him to do; but all the rest of the ships that had got out of action were still on the starboard tack, fome of them dropping to leeward, and 'feemingly employed in repairing their damages:—The Victory herfelf was in no condition to tack, and I could not immediately wear and stand back on the ships coming up a-stern of me out of the action (had it been otherwise expedient) without throwing them into experiment, having informed the " not immediately tack and dou- he was under of wearing back again

gain to prevent the consequences have mentioned, makes it unceffary to enlarge on the probae effect of such a general ma-zuvre with all the ships a-head. deed, I only remark it as a congly relative circumstance, apsaring by the evidence of a very ole and experienced officer, and r no means as a justification for wing stood away to a great difnce beyond the enemy before I ore, because the charge itself is rofly false in fact.
The Victory had very little way

hile her head was to the fouthard, and although her damages ere considerable, was the first ip of the center division that got ound towards the enemy again, nd fome time before the rest were ole to follow her; fince even as was, not above three or four ere able to close up with her on e larboard tack; so that had it ven been practicable to have wore oner than I did, no good purpose ould have been answered by it, nce I must only have wore the oner back again, to have colcled the disabled ships, which ould have been thereby left ftill

rther a-stern.
The Formidable was no otherrife engaged with the enemy dug this thort interval, than as eing in the rear, which must alays necessarily happen to ships' that fituation, when fleets enage each other on contrary tacks, nd no one witness has attempted o speak to the danger my accuser omplains of, except his own capin, who, on being called upon fix the time when such danger as apprehended, stated it to be efore the Formidable opened her re,-which renders the applica-

tion of it as a confequence o second charge too absurd to der a refutation. Now please to the third, Sir.

Judge Advocate. The third ticle of the charge is, " That " the vice-admiral of the " had passed the last of the " my's ships, and immedi " wore and laid his own i " head towards the enemy a " being then in their wake, at a little distance only, " expecting the admiral to " vance with all the ships to " new the fight; the admira on not advance for that pur " but shortened sail, hauled: " the fignal for battle; nor d " at that time, or at any " whilft standing towards the " my, call the ships togethe " order to renew the attacl " he might have done, par " larly the vice-admiral of th " and his division, which ha " ceived the least damage, " been the longest out of a " were ready and fit to rene " were then to windward, " could have bore down fetched any part of the F: of fleet, if the figual for battle " not been hauled down; " the faid Admiral Keppel " availed himself of the figns " pointed by the thirty-first " cle of the Fighting Instruct " by which he might have on " those to lead, who are to " with the starboard tack " board by a wind, which : " was applicable to the oci " for renewing the engage " with advantage after the P " fleet had been beaten, " line broken, and in diford

2-S] ANNUAL REGISTER, 1779.

u the utmost in his power to take, link, burn or destroy the

" French deet, that had attacked the British deet."

The summeral Sir, As foon as I had were to frand towards the encine, I hauled down the fignal ter baccie, which I judged improper to be kept abroad till the ships could recover their flations, or at lead get near enough to support cach other in action; and in order to call them together for that purpote. I immediately made the fignal to term the line of battle ahead, a cable's length afunder, and the V clary being at this time ahead of all the center and red divition, I embraced that opportunity or unbending her maintop-fail, which was totally unserviceable, and in doi. g which the utmost expedition was used, the ships a-stern of me doing all they could in the mean time to get into their stations, to that no time was loft by this negeilary operation.

The Formidable was a-head of the Victory during this period; it was her ilation in the line, on that tack; yet at the very moment acculer dares to charge me with not calling the ships together to renew the attack,—he himself, though his thip was in a manageable condition, as has appeared by the evidence of his own captain, - and though he had wore, expecture (as he fays) the battle to be renewed, quicted his station in the treat of that line of buttle, against tox which was flying, ye conceive ward of me on the starin it inch, while I was advanc-_ ... the enemy, and never came

into the line during the rest of the

day.

In this fituation I judged it neceffary that the vice-admiral of the red, who was to windward, and pushing forward on my weatherbow with fix or seven ships of his division, should lead on the lasboard tack, in order to give time to the ships which had come last out of action, to repair their damages; and get collected together, and the fignal appointed by the thirty-first article of the Fighting Instructions not being applicable, as the French fleet was so nearly a-head of us, that by keeping close to the wind we could only have fetched them, I made the Proserpine's signal, in order to have, dispatched Captain Sutton with a message to Vice-Admiral Sir Robert Harland, to lead the fleet on the larboard tack; but before he had left the Victory with the orders he had received, the French fleet wore and stood to the fouthward, forming their line on the starboard tack, their ships advancing regularly out of a collected body, which they had got into from the operation of wearing, and not from any disorder or coususion; though had such disorder or confusion really existed, I could have derived no immediate advantage from it, not having a sufficient force collected to prevent their forming, by an attempt to renew the attack. The Victory was at this time the nearest ship to the enemy, with no more than three or four of the center division in any fituation to have supported her, or each other in action; the vice-admiral of the blue was on the starboard tack, standing away from

from h's station, totally regardless of the signal that was slying to form the line; and most of the other ships, except the red division, whose position I have already stated, were far a-stern, and sive disabled ships at a great distance on the lee quarter.

Most of these facts are already establed by my accuser's own evidence; and I shall prove and confirm them all by the testimony of that part of the sleet, whose situations will enable them to speak

to them with certainty.

I trust they will convince the court, that I had it not in my power to collect the fleet together to renew the fight at that time, and that from their not being able to follow me, I confequently could not advance with them; that I did not shorten fail, but only shifted an unferviceable one when I was far a-head, and the thips unable to follow; that I did not haul down the fignal for battle till it ceased to be capable of producing any good effect; that during the whole time I flood towards the enemy, I endeavoured by the most forcible of all fignals, the fignal for the line of battle, to call the thips together, in order to renew the attack; that I did avail myfelf of the ships that were with the vice-admiral of the red, as far as circumstances admitted; and that I therefore did do the utmost in my power to take, fink, burn, and destroy the French sleet, which had attacked the British Seet. Read the fourth article if you pleafe.

Judge Advocate. The fourth article of the charge is, " That, " instead of advancing to renew "the engagement, as i ceding articles is and as he might and have done, the adm and made fail directly enemy; and thus he whole British steet a them, which gave the portunity to rally m and to form again int battle, and to stand British steet.

The Admiral. Sir, Th fleet having wore, and form their line on the tack by the wind, which had kept would have brou close up with the center foon afterwards edged awa ing towards four or five o abled thips, which were tance to leeward, and w dent intention to have t them from the rest of the to prevent which, I made nal to wear, and flood their van in a diagonal c give protection to thefe thips, keeping the fignal line flying, to form and co fleet on the starboard tack I had thus been obliged my disposition before Cap ton left the Victory with mer message, I dispatched ! orders to the vice-admiral o to form with his division at a a-stern of the Victory, to

[S] 4

280] ANNUAL REGISTER, 1779.

rear, and to keep the enemy in check 'till the vice-admiral of the blue should come into his station with his division, in obedience to the fignal. These orders the viceadmiral of the red instantly obeyed, and was formed in my wake before four o'clock; when finding that while by the course I steered to protect the crippled ships, I was nearing the enemy, the viceadmiral of the blue still continued to lie to windward, and by so doing kept his division from joining. me, I made the fignal for ships to windward to bear down into my wake; and that it might be the better distinguished (both being fignals at the mizen peak) I hauled down the figual for the line for about ten minutes, and then hoisted it again. This fignal for ships to windward to bear down he repeated, though he had not repeated that for the line of battle; but by not bearing down himself, he led the ships of his division to interpret his repeating it, as requiring them to come into his wake instead of mine.

Having now accomplished the protection of the disabled ships, and the French fleet continuing to form their line, ranging up to leeward parallel to the center division, my only object was to form mine, in order to bear down upon them to renew the battle: and therefore, at a quarter before five, after having repeated the fignal for ships to windward to bear down into my wake with no better effect than before, I sent the Milford, with orders to the vice-admiral of the red to stretch a-head and take his station in the line, which he instantly obeyed; and the viceadmiral of the blue being still to

windward, with his fore topfail unbent, and making no visible efforf to obey the fignal, which had been flying the whole afternoon, I sent the Fox at five o'clock with orders to him to bear down into my wake, and to tell him that I only waited for him and his divifion to renew the battle; and while I was dispatching these frigates, having before hauled down the fignal to come into my wake, I put abroad the fignal for all ships to come into their stations, always keeping the fignal for the line flying. All this producing no effect on the vice-admiral of the blue, and wearied out with fruitless expectation, at seven o'clock I made the fignal for each particular ship of the vice-admiral of the blue's division to come into her station; but before they had accomplished it, night put an end to all further operations.

It may be observed, that amongst these signals I did not make the Formidable's.—If the vice-admiral chuses to cosider this as a culpable neglect, I can only say that it occurred to me, to treat him with a delicacy due to his rank, which had some time before induced me to send him the message by Captain Windsor; the particulars of which he has already faithfully related to the court.

I trust I have little reason to apprehend that you will be inclined to consider my conduct, as I have stated it, in answer to this sourth article of the charge, as disgraceful to the British stag! After I had wore upon the same tack, with the enemy, to protect the disabled part of my sleet, and to collect the rest together, there would have been little to do to renew the

" the contrary, he led the Bi

" the enemy.

"By these instances of mis duct and neglect a glorious portunity was lost of doin most essential service to state, and the honour of the tish navy was tarnished."

on the enemy, if my accuser d led dawn his divition in obeence to the repeated fignals and lérs which I have flated. The ctory never went more than two ots, was under her double reefed ofails and forefail, much thated, which kept the ships that re near her under their topfails, d fuffered the French fleet, nich might always have brought e to action, if they had inclined do it, to range up parallel with e center under very little fail: d it was to protect the five difoled thips above mentioned, and give the rest time to form into me order, that I judged it more rpedient to Rand as I did, under at easy fail, than to bring to, ith my head to the fouthward, he court will judge whether it as possible for any officer in the rvice, really to believe that thefe perations could give the appearnce of a flight, or furnish a raonal pretence to the French adniral to claim the victory, or pubth to the world that the British ficet ad run away. Please to read the

ttle, but bearing right down

Judge Advocate. The fifth article of the charge is, "That in the morning of the 28th of July, 1778, when it was perceived that only three of the French fleet remained near the British in the fituation the whole had been in the night before, and that the rest were to leeward at a greater distance, not in a line of battle, but in a heap; the admiral did not cause the sleet to pursue the slying enemy, nor even to chace the three ships that sled after the rest; but, on

ext article.

The Admiral. Sir, On the m ing of the 28th of July, the Fr fleet (except three fail, which feen on the lee-quarter) was visible from the mast heads of of the ships of the British and at a distance from me, w afforded not the imallest pro of coming up with them, especially as their ships, the certainly much damaged in hulls, had not apparently ful much in their masts and whereas the fleet under my mand was generally and gr mattered in their maits, y and rigging, and many of unable to carry fail; as to three French ships, I made fignal at five o'clock in the a ing for the Duke, Bienfa Prince George, and Elizabet give them chace, judging the be the properest ships for that pole; but the two last wen able to carry fufficient fail to even countenance to the pu. and looking round to the ge condition of my fleet, I fi was in vain to attempt either neral or a partial chace. my acculer does not ventu. alledge that there was any pro lity, or even possibility, of a it with effect, which deftroy whole imputation of his charge.

Under these circumstances I could not mistake my duty,

z now offered to the court · miwers to all the charges .eu against me; I shall proa call my withesses to supand answers, and of course if ite the charges in the order - ion they have been made. man call them not as a prisoner monly calls his witnesses, to pose them to those which appear r ine prosecution—quite the con--ary,-I bring them to support, contirm, enlarge, and illustrate almost the body of the evidence which has been given by my acculer.

But, before I sit down, I must discharge a duty which I seel myfelf to owe to the reputation of a in service highly and justly favoured in this country, and which can never suffer in its honour, but the nation itself will suffer in proportion.

- 145

I have heard it asserted, and contended for during this trial, it as an essential and indispensible right of a captain of a man of war, to make additions and alterations in the ship's log-book, even after the original entries had been seen, examined, and approved by himself. I have seen this attempted to be excused, nay, even justified and boasted of in a case where the alterations and additions introduced matter of criminal and capital offence, acknowledged by the party to have been introduced months after the original entries were inerted; and with knowledge that a criminal charge had then been exhibited against the person in whose trial they were first heard of. I have heard this attempted to be defended where the most material of the alterations and additions were certainly not supported by fact. Upon

occasion, furely, I to enter my protest which subjects the e King's ships, that in, if not always a ways a genuine nartransactions, when fresh and recent, anot be mistaken, be misrepresented, the never to be al-

tered after the entries have been

made and authorized.

This is the case of the first alteration of the log-book. - Another alteration has fince appeared in another log-book! that of the profecutor himself! little differing from the former, except that the person that has actually made it does not appear to justify it; that the witness to it states it to have been made foon after the engagement, and that the destruction of fome leaves, and substitution of others, feems to be rather made for the purpole of exculpating another person than of criminating me. But whatever the intention was, the thing is equally unjustifiable in all respects. It tends equally to destroy all fort of use in these kind of records, and to render them highly fallacious, and posibly highly dangerous. I do not dwell on all the particulars of that unhappy business!—It is painful to me, and the nature of the transaction is but too visible. There has always been, and probably will always be, fomething florenly in these books, and the masters have thought they have more power over them than is proper. There is, however, a great difference between inaccuracy and malicious design. There is a difference between the correction or fapply of indifferent matters, and

the cancelling of pages, a ting in others;—omitting, to, and varying the most in things for the most importa poses.

It is also proper for me two or three facts to the c order to place the conduct accuser in its proper point of

204 j evidence

evidence; but when I go out of the court, I will shew it to any gentleman who is desirous to see it...

Another thing more, and I have donc.

Sir Hugh Palliser thought proper to address the public by a printed newspaper, dated the 4th of November, principally, as it seems, for the sake of asserting that he was not, and infinuating that I was, the cause of the French sleet not being re-attacked in the afternoon of the 27th of July.

In that paper he positively denies that he received any message by Captain Windsor saying a word about renewing the attack, and he calls the contrary assertion a salse one.—Captain Windsor has been called, and he has proved, that at sive o'clock he received from me, and at about half past sive he delivered to Sir Hugh Palliser himself, the message to come with the ships of his division into my wake, and that I only waited for him to renew the attack.

This account of Captain Windfor has been attempted to be difcredited by the prosecutor, who has asked Captain Bazely, and I believe one or two more, whether it was not at a later hour than Captain Windsor named.—I shall for that reason call witnesses to confirm Captain Windsor in all the circumstances of his testimony.

I owe it to him, as an honourable man, to shew that his evidence is correctly true.

I will prove that the message sent by me, was precisely the message delivered by him at the time he speaks to, and that it was exactly repeated by him to the viceadmiral,—yet, after his own ears had heard, at half past five in the afternoon of a summer's day, that I waited only for him and his division to renew the attack; this gentleman applies to me, ignorant, negligent, cowardly, as he now represents me, to certify his good behaviour, and to support his character against the malice of his enemies.

He applies to me to fign a paper, containing many particulars directly contrary to the evidence you have heard upon oath, and which I will also shew to any one +.

At present I have only to do with one of those particulars. That paper (concurring with his attempts in this trial) con'ains this assertion, "that the calling his, "and vice-admiral Sir Robert" Harland's divisions, into my wake, in the evening, was not "for the purpose of renewing the battle at that time, but to be in readiness for it in the morn-"ing." This my accuser had the considence to tender to me to sign.

To lign an affertion of a fact abfolutely unfounded; the contrary of which I know to be true, and the contrary of which Captain Windsor has proved, and my accuser knew to be true.

How that gentleman felt when this came out I know not; but if I could conceive myself in the same situation, I know that it would be difficult to express what I should feel. I cannot wish so heavy a punishment to my worst enemy.

The examination of evidence in the admiral's defence continued to the 8th of Feb. when it was finally closed; and Sir Hugh Palliser the

286] ANNUAL REGISTER, 1779.

The Address of Sir Thomas Pye, President, on delivering the Admiral his sword.

Admiral Keppel, It is no small pleasure to me to receive the commands of the Court I have the honour to preside at, that, in delivering you your sword, I am to congratulate you on its being restored to you with so much honour; hoping ere long you will be called forth by your Sovereign to draw it once more in the desence of your country.

Copies of Letters between the Hon.

Admiral Keppel, the Secretary to
the Admiralty, the Judge Advocate, and Sir Hugh Palitier.

Admiralty-office, 9 Dec. 1778. SIR,

Sir Hugh Palliser, vice-admiral of the blue squadron of his Majesty's fleet, having in his letter of this day's date transmitted to my Lords Commissioners of the Admiralty, a charge of misconduct and neglect of duty against you, on the 27th and 28th of July, 1778, in divers instances therein mentioned, and defired that a court martial may be held for trying you for the same; and their Lordships intending that a court martial shall be held for that purpose, I have it in command from them to fend you herewith a copy of the faid charge, that you may be preparing for your defence. -

I have the honour to be,
Sir,
Your most obedient,
humble servant,
Ph. Stephens.
Smble. Augustus Keppel,

Monble. Augustus Keppel,

Admiral of the Blue, &c.

Audley-square, Thursday night, Dec. 10, 1778.

SIR,

The very extraordinary contents of your letter of last night made it impossible for me on a sudden to make any other answer, than a bare acknowledgment of having received it; but it has not required much time to determine me, in justice to my own reputation, to inform you, that I am willing to meet a court martial whenever the Board of Admiralty shall think

At the same time, Sir, I desire you will represent to the Lords Commissioners my utter assonishment at the countenance their Lordships have so far given to this proceeding, as to resolve, on the same day on which such a charge is exhibited, to order a court martial against the commander in chief of the sleet, on an attack from an inferior officer, under all the very peculiar circumstances in which Sir Hugh Palliser now

stands.

I am, Sir, your humble servant.

A. K.

Pb. Stephens, Esq.

Letter from PH. STEPHENS, Esq;
Admiralty-office, 11th Dec. 1778.

I received yesterday asternoon your letter of the 10th instant, acknowledging the receipt of mine of the 9th, transmitting a copy of the charge exhibited against you by Vice-admiral Sir Hugh Palliser; and this morning I received your letter, dated last night, intimating that you are willing to meet a court martial whenever the Board of Admiralty shall think proper

or to order one; and having or loss of time laid the same my Lords Commissioners of Admiralty, I am commanded eir Lordships to acquaint you, they propose to order a court al to be assembled on Thursthe 7th of January next, if hink you shall be ready with evidence by that time; but t, their Lordships will order it held on a later day.

to the aftonifament you exat the countenance you contheir Lordships have given is proceeding, by refolving, he fame day on which the e was exhibited, to order a martial, their Lordships nand me to acquaint you, they know of no instance in the Board of Admiralty, receiving a specific charge of a nature, figned by an officer ank ferving under the party ed, and accompanied with uest for the assembling a court ial thereupon, have delayed ng to a resolution to order nor would they have thought felves justified, if they had ited to take the necessary steps ringing the matter to an early egal decifion.

Your most obedient, humble fervant,

> PH. STEPHENS. Kessel togue.

le. Admiral Keppel, town.

Andley-square, 16th Dec. 1778.

SIR,

ly counsel having informed that before they can give the advice in their power upon charge of Sir Hugh Pallifer, it

will be necessary for them the whole of my instruction correspondence with you that it may be necessary to duce the whole or part of before the court martial, I you will acquaint the Lord missioners of the Admiralty with.

I am, Sir, Your humble fervant

Pb. Stepbens, Efq.

Mr. Stephen's letter in at mine of the 16th.

Admiralty-office, 18th Dec S I R,

I received, and loft no laying before my Lords missioners of the Admiralt letter of the 16th instant, ing the communication (instructions, and correspo with me, to your count perhaps to the court mart is to be affembled for you I was in hopes I should ha enabled by this time to he you their Lordships answers but as the instructions to you allude are of a very fe ture, and were given in pu of his Majesty's command. fied by one of his Princi cretaries of State, it is n that their Lordships should his Majesty's farther con before they can with p give you a full answer letter. Votes of Thanks of the two Houses of Augustus Keppel.

(COPY) SIR,

T Have the satisfaction to have received the commands of the · House of Lords, nemine Dissentiente, to transmit to you the thanks of their lordships for your conduct in defending this kingdom, protecting its trade, and maintaining the honour of the British slag, expressed in the fullest and highest sense of applause.

No private voice can add to fo fplendid an encomium: --- permit me, however, to congratulate you on this distinguishing mark of spprobation, which a grateful coontry confers on your zeal and ment in the service of the public.

I have the honour to be,

Sir,

Your most obedient, humble fervant, THURLOW.

Ormond-street, 16 Feb. 1779. To the Hon. Adm. Keppel.

Die Martis, 16 Februarii, 1779.

Ordered, nemine Diffentiente, by the Lords Spiritual and Temporal in Parliament assembled, That the thanks of this House be given to the Hon. Admiral Augustus Keppel, for his distinguished courage, conduct and ability in defending this kingdom in the course of the last summer, effectually protecting its trade, as far as his command extended, and more particularly for his having gloriously upheld the honour of the British slag on the 27th and 28th of July last; and Parliament, and of the City of that the Lord Chancellor do cause London, to the Hon. Admiral the same to be transmitted to the said admiral.

> Ashley Cowper, Cler. Parliamentor.

My Lord,

The very distinguished notice which the House of Lords has been pleased to take of my services in the course of the last summer, confers on me the highest honour; the

the advantages which their lordships have thought worthy of their
thanks, are due to God's blessing,
to the gallant behaviour of many
great and able officers who have
served in the seet, and to the bravery of the seamen. I can only
say, that the warmest gratitude for
this great honour and favour will
make me ever desirous of meriting
it by the most strenuous endeavours
to serve my country.

I beg leave to return your lordfhip any best thanks for the flattering and polite manner in which you have been pleased to communicate to me the resolution of the House.

I have the honour to be,
with much respect,
Your lordship's most obedient,
and very humble servant,
A. Keppel.

Andley-Square, Feb. 17, 1779. To the Rt. Hon. Lord Thurlow, Lord Chancellor.

(COPY)

Jouis 18º Die Februarii, 1779.

Admiral Keppel being come to the House; Mr. Speaker acquainted him, that the House had, on the 12th instant, ordered that the thanks of this house be given to him, for his distinguished courage, conduct, and ability, in defending this kingdom in the course of the last summer, effectually protecting its trade, and more sparticularly for his having glorioully upheld the honour of the British flag on the 27th and 28th of July last; and Mr. Speaker gave him the thanks of the House --cordingly, as followeth, win.

Admiral Keppel,
This House have done you the
distinguished honour of ordering

their thanks to be give an honour never cont upon extraordinary me thanks it is my duty to cate to you in your place

After having fat so I chair, I hope it is unn declare that I have b happy to obey the ord House; and I have no cular satisfaction in that—Indeed, every gene must feel satisfaction, day of honourable acqueeds to the day of se and this pleasure was, never more general, not cere, than upon the prsion.

You, Sir, was calle Sovereign, with the of all descriptions of z cularly these of your own to a station of the utmo and of the highest The fafety of this co the honour of the Britist trufted in your hands was expected enemy coaft; and, notwithsta most able discharge of and momentous truft, ye culed of milconduct and But, after a ver full investigation, by me respect the best qualifies that charge appeared grounded and malicious judgės have unanimousi nourably acquitted you, further added, that yo on the 27th and 28th d last, was that of a judic and experienced office then it cannot be matter that extraordinary mark and efteem are thewn character. We now certainty that our coi [T] 4

296] ANNUAL REGISTER, 17.79:

you was not misplaced; and we entertain a well grounded hope that there still remain amongst the naval officers talents and abilities fully equal to this dangerous criss.

Amidst this general joy, I cannot help repeating the singular pleasure which I feel in giving you the thanks of this House, which I now do, for your distinguished courage, conduct, and ability, in desending this kingdom in the course of the last summer, effectually protecting its trade, and more particularly for your having gloriously upheld the honour of the British slag on the 27th and 28th of July last.

Upon which Admiral Keppel faid,

Mr. Speaker,

It is impossible, by any expressions I can use, to do justice to my feelings of gratitude to the House, for the honour they have done me by their approbation of my conduct.

The good opinion of my fellow citizens, expressed by the representatives of the nation, cannot but be received by me as a most acceptable addition to the satisfaction I felt in the recent sentence, to which you have been pleased to allude, of a court martial; the result of a full and deliberate inquiry, expressive of their sentiments of the subject referred to their examination, in terms equally honcurable to themselves and an e.

The pleasure I feel his moment is not a little here tened by the unavoidable recollection of the very different emotions I felt when I was last in this House, and in this place.

I should be guilty of great injudice, if, on an occasion like the

present, I neglected to inform this House, that my efforts for the public service, in the instances in which the House has been pleased to distinguish them, were most zealously seconded by many as gallant and able officers as the navy of England ever produced; to whose attention and spirit, next to the divine providence, the success of these efforts ought to be in a great measure ascribed.

I cannot fit down without returning to you, Sir, personally, my particular thanks, for the very obliging terms in which you have executed the commands of the House.

On Saturday the 20th of Feb. the committee appointed to present Admiral Keppel with the freedom of the city, having waited on him at his House; Mr. Crosby, the senior alderman, addressed him in the sollowing manner:

" Admiral Keppel,

"The citizens of London, a-midst the acclamations of a grateful people, beg leave to express their joy on your honourable acquittal from a very heavy and severe charge of neglect and misconduct on the 27th and 28th of July last; a charge which appeared on your trial to be ill-founded and malicious.

"The committee, Sir, who now have the honour to wait on you by order of the lord mayor, aldermen, and commons of the city of London, in common council assembled, are happy in this opportunity to testify their approbation of your conduct in the many signal services done to your country.

Extract of a Letter from Li General Burgoyne to bituents, upon bis late Rej with the Gorrespondence bim and the Secretaries of lative to bis Return to As

N the 9th of Octobe Lieut. Gen. Burga figned the command of the regiment of light dragos government of fort Williams appointment on the Affaff. As this refignation to have been occasioned cumflances of a very extra and fingular nature, a thought it proper, in a this kind, to lay before the correspondence at large passed between him and cretaries of War, togeth

fuch parts of his letter to his confinuents, as tend to explain more fully the motives of his conduct on that occasion .- After briefly flating his political fituation previous to his being first fent to America, and the steps by which the command of the troops deftined to make a junction with Sir William Howe naturally devolved to him, the General proceeds in the following manner:

" With those claims, Gentlemen, to the countenance and goodwill at least of government, I proceed to relate the treatment I re-

ceived.

I had expressed, in my priwate letter from Albany to the Secretary of State, my " confi-" dence in the justice of the King " and his councils to support the general they had thought pro- per to appoint to as arduous an " undertaking and under as pof-« sitive a direction as a cabinet " ever framed." I had in the fame letter given an opinion of the enemy's troops, upon near inspection of their numbers, appointment and discipline.

Furnished with these materials, and supported by the fidelity with which I had acted, it was not thought expedient I should have access to the King. What other facts might have been cleared up by my interview, and were wished not to be cleared up, the Secretary of State* only can inform the world. Direct means of effecting my exclusion from the King's prefence were not practicable; for

the case was unprecedented. ' pretext adopted was as follows:

It was fuggested that an quiry should be made by a be of general officers into the ca of the miscarriage of the north expedition; and a court etiq was invented, the foundation which in reason or precedent. I not acquainted with, wie. that persons whose conduct was so in question, should not appea Court pending the enquiry. difficulty of the competency fuch a court was then fpoke or perhaps thought of, by any the dark deligners of my 1 the measure therefore could ther affect his Majesty nor Court with any idea of fai hardship than the delay of a days to my appearing in his fence.

This arrangement had prepared by the Secretary of S in the interval between the n of my arrival at Portime which he received in the ever and my vifit to him in Pallwhich was before noon the

It will naturally be supp that the flate in which I flood the first subject of conversa on the contrary, I was rece with much apparent kinds explanations passed, but they friendly; I was heard attenti through a report of all the t actions subsequent to the Con tion of Saratoga; and I was by degrees, and without fulp of infidioufacts, to the most c

APPENDIX to the CHRONICL

ntial communication, on my rt, of facts, observations, and inions, respecting very important

jects.

If the measure of denying me cess to the king had been undeled before, this conversation was a nature to produce a decision; it opened truths respecting the positions of the people of Amea, and the state of things there, by different from the ideas which is now known, from the line ten by the Secretary of State the late enquiry) were prevalent the governing councils of this agdom.

It was not till after the matter my communication was exhaustthat the Secretary of State we from his pocket an order, at I should prepare myself for inquiry: at which I expressed fullest satisfaction, till he folred the order with the informamed, that I was not to appear at

irt.

Having pitched upon this exlient for no other end than to exde me from the presence of my rereign, he could hardly be in n about the event. If the geneofficers appointed for a Board Enquiry, thould coincide with notion that my parole was of h a nature as to bar their prodings, this would put off my efs to the King to a very long : but if the general officers uld not enter into these ideas, had a resource left. He could be unapprized, that fuch a rt was held by high authorities the law to be illegal; and if I s not to fee the King until an gal or questionable court should make a valid report, likely to enjoy that howay I was not to have of an enquiry; but he the advantage of the prin order to that the James's against me. I made apparent beyond of doubt, by every pa sequent conduct: but a though I saw a disgraced me, I was not able the full extent of it.

Thus prevented in appeal to the King, and tal reason to believe, th fecured against me, at not unthought of to d a voice in parliamen law officer of the cro the form of legal doubt: methodical argument competence to any ci function: but it was eafy to exclude me fro vice, as it had been to d countenance at court; : only shewed by that tempt, what their moti those attempts in which been more faccelsful.

Though the late time from, and the absence of Howe and Sir Guy C: were supposed to be nished plausible argume poning a parliamentary the summer of 1778, is the temper of the Houmons was inclined to ad ensuing meeting.

In the beginning received the conditions nexed. [No. 1.] Tho the King's name, it was a letter of the cabinet remained no longer a d.

mind, that my ruin was made a measure of state. Few adepts in the science of oppression could have formed a delign better fitted to its end; and it was likely to be successful, whatever part I should take. If I went — my character was lost irretrievably — the falsehoods and aspersions that have since been refuted in the face of those who propagated them, were already gone forth: the numbers of my aimy, and of that opposed to me, were already grossly militated; contradictory charges of floth and precipitancy, as the temper of men at the moment seemed inclined to either, were supported with uniform perseverance: - my friends were stated to be my accusers; and even my integrity, with regard to pecuniary trusts, was glanced **2**t.

If I stayed, the King's order (as it was fallaciously called) was a specious topic; and it was not difficult to forelee, that it would be put into the hands of gentlemen that well knew how to make the utmost of it by art and opportunity. My answer [No. 2.] drew from the cabinet their second letter [No. 3.]; and I give them ' the satisfaction of knowing, that I felt all they could wish I should feel from the repetition of their I saw in it at once a ieverity. doubt of my veracity respecting my health, and the most contemptuous difregard of all other principles upon which I had claimed a right of staying in this country. Fundamental principles, I thought them, of justice and generosity due from all governments to those who serve them zealously, and in some governments held

doubly due to such as in their zeal have been unfortunate.

It must be observed, that the ministry kept a profound filence, both to myself and the public, respecting the ratification of the convention. The same silence they maintained even in parliament long after its meeting. They were perfeetly apprised, that the enemy had some time before made the want of that ratification the ground of their refusing to give effect to the part of the treaty which was favourable to the troops. They knew also, that one of the principal objects of my return to England was to negotiate in behalf of that deferving body of foldiers and subjects. I heir desire of my delivering myself into captivity, at juch a time, and under fuch circumstances, justified something more than a suspicion, that in my abience it was intended either to lay to my charge some breach of faith with the enemy; or to renounce the treaty from the beginning, and by my furrender, to transfer the act from the nation to my per-These are the only two cases which I believe can be produced from the history of nations, wherein an officer, who had made a convention with an enemy, had been delivered up to them. The ratification of the treaty afterwards is no proof that fuch intentions did not then exist.

I will make no farther observations, Gentlemen, upon this first correspondence between the Waroffice and me; nor should I have troubled you with these, but that great pains are taken to divert the attention of the public from the pretended order, to my behaviour

fince

APPENDIX to the CHRONICLE.

se the receipt of it. I in no e feek to evade the public judgnt upon any thing I have done: I claim from the impartial and candid, a confideration of the tended order itself, in its prinal parts, wiz. the ground upwhich it is founded; the nofpecies of cruelty which it poles within the power of the wn; and laftly, the exerof such doctrine by men who e parties, and against the man om they were called upon by ir station and their honour to front.

Nothing farther passed during recess of parliament. I availmyself of a discretionary power, I had a right to do, and I made no secret, that had a direct orbeen sent me, I should have all my commissions at his Ma-

y'a feet.

During the last fession of parliant, an inquiry was instituted. e detail of the attempts made the ministry to defeat it, is too orious to be necessary upon this afion. They at last contrived. t it should be left imperfect: in spight of every managent, it had answered my pure fo far, as to fix upon record ody of evidence, that I would exchange for all that power ld bestow. It is a justification misfortune by the voice of hor. It is there apparent, what army under my command, felt most and saw best, thought ny actions. — The affections of my lant comrades, unfhaken in every l, labour, famine, captivity, or th, enable me to despite the ranir of a cabal, and all its confences.

The most important purp my return to England havin answered by this vindicat thought the facrifice of my missions, the fruits of the s part of my life, not to be fary. I know by experient I had to apprehend in pe health from an American t but I fcorned to plead it, scious of my integrity, I ab ed my public accounts to gorous ferutiny of office; took occasion publicly to c pedient to deliver me back enemy, and a politive order be fent me for that purp should, as far as in me lay it.

I do not believe any m: knows me doubted of the fi of that intention. I am per the framers of the letter 24th September were part convinced of it. The ma embarked in the fituation in the year 1776, could har supposed to want fortitude dertako an American voy: the fituation in which I ma declaration. An order, the which I could have obeyed committing my bonour, we have effected my ruin. circumstances furnished me cure expedients; which I fh open.

Occasions were taken to my offences upon my Examples respecting my connexions need not be out, when I am addressing to any part of the county caster. But the principle ed far more wide; and the apprehension of farthe

302] ANNUAL REGISTER, 1779.

I could produce instances of hardship in the distribution of military preferments, that no impartial person will impute to any other cause than the kindness and
friendship of the parties to me.

that not a ship or a soldier could be spared from our internal despends from our internal

These instances of persecution, it was well known, affected me deeply. There were others yet

more irritating.

In the course of the summer, the apprehensions before entertained of an invasion, by the declaration of government became a certainty. Hardly a British subject could be found so low, so feeble, or even so profligate, as to be exempted from service; while uncommon premiums were raised by begging, and distributed to volunteers, the gaols, and even the feet of the gallows, were resorted to for other recruits.

In this declared dilemma, I know government were not strangers to my intention of fighting my own regiment as colonel; or, should its destination not admit the honour of meeting the enemy in that capacity, of effering my-felf as a volunteer in the ranks of any corps that might be more fortunately situated.

These several seelings, and many others incident to an oppressed man, were doubtless duly considered; for at the crisis when they could operate most forcibly, it was thought proper most to insult me; at the crisis when the King's servants openly announced,

be spared from our internal detence, a fentence of banishment was fent me, and even that not in an order, but a reprimand; —a submission to ignominy was required of me; for to put me wholly out of a capacity to draw my sword at such a moment, was virtually, in point of difgrace, to break it over my head. My enemies might have spared superfluous provocations. This alone would have sufficed to prove their fagacity, and to effect their purpose. Let it not be supposed they want knowledge of the human heart. There are among them, who can discern its recesses, and have the skill and the triumph to make a foldier's honour and fenfibility the instruments of his own destruction.

I could no longer brook the treatment I received. My letter of the 9th October to the Secretary at War, [No. 5.] contains my general fentiments."

Correspondence with Lord Barrington.

[No. 1.]
War-Office, June 5, 1778.
SIR,

The King, judging your prefence material to the troops detained prisoners in New England, under the convention of Saratoga; and finding in a letter of yours to Sir William Howe, dated April 9, 1778, " that you trust a short time " at Bath will enable you to re-" turn to America"," his Majesty

Paragraph of the letter from Lieutenant General Burgoyne to Sir William Howe, which was made the foundation of the above conditional order.

[&]quot;I need not expatiate upon the satisfaction I should feel at being put again in a situation to serve under you, as soon as my health will enable me.—I trust that a very short time at Bath will effect that purpose.

humility on my part, such of my
plaints as admit of representa-

My letter to Sir William Howe, erred to in your lordship's letwas writ in the fulness of zeal renew my fervice in arms the ing campaign. The fatisfacof facceeding in that applicawould have tended to my reery, or for a time might have rented my feeling an ill. ed of to animating a support, vifited by new and unexpected ieties, I have now recourfe only, far as the mind is concerned, to ear confciente, perhaps a more y. but, I trust, as efficacious an tance,

The present season of the y always favourable to me, gives the appearance, and indeed, fome degree the fenfation of hea But much care is still wanting reftore me to my former state. remedies preferibed me are rej regimen of diet, and repeated t to Bath: my intention, in co quence, was to remain fome in the country, to repair to] for a short time next month, to return thither for a much los fpace in the more proper (e2 the autumn. But whatever be the benefit of all or any pa. this plan, I am perfuaded, tha expole my constitution to the American winter, is in probab to doom me to the grave.

That I should not hesitate such an alternative, in circ stances of exigency, I am consist the King will admit, when in grace he shall recollect how of at his Majesty's call in this wa have relinquished private do and affection, more inpulsive u the heart than any we owe to istence. The purposes intimisfor my present attendance America, would, I fear, be a

different from fervices.

The army I commanded, cre lous in my favour, and attached me by the feries of conflicts misfortunes we have in communicational furtained, would not find mate confolation from my return in grace; and their disappoints could not but be enhanced by it an indication, that government

I have only to add, my trust that you will continue to me the friend of confidence with which you have always honoured me, and that ill write to me at full by the first opportunity, how I can be employed rve your views.

I have the honour to be, &c."

304] ANNUAL REGISTER, 1779.

the convention of Saratoga, or despaired of a ratification effectuating the redemption of that army; for they would not conceive it posfible, had the return of the troops been in view, that any perion would have advised the King to what then might have appeared for harsh an act as sending an infirm, calumniated, unheard complainant, across the Atlantic, merely to in-

spect their embarkation.

Your lordship will perceive the parts of this letter which apply to the council of the throne, from whence I am to suppose the order I have received originated, and in your justice and generosity you will guard me, my lord, from any supposable presumption of expostulating with the King in person. But I apply to the same qualities in your lordship's mind, for pointing out to his Majesty, independently of his council, other letters, among those transmitted to the Secretary of State, alledging other reasons, and those more prevalent than the attention to health, for my return to England; and permit me, my is his pleasure, that you return to lord, to add, that every one of them as soon as you can, without them receives tenfold weight from what has happened lately, for my continuance in England. The special reason upon which I chiefly rest at present, my lord, is a vindication of my honour.

Until that by full and proper trial is cleared to my Sovereign and Lieut. Gen. Burgoyne. to my country, I confess I should feel a removal from hence, though Correspondence with Mr. Jenkinson. enforced by the term duty, the feverest sentence of exile ever imposed; and when the time and circumstances of such removal are farther considered, that Britain is threatened with invasion, and that

ther thought it inexpedient to ratify after an enemy has fet my arm at liberty, I am forbid a share in her defence by the council of my own Sovereign.—After these considerations, can I, my lord, be deemed offensive if I venture to declare that so marked a combination of displeasure and hard treatment, would be more than I should be able, or perhaps ought to bear.

> My cause, my lord, thus committed to your office and character, I have only to add my reliance that you will do it justice, and the respect with which I have the honour to be,

&c. &c. &c.

Lord Barrington.

raing to America, and joining the cops, prisoners under the convenon of Saratoga, is confidered as a gleck of duty, and disobedience orders transmitted to you by the cretary at War, in his letter of h June, 1778.

I have the honour to be, &c. &c. &c.

(Signed) C. Jenkinson, mt. Gen. Burgayne.

[No. 5.]
Heriford-Street, O. 9, 1779.
S I R,
I received your letter acquaint-

to America, and joining the troops, prisoners under the convention of Saratoga, is confidered as a neglect of duty, and disobedience of orders transmitted to me, by the Secretary at War, in his letter of 5th June,

1778."

During a service of more than rty years, I have been taught, the rewards of two facceffive vereigns, to believe, that my litary conduct was held deferving more favourable terms than those ich are applied to it in the above ital. I have received from his sent Majesty in particular, reited and conspicuous testimonies diffinction and good opinion: I should have been the most grateful of men, if I had not felt, i sniformly endbavoured to mark warmest and most dutiful athment to his person, together à a punctilious perseverance in execution of all his lawful comnds,

Juder this fense of my past situa-, your letter, stated to be writby the King's command, canbut affect me most painfully.

Vot. XXII.

The time in which I am che with neg ect of duty, has been ployed to vindicate my own nour, the honour of the Bi troops, and of those of his jesty's allies, under my late a mand, from the most base and barous aspersions, that ever forged against innocent men malignity supported by power.

In regard to the second chi I must first observe that there two letters from the late Secri at War, upon the subject of return to America; and the you only state that of the 5t June, I conclude it is not me that the other of the 27th sh be suppressed, as it is explana

of the former.

The fignification of the Ki pleafare therein contained be clearly conditional, and the contion depending upon my judgment; I am unable to ceive by what possible construction to an be considered as difference, that I have not fulfille optional condition; and I am dy and desirous to meet the jument of a proper tribunal upon the as upon every other part of my duct.

In the mean time, Sir, I not told who it is that confi my taking advantage of my pa for the purposes I have done, neglect of duty, and breach of ders, and has so represented i his Majesty. But in this statistic ignorance concerning my enem I must say, as well from duty my Sovereign, as from justic myself, that they who have ab the considence of their grac master, by such a gross misre sentation, merit, and I trust meet with more of his displeas

[v]

general in the army, to render me the more clearly amenable to a court martial hereafter, and to enable me to fulfit my personal faith, should I be required by the enemy so to do.

I have the honour to be, &c.

The Right H.n. Charles Jenkinson, Secretary at War.

> [No. 6.] War-office, O.E. 15, 1779. SIR,

I have received your letter of the 9th instant, wherein, after stating your reasons for objecting to the several steps that have been taken with relation to the orders given for your return to North America, you add, that " if you are not al-" lowed an early trial, or if by his " Majesty's grace, upon the repre-" fentations contained in the faid " letter, you are not reflored to " a capacity of service, it is your ** request to his Majesty, that he will be pleased to accept your ** refignation of your appointment ee to the American staff, of the " Queen's regiment of light draec goons, and of the government " of Fort William; humbly de-" firing only to referve your rank of lieutenant general in the ar-" my, to render you more clearly ** amenable to courts-martial herees after, and to enable you to julse fil your personal faith, should " you be required by the enemy

Having laid your letter before the King, I am commanded to acquaint you, that for the reasons submitted to his Majesty by the Board of General Officers, in their report, dated 23d May, 1778, (which reasons subsist in the same force now as

" fo to do."

they did at that time) his Majeky does not think proper that any part of your conduct should be brought before a military tribunal, so long as you shall continue engaged to redeliver yourself into the power of Congress upon their demand, and due notice being given by them. Nor does his Majesty think proper, in consequence of the representations contained in your said letter, to restore you, circumstanced as you are, to a capacity of service. Neither of these requests can therefore be granted.

I have it farther in command from the King to acquaint you, that his Majesty considers your letter to me as a proof of your determination to persevere in not obeying his orders, fignified to you in the Secretary at War's letter of the 5th of June, 1778: and for this reason, his Majesty is pleased to accept your resignation of the command of the Queen's regiment of light dragoons, of the government of Fort William, and of your sppointment on the American staff, allowing you only to referve the rank of lieutenant general in the army, for the purpoles you have fiated.

Lord Barrington's letter of the 27th of June is considered as explanatory of the orders given in his letter of the 5th of that month.

I have the honour to be,

&c.

Admiralty-Office, OA. 12, 1779 A Letter from Captain Pearlon, his Majefly's thip Serapis, Mr. Stephens, of which the f lowing is a Copy, was yestere received at this Office:

Pallas, French Frigate, in Congs Serv. ce. Texel, OA. 6, 17;

SIR, 【アOU will be pleased to info I the Lords Commissioners the Admiralty, that on the 21d u being close in with Scarborous about eleven o'clock, a boat car on board with a letter from t bailiffa of that corporation, givi information of a flying 1quadron the enemy's thips being on t coaft, and of a part of the fi squadron having been seen fre thence the day before, standing the fouthward. As foon as I i

 $[U]_3$ CELT

ANNUAL REGISTER, 1779. 310]

ceived this intelligence, I made the minutes past seven, the largest fignal for the convoy to bear down under my lee, and sepeated it with two guns; notwithstanding which, the van of the convoy kept their wind, with all sail stretching out to the fouthward from under Flamborough Head, till between twelve and one, when the headmost of them got fight of the enemy's thips, which were then in chace of them; they then tacked, and made the best of their way under the shore for Scarborough, &c. letting fly their top-gallant sheets, and firing guns; upon which I made all the fail I could to windward, to get between the enemy's ships and the convoy, which I soon effected. one o'clock we got fight of the cuemy's ships from the mast head, and about four we made them plain from the deck to be three large flups and a brig; upon which I made the Countels of Scarborough's fignal to join me, she being in shore with the convoy: at the fame time I made the figual for the convoy to make the belt of their way, and repeated the fignal with two guns: I, then brought to, to let the Countels of Scarberough come up, and cleared ship tor At half past five the Countess of Scarborough joined me, the enemy's ships then bearing down upon us, with a light breeze at S. S. W. at fix tacked, and laid our head in shore, in order to keep our ground the better herveen the enemy's thips and the convoy; focu after which we percrived the ships bearing down upon us to be a two-decked thip and two trigates, but from their keeping end on upon us, on bearing down, we could not differn what colours they were under: at about twenty

thip of the three brought to, on our larboard bow, within mulquet thot: I hailed him, and alked what ship it was; they answered in English, the Princess Royal; I then asked where they belonged to; they answered evalively; on which I told them, if they did not answer directly, I would fire into them; they then answered with a shot, which was instantly returned with a broadfide; and after exchanging two or three broadfides, he backed his topfails, and dropped upon our quarter within pittolthot, then filled again, put his helm a-weather, and run us cu board upon our weather quarter, and attempted to board us, but being repulled, he sheered off; upon which I backed our top-fails, in order to get square with him. again, which, as soon as he observed, he then filled, put his helm a-weather, and laid us athwirt hawse; his mizen shrouds took our jib boom, which hung him for some time, till it at last gave way, and we dropt alonglide of each other, head and stern, when the fluke of our spare anchor hooking his quarter, we became so close fore and aft, that the muzzles of our guns touched each others fides. In this polition we engaged from half past eight ull half past ten; during which time, from the great quantity and variety of combuttible matters which they threw in upon our decks, chains, and in short into every part of the ship, we were on fire no less than ten or twelve times in different parts of the ship, and it was with the greatest difficulty and exertion imaginable at times that we were able to get it extinguished. the

APPENDIX to the CHRONICLE.

the fame time the largest of the two frigates kept failing round us he whole action, and raking us ore and aft, by which means she tilled or wounded almost every near on the quarter and main ecks.

About balf mit nine, either rom a hand grenade being thrown at one of our lower deck ports, r from fome other accident, a utridge of powder was fet on fire, be flames of which running from artridge to cartridge all the way ft, blew up the whole of the peole and officers that were quartered baft the main-mast; from which nfortunate circumstance all those uns were rendered ufelefs for the mainder of the action, and I ar the greatest part of the people ill lose their lives. At ten o'clock ey called for quarters from the ap alonguide, and faid they had ruck: bearing this, I called upon e captain to know if they had ruck, or if be asked for quarters; it no answer being made, after peating my words two or three mes, I called for the boarders, d ordered them to board, which ey did; but the moment they ere on board her, they discovered superior number laying under ver with pikes in their hands ady to receive them; on which ir people retreated inflantly into r own ship, and returned to eir guns again till past ten, when e frigate coming across our stern, d pouring her broadfide into us ain, without our being able to ing a gun to bear on her, I and it in vain, and in thort imacticable, from the fituation we ere in, to stand out any longer th the least prospect of success; therefore ftruck, (our main mast

at the same time went t board.) The first lieutenar myself were immediately e into the thip alongfide, wh found her to be an America of war, called the Bon I. Richard, of 40 guns and 375 commanded by Captain Paul the other frigate which en us, to be the Alliande, guns, and 300 men; and the frigate which engaged and to Countels of Scarborough, aft hours action, to be the Pal French frigate of 3z gun: 275 men; the Vengeance armed brig of 12 guns, a men; all in Congress service under the command of Paul They fitted out and failed Port l'Orient the latter et July, and came north about; have on board 300 English foners, which they have tak different vessels in their way r fince they left France, and ransomed some others. going on board the Bon He Richard, I found her in the g est distress; her quarters and ter on the lower deck en drove in, and the whole of ·lower deck guns dismounted was also on fire in two places fix or feven feet water in her which kept increasing upon all night and the next day they were obliged to quit her the funk, with a great numb her wounded people on board She had 306 men killed wounded in the action; our k the Serapis was also very g My officers and people in gebehaved well, and I should very remifs in my attention to merit were I to omit recomm ing the remains of them to [7] 4

ANNUAL REGISTER, 1779. 312]

lordships favour. I must at the fame time beg leave to inform their lordships, that Captain Piercy, in the Countels of Scarb rough, was not in the least remis in his duty, he having given me every affistance in his power, and as much as could be expected from such a ship, in engaging the attention of the Pallas, a frigate of 32 guns, during the whole action.

I am extremely forry for the misfortune that has happened, that ot losing his Majesty's ship I had the honour to command; but, at the same time, I flatter myself with the hopes, that their lordships will be convinced that she has not been given away; but, on the contrary, that every exercion has been used to detend her; and that two essential pieces of service to our country have arisen from it; the one, in wholly oversetting the cruize, and intentions of this flying squadron; the o her, in recoing the whole of a valuable convoy from falling into the hands of the enemy, which must have, been the case had I acted any otherwise than I did. We have been driving about in the North Sea ever fince the action, endeavouring to make to any port we possibly could, but have not been able to get into any place till to day we arrived in the T'exel.

Herewith I inclose you the most exact lift of the killed and wounded I have as yet been able to procure, from my people being difperfed amongst the different ships, and having been refused permission to muster them: there are, 1 find, many more, both killed and woun' ed, than appears on the inclosed " but their names as yet I find impumble to alcertain; as soon as I

possibly can, shall give their lordships a full account of the whole.

I am, Sir, Your most obedient. and most humble servant, R. PEARSON.

P. S. I am refosed permission to wait on Sir Joseph Yorke, and even to go on shore.

Abstract of the list of killed and quounded.

Killed 49.—Wounded 68.

Copy of a Letter front Lieut. George, of the Rambler Cutter, to Sir Charles Hardy, giving an Account of an Engagement between bis Majesty's Ship the Quebec, and a French Frigate of 40 Guns.

SIR,

T BEG leave to acquaint you, that on Wednesday the 6th instant, being then in company with his Majesty's ship Quebec, Ushant bearing south 15 leagues, at daybreak we discovered three sail to leeward in the S, W. quarter. Captain Farmer made the figual for the Rambler to come under his stern, which I obeyed; he then asked me what I thought of them; I told him a ship, a cutter, and a Dutch hoy: he replied, he would go down and see what they were, and ordered me to keep close to him. At half past eight we plainly perceived two of them to be a large French frigate and a cutter: at nine the enemy's frigate began to fire at the Quebec, but at too great a distance to do any execu-At ten the Quebec, being within point blank shot of the enemy, hoisted her colours, and returned their fire, still edging down

APPENDIX to the CHRONICI.E.

come to a close engagement till was alongfide the French frigate. immediately hoisted my colours, d flood in between the French gate and the cutter, with an inat to cat her off from her cont, and bring her to a close engement, which I effected a and gan to engage her at eleven lock close alongside; (I then and her force to be fixteen fixunders, and full of men;) we atinued to engage her in the ne polition till within a few mites of two o'clock, when the fet the fail the could croud, and re from us, we not having had luck to carry away any thing iterial; and the Rambler, havg ber gaff shot away, her topalk that through, the top-fail lyards, and most of her standing d running rigging gone, and e mainfail rendered unfervicele, was incapable of following with any hopes of coming up th her; at the same time seeing th the frigates dismasted, and e Quebec take fire, I endeavourto get as near the Quebec as flible, in hopes of faving fome her men; but there being but tle wind, and a large fwell, and I could affift her no other ly but by hoisting out our boat,

which I effected, and master and two men armed who picked up one master two young midshipmen, at teen more of the Quebec's the enemy's frigate at time firing at the boat *. Rambler was a confidera tance to leeward of the Quebec's thought it would be in vail a second time.

I want words fufficient feribe the noble gallant mi Captain Farmer's engag enemy for upwards of thr and an half, that he lay s the frigate, which carried eight eighteen - pounders main deck, and twelve gun quarter deck and forecastl Quebec continued burnir fiercely, with her colours till fix o'clock, when the I am much afraid, from th of Mr. William Moore, or malter's mates of the Quel Captain Farmer, and his that were alive when he Quebec, thared the fate

I beg leave, at the fan to recommend to you, i officers and crew of the I who did every thing that a expected from Englishmen

We are happy in taking this opportunity of doing that justice to there of a brave and humane enemy, which their conduct on this occasions at our hands. The circumstance mentioned in Licut. George's French frigate's string upon our boat, is supposed to have arisen from the Quebec, some of which it is probable might have gone off during was burning. However that may be, the mistake in Mr. George's since been sufficiently proved by the concurrent testimony of a number, and some officers, belonging to the Quebec, who all owed their like humanity of the French, and were afterwards treated by them with tenderness and kindness; notwithstanding their own extreme son stress at the time, with a ship nearly reduced to a wreck, a majority of the lied or wounded, and their brave captain in the agonies of death, who is breath in declaring the pleasure he received from having such an operactions his benevolence.

ANNUAL REGISTER, 1779. 314]

happy to say our loss confifts of only one man who has lost his leg, the pilot shot through the arm with a musket ball, and several slightly wounded, as the enemy aimed at our masts and rigging, in which they succeeded too well. From the cutter's not returning the fire for two or three broadsides before she bore away, and feeing but few men on her decks, I conclude the suffered considerably.

I have the honour to be, Sir, Your most obedient, humble fervant, JAMES GEORGE.

Account of the Trial of Mr. Stratton, and the other Members of the Council of Madrais, who deposed and imprisoned their Governor, the late Lord Pigot, and were prosecuted for the jaid Offence, in the Court of king's Bench, by the Attorney General, in confequence of an Address of the House of Commons to his Majesty for that Purpoje.

HE trial began before the Right Honourable the Larl of Mansfield in the Court of King's Bench, Westminster Hall, on Monday, December 20th, early in the morning, and lasted till two the

next morning.

The Attorney General stated the facts, on which the profecution was founded, in a most pathetic and eloquent speech. The principal points he infifted upon in support of the profecution were— Fish, that Lord Pigot was sent from England by the East India Company, with express instructions to reliose the Raja of Tanjore.

Secondly, That the whole Conscil, on his arrival at Madrass, and for some time after, (in the year 1775) were unanimous in their resolutions to carry these instructions into execution; but that afterwards a differtion arole, owing to some of the members of the council espousing the interest of the Nabob of Arcot and his sou, who strenuously opposed the resoration of the Raja. Thirdly, That Lord Pigot was under a necessity to suspend Mr. Stratton and Mr. Brooke, (two of the defendants) in virtue of his authority as Prefident, that he might not be obstructed by them in the execution Company's command. the Fourthly, That the claim of Mr. Benfield, on the part of the Nabob of Arcot, to a crop on the lands of Tanjore, fown by the Nabob and mortgaged to Benfield, was a fracdulent claim, calculated to foment divisions in the council, and to oppose Lord Pigot in his government. This he endeavoured to prove, from the improbability that Benfield, a private person of little or no property, should have been able to advance so large a sum as the claim amounted to, even allowing him very confiderable profits: for his demand was 250,000 l. Fifthly, He proved that the detendants figned an order for taking his Lordship into custody, and ordered Colonel Stuart, who arrested him, to inform his Lordship, that his life should answer any refiftance to their orders; from which he drew an inference, that assassintended in case of resistance. Finally, He enquired by what authority this violent revolution had been accomplished. He admitted, that the majority of

s council affeating to, or putting segative upon, a question, exered a legal power; but it did not low, if the Governor acted wrong not putting a question, which the fease of the majority he ght to have put, that they had legal power to imprison him; otler measures might have been opted; he was amenable to the es of his country, but not to any amed authority of his council. on the whole, however, he jused the conduct of Lord Pigot, ugh arbitrary, upon this ground, it it was his duty to execute the amifion he had received from : Company, by refloring the Raja Tanjore at all events.

The postillion who drove Lord got's chaife when he was arrest-, and Colonel Monckton, his rdfhip's fon-in-law, were proced as evidence of the arrest and nfinement; but as the crown lawis on the one hand admitted the to alledged by the defendants ncerning Lord Pigot's proceedgs in council; and the defendants the other avowed the arrest and afinement of his Lordship, no verl evidence was necessary. But a eat load of written evidence was ential to support the profecution, cause it turned upon the positive Rructions given by the Company Lord Pigot. The reading of ese papers, containing the correundence between the Company d Lord Pigot, with other docuents, was excessively tedions, and ok up feveral hours.

Mr. Dunning began the defence his clients at about eight in the ening; and in the most masterly cading that was ever exhibited a weak cause, displayed abili-

ties and attachment to the interel of his clients that would have donbonour to the best. After noticing the passion and prejudice which has influenced the minds of men i general with respect to the deat of Lord Pigot; he cleared the de fendants to the fatisfaction of ever one prefent, from the imputatio of aiming at his life, and from a felfish motives. He then gave detail of the arbitrary proceeding of Lord Pigot in the council; an in other acts of his government fuch as his suspension of Sir Rober Fletcher, the commander in chie of the troops, &c. From these is flances of extravagant behaviour, h adduced the political necessity c removing him from the govern ment, all public butiness being at ftand.

He also endeavoured to show that he had exercised powers no veited in him by the Company and he finally rested the defenc of his clients, on the approbatio which the supreme council of Bea gal had expressed, in writing, c their proceedings. Mr. Dunnin did not fit down till near twelv o'clock.

The Attorney General mad only two observations on the de fence, wish that the Company appointment of Lord Pigot, for th special purpose of restoring th Raja, had not been attempted be denied, therefore he stood just fied in refiffing every delay, ever opposition of that measure; an that the defendants, though M Benfield was in court, had no thought proper to call upon his fo well convinced were they th the fole cause of all the distur ances was that gentleman's pr

tended claim: it showed plainly, the apprenentions they were under that the truth would come out if be was examined.

Lord Managed, about hilf after one to the morning, semmed up the whole miches acta concilela" unierung, that the indicament was idua ou due cours or charges; two we thegul advanction of goverament, and three for imprisoning the governor; but they differex very rece, for if the defendances special as justified in the one, it were a great way to justify them in the ctaer. Three querions were hir the perv to confider; sit, What es the co-ditution of the governnecut of Adadrais? 2d, Whether Lord "120t had I bretted that connicocion? zolv. Whether such concost of Lord Pigot amounted to a justification of the subsequent conduct of the defendants?

As to the first, his Lordship said, it appeared, that the government of the province was vested in the President and Council, or a majority of them legally summoned and adembled, whether the President was or the majority or minerity, he having only the benefit of his castmy vote in case of equality; but the governor being an integral part of the government, the Counen without him was imperfect and medianecot. He had it in his y see to adjourn at any time, or windraw maniest from the meetin the inca woold end the busi-. it time, until they were and councily convened.

inercitive, as to the second

members by his own authority, for figning what they had voted for, and what the other four were ready to fign also, having all previously declared their intentions, was certainly violent, illegal, and unjustihable.

And this leads to the third question as to the justification. Here his Lordship expressed some anxiety about giving his opinion upon fuch a new and unprecedented case. He adverted to cales of force and necessity here in England, which are cognizable and determinable by a jury only. In the case of external force compelling a man to an unlawful act, the man's will does not go along with the action; he is therefore not culpable. In the case of natural necessary, a man driven in self-defence to commit homicide, or other unavoidable act, is not culpable: but of both these cases a jury alone can decide.

His Lordship could put the affair at Madrass on no other footing than that of a civil necessity, or state necessity. If the jury could consider this civil necessity the majority were under tantamount to a natural necessity, it would be a justification. To decide this, they might take into confideration the critical fituation they were in, from the violent proceedings of the governor: he had suspended two of the senior council; he might possibly proceed to suspend the other four; he had also ordered one of their number to be arrested on a charge of mutiny, that ..., Les l'igot's conduct on pointed at his life. In such a situand a question regularly be- ation it was difficult to act: but at the fame time they began their and suspending two own administration with an illegal

APPENDIX to the CHRONICLE.

the members who voted against hash been the offence, a must give the he to the

His Lordship said, it was for the ary to exercise their judgment on hese three questions, and if they band sufficient matter to justify he assumption of government out of the hands of the governor, the me would go to justify his imprisonment; and as no aggravating circumstances were insided on by the prosecutors, they would hen acquit the defendants: if therwise, they would find them sailty.

His Lordship quitted the court exactly at two; and the jury, after withdrawing a quarter of an hour, prought in their verdict, finding

he defendants *Guilty*.

Copy of the Challenge feat by the Marquis de le Fayette, to the Earl's Answer.

To the Earl of Carlifle.

Did not imagine, my Lord, that I ever should have had ny transactions but with your geerals, and expected not the boour of feeing them but at the read of the armies which they repectively command. Your letter if the 26th of August to the Contrefs of the United States, and be terms of infult respecting my country, to which you have figured our name, is the fole cause of my saving any thing now to fettle vith your Lordinip. I deign not a refute the atpersion, but I deire to punish it. It is from you, s chief of the committion, that I demand a reparation as hash been the offence, a must give the he to the you have us.d. I should delayed this demand so your letter had reached mobliged to be absent a fe hope to find your answer sturn. M. Glmot, a French will settle on my part the place of our meeting, to Lordship's conveniency, not but, for the honour of tryman, General Clinton tend you to the fild.

As to me, my Lord, different who attends you ed that, to the glory of Frenchman, I join that of to a gentleman of your that no one dares to inf with impunity.

(Signed)

LA F.

To the Marquis De la Pa

SIR.

I HAVE received yo transmitted to me from M and I confess I find it d. return a ferious answer to tents. The only one tha expected from me as the Commissioner, and whi ought to have known, i do, and ever faall, confid folely responsible to my and King, and not to a widual, for my public con language. As for any o exprellions contained in a cations iffued under the sion in which I have the to be named, unless the tracked in public, you m fured I thall never, in an with a si stem, but he were WA 11 7 THE.

The majory and the conprimaries of the hitzen com-BUSINESS IN USE CONTINUES BAR pendich you, is see it a gr. see satire; and I conceive all national displies will be set see sec by the meeting of Admiral Egron and Cart & Ktiga.

(ngues,

CARLISCE.

Hew York, Obesier 11, 1776.

Some Account of Matthieson, lately executed for forging the Notes of the Bank.

TOIIN Matthieson was born at J Greina-Green, (a noted place in Scotland fince passing the English marriage act). His father was a mill wright, and accounted an ingenious mechanic; nor was the son's mechanical genius less conspicuous than that of his father. From the knowledge be had in millwork, he attained the art of making clocks, and by that, and cleaning and repairing watches, he was enabled, after the death of his father, to support his mother, his fitter, and himfelf. But his mind was realets, and ever thirsting after improvement. Not content with what he had learned, which produced him only a bare competency, he became acquainted with an engraver, a loote, diffinated young man, whole extravagance often reduced him to great fleaits. With this youth he try, and negotiated them; till, cultivated a feeming triendthip; and, from a constant attendance, and clote attention to him when at work, he stole from him that arrive at London undiscovered

el leucien, se al griest ar give en una una una una un maigne bare evelues som so as innek applidature property and the tay comvertical at the a most residence of the ECAL.

> It are been infranced by fome, that has been used as accomplice at his destructing can, and that botz were consected to forging the notes ef the Die. metes Bank; but source of that and has ince appeared, and therefore answorthy to be be eved

> To the art of engraving, Matthiefin had added a pasticular facolity in tracing lines, intomack that he could take off the handwriting of any man with fuch exactuels as even so deceive the writer himself.

> Tempted by these acquirements, so flattering to his notions of suddealy becoming rich, his first experiment, as before observed, was made on the 51. notes of the Darlington Bank; but of these, being of small value and quick circulation, though currently negotiated, he could make no very considerable advantage; and being but a young beginner, and not over-cautious in passing his notes, a discovery was soon made by the banks that their notes were forged; and Matthieson was suspected of being the forger. He was even described, and a reward offered for his apprehension; which, however, he found means to clude by travelling into Scotland, where, there is reason to suspect, he forged the notes of the Royal Bank of Edinburgh, traversed that comdirecting his route by the weftern road of Galgow, where he was unknown, he found means to Here

APPENDIX to the CHRONICLE

ere he procured very creditable artments, where he lived for me time retired and unfulpected. In all his preregrimations he me to have paid great attention his lifter; to whom, however, loss not appear that he ever imported the fecret of his fraud.

His lodgings were over-against undel street, in the Strand, in creditable family, to whom he led for a watch maker come to ndon for improvement. fe lodgings he behaved with at regularity and fobricty, ofretired by himfelf in the day, l often talked with the people the shop as he passed and refed, and appeared in every rect as an unexceptionable chater. His litter, indeed, appearbut mean, the landlord (aid, for erfon that took an apartment at s. a week.

It should feem, that, though his nd, as he confessed, was much befied by the confciousness of guilt, yet that did not wholly troy the activity of it for invenn. It is affonishing to contemte the powers of an inventive nd, when directed either to good evil purpofes. Harrison, who a long feries of deliberate fludy, tsted at last a time-piece of inite use to navigation, and for ich he received the applause and vard of his country, was forty ers in effecting that which this n woold probably have brought perfection in less than as many inths, had his inventive powers ta directed to fo laudable a purie: for so rapid was he in his

progress, that, though h upon his lodgrage on the February, he had purc copper, ground it, engra bricated the notes, prin torged the water-mark, : trated feveral of them, or ticular at Covenisy, for futfered, before the 12th (and to nicely was all that ed, that the Banker, to t last-mentioned note was change, made not the l ple to receive it, though it was prefented by Kranger 🔭

it was, therefore, of t consequence to nations that to dangerous a 'vill erer ingenious, should t ed. It was not enough be malter of counterfesti external lines on the fu notes, with a nicety whi deceive even the very c iffued the notes, but he quired the very art of co ing the internal mark of on which the notes of the England are drawn, and paper the Directors are as not to fuffer a sheet to if we are rightly informanote to be printed upon out the attendance of a t four or perions to info eath, the whole process. was thought their fedurit had exposed every former the like kind to immedi tion; but Matthiefen's beyond their reache he whole circulation of the has hands; for, had he

He presented the note to a filver-smith at Coventry, of whom pair of buckles, who carried it to a Banker's at next door; and it,

320] ANNUAL REGISTER, 1779-

fered to reign long, no man could have been take in taking a Bank note, who had not the books of the Bank to refort to. Even Mr. Geathing, one of the cashiers, being asked, if he had seen the name subscribed to the note on which the prisoner was convicted, on a separate piece of paper, without any suspicion of forgery, whether he could have sworn it was not his hand-writing, his answer was, I do not know that I could.

His first care, after he was settled in his lodgings, was to procure a fair 201. note, which be went to the Bank for himself; for he was cautious of trusting even his fifter with any of his affairs, Having got this for a pattern, he next applied to a brazier, and had two pieces of copper cut exactly to the dimensions of the plates used by the Bank. Those rough plates were prepared, as we before observed, by himself; and, as soon as he had completed the notes, he pretended business in the country, and travelled from one end of the kingdom to the other, to negociate them; for the buckles, which he bought at Coventry, were traced and found in Scotland. All this passed without suspicion at his lodgings: when he went out, it was in the middle of the day; and when he came home, he had all the appearance of a man who had been a long journey.

He no sooner came home than he again applied to the Bank for fresh notes; and a circumstance, which very remotely led to his detection, gave occasion to one of the tellers of the Bank to mark him. He had been, on the 17th of March, to change a ten-pound note; and, on the 24th, he came

again to have two Back-notes, oil for 201, and the other for 101. made out to him for cash. that day the Excise-office was paying 7000 guiness, one of which was scrupled. Matthieson looked at it as it lay at a distance, and said it was a good one. "Then," faid the clerk on his trial, " I recollected him. I turned to the bo k, and saw I had paid him those three notes," [meaning, we suppose, three notes which were praduced to identify the person of Matthiefon.] But, probably, the turning to the book was a subsequent act, though represented in the Settions-paper as an immediate inspection, for which there was then no caule.

How he came to be first sufpected at the Bank, which did not
happen till the 10th of April, does
not appear; but, it is evident, the
suspicion was but slightly grounded, as the same clerk apprehended
and released him on the same day,
and did not carry him before a
magistrate till next morning, when,
hearing he was going along Cornhill with a bundle, he followed
him, and persuaded him to go
back with him to the Bank of England.

There is reason, indeed, to believe that his frequent appearance
at the Bank, exchanging notes of
to and 201; for cash, and sometimes taking out notes of the same
value, and paying money for them,
might create a suspicion that he
was some way or other connected
with the person who counterseited
notes which, since his first appearance there, had been presented at
the Bank, and at first paid without
scruple, and probably would have
continued so to have been, had

APPENDIX to the CHRONICLE.

me in, and given the same notes me in, and given the alarm. By imparing these one with another, are was found so material a distance, that the clerks could institly tell the counterfeit from a real, though their orders were pay both without hesitation, wided they came through any asset of credit, or other unsuspected innel.

To Arengthen this conjecture, writer of this account recolis to have heard, that, while atthicfon was at the Hank to change a real note, one of his n forged notes came in for ment at the fame time; and t this furnished the teller, to om those notes were presented, h an occation to challenge xwell (for that was the name went by) pretty roundly with ring some knowledge of these geries, several of which had apred, though no notice had been on of them, left it should give theck to the circulation of the notes. This he steadily ded; yet there appeared iome altion in his countenance which oted guilt, but nothing that ld justify a detainer, and he fuffered to escape. Alarmed, vever, by this, he knew he ld no longer carry on his fraud. b fafety in England; and he preparing to leave the king-, when next day [April 11], try early in the morning, the er was told that his friend Maxl (for to be was now flyled ironically) was feen with a passing along Cornhill.

Woether the teller had d ed more of those notes in th time, or had received pa instructions from his super detain Maxwell if he shoul agrin, is not material; but it is, that he instantly poste him, and, having come u him, under pretence of committed a mistake in th of the money he had paid t day before, perfuzded him turn with him to the Bank that mistake rectified. Beit ed what the mistake was, the seplied, that he believed ! paid half a guinea too mu which Maxwell made light matter, and, putting his h his pocket, pulled out a g and offered him that. The faid, that would not do; th take must be rectified by the l or he must lose his place. had the defired effect: he fented to return, and in hi back left his bundle at a pa tar shop. As soon as he e the Bank, he was told to must stay till the Directors and he was shewn into a where the porters passing t fro might fee and observe he

What passed between hin the Directors, the writer do pretend to know; all that as ed was, his bundle was ser and examined, but there we thing exceptionable found in t

The contents of the bundle were, some linea and clothes, a pair of p guiness in gold, some seat Bank notes, some gravers, and watch-n s, but nothing that had the appearance of any instrument to fabre k note.

322] ANNUAL REGISTER, 1779.

Yet, retwirkflanding this harmless appearance, it was thought necessary, in a case of so much consequence, to take him before Sir John Fielding, where, though he had eluced the querions that had been put to him by the Directors, he perhaps might not be able to evade those put to him by the experience and fagacity of that magistrate; by whom he was particularly asked as to his family, his friends, his connections, his place of abode, his pursuits, and his professions; to all which questions, he said, he had reasons for declining to answer. He was a citizen of the world, he faid, and knew not how he came into it, nor how he should go out of it. Nothing, therefore, appearing against him, the Solicitor of the Bank sent him to a public house, atrended by proper officers, while he should consult the magistrates about refloring to him hit bundle, and feeting him at large. Being placed in the infide of the box next. the window, he had not fat long before he, lifting up the fash as if to let in air, gave a sudden spring; and jumped out; but, being immediately purfued, was taken and brought back. This confirmed the Solicitor in his suspicions that he was the man; otherwise why should he fly, and leave his money and effects behind him? Being asked his motive, his answer was, It was his humour. It was however, determined not to let him go till he had undergone a fecond examination by Sir John Fielding, who, before he was brought up, extended his enquiries to all his

intelligence offices, and had collected all the information possible concerning him; when, to his atter confusion, the advertisement of the Darlington bank was produced, and he was found to answer the description of Matthieson, who was suspected to have forged the notes that had been counterfeited of that bank. This being read to him, and being asked if his name was not Mattheson, instead of Maxwell, he all at once lost his resolution, turned pale, burst into tears, and, after faying he found he was a dead man, he added, "And now I will confess all." He accordingly owned that he fabricated the motes in the manner already related; that the moment he had completed the namber of notes he thought proper, he destroyed the plates and every implement which he had made we of in the fabrication; that his next bufiness was to negociate those notes, and then return and make out more; that he had an altonishing facility in doing all this, so that he could accomplish the whole in lefs than a single day. By what appeared upon the trial, it should seem that he discovered to the Solicitor of the Bank his method of counterfeiting the wabut, upon enquiry, there is reason to doubt whether he made any particular discovery, only, in general, that he himfelf was the fole fabricator.

Thus much we have been able to collect of a man, whose powers of imitation never were equalled, and, we hope, for the good of this country, never will in future.

STATE PAPERS.

His Majesty's most gracious Speech to both Houses of Parliament, November 25th, 1778.

My Lords, and Gentlemen,

Have called you together in a
conjuncture which demands
your most serious attention.

In the time of profound peace, without pretence of provocation or colour of complaint, the court of France hath not forborne to dilturb the public tranquillity, in violation of the faith of treaties, and the general rights of sovereigns, at first by the clandestine supply of arms and other aid to my revolted subjects in North America, afterwards by avowing openly their support, and entering into formal engagements with the leaders of the rebellion, and at length by committing open hostilities and depredations on my faithful subjects, and by an actual invasion of my dominions in America and the West Indies.

It is, I trust, unnecessary for me to assure you, that the same care and concern for the happiness of my people, which induced me to endeavour to prevent the calamities of war, will make me desirous to see a restoration of the blessings of peace, whenever it can be essected with perfect honour, and with security to the rights of this country.

In the mean time, I have not

neglected to take the proper and necessary measures for disappointing the malignant designs of our enemies, and also for making general reprisals; and although my efforts have not been attended with all the success, which the justice of our cause and the vigour of our exertions seemed to promise, yet the extensive commerce of my subjects has been protected in most of its branches, and large reprifals have been made upon the injurious aggressors, by the vigilance of my fleets, and by the active and enterprizing spirit of my people.

The great armaments of other powers, however friendly and sincere their professions, however just and honourable their purposes, must necessarily engage our attention.

It would have afforded me very great satisfaction to have informed you, that the conciliatory measures, planned by the wisdom and temper of parliament, had taken the desired effect, and brought the troubles in North America to a happy conclusion.

In this situation of affairs, the national honour and security call so loudly upon us for the most active exertions, that I cannot doubt of your heartiest concurrence and support. From the vigour of your councils, and the conduct and increpidity of my officers and forces

STATE

fea and land, I hope, under biefling of God, to derive the ans of vindicating and mainning the honour of my crown, the interests of my people, and all our enemies.

Gentlemen of the House of Commons,

will order the proper citimates the fervice of the enfuing year be laid before you; and when confider the importance of the ects for which we are contend-, you will, I doubt not, grant fuch supplies as you shall judge essary for the public service, adequate to the prefent emercy.

My Lords, and Gentlemen,

have, according to the powers ed in me for that purpofe, callforth the militia, to affift in the rior defence of this country; I have, with the greatest and est satisfaction, been mytelf a ness of that public spirit, that dy ardour, and that love of r country, which animate and e all ranks of my faithful jects, and which cannot fail of cing us fafe at home, and reded abroad.

: bumble Address of the Lords Spiuual and Temporal in Parliament fambled.

Most Gracious Sovereign, VE, your Majetty's most du-tiful and loyal subjects, the ds Spiritual and Temporal, in liament affembled, beg leave return your Majesty our humble nks for your most gracious ech from the throne. Vol. XXII.

PAPERS.

We have the strongest i the importance of those which render the prefent of ture worthy of the most fer tention.

The diffurbance of the tranquillity by the court of without pretence of provoca colour of complaint, the c tine affiftance, the avowed (the formal engagements w different periods, that cou not thought it inconfishent honour, to afford to your M revolted subjects in North rica, and to conclude with th ers of rebellion, excite breasts a just abhorrence violation of every public p which fuch a conduct ma and a determination to con every measure, which may your Majesty to resent with the holilities committed o faithful fubjects, and the invation of your Majesty's nions in America and the Indies,

We beg leave to expri grateful sense of the tende cern for the happiness o people, which has uniform duced your Majesty to enc to prevent the calamities (and will make your Majest rous to fee the return of whenever it can be effecte perfect honour and security rights of this country.

At the same time we retu Majesty our dutiful than! your great care in taking t per and necessary mealus disappointing the maligna ligns of our enemies, and making general reprifals, the protection which has b rived from the vigilance (

Majesty's fleets to our extensive commerce, in most of its branches, while that of the enemy has materially suffered by the active and enterprizing spirit of our fellowsubjects: And we hope, although your Majesty's efforts have not hitherto been attended with all the fuccels, which the justice of our cause, and the vigour of our exertions, seemed to promise, that confequences more adequate to both may refult from the animated execution of firm and active councils, which the time requires, and with which the spirited perseverance of the British nation has so often surmounted the greatest difficulties.

It is with concern we learn, that the conciliatory measures of parliament have not yet had the good effect with your Majesty's revolted subjects, which was due to the wisdom and temper with

which they were planned.

In this fituation of affairs, fully sensible that the national honour and security loudly calls for the most active exertions, we will strenuously concur in supporting your Majesty, that, under the blessing of God, means may be derived from the conduct and intrepidity of your Majesty's officers and forces, by sea and land, and the yet undaunted spirit of the nation, to vindicate and maintain the honour of the crown, and the interests of the people of Great Britain.

We return your Majesty our cordial acknowledgments for having called forth the militia, to assist in the interior defence of this country; and it is with joy and exultation we hear the gracious testimony your Majesty is pleased to bear to the public spirit, the

steady ardour, and love of their country, which animate that national force, and unite all ranks of your Majesty's faithful subjects in giving signal proofs, to all the world, of a loyalty and zeal which must render us safe at home and respected abroad.

His Majesty's Answer.

My Lords,

I thank you for this loyal and dutiful address: The zeal you hew for my honour and support, and the sirmness and vigour you manifest in the present conjuncture, cannot fail to produce the best effects; it must add considence to my people, and encourage animated efforts to withstand, oppose, and subdue, every hostile attack upon the honour and interests of my kingdoms.

The bumble Address of the House of Commons to the King.

Most Gracious Sovereign,
WE, your Majesty's most dutiful and loyal subjects,
the Commons of Great Britain in
parliament assembled, beg leave
to return your Majesty the thanks
of this House, for your most gracious speech from the throne.

We acknowledge with the utmost gratitude your Majesty's paternal regard for the happiness of your people, in your earnest and uniform endeavours to preserve the public tranquillity, and the good faith and uprightness of your Majesty's conduct to all foreign powers; and we assure your Majesty, that we have seen with concern and indignation, that tranquillity

STATE PAPERS.

illity disturbed by the court of rance, without the least pretence provocation, or colour of comaint; and we have, with the irmest emotions of refeatment, arked the progress of their manant designs against this country, ft by a clandestine aid and supply arms to your Majesty's revolted bjects in North America; afterards, in violation of the faith of enties, and contrary to the rights d common interest of every rereign state in Europe possessed colonies and dependencies, by tering into and avowing formal gagements with the leaders of rebellion; and, at length, by mmitting open hostilities and predations, and by actually inding part of your Majesty's donions in America and the Weft dies.

We cannot but feel concern and gret, that the measures taken by ur Majesty, for disappointing ese boilile and malignant dens, have not been attended th all the fuccess which the flice of the cause, and the viour of the exertions, feemed to omife; yet, we have at the ne time feen with great fatisction, the extensive commerce your Majesty's subjects protect-in most of its branches, and rge reprifals made on the injuous aggressors, by the vigilance of or Majesty's fleets, and the active irit of the nation,

It would have given your faith-I Commons the truest happiness, have received the communicaon from your Majesty, that the A and humane purpoles of your lajesty and your Parliament, for nicting the minds of your repited subjects, had taken the de-

fired effect, and had broug troubles in North America

happy conclusion.

Your faithful Commons d heartily concur with your M in the just approbation you been pleased to express public spirit which has so cuoufly animated all ranks (Majetty's faithful subjects, t forth, at this time of dang the fervice of the militia, w their discipline and steady verance in their duty, hav bled your Majesty to avail felf of that constitutional fo the defence of this country.

Your Majesty may rely hearty and zealous conci and affiftance of your Commons, in enabling you jesty to make the most acti vigorous exertions by Ica anfor vindicating and estat the national honour and fe and we beg leave to deck stedfast resolution, and renfolemn affurances to your N that this House, convinced importance of the objects for we are contending, and it by every motive of duty an rest that can animate the of Britons, will effectuall your Majesty in the profect the present just and necessal and that we will, to the ut our power, support your I against all your enemies.

PROTESTS of the LORD

Die Luna, Decem. 700. Moved.

THAT an humble add presented to his Maj express to his Majesty the

[27] 2

ANNUAL REGISTER, 1779. 340]

sure of this House, at a certain manifesto and proclamation, dated the third day of October, 1778, and published in America under the hands and leals of the Earl of Carlisle, Sir Henry Clinton, Knt. of the Bath, and William Eden, Esq; commissioners for restoring peace to the colonies, and countersigned by Adam Ferguson, Esq; secretary to the commission; the faid manifesto containing a declaration of the following tenour:

"If there be any perions, who, divested of militaken resentments, and uninfluenced by felfish interests, really think it is for the benefit of the colonies, to leparate themselves from Great Britain, and that to deparated they will find a constitution more mild, more free, and better calculated for their prosperity, than that which they heretofore enjoyed, and which we are empowered and disposed to renew and improve; with such perions we will not dispute a position, which feems to be fufficiently contradicted by the experience they have had. But we think it right to leave them fully aware of the change which the maintaining luch a polition mult make in the whole nature and future conduct of this war, more especially when to this position is added the pretended alliance with the court of France. The policy, as well as the benevolence of Great Britain, have thus far checked the extremes of war, when they tended to diffress a people, still considered as our fellow-Subjects, and to desolate a coun- the crown of this realm, tending try, shortly to become again a to debase the spirit, and subvert source of mutual advantage: but the discipline of his Majesty's arwhen that country professes the unnatural design, not only of innocent subjects, in all parts of

estranging herself from as, but of mortgaging herself, and her resources, to our enemies, the whole contest is changed, and the queltion is, how far Great Britain may, by every means in her power, destroy or resider utelets a connection contrived for her ruin, and for the aggrandizement of France. Under such circumstances, the laws of felf-prefervation must direct the conduct of Great Britain: and if the British colonies are to become an accellion to France, will direct her to render that accession of as little avail as possible to her enemies."

To acquaint his Majesty with the sense of this House, that the faid commissioners had no authority whatfoever, under the act of parliament, in virtue of which they were appointed by his Majesty, to make the faid declaration, or to make any declaration to the lame, or to the like purport, nor can this House be easily brought to believe that the said commissioners derived any such authority from his Majelty's instructions.

Humbly to beleech his Majetty, that to much of the faid manifelto as contains the laid declaration, be publickly disavowed by his Majetty, as containing matter inconfistent with the humanity and generous courage which, at all times, have distinguished the British nation, subversive of the maxims which have been established among. Christian and civilized communities, derogatory to the dignity of mies, and to expose his Majesty's

 dominions, to cruel and ruigous taliations.

After a long debate, the question is put, and carried in the negare. Contents 37. Non-contents in including proxies.

Diffentient,

1st. Because the public law of tions, in affirmance of the dictes of nature, and the precepts revealed religion, forbids us to fort to the extremes of war upon r own opinion of their expeency, or in any case to carry on ir for the purpole of defolation. e know that the rights of war e odious, and instead of being tended upon loofe constructions d speculations of danger, ought to bound up and limited by all the firaints of the most rigorous conaction. We are shocked to see the It law of nature, felf-prefervation, rverted and abused into a princie destructive of all other laws; d a rule laid down, by which our n fafety is rendered incompatiwith the prosperity of mankind. hole objects of war, which cant be compassed by sair and hograble hostility, ought not to compatted at all. An end that s no means, but fuch as are un-Aful, is an unlawful end. anifesto expressly founds the ange it announces from a qualid and mitigated war, to a war extremity and defolation, on a rtainty that the provinces must independent, and must become accession to the strength of an emy. In the midst of the calaities, by which our loss of emte has been preceded and acmpanied; in the midst of our prehensions for the farther calakies which impend over us, it

is a matter of fresh grief and ac mulated shame, to see from a co mission under the great seal of kingdom, a declaration for de lating a vast continent, solely cause we had not the wisdom retain, or the power to subdue it.

adly. Because the avowal o deliberate purpole of violating law of nations a uft give an ala to every flate in Europe. commonwealths have a conc in that law, and are its nat. avengers. At this time, furrou ed by enemies, and deflitute of allies, it is not necessary to sharp and embitter the hostility of clared foce, or to provoke the mity of neutral flates. We to that by the natural Arength of kingdom, we are fecured from foreign conquest, but no nation fecured from the invation and curlions of enemies. And it fee to us the height of frenzy, as wel wickedness, to expose this coun to cruel depredations, and otl outrages too shocking to ment (but which are all contained in idea of the extremes of war a defolation) by establishing a fal fhameful, and pernicious maxi that where we have no interest preferve, we are called upon necessity to destroy. This kit dom has long enjoyed as profou internal peace, and has flourish above all others in the arts a enjoyments of that happy sta-It has been the admiration of world for its cultivation and plenty: for the comforts of poor, the fplendor of the ri and the content and prosperity all. This situation of safety n be attributed to the greatness our power. It is more become and more true, that we ought $[r]_3$ attrib

attribute that fafety, and the power which procured it, to the ancient justice, honour, humanity, and generofity of this kingdom, which brought down the bleffing of Providence on a people who made their prosperity a benefit to the world, and interested all nations in their fortune, whose example of mildness and benignity at once humanized others, and rendered itfelf inviolable. In departing from thole folid principles, and vainly trulting to the fragility of human force, and to the efficacy of arms, rendered impotent by their perversion, we lay down principles, and furnish examples of the most atrocious barbarity. We are to dread that all our power, peace, and opulence should vanish like a dream, and that the cruelties which we think safe to exercise, because their immediate object is remote, be brought to the coasts, perhaps to the bosom of this king-

3dly. Because, if the explanation given in debate, be expressive of the true sense of the article in the manifesto, such explanation ought to be made, and by as high authority as that under which the exceptionable article was originally published. The natural and obvious leine indicates, that the extremes of war had hitherto been checked; that his Majesty's generals had hitherto soreborne (upon principles of benignity and policy) to desolate the country; but that the whole nature, and future conduct of the war must be changed in order to render the American accession of as little avail to France as possible. This, in our apprehension, conveys a menace of car-

rying the war to extremes and to desolation, or it means nothing, And as some speeches in the House (however palliated) and as some acts of fingular cruelty, and pertectly conformable to the apparent ideas in the manifelto, have lately been exercised, it becomes the more necessary, for the honour and lafety of this nation, that this explanation should be made. As it is refused, we have only to clear ourselves to our consciences, to our country, to our neighbours, and to every individual who may suffer in consequence of this autocious menace, of all part in the guilt, or in the evils that may become its punishment. chuse to draw ourselves out, and to distinguish ourselves to posterity, as not being the first to renew, to approve, or to tolerate, the return of that ferocity and barbarism m war, which a beneficent religion, and enlightened manners, and true military honour, had for a long time banished from the Christian world.

Differtient,
Because, having made the mom alluded to in the above differt,

I think it incumbent upon n let posterity know the partigrounds I made that motion upo

1st. Because, fince the 1771, there has been 6,917,8 5 s. of. granted for naval purp more than was granted in an enumber of years, between and 1759, for the use of the nalthough we had been four at war with France within period.

adly. Because the navy of I sand appears to be reduced a what it was in the year 1771, we the present first Lord of the Astralty succeeded to the head of board, notwithstanding the mense sums granted for its sugand increase since that time.

adly. Because it appears, having received fuch repeater telligence as hath been acki ledged to have been received. the 3d of January, 1778, to 47th of April following, of equipment and progress of Toulon fquadron, to their fa on the 13th of April, 17784 not fending a fquadron into Mediterranean, to watch the tions of, and endeavour to it cept, the faid French fqua from passing the Straits, nor f ing any reinforcement to Vice miral Lord Howe, or even patching Vice-Admiral Byron the 9th of June, 1778, was posing the ficet as well as a of England, then employed America, to a very superior for France.

4thly. Because it appears fending of Admiral Keppel Brest the 13th of June twenty fail of the line, when Lords Commissioners of the miralty knew, or ought to [7] 4

known, that the French fleet then actually at Brest, and fitting for sea, consisted of 32 ships of the line, belides many heavy frigates, might have been productive at that time of the most fatal consequences to the only confiderable naval force this kingdom had then ready for its protection, but also to the trade, and even the ports of these kingdoms. And if Admiral Keppel had remained with his 20 fail of the line off Brest, he must with thole thips have engaged the French fleet of 30 sail of the line, who lailed on the 8th of July, as Admiral Keppel could not get the reinforcement even of four ships of the line to join him till the 9th of July, although he was then at St. Helens for that purpole.

Jost that valuable island of Dominica, for want of timely reinforcements and proper instructions being fent to Admiral Barrington.

6thly. Because, for want of the smallest naval force being sent to the coast of Africa, we have also lost the valuable station of Senegal, which might in time, with proper attention, have opened new markets for our drooping manufactures.

the Admiralty, without any deliberation whatsoever, having so precipitately ordered a court-martial upon a commander in chief, of great rank and character, which Admiral Keppel bears in his Majesty's fleet, was frustrating the saturary intentions of that discretionary power, lodged by the constitution in the lords commissioners for executing the office of Lord High Admiral of Great Britain, whereby all maistions and ill-founded

charges (by whom foever exhibited) may be avoided, and the union and discipline of the service not interrupted.

BRISTOL.

June 17th the following Message was fent by the King to both Houses of Parliament.

GEORGE R.

HE ambassador of the King of Spain having delivered a paper to Lord Viscount Weymouth, and fignified that he has received orders from his courr, immediately to withdraw from this country; his Majesty has judged it necesfary to direct a copy of that paper to be laid before both Houses of Parhament, as a matter of the highest importance to the crown and people; and his Majesty acquaints them at the same time that he has found himself obliged, in confequence of this hostile declaration, to recal his ambassador from Madrid.

His Majesty declares, in the moit iolemn manner, that his defire to preferve and to cultivate peace and friendly intercourse with the court of Spain, has been uniform and fincere; and that his conduct towards that power has been guided by no other motives or principles than those of good faith, honour, and justice; and his Majesty sees with the greater surprise the pretences on which this declaration is grounded, as some of the grievances enumerated in that paper have never come to the knowledge of his Majesty, either by representation on the part of the Catholick King, or by intelligence from any other quarter; and in all those cases where appli-

cations

cations have been received, the matter of complaint has been treated with the utmost attention, and put into a course of enquiry and redress.

His Majesty has the firmest confidence, that his parliament will, with that zeal and public spirit which he has so often experienced, support his Majesty in his resolution, to exert all the power, and all the resources of the nation, to relist and refel any hostile attempts of the court of Spain; and that, by the bleffing of God, on the rectitude of his intentions, and the equity of his cause, his Majesty will be able to withstand and defeat the unjust and dangerous enterprises of his enemies, against the honour of his crown, and the commerce, the rights, and the common interests of all his subjects.

The bumble Address of the Right Honourable the Lords Spiritual and Temporal in Parliament assembled.

" Most gracious Sovereign, WE, your Majesty's most du-tiful and loyal subjects, the Lords Spiritual and Temporal, in parliament assembled, beg leave to return your Majesty our humble thanks for your most gracious mesfage, and communication of the paper delivered to Lord Viscount Weymouth by the ambassador of the King of Spain, which we cannot but consider as a matter of the highest importance to your Majesty's crown and people; and for acquainting us, that in confequence of this hostile declaration, your Majetty had found yourself obliged to give orders to your ambassador to withdraw from that court.

We beg leave to affure your Majesty, that among the many proofs we have received of your Majesty's constant care and concern for the safety and happiness of your people, your Majesty's declaration of vour fincere defire to preserve and to cultivate peace and friendly intercourse with the court of Spain, cannot fail to inspire us with the highest sentiments of gratitude and attachment; and thar, animated by your Majesty's example, we will, with unshaken fidelity and resolution, and with our lives and fortunes, stand by and support your Majesty against all the hostile defigns and attempts of your enemies against the honour of your crown, and the rights and common interests of all your Majesty's subjects."

Upon the motion for the above address, an amendment was proposed by adding the following words:

" That in a moment so critical as that which now presents itself to the confideration of parliament, the most awful this country has ever experienced, it would be deceiving his Majesty, and the nation, if at the same time that we lament the fatal effect of those councils, which, by dividing and wasting the force of the empire by civil wars, incited our natural enemies to take advantage of our weak and distracted condition; were we not to represent to his Majesty, that the only means of resisting the powerful combination that now threatens this country, will be by a total change of that lyitem

fystem that has involved us in our present dissipulties in America, in Ireland, and at home; by such means, attended with prudent economy, and a due exertion of the sorces of a free and united people, we trust that his Majesty, with the assistance of Divine Providence, will be able to withstand all his enemies, and to restore Great Britain to its former respected and happy stuation."

The question being put, that those words stand part of the address, it was carried in the negative. Contents 32. Non-contents 57.

Dissentient,

Because the amendment proposed, recommending to his Majesty a change of system in the principles and conduct of the war, appears to us to be warranted by every confideration which prudence and experience can luggest, and to be called for by the extreme magmitude of the dangers which surround us. The formal furrender of all right to tax North America, proposed by the very same Miniders, who at the expence of fifty shoufand lives, and thirty millions of money, had for three years successevely attempted to establish this claim, necessarily proves, either that those principles of legislation which they had thus afferted and thus abandoned were unjust in themselves, or that the whole power of Great Britain under their conduct was unable to effectuate a reasonable dependency of its own colonies. A dilemma dishonourable to them and ruinous to us; and which, whatever fide is taken, proves them wholly undeferving of the future confidence of a Sovereign and a people whose implicit trust in them (the largest which ever was reposed by any King or any nation) they have abused in a manner of which the records of parliament, and the calamities of the nation, are but too faithful witnesses.

If the whole force of Great Britain and Ireland, aided by the most lavish grants, assisted by thirty thousand Germans, unobstructed for a long time by any foreign power, has failed in three campaigns against the unprepared provinces of North America; we should hold ourselves equally unworthy of all trust, if we were willing to confide in those abilities which have totally failed in the fingle contest with the colonies, for rescuing us from the united and fresh efforts of France and Spain, in addition to the successful resistance of North America.

In such a situation, a change of system appeared to us to be our indispensable duty to advise. have confidered fuch a change as the only means of procuring that union of councils, that voluntary effort of every individual in the empire which is necessary to be called forth in this hour of danger. We have readily concurred in a fincere offer of our lives and fortunes in support of his Majesty against the attacks of his enemies. Those valuable pledges, both of what is our own personally, and of what belongs to our fellow citizens (which ought to be, and are no less dear to us), give us a full right to claim and demand some better security for their being employed with judgment and effect, for the purpoles for which we offer them, than can be derived from the opinions, in

Which

which all mankind concur, of the total want of capacity of his Majesty's Ministers.

We have avoided recommending any specific measures, in order
not to embarrass government in a
moment of such difficulty: but
we have no scruple in declaring,
that whatever may be the suture
conduct of Great Britain with respect to America, the collecting
our force at a proper time to resist
and to annoy our natural rivals
and ancient enemies, seems to us
beyond a doubt to be proper and
expedient.

adly. We think this advice the more seasonable, because we know the obstinate attachment of the Ministers to that unfortunate system, from the satal predilection to which they have suffered the safety of the state to be endangered, and the naval strength of our powerful, jealous, and natural rivals to grow under their eyes, without the least attempt at interruption, until it had arrived at its present alarming magnitude, insidious combination, and hostile direction.

3dly. This plan appears to us strongly enforced, by the melancholy condition in which the mifconduct and criminal neglects of the Ministers have placed us.— Our best resources wasted and confumed; the British empire rent alunder; a combination of the most powerful nations tormed against us, with a naval superiority both in number of ships and alacrity of preparation; and this country now, for the first times left entirely exposed, without the aid of a fingle ally. We should think ourselves partakers in the offences of the Ministers, and ac-

we neglected any possible means of fecuring a proper application of all the force we have left, from a blind confidence in persons, on whose account no nation in Europe will have any confidence in us. A manly disposition in parliament to apply the national wifdom to the cure of the national difference, would restore our credit and reputation abroad, and induce foreign nations to court that alliance which they now fly from; would invigorate our exertions at home; and call forth the full operation of that British spirit which has so often, urder the direction of wife counsel and a protecting Providence, proved superior to numbers; but which can have no existence but from a well-founded opinion, that it is to be exerted under Ministers and commanders who possess the esteem and affection of the people.

We have in vain called for some plan on which to build better hopes, or for some reason for adhering to the present system.

We have in vain requested to know what have been the circum-stances of the mediation, what are the grievances complained of by the Spanish court, in order that we may weigh the justice of that war in which we are going to engage, on which foundation alone we can rely for the protection of Providence.

We have urged the necessity of the great council of the nation continuing to fit, that his Majesty may not be deprived of the advice of parliament in such a difficult erisis.

think ourselves partakers in the All these representations have offences of the Ministers, and ac- been met with a sullen and unsacessaries to our own destruction, if tissactory silence; which gives us

but too much reason to conclude, that Ministers mean to persevere in that unhappy course, which has been the cause of all our missortunes.

After doing our utmost to awaken the House to a better sense of things, we take this method of clearing ourselves of the consequences which must result from the continuance of such measures.

Richmond, Manchester, Effingham, Abergavenny, Derby, Ferrers, De Ferrars, King, Harcourt, Portland, Rockingham, Radnor, Coventry, Scarborough, Ponionby, Hereford, Devonshire, Foley. Egremont,

Die Martis, 29° Junii, 1779.

THE bill for the more effectually manning the navy was read a third time. Then an amendment being proposed to be made thereto; the same was objected to after a long debate. The question was put thereupon. Resolved in the affirmative. Then it was moved to re-commit the bill. The question was put thereupon. Resolved in the negative. Contents 24. Non contents 50.

Dissentient,

Because the re-commitment of this bill, which was moved, but which the House has thought proper to negative, appeared to us to be absolutely necessary for the introduction of such alterations as might, we hope, have enabled the House to concur unanimously in the suspension of those acts of parliament which stand in the way of

the extraordinary supply of men wanted for equipping the fleet on the present emergency; an unanimity at this time is certainly deurable, which we have thewn our readinels to produce, by offering to acquieice in measures of confiderable hardship and oppression, on account of the deplorable fituation, to which this country is reduced; although that fituation, fo far from being imputable to es, is to be ascribed solely to that obstinate adherence to a system, of wnich we have conitantly foretold the confequences we now to unhappily experience.

We wished in the committee not to have suffered the day of the commencement of this bill to remain, as it now stands the fixteenth of the present month, a period antecedent by sourteen days to the pussing of this bill, whereby it has a retrospective operation, and becomes an expussion facto law, contrary to every principle of justice, contrary to parliamentary saith, and contrary to true policy.

We wished to have accompanied this alteration in the committee, with an act of indemnity for the avowed breach of the laws now in being; we offered to confert to this indemnity in the fullest manner that could be wished, although the proofs we repeatedly called for, of the extent of the benchin were retuled; proofs which we did not require to be attended with that degree of Arichness which could render it difficult to produce them; proofs, which in common blies, from an effential part of the grounds on which the infractor of law is to be saved harmless, but which, in the present instance,

we would have dispensed with in favour of the intention.

We wish, by no means, to dilcourage future ministers from extraordinary exertions, when warranted by sufficient necessity; but we think it due to the dignity of parliament, as well as to the lafety of the conditution, on all occasions, but more especially where the parliamentary faith has been so deeply pledged, to give to acts of indemnity all possible solemnity, that they may never come to be confidered as acts of right, but as acts of the last necessity; recognizing upon the face of them the force of the law, and stacing, as far as the occasion will admit, the necolity of the violation. A precedent in point stands in the statute book, 7 G.o. III. chap. 71 and we can fee no reason why it has not been precifely followed.

In direct opposition to this precedent, the present bill does not in the title, preamble, or in any part, directly mark its intermediate object; it no where directly recognizes the power of the law; it no where states the necessity, nor the obtainable advantage, which can atone justify the proceeding; both the violation idelt, and the indemnity it is to obtain, come only incidentally and indirectly under the last clause. It has been hurried through parliament in a most uncommon manner, and establishes a new, dangerous, and most alarming précedent,

Such an act of indemnity as was that nothing less than the legislawho infringe them, and that such

protection is given only in cases of extreme necellity.

The objection, that a great fervice already obtained by the number of men impressed since the 16th of this month, would be lost by their being to be discharged, if the act had no retrospect to the time when they were seised, by no means applies to the question of re-commitment which the House has rejected. It appeared in debate, that of the number of men pressed on this occasion, and which has not even been computed to be very considerable, by far the greater part had only Admiralty protections, and were not protected by the acts now proposed to be And it was by no iuipended. means impossible, but that such bounties or encouragements might have been suggested in the committee, as would have induced the greater part of those who had the farth of parliament for their security, to enter voluntarily into the dervice at this critical conjuncture.

Every good purpole therefore of this bill might have been obtained, and probably a general concurrence in its support produced; by limply acquielding in a proper iccurity for the observance of law.

But when we see this proposal refused, when we see that part of the preamble pertinaciously adhered to, which aims at establishing, as a general principle, that whatever may be deemed an arduous and difficult conjuncture, makes it proposed, would have preserved equally just and expedient to inthe principle that laws are facred, fringe law; when we fee a proposed amendment for confining tive power itself can protect those that reasoning to the case which gives rife to the measure, namely,

the present conjuncture, rejected, we cannot but see with a jealous eye this and every opportunity taken of establishing some doctrine subversive of liberty and our happy free constitution.

At such a time as this, when ministers arow their just fears of foreign invasion, which their misconduct has invited, to create fresh jealousies in respect to that liberty which is alone worth contending for, which is the best support to his Majesty's crown, and the surest foundation of that true affection of his people, on which his Majesty can alone rely for effectual and general resistance to a foreign yoke, is a degree of infatuation we cannot comprehend!

Ancaster and Wycombe,
Kesteven, Manchester,
Richmond, Rockingham,
Scarborough, Fitzwilliam,
Abergavenny, Cholmondeley,
Fortescue, Bolton,
De Ferrars, Essingham.
Postland,

Then the question was put, whether this bill, with the amendment, shall pass? Contents 51. Non-contents 20.

Resolved in the affirmative.

Dissentient,

Because the acquiescence of the country in the mode of impressing seamen (tolerated only because the necessity of the measure is alledged by persons of great experience in naval matters, and hitherto is not disproved) has been by positive acts of the legislature interpreted and determined, with respect to the several persons, objects of this bill, who have therefore not only all the rights of this kingdom, in common with their sellow subjects,

but the security of special acts of parliament, made expressly to check and curb that acquiescence with respect to them.

adly. Because the protection given by such acts, in confidence of which these persons have engaged in their respective occupations, has, in my opinion, the nature of a contract, and is, by every rule of equity, indisfoluble, except by the voluntary consent of the parties, or upon a compensation satisfactory to, and accepted by them, or in extreme necessity, on the tender of luch advantages as the wisdom of the legislature should direct, and its justice should make a complete, adequate, and ample equivalent for such an infringement of their rights.

3dly. Because at the very time protections thus held out by parliament to certain persons, as invitations and encouragements to undertake certain services, were boldly violated; the customary exemptions of certain watermen, licented by the members of this House, unauthorized (as I conceive) by any law, and unknown to any court, though stated in the House by the same noble Lord who has infringed these protections, to be constructively disclaimed by a vote of this House, were yet declared by him to be, from deference and respect, held sacred.

4thly. Because the bill, so far as it is an act of indemnity, is inconsonant with reason, contradicted by precedent, and dangeross in practice.

First, with respect to the persons to be indemnissed, as it does not contain an honest avowal of the transgression; as it does not stake the minister to an intentional violaviolation of the law for the public good, to be subsequently approved and justified on that ground by a public indemnity, but contents itself with the abatement of suits and actions.

And secondly and chiefly, with respect to the constitution of the kingdom, to which it offers no 12tisfaction for the violation of the law; as it acknowledges only by construction and reference to dates, that it has been violated; as it attempts to confound the just ideas of prospective legislation by authorizing a measure from a day which has already long elapsed, and as it totally omits to state not only that the effect has been adequate to the measure, and that therefore the measure is falutary, and that it has had any effect whatever.

RADNOR.

For the first and fourth reasons,

Portland, De Ferrars.

Abergavenny,

On Saturday, July 3. his Majesty closed the Session of Parliament with the following Speech.

My Lords, and Gentlemen,

HE many great and essential services you have rendered to me and to your country, during the course of your long attendance in parliament, demand my most cordial thanks.

I have seen, with entire approbation, the zeal you have manifested for the support and prosecution of the just and necessary war in which I am engaged, nor am I less sensible of your attention to the present state of the kingdom of Ireland: my paternal affection for all

my people makes me sincerely anxious for the happiness and prosperity of every part of my dominions.

Hitherto the events of war have afforded the court of France no reafon to triumph on the consequences of their injustice and breach of public faith; and I trust that by a spirited and prosperous exertion of the force you have put into my hands, that ambitious power may be brought to wish that they had not, without provocation or cause of complaint, insulted the honour, and invaded the rights of my crown.

I have already acquainted you with the hostile step which has been lately taken by the court of Spain. Whatever colour may be attempted to be put upon that unjust proceeding, I am conscious. that I have nothing to reproach myself with: it has been followed by the clearest demonstrations of the loyalty and affection of my parliament to my person and government, for which I repeat to you my warmest thanks; and I confider it as a happy omen of the fuccels of my arms, that the increase of difficulties serves only to augment the courage and constancy of the nation, and to animate and unite my people in the defence of their country, and of every thing that is dear to them.

The advanced season of the year requires that I should afford you some recess from public business, and I do it with the less reluctance, as, by the powers vested in me by law, I can have the aid of your advice and assistance within tourteen days, should any emergency make it necessary for me to convene you before the usual time.

Gentle-

Gentlemen of the House of Commons,

The various and extensive operations of the war have unavoidably occasioned uncommon expence, and brought additional burdens on my faithful and beloved people, which I most sincerely regret: I cannot sufficiently thank you for the considence you have reposed in me, and for the chearfulness and public spirit with which the large supplies for the current year have been granted.

My Lords, and Gentlemen,

It is impossible to speak of the continuance of the rebellion in North America without the deepest concern; but we have given such unquellionable proofs of our fincere disposition to put an end to those troubles, that I must still hope that the malignant deligns of the enemies of Great Britain cannot long prevail against the evident interests of those unhappy provinces, and that they will not blindly persist in preferring an unnatural and dangerous connection with a foreign power, to peace and re-union with their mother-country.

Then the Lord Chancellor, by his Majesty's command, said,

My Lords, and Gentlemen,

It is his Majesty's royal will and pleasure, that this parliment be prorogued to Thursday, the 5th of August next, to be then here holden; and this parliament is prorogued to Thursday, the 5th of August next.

Dublin Castle, Odober 12.

HIS day the parliament having met according to the last proregation, his Excellency the Lord Lieutenant went in state to the House of Peers, and the Commons being sent for and come thither accordingly, his Excellency made the following speech to both Houses:

My Lords, and Gentlemen,

AT a time when the trade and commerce of this kingdom are, in a more particular manner, the objects of public attention, it were to be wished that the general tranquillity, ever desirable, had been restored, so as to have left you entirely at leifure to deliberate on those great and important subjects. But I am persuaded you will not permit any interests, however dear to you, to impede your efforts, or dilturb your unanimity at this most important period: and I have it expressly in command from his Majesty to assure you, that the cares and solicitudes inseparable from a state of hostility, have not prevented him from turning his royal mind to the interests and distresses of this kingdom with the most affectionate concern; of which the money remitted to this country for its descence, when England had every reason to apprehend a most formidable and immediate tack, affords a convincing proof. Anxious for the happiness of his people, his Majesty will most chearfully co-operate with his Parliament in such measures as may promore the common interests of all his subjects.

I have the pleasure to inform you of an accession to his Majesty's family since the last session of Par-

liament, by the birth of another Prince. May the same Providence that continues to increase his domestic selicity, protect the honour of his crown, and the happiness of his people.

Gentlemen of the House of Commons,

It is with great concern I am to inform you, that on account of the extraordinary decline of the revenues, the very liberal supplies of the last session have proved inadequate to the exigencies of government; so that, contrary to my most sanguine expectations, and most sanguine expectations, and most earnest endeavours, there is a considerable arrear now to be provided for.

His Majesty, from his paternal attention to the interests of his people, and his solicitude to obviate to the utmost, the necessity of increasing their burdens, has graciously commanded me to declare to you, that the greatest economy shall in every instance be exerted, as far as may be consistent with the honour of his crown, and the real interests of the nation.

I have ordered the public accounts, and other necessary papers, to be laid before you; and I have no doubt that your known loyalty to your King, and attachment to your country, will induce you to go as far as the national abilities will admit, in making a provision suitable to the exigency of the times, and the honourable support of his Majesty's government.

My Lords and Gentlemen,
The united efforts and great
military preparations of the house
of Bourbon seem only to have
Vol. XXII.

roused the courage, and called forth the exertions of his Majesty's brave and loyal subjects of this kingdom. I have only to lament, that the exhausted state of the treasury has hitherto put it out of my power to give those exertions the most extensive and constitutional operation, by carrying the militia laws into execution.

I am persuaded you will not suffer any dangers that may be threatened from abroad to draw off your attention from wise and necessary domestic regulations; and that, among the many subjects worthy of your consideration, the Protestant charter schools and linen manusacture will continue to be objects of your serious attention.

In promoting these, and in all other measures that may tend to increase the prosperity and improve the true interests of this kingdom, I am bound to co-operate with you by a double tie of inclination and duty. Nothing can ever affect me with more real satisfaction, than the exerting my best endeavours for the welfare of Ireland; nor can I ever render a more acceptable service to my Sovereign, than in promoting the happiness of his people.

The humble Address of the Lords
Spiritual and Temporal, in Parliament assembled, to his Excellency
the Lord Lieutenant; with his
Excellency's Answer.

May it please your Excellency,

E, his Majesty's most dutiful and loyal subjects, the
Lords Spiritual and Temporal in
Parliament assembled, teturn y us

[Z]

Excel-

Excellency our fincere thanks for your most excellent speech from the throne.

We feel ourselves happy in being again assembled in Parliament under your Excellency's administration, of which we have had sych experience, as fills us with the best grounded hopes and considence, that, assisted by your Excellency's knowledge of, and earnest desire to promote the true interest of this country, such things may be accomplished, as may eminently distinguish the present seffion of parliament, by the wife provision, and useful regulations which shall be made in it, for restoring and establishing the national prosperity.

We cannot doubt of your Excellency's faithful representations of this country, when we hear from the throne, as we have done, that his Majelty hath gracioully condeicended to assure us, that the cares and solicitudes inseparable from a state of hostility, have not been able to prevent him from turning his thoughts to the interest and distresses of this kingdom, and to asford us such a proof as he has done of his affectionate concern, by the remittance made to this country for its support.

-We rejoice with your Excellency, on the happy accession to his Majesty's royal family by the birth of

another Prince.

We congratulate with your Excellency, that, notwithstanding the united efforts of his Majesty's enemies, there is that display of courage and manifestation of zeal for the support of his Majesty's sacred person and government, through all orders and ranks of the people in this kingdom, as shews

that his Majesty's loyal subjects here, are so far from being cast down and dismayed, by any hostile efforts or threats, that they are animated to a degree, that roules the brave and military fpirm of this country, that hath so eminently distinguished itself at all times.

We beg leave to affure your Excellency, that we will not suffer any dangers, with which we may be threatened from abroad, to draw off our attention from wife and domestic regulations; and that among the great objects, worthy of our consideration, the Protestant charter schools, and linen manufacture, will continue to have a just share of our attention.

We cannot but affer to your kxceilency our most graseful thanks, for the kind assurance that you have given us, of your co-operating with us in promoting such measures, as may tend to increase the prosperity, or improve the true interest of this kingdom; - and, relying upon the proofs which your Excellency hath given us, in your past conduct, of your good wishes, we trust, that your Excellency's best endeavours will never be wanting, to forward and promote the welfare of Ireland.

His Excellency's Anfaver.

My Lords,

The same indulgent partiality which dictated the terms of your Lordships Address, will, I flatter myself, excuse my not finding language sufficiently forcible to express my thanks. It shall be my flody to persevere in that line of conduct, which has been deemed deserving of your approbation.

Translation

Translation of the King of France's Declaration of War at Martinico.

HE infult offered to my flag by a frigate belonging to his Britannic Majesty, in her treatment of my frigate the Belle Poule; the capture by an English squadron of my frigates the Licorne and Pallas, and of my cutter, the Coureur, contrary to the law of nations; the capture at sea and confication of ships belonging to my subjects, by the English, contrary to the faith of treaties; the continual interruption and injury occasioned to the maritime commerce of my kingdom, and of my colonies in America, as well by ships of war as by privateers, authorized by his Britannic Majesty; the depredations committed and encouraged, by which these injurious proceedings, but chiefly the infult offered to my flag, have forced me to lay afide that moderation which I proposed to observe, and will not allow me any longer to suspend the effects of my reientment.

The dignity of my crown, and the protection which I owe to my subjects, oblige me to make reprifals, and to act in a hostile manner against the English nation. therefore authorize my ships to attack, and endeavour to take and destroy all ships, frigates, and other vessels they may meet with, belonging to the King of England, and also to seize and detain all English mercantile vessels which they may encounter; and I likewise authorize my troops to attack, seize, and occupy the possessions of his Britannic Majesty.

I therefore write this letter to inform you, that it is my tlefire,

that you employ all the land and sea forces under your direction, in attacking and seizing the possesfions of the King of England, his ships, frigates, and other vesiels, also the merchant ships belonging to his subjects, and for that purpose you may exercise, and cause to be exercised, all manner of bostilities authorized by the laws of war; I am affured in finding in the justness of my cause, in the courage and skill of my land and sea forces, in the bravery and attachment of my foldiers and failors, and in the love of my subjects in general, the resources which I have always experienced from them, my present conduct having no other tendency than to promote their happiness.

I pray God, Monsieur le Marquis de Bouille, that he may take you under his holy protection.

(Signed)

Louis.

DE SARTINE.

Versailles, 28th June, 1778.

A DECLARATION,

Addressed in the Name of the King of France to all the ancient French in Canada, and every other Part of North-America. (Translated from the French.)

by his Majesty, and thence cloathed with the noblest titles, with that which effaces all others, charged in the name of the father of his country, and the beneficent protector of his subjects, to offer a support to those who were born to enjoy the blessings of his government—

 $[Z]_2$

To all bis Countrymen in North-America.

You were born French; you never could cease to be French. The late war, which was not declared but by the captivity of nearly all our seamen, and the principal advantages of which our common enemies entirely owed to the courage, the talents, and the numbers of the brave Americans, who are now fighting against them, has wrested from you that which is, most dear to all men, even the name of your country. To compel you to bear the arms of parricides against it, must be the completion of misfortunes: with this you are now threatened: a new war may justly make you dread being obliged to submit to this most intolerable law of flavery. It has commenced like the last, by depredations upon the most valuable part of our trade. Too long already have a great number of unfortunate Frenchmen been confined in American prisons. You hear their groans. The present war was declared by a mellage in March lalt, from the King of Great Britain to both Houses of Parliament; a most authentic act of the British sovereignty, announcing to all orders of the State, that to trade, (with America) though without excluding others from the same right, was to offend; that frankly to avow such intention, was to defy this fovereignty; that she should revenge it, and deferred this only to a more advantageous opportunity, when she might do it with more appearance of legality than in the last war; for she declared that she had the right, the will, and the ability to revenge, and accordingly she demanded of Parliament the

supplies.

The calamities of a war thus proclaimed, have been restrained and recarded as much as was posfible, by a monarch whose pacific and difinterested views now reclaim the marks of your former attachment, only for your own happi-Constrained to repel force by force, and multiplied hostilities by reprisals which he has at last authorised, if necessity should carry his arms, or those of his allies, into a country always dear to him, you have not to fear either burnings or devastations: and if gratitude, if the view of a flag always revered by those who have followed it, should recall to the banners of France, or of the United States, the Indians who loved us, and have been loaded with prefents by him, whom they also call their father; never, no never shall they employ against you their too cruel methods of war. Those they mutt renounce, or they will cease to be our friends.

It is not by menaces that we shall endeavour to avoid combating with our countrymen; por shall we weaken this declaration by invectives against a great and brave nation, which we how to respect, and hope to vanquish.

As a French gentleman, I need not mention to those among you who were born such as well as myself, that there is but one sugust House in the universe, under which the French can be happy, and ferve with pleasure; fince its head, and those who are nearly allied to him by blood, have been at all times, through a long line of monarchs, and are at this day

more than ever delighted with bearing that very title which Henry IV. regarded as the first of his own. I shall not excite your regrets for those qualifications, those marks of distinction, those decorations, which, in our manner of thinking, are precious treasures, but from which, by our common mistortunes, the American French. who have known so well how to deferve them, are now precluded. These, I am bold to hope, and to promise, their zeal will very 100n procure to be diffused among them. They will merit them, when they dare to become the friends of our allies.

I shall not ask the military companions of the Marquis of Levi, those who shared his glory, who admired his talents and genius for war, who loved his cordiality and frankness, the principal characteristics of our nobility, whether there be other names in other nations, among which they would be better pleased to place their own.

Can the Canadians, who saw the brave Montcalm sall in their defence, can they become the enemies of his nephews? Can they sight against their former leaders, and arm themselves against their kinsmen? At the bare mention of their names, the weapons would fall out of their hands.

I shall not observe to the ministers of the altars, that their evangelic efforts will require the special protection of Providence, to prevent faith being diminished by example, by worldly interest, and by sovereigns whom force has imposed upon them, and whose political indulgence will be lessened proportionably as those sovereigns

shall have less to fear. I shall not observe, that it is necessary for religion, that those who preach it should form a body in the State,; and that in Canada no other body would be more considered, or have more power to do good than that of the priests, taking a part to the government, since their respectable conduct has merited the considence of the people.

I thall not reprefent to that people, nor to all my countrymen in general, that a vait monarchy, having the same religion, the same manners, the same language, where they find kinsmen, old triends and brethren, muit be an inexhaultible source of commerce and wealth. more easily acquired and better fecured, by their union with powerful neighbours, than with strangers. of another hemisphere, among whom every thing is different, and who, jealous and despotic governments, would sooner or later treat them as a conquered people, and doubtless much worse than their late countrymen the Americans, who made them victorious. I shall not urge to a whole people, that to join with the United States, is to secure their own happiness; since a whole people, when they acquire the right of thinking, and acting for themselves, must know their own interest; but I will declare, and I now formally declare in the name of his Majesty, who has authorifed and commanded me to do it, that all his former subjects in North America, who shall no more acknowledge the supremacy of Great Britain, may depend upon his protection and support.

Done on board his Majetly's ship the Languedoc, in the har[Z] 3 bour

bour of Boston, the 28th day of Done at Versailles the 5th day October, in the year 1778.

LSTAING.

BIGREL DE GRANCLOS, Secretary, appointed by the King, to the squadron commanded by the Count D'Estaing.

Letter from the French King to the Admiral of France, fixing the Time from whence the Commencement of Hostilities was to be considered.

To his Serene Highness, my Lord, the Admiral.

COUSIN, Am informed that doubts have arisen on the period from which ought to be fixed the commencement of hostilities; and that from this incertitude may result many disputes prejudicial to commerce. To prevent which, I have thought proper to explain to you more particularly what I have already sufficiently told you in my letter of the 10th of July. I charge you, in consequence, to inform those who are under your orders, that the infult done to my flag on the 17th of June, 1778, by the English squadron seizing my frigates, the Pallas and the Licorne, puts me to the necessity of making reprisals, and that it is from that day, the 17th of June, 1778, that I fix the commencement of hostilities against my subjects, by the subjects of the King of England. There being for this purpose only, I pray God, that he will take my cousin into his holy and merciful protection.

of the month of April, in the year of Grace, 1779, and in the 5th of our reign.

(Signed) Louis. And underneath, DE SARTINE,

Letter from the French King, to his Serene Highness the Admiral of France. Dated June 5, 1779.

(Translated from the French.)

Cousin,

THE defire I have always had of fostening, as much as in my power lies, the calamities of war, has induced me to direct my attention to that part of my subjects who employ themselves in the fisheries, and who derive their sole subsistence from those fources. I suppose that the example, which I shall now give to my enemies, and which can beve no other views than what arise from fentiments of humanity, will induce them to grant the same liberty to our fisheries, which I readily grant them. In consequence whereor, I fend you this letter to acquaint you, that I have given orders to all the commanders of my vessels, armed ships, and captains of privateers, not to molek (until further orders) the English hihery, nor to stop their vessels, whether they be laden with fresh fish, or not having taken in their freight; provided, however, that they do not carry offensive arms, and that they are not found to have given fignals, which might indicate their holding an intelligence with the enemy's ships of war. You will make known these my intentions to the officers of the

Admiralty, and to all who are under your orders. Such being the purpoles of these presents, I pray God, my Coufin, that he will grant you his boly protection.

Given at Versailles, the 5th day of June, in the year 1779.

Signed

Louis.

Counterlighed

DE SARTINE.

Copy of a Paper delivered to Lord Viscount Weymouth, by the Marquis d'Almadovar, the 16th June, 1779.

LL the world has been witness to the noble impartiality of the King, in the midst of the disputes of the Court of London with its American colonies and with France. Besides which. his Majesty having learned that his powerful mediation was desired, generoully made an offer of it, which was accepted by the beligerent powers, and for this motive only a ship of war was sent on the part of his Britannic Majetty to one of the ports of Spain. The King has taken the most energetic iteps, and fuch as ought to have produced the most happy effect, to bring those powers to an **accommodation** equally honourable to both parties; proposing for this end wife expedients for imoothing difficulties, and preventing the calamities of war. But although his Majesty's propositions, and particularly those of his Ultimatum, have been conformable to those which at other times the Court of London itself had appeared to judge proper for an accommodation, and which were also quite as moderate, they have been rejected

in a manner that fully proves the little defire which the British Cabinet has to restore peace to Europe, and to preserve the King's friendship. In effect, the conduct of that Cabinet, with regard to his Majesty, during the whole course of the negociation, has had for its object to prolong it for more than eight months, either by vain pretences, or by answers which could not be more inconclusive, whilst in this interval the insults on the Spanish stag, and the violation of the King's territories were carried on to an incredible excels; prizes have been made, ships have been searched and plundered, and a great number of them have been fired upon, which have been obliged to defend themselves; the registers have been opened and torn in pieces, and even the packets of the Court found on board the King's packet-boat.

The dominions of the Crown in America have been threatened, and they have gone to the dreadful extremity of raising the Indian nations, called the Chatcas, Cheroquies, and Chicachas, against the innocent inhabitants of Louisiana, who would have been the victims of the rage of these barbarians, if the Chatcas themselves had not repented, and revealed all the seduction the English had planned. The sovereignty of his Majesty in the province of Darien, and on the coast of St. Bas, has been usurped, the Governor of Jamaica having granted to a rebel Indian the commission of Captain-general of those provinces.

In fhort, the territory of the Bay of Honduras has been recently violated by exercising acts of hostility, and other excesses, against $[Z]_4$ the

the Spaniards, who have been imprisoned, and whose houses have been invaded; besides which, the Court of London has hitherto negleded to accomplish what the 16th article of the last treaty of Paris stipulated relative to that coast.

Grievances so numerous, lo weighty, and recent, have been at different times the object of complaints made in the King's name, and flated in memorials which were delivered either to the British Mimisters at London, or transmitted to them through the channel of the English Ambassador at Madrid; but although the aniwers which were received have been friendly, his Majesty has hitherto obtained no other fatisfaction than to see the infults repeated, which lately have amounted to the number of one hundred.

The King, proceeding with that fincerity and candour which char racterize him, has formally declared to the court of London, from the commencement of its disputes with France, that the conduct of England should be the rule of that which

Spain would hold.

His Majesty likewise declared to that Court, that at the time their differences with that of Paris might be accommodated, it would be absolutely necessary to regulate those which had arisen, or might still arise, with Spain, and in the plan of mediation which was lent to the under-written Amballador the 28th of last September, and which was by him delivered to the British Ministry in the beginning of October, a plan with which Lord Grantham was apprized, and of which he received a copy, his Majesty declared in positive terms to the belligerent powers, that in consideration of the insults which his subjects and dominions had luffered, and likewise of the attempts levelled against his rights, he should be under the necessity of taking his part, in case the negociation, instead of being continued with tincerity, should be broken off, or

should produce no effect.

The causes of complaint given by the Court of London not having ceased, and that Court shewing no dispositions to give reparation for them, the King has refolved, and orders his Ambassador to declare, that the honour of his crown, the protection which he owes to his subjects, and his own personal dignity, do not permit him to suffer their insults to continue, and to neglect any longer the reparation of those already received, and that in this view, notwithstanding the pacific dispositions of his Majesty, and even the particular inclination he had always had and expressed for cultivating the friendship of his Britannic Majesty, he finds himself under the disagreeable necessity of making use of all the means which the Almighty has intrusted him with, to obtain that justice which he has solicited by so many ways, without being able to acquire it: in confiding on the justice of his cause, his Majesty hopes that the consequences of this resolution will not be imputed to him before God or man, and that other nations will form a suitable idea of this resolution, by comparing it to the conduct which they themselves have experienced on the part of the British Ministry.

(Signed)

LE MARQUIS D'ALMADOVAR. London, 16 June, 1779.

Or ders

Orders for Reprisals by the Court of London.

At the Court at St. James's, the 18th of June, 1779.

PRESENT,
The KING's Most Excellent
Majesty in Council.

WHEREAS the Ambassador V of the King of Spain has, by order of his Court, delivered to Lord Viscount Weymouth a paper, in which it is declared, that his Catholic Majesty intends to have recourie to arms, under the groundless pretence of obtaining reparation for injuries supposed to have been received; and whereas the said Ambassador has received orders to retire from this kingdom without taking leave: his Majesty, being determined to take such measures as are necesfary for vindicating the honour of his crown, is pleased, by and with the advice of his Privy Council, to order, and it is hereby ordered, that general reprilats be granted against the ships, goods, and subjects of the King of Spain, so that as well his Majesty's fleet and ships, as also all other ships and veilels that shall be commissionated by letters of marque or general reprisals, or otherwise, by his Majesty's Commissioners, for executing the office of Lord High Admiral of Great Britain, shall and may lawfully seize all ships, vessels, and goods belonging to the King of Spain or his subjects, or others inhabiting within any the territories of the King of Spain, and bring the same to judgment in any of the Courts of Admiralty within his Majesty's

dominions; and to that end his Majesty's Advocate-General, with the Advocate of the Admiralty, are forthwith to prepare the draught of a commission, and present the same to his Majesty at this board, authorifing the Commissioners for executing the office of Lord High Admiral, or any person or persons by them empowered and appointed, to issue forth and grant letters of marque and reprisal to any of his Majesty's subjects, or others whom the faid Commissioners shall deem fitly qualified in that behalf, for the apprehending, seizing, and taking the thips, vessels, and goods belonging to Spain, and the vaffals and subjects of the King of Spain, or any inhabitants within his countries, territories, or dominions; and that such powers and clauses be inserted in the said commission as have been usual, and are according to former precedents: and his Majesty's faid Advocate General, with the Advocate of the Admiralty, are also forthwith to prepare the draught of a Commistion, and prefent the fame to his Majesty at this Board, authorising the faid Commissioners for executing the office of Lord High Admiral, to will and require the High Court of Admiralty of Great Britain, and the Lieutenant and Judge of the faid Court, his furrogate or jurrogates, as also the several Courts of Admiralty within his Majesty's dominions, to take cognizance of, and judicially proceed upon all, and all manner of captures, seizures, prizes, and reprisals of all ships or goods that are or shall be taken, and to hear and determine the same; and according to the course of Admiralty, and the laws of nations, to adjudge

and condemn all fach ships, vesfels, and goods, as shall belong to Spain, or the vallals and subjects of the King of Spain, or to any others inhabiting within any of his countries, territories, and domin ons; and that such powers and clauses be inserted in the laid cominission as have been usual, and are. according to former precedents; and they are likewise to prepare and lay before his Majesty at this Board, a draught of such instructions as may be proper to be sent to the Courts of Admiralty in his Majesty's soreign governments and plantations, for their guidance berein; as also another draught of instructions for such ships as shall be commissionated for the purposes afore mentioned.

Proclamation relative to an Invasion.

By the KING.
A PROCLAMATION.

GEORGE R.

[7HEREAS we have received VV intelligence, that preparations are making by our enemies to invade this our kingdom, the fafety and defence of which requires our utmost care, and wherein, by the affiftance and bleffing of God, we are resolved not to be wanting; and to the intent that they may not, in case of their landing, strengthen themselves, by seizing the horses, oxen, and cattle of our subjects, which may be useful to them for draught or burthen, or be easily supplied with provisions, we have therefore thought fit, and do by our Royal Proclamation, by the advice of our Privy Council, strictly charge and command the Warden of the Cinque Ports, his Lieutenauts, Deputy or Deputies, and all and every the Lieutenants and Deputy Lieutenants of our counties, and all Sheriffs, Justices of the Peace, Mayors, Bailiffs, and all and every other Officers and Ministers, civil and military, within their respective counties, cities, towns, and divisions, that they cause the coasts to be carefully watched, and upon the first approach of the enemy, immediately to cause all horses, oxen, and cattle, which may be fit for draught or burthen, and not actually employed in our service, or in the defence of the country, and also (as far as may be practicable) all other cattle and provitions, to be driven and removed to fome place of security, and to such a distance from the place where the enemy shall attempt, or appear to intend, to land, so as they may not fall into the hands or power of any of our enemies; wherein, nevertheless, it is our will and pleafure, that the respective owners thereof may suffer as little damage, loss, or inconvenience as may be confistent with the public safety: and we do hereby further strictly charge and command all our subjects to be aiding and assisting in the execution of this our royal command.

Given at our Court at St. James's the ninth day of July, one thoufand feven hundred and feventynine, in the nineteenth year of our reign.

GOD fave the KING.

Translation of the two Royal Chedules of the King of Spain.

ON Carlos, by the grace of God, King of Castile, Leon, Arragon, the Two Sicilies, Jerusalem, Navarre, Granada, Toledo, Valencia, Gallicia, Malorca, Seville, Sardinia, Cordova, Corfica, Murcia, Jaen, the Algarves, Algazires, Gibraltar, the Canary Islands, the East and West Indies, the Islands and Terra Firma, of the Ocean—Archduke of Austria, Duke of Burgundy, Brabant, and Milan, Count of Hapfburg, Flanders, Tirol, and Barcelona, Lord of Biscay, and Molina, &c.

To my Council, to the Presidents, and Auditors of my audiencies and chanceries; to the Alcaldes [Mayors] and Alguzails [Constables] of my Houshold and Court. To the Corrigidors Assistants, Governors, Judges Alcaldes Majors [Chief Mayors] and ordinary, as well of the crown as of their lordships, to the abbeys and religious orders, and to all other persons of whatsoever rank, quality, and condition they may be, in the cities, towns, and places of my kingdoms and lordships; you are to know, that the 21st of this mopth I thought proper to address to my council a decree, concluded in their terms, and lighted by my hand:

In spite of the earnest desire I have always had, to preserve to my saithful and well-beloved subjects the inestimable advantage of peace; and notwithstanding the extraordinary efforts that I have made at all times, but particularly in the present critical circumstances of Eu-

rope, to obtain so essential an object, carrying my moderation and patience to an extreme, I beheld myself at last under the hard necessity of ordering my ambassador, the Marquis d'Almadovar, to retire from the court of London, first delivering in to the Minister a declaration (a copy of which is annexed) reported to my council, by my first Secretary of State; 'as I found my own respect, and the honour of my crown, demanded it of me. At the same time I caused circular letters to be written to my amballadors and ministers at other courts, (of which the following is a copy) of the original that was given in to the faid council.— The council will take care to expedite the orders and necessary advices, that all my subjects may be informed of my present royal resolution, and that they stop all communication, trade, or commerce, between them and the subjects of the British King.

Given at Aranjuez, the 21st of June 1779:

/ Addressed,

To the governor of the council.

[Here is inserted a Copy of the Rescript delivered by the Spanish
Ambassador to Lord Weymouth;
which the reader will find in page
359. Then follows the circular
Letter in these words:]

"BY the annexed copy of the declaration which the Marquis d'Almadovar, the King's ambassador to his Britannic Majesty, gives to the English minister, on his leaving that court, you will see the very weighty motives which have induced his Majesty to take that

that resolution; being at length weary of suffering such great and numerous mortifications from the British cabinet, and English navy, as is shewn in the said declaration. You make what use of this information you judge convenient; and that it may serve for a new teltimony of the justice and indispenfible necessity which actuates his Majesty on this occasion, it is necessary to add three particulars for your instruction. First, That whilst the court of London sought to amuse that of Spain, in seeking delays, and in finally refufing to admit the honourable and equitable proposals which his Majesty made, in quality of mediator, to re-establish peace between France, England, and the American provinces, the British cabinet offered, clandeslinely, by means of secret emissaries, conditions of like substance with the propositions of his Majesty. Secondly, That these offers and conditions not to strange or indifferent persons, but directly and immediately to the minister of the American provinces, residing at Paris. Thirdly, That the British minister hath omitted nothing to procure, by many other methods, new enemies to his Majesty; hoping, no doubt, to divide his attention, and the cares of his crown.— So God keep you in his holy protection, &c."

My above royal decree, having been published in my council, it hath ordered it to be executed. In consequence thereof, I order all, and each of you, in your respective districts and jurisdictions, that as soon as you shall have received my said decree, and shall have seen my resolution contained therein, that you observe, accom-

plish, and execute it, and casse it to be observed, accomplished, and executed, in all and every place, conformable to its tenor; giving orders, and making convenient dispositions, that my said royal determination be known to all my subjects; and that they cease from all communication, trade, and commerce between themselves and the subjects of the British King—For such is my pleasure.

And that the same credit be given to the printed copy of this printed Chedule, certified by Don Antonio Martinez Salazar, my Secretary, Register of Resolutions, and oldest Clerk of the Government and Chamber of my Council, as to the

original.

Given at Aranjuez, the 22d of June, 1779.

Signed I THE KING.

Signs a little lower,

J. Don Juan Francisco de Lastin, Secretary to the King our Lord, have written this present, by his order.

Also signed,

Don Manuel Ventura Figuerea,
Don Manuel de Villafrane,
Don Manuel Doz,
Don Raymundo de Irabien,
Dou Blas de Kjnojoja,
Registered. Don Nicolas Verdugo.

Second Royal Chedule contains as follows:

I the King,

In spite of the earnest desire that I have always had to procure the inestimable advantages of peace to my faithful and well-beloved subjects, and notwithstanding the extraordinary efforts which I have always made, more especially in

the present critical state of affairs in Europe, to obtain that essential object, carrying my patience and moderation to the utmost degree; I saw myself obliged, at last, to order my ambassador, the Marquis of Almadovar, to withdraw from the court of London, and make to the minister there the following declaration. [Here follows the declaration given to Lord Weymouth.]

To what has been already mentioned, there must be added, that whilst the court of London sought to Iull Spain to sleep, in seeking delays, and refusing to admit the honourable and equitable proposals that I made in quality of mediator, to re-establish peace between France, England, and the American provinces, the British cabinet had clandestinely offered conditions by their secret emissaries, of the fame tenor as those which I proposed; and addressed those conditions and offers, not to strange and indifferent persons, but directly and immediately to the minister of the American provinces The English rendent at Paris. ministry also have neglected no means to excite new enemies against me, hoping to divide my attentions and the cares of my crown.

In consequence of these solid those of the kingdoms, provinces, motives, by my royal decree of the and states with whom I am in a life of this month, and by other peace, alliance, and free comdispositions communicated to my supreme council of war, I have resolved to order all communication and commerce to cease between my subjects and those of the king of Great Britain—that all produce of their ships, as well as the produce of their lands, provinces, the subjects of that Monarch, who are not naturalized in my dominions, or who do not employ them-kingdoms, by virtue of substiting selves in mechanic arts, do quit treaties.

my kingdom: but be it understood, that among the above workmen, those only who inhabit the interior of the country, are not to be comprehended; but all who reside in my sea-ports, or dwell on the coasts and frontiers, must equally leave the kingdom.—That from the present moment my subjects do carry on no kind of commerce with those of England, and its dominions. That they do not trafnck in their productions, their falt fish, or other fisheries; their manufactures, or other merchandizes; 10 that this prohibition of commerce be absolute and real; and do extend so as to render vicious and contraband all the effects, productions, salt fish, fisheries, merchandizes, and manufactures of the said dominions. That they do not admit or suffer to enter into any of my ports, any vessel laden with the above named effects; nor permit that such may be brought in by land; being illicit and prohibited in my kingdoms, whencesoever they may come; but they may be seized wheresoever found, either in vessels, baggages, shops, warehoules, or houles of merchants or traders, or any particular person whomsoever, whether they be my subjects and vassals, or those of the kingdoms, provinces, and states with whom I am in peace, alliance, and free commerce. Nevertheless, in regard to which, I will that no prejudice be done to the peace, franchises, and liberties, in lawful commerce, which their ships, as well as the

I declare that all merchants who have any falt fish, or other produce of the fisheries of the dominions of England in their possession, must make a, declaration of the same, and register them in the space of fifteen days, reckoning from the publication of this my present Chedule, which is fixed for their peremptory term, before such officers as snall be appointed by Don Miguel de Muzquiz, my Superintendantgeneral of Finances, as well in this court as elsewhere, to the end that notice may be given. And in case that they keep them unregistered beyond the faid term of fifteen days, they shall be immediately declared to have fallen under confiscation.

I will also, that a term of two months be allowed for the disposing of the said fish, and no prolongation of that term shall be granted, but after that term all traders shall be obliged to carry them to the Custom House, or, in places where there is no Custom House, to some house of government, where they shall be publicly fold to the highest bidder, in the presence of the officer or officers deputed for that purpole, or, in their absence, in presence of the magistrates of the place, who shall give the produce of the sale to the proprietors, who shall not be allowed to carry back to their shops, or warehouses, any of those prohibited goods, in like manner as has been observed heresofore.

I have given to Miguel de Muzquiz, a particular commission, that in quality of Superintendant-general of my Finances, he shall have the care of the aforesaid dispositions; in the manner that he shall judge most proper to accomplish

an object so important. He shall take cognizance, in the first instance, by himself or his sub-delegates, of all disputes that may arise in consequence of contraband; saving there is an appeal to the Council of Finances in the Hall of Justice, excepting any martial contraventions, respecting arms, ammunition, and other effects relative to war, as are explained by the treaties of peace; the cognizance of any disputes about those belonging to the Council of War, and Martial Judges.

I order, that all the above regulations be observed, kept, and fulfilled, under the pains prescribed by the laws, the pragmatics, and Royal Chedule, passed in former times, from motives of the same nature, comprehending therein all my subjects, and the inhabitants of my kingdoms and lordships, without exception of any person whatsoever, and howsoever privileged. It being my will, that this declaration shall come, as soon as possible, to the knowledge of my subjects, that they may preserve their effects and persons from all infults from the English; for that

and duly executed.

Given at Aranjuez, the 26th of June, 1779.

purpole my Supreme Council of

War will make all necessary dispo-

fitions, that it be formally published,

(Signed) I THE KING.
This prefent, seen and ratified in sull council, hath been this day published by proclamation in the usual places of this court, with the affishance of the Clerk of the Council Chamber, and the Algussisls of the Tribunal, the Staff Officers of Place, the Serjeants, Drummers, Fasers, Kettle Drammers,

and Trumpeters of the Garrison; a company of infantry, and a picquet of horse; as it is verified by the original, remaining under my care, in the Secretary's Office of the Supreme Council of War.

At Madrid, the 28th
of June, 1779.
(Signed)
DON JOSEPH PORTUOSE.

Translation of the Spanish Manifesto, published at Madrid, declaring the Motives which have induced his Catholic Majesty to withdraw his Ambassador, and all hostily against England.

TT would be too long to relate mi-I nutely all the grievances which Spain might complain of fince the conclusion of the treaty of peace in 1763; for that reason we shall restrain ourselves to the greater ones, and those most recent, lest we should be accused of reviving old injuries already forgotten. By the fixteenth article of the preliminaries of that treaty; England acknowledged the Bay of Honduras as making part of the Spanish domimions, and bound itself to cause every fortification that had been erected by its subjects in that part of the world, to be demolished within four months after the ratification of the treaty; without preserving to the court of London any other right than that of being permitted to cut log-wood, without any molestation or hindrance; and for which purpole, its workmen were to be allowed only the houses

to them. None of these stipulations have been performed by the English: they have introduced themselves more and more into the ancient settlements, beyond the limits allotted them, and have excited a rebellion among the native Indians, providing them with arms, and giving them every succour and assistance under the protection of Great Britain.

Not satisfied with these violences, they have established themselves in many other ports, rivers, and coasts of the Spanish territory in the said Bay of Honduras; in which places they could not even alledge the specious pretence of cutting log-wood, but manifestly with a design of usurping foreign dominion, and of imuggling various merchandizes without any discretion. — The names of these places wherein they went are, El Pincho, Rio Tinto, Rio Matina, and many others:, they have there trained up bodies of militia to arms, and have given the King of England's brevet, or commission, of Captain-general of all these settlements or establishments to Jacob Loury; which brevet, or passport, together with many other patents or commissions to subaltern officers, was folemnly read to the whole colony on the 21st of September. 1776, before the troops and people. All these proceedings of the English were discovered by the Spaniards, at a time when the British ministry had declared that those encroachments and ments had been made without their approbation, or the fanction of their authority.

were to be allowed only the houses. The English settlers found ont and barracks effentially necessary artifices and various perfidious means

means to prevail on the chief or leader, to revolt against Spain, and to stile himself King of the Mosquito Indians, and persuaded him to take the title of Captain in Chief of the other Indians, whole leaders have fent commissioners to the Vice-Roy of the Spanish government, acknowledging themselves as vassals of his Catholic Majetly: besides which, the English supplied them with arms, and gave them all kind of affistance to prevent their seeking the protection of Spain, who has an immediate right upon the dominion of those territories. Moreover, though foreigners of all denominations, let their religion be what it will, be well received in all the English settlements of America, the Spaniards only have been refused admittance, they being either imprifened or driven away.

The better to prove the uniform defign England had always harboured of becoming masters of these extensive territories; to lay there the foundation of its settlements; and to augment every day the immense prohibited commerce carried on by its subjects in the interior parts of the Spanish provinces, we need but relate what happened in the year 1775. That a certain physician, famous for his voyage round the world, known by the name of Doctor Irwin, left England, having with him all kinds of tools for agriculture, feveral artists, and many other succours found by the British ministry, to the end and purpose of making a lasting settlement in the province habit the frontiers of the Spanish of Nacha, wherein he landed several families, and several more

that intention, the said doctor had brought up and educated in his own house a son of an Indian King, and two Indians of note in these countries. The Spanish Guarda Coffas were foon apprifed of the doctor's embarkation, and the British ministry, instead of giving redress to remonstrances for that breach of the treaty, threatened Spain with a war.

Last year, in the month of November, some Spaniards happened to settle themselves on the river Saint Johne, on the same coast of Mosquito, whereupon they some houses; and when they least expected it, they were attacked by a party of English, and another party of Indians; in that conflict, the captain of the ship was wounded, most of his people were put to prison, and many other violences While that was were offered. transacting, the negociation of peace, then on the carpet, was carried on with the greatest anxiety by his Majesty, for the benefit of England; and he was straining every nerve to make it succeed. No other proof is required to establish the essential difference extant between the proceedings of the court of London, its ministers and subjects, and the generous and magnanimous conduct of his Catholic Majesty.

Wherever they let their feet for the purposes of settlement, the English behave in the same manner: for example, on the coast of St. Blas, a province of the Darien, they engaged the Indians that insettlements, to raise a revolt; and, after giving them all succours, enwere soon to follow them. With ticed, and drew them on their

side,

STATE

fide, by decorating them with pompous patents and breveis, or commillions of command under the protection of Great Britain. like commission was granted to one chief of the Indians, named Bernard, to whom the governor of Jamaica fent a formal patent or committee, and in which he was stilled captaingeneral of that could. That proceeding was also discovered at the beginning of the prefent year, and complained of the 8th of March to the Englith minitry, who, pretending to be unacquainted with, it, answered it in their psual man-

Many have been the attempts, made by the English, within these sew years, to drive into rebellion against Spain, those nations of India, their allies, and triends, who ishabit the lands contiguous to Leufane; one while they regularly provided them with arms; at other times they bribed them with presents and English medals, are decayed in ally, tolligated them to join the English troops to commit hostibilies against the subjects of his Catholic Majetty.

Applications have been regulary by made to the court of London, on different occasions, for the restress of various offences of that nature; and though its, answers have been made in general terms, but as these: "We shall take n tree "of that, and send the neressary or the alteration, which she expected in all reason and justice.

On the contrary, the court of London, under pretence of its war with the American states, and forgetting someth the exact, impart walty observed by the Spanish co-Vos. XXII.

lonies, as to the good reception the English have always met with therein, they have committed, both by land and sea, the most grievous insults: having even threatened with destruction a frigate of war in the very capital town of New Or-leans.

. Soon after this, and in months of June and July of the, year 1778, the English the Characas, Miraquies a that Indians, to raife a i paying to each lodian t of a skin of venison a day ducing them to fall upon, natural and brutal cruelty barbarous nations, and de Spanish settlements; notu ing the treaty of peace force between Spain and . and the pacific disposition King, and his impartial right conduct in regard to turbances of America, and tilities committed against To the nurpole aforelaid,

and flem'sled in a place called the Natcles, with a body of English well rme is but a happy circumstance prevented this barbarous project from taking place: two of those nations, convinced, without doubt, of the injustice they were going to commit, every way repuganant to the rights of med, and to the good treatment they had always received from the Spaniards, they withdrew, and thus discountenanced the rest.

Some inhabitant dominions were piters were offered lence, and many to ty arms and war a ricans: particular many other inflat

'jetts,

jects, a young man, named Liveis, the fon of a captain of one of our

Spanish colonies.

By the last news we have received the original letters of the English Commander Hamilton, which he threatened to enter the Spanish territories, as has been related in the Gazette of Madrid of the 20th of July, at the article of la Havanna: it appeared moreover, by those letters, that the British government had given orders to build many fortresses, and in particular a folid and permanest one at the mouth of the Miffi-Mpi, near the lake of Iberville; which proceeding alone would be fufficient to bring to light the defigns of the court of London sgainst the Spanish dominions, fince the said fortress could by no means molest the Americans, but would be highly prejudicial to the Spanish nation.

To the above purpose we must not omit, that in the month of May in the year 1778, Don Francisco Escarano, the Spanish Charge des Affaires, came to London to complain, that the English had instigated the Indians called Paseagulas, whose habitations are contiguous to Louisiana, to thake of the obedience they owe to the King; by giving them commissions of captains in the service of his Britannic Majesty, and decorating them with orders and medals. should never have done, if we would relate, with their circumflances, these, and many more Infringements of the treaties, violences, and ulurpations executed these late years by the English government against the Spanish dominions.

2. Spain gave, in regard to prizes, orders fimilar to those of France; and it caused them to be put in execution with so much rigour and exactness, that several American privateers, and among others the samous Cunningban, exasperated against Spain, retaliated, by using the Spaniards very ill, and making upon them reprizals, which have not as yet been delivered back, though often asked for.

3. Neither ought motives of jeslonly or the thirst of discord to have prevailed upon the English so much, as to make them lose any sense of justice, gratitude, or respect in regard to Spain, considering that this last could carry on but little or no trade with the English Americans, having already enough of that it carries on with its own possessions of America; and being amply provided with every necessary by the same. theless, the court of London, with an intention of keeping at hand a specious pretence for a rupture, whenever its projects should be in maturity, affected a great uneafnels on account of the mercantile correspondence carried on between some merchants of Bilboa and others of the English colonies, though that correspondence begun several years before their rupture with the mother country. The English ministry discovered the same uneasiness for a like mercantile correspondence carried on by some French merchants of Louistana with the Americans; and pretended to call the Spanish government to an account for that contravention to its own laws in that part of the world; at the same period, wherein the subjects

6

of Bagland, called the Royalists, were found in the same contravention on the Spanish coasts of Missipi and Louistana, making a traffic of smuggled goods: many of them were taken up, and great complaints have been made for The English comthe lame. manders of those parts pretended proudly, that the inhabitants prosecuted by them should not be allowed to take refuge at Louisiana, if they should fly there for it, while the royalists were welcome there, and being under no apprehensions either for their lives or properties; for which generous dealing several of them returned thanks to the Spanish government by word of mouth, and in writing. The Spanish government did not confine itself to those tokens of huma-Having heard of a great scarcity of flour prevailing at Penmacola, it spontaneously sent a good quantity of it into that place;---threats, violences, and the hostile proceedings laid down in the foregoing articles are the only thanks the ministry and the English nation gave for the fame.

4 For fear we should be detained in the enumeration of the events anterior to these late times, we shall only say, that the insults offered by the English navy to the Spanish navigation and trade, from the year 1776 till the beginning of the present year 1779, were already 86 in number, including prizes taken by unjust practices, piracy, and robberies of various effects out of the veffels; attacks made with gua-fring, and other sacredible violences. Since the faid month of March, and notwithfinding the memorial prefented by the ambassador, Mar-

quis de Almadovar, on the 14th of the same, in which he complained of the principal grievances, and revived the Memorials that had preceded, three Spanish thips were taken by the English, on the 12th, 19th, and 26th of April, viz. the Nostra fra de la Conception, the la Virgen de Gracia, and the las Almas: which proceeding, together with the other insults, of which a detail was sent to the same ambassador, in order to be laid before the English minikry, were sufficient motives for the ambassador to assert, in his final declaration presented to the ministry on the 16th of June, that the grievances of the late years. did not fall much short of a hundred.

5. In the two last years, and till the beginning of March of the prefeat year, the English navy has insulted at 12 different times, in the European and American seas, the thips of his Catholic Majesty, among which were packets, and other small vessels, that had not a competent force to refilt. It makes one blush to describe with what indecency and ignominy the King's flag was treated by the English officers in those and other similar We shall only relate the transaction of the 31st of October of the last year, when an officer having been dispatched by two English frigates to reconnoitre the Spanish sloop, named Noftra Signora de la Esclovitud, between the Illes of la Mona and la Saona, be obliged it to strike his Majesty's flag, and then, taking it, he wiped the sweat off his face with its coat of arms, to flew a greater This fingular contempt for it. officer, with his companions, plun-

[Aa]2

372] ANNUAL REGISTER, 1779.

dered the ship, and stript the seamen of sundry things essentially neces-

fary to their use.

6. The English nation entered the Spanish territories eleven times within a very few years past. Among those attempts, one deserves a particular notice; viz. what was performed on the 31st of April, 1777, by the long-boats of three English trigates, then laying in the bay of Gibraltar, which fired at the King's cutter, and at the guard-house, that was on the bridge Mayorga, and carried away the crew and the goods of a back which had been taken by the laid cutter on suspicion of sinuggling tobacco and money. After they had possessed themselves of the whole, they retired, displaying affected civilities, and taking off their hats out of derition.

.7. The complaints of the court of Spain have been as many as the infults offered; memorials having been repeatedly presented from time to time in London and in Madrid; so that, they might be said to have been innumerable. Nevertheless, the King of England told his parliament precisely, that many of them never came to his knowledge, adding moreover, that he was fully convinced, he had never given occasion for the unjust proceedings of Spain. now tay it over again, complaints have been to repeatedly made, that on the 5th of February, 1778, Don Francisco, Escarano having exposed and shewn some of them in writing to Lord Weymouth, did .express plainly how tired he was of presenting so many, by saying, 44 That at appeared as if all the 4' captains of thips of his British " Majesty had agreed about the

mode of bad behaviour to those " of the King and of the Spanish "nation; since it was known by " a constant experience, that the " English ships always began by " hring their guns at ours with " buliets; then their officers came " on board to register them; put " the leamen in irons, or con-" fined them under the hatches of " the ship: did not in the least " scruple to carry away what " goods they had a fancy to, and "when they parted from us, bid us " fare well by another cannonad-" ing with small shot: that the " Spanish ships, and especially " the packet-boats, which are " provided with guns, might have " repelled those insults by force, " but that they never did it, on " account of the remarkable shift " orders they had from the Spa-" nish government, which was an-"xious to live in the best harmo-" ny with the English nation; " and that finally, by comparing " the excessive moderation of Spain " with the frequent affronts offer-" ed by the English navy, his lord-" ship will be able to judge, whether " they ought not to have been paid " attention to; and whether they " did not call aloud for re-" dress."

Those were the expressions made use of by Spain, in February 1778. Let us now see what that court said on the 14th of March of the present year, by the channel of the Marquis d'Almadovar, in a memorial written for that purpose to the Viscount Weymouth.

The Spanish ambassador, aster reserving to two cases that had been answered by the English minister, proceeds in this manner; "The King could not help to remark,

a that,

"that, from all the complaints " made to the English ministry by 4 his orders, for these two years, " these two cases only met with a " clear instructive answer. " Majesty took into confideration " the matives of the aniwer of " the 13th of January, and ex-" cufes the delay alledged, as to " the transaction that happened " in America;" but he does not see, why any change in the dellination of the ships, the death of the commanders, or the recall of the admirals, to whom the orders were directed, should have prevented the verification longed after; such were, however, the motives or pretences alledged. If the captains were dead, or if the ships had changed their station, had even those changes and alterations been universal, and had they happened precisely at the time when the verisication should have taken place, the command of the places near whom the transactions happened; were, nevertheless, in the same hands, and there it was they should have been enquired into. Suppose the officers had been changed, the exercise of their function was not interrupted, and the tribunals of the districts, who ought to have known of matters of that fort, were Hill sublisting. Since that time, some of the captains, who commanded the ships that either took or treated ill the Spanish vessels, came over to England, and they might have been interrogated upon many articles.

The Marquis of Almadovar continued to make observations upon particular cases, and concluded his memorial in this manner: "In a word, had even every circumfance concurred to hinder or

" delay the instruction which the "British ministry desired, pre-" vious to its giving redress to my court, the King, my maller, " thought at least, that orders fent ** by his British Majesty to his " officers should have stopt the " course of those vexations; so far from it, advice is conti-" nually received at Madrid of recent injuries, there having " been sent to me from thence ** the relation of some of them, with injunction to communicate " them to your lordship. In compliance, therefore, with those orders, I have the bonour to " include the relation thereunto annexed, containing the most onotorious facts, omitting others, " for fear of multiplying com-" plaints, though they are equal-" ly well founded on truth. Your " lordship will know from this the " importance of those complaints, and the necessity of accelerating, as much as possible, the satisfac-" tion which the King not master ** flatters himfelf he shall obtain " from the justile and equity of * his British Majesty "

This memorial, given in the month of March, product I nothing but fine promiles on the part of the English ministry, without preventing the making prizes and committing other infults in the months of April and May following, which was hinted at before in the fourth note. We may reafonably question, whether the English ministry ever took the trouble to read the notes or enume. ration of the grievances; and if nor, the reason is obvious, why his. Britannic Majesty had never been informed of them, as he was pleafed to announce to his parliament.

[Aa] 3 Spria

Spain was more fortunate with the English government, because at least this last never denied sucts, but always made good offers, though such as never were productive of a compleat redrefs, or even prevented the usual vexations. All the Buropean powers know very well the practices of the English navy in its depredations; what country has not experienced them either in the present, or the late war against France and England: but they did not know, nor could they have imagined, that the captain of the English frigate floop of war, the Zephir, commanded by Thomas Hafth, after taking by unjust means the Spanish ship, La Trinidad, going from Bilboa to Cadiz, towards the end of 1777, loaded with leather, nails, iron, and other goods, should carry her into Tangiers, and there try to exchange her for an American brigantine (which had been taken by a cortain of Monocco) leaving the captain, pilot, and all the mariners for flaves. Happily, however, the Moors did not accept of that proposal, and the ship was conducted to the Bay of Gibraltar; and there being no kind of pretence to declare her a lawful prize, they abandoned her, after having plundered a great deal of her cargo; the ship, however, suffered so much in the action when taken, that having met with a gale of wind near Gibraltar, she could not hold it out, but was shipwrecked on the coasts. No faith would be given to a fact of that nature, if the truth of it was not so well established; and nobody could ever imagine, that a nation so learned and improved as the English are,

should bring up and employ seaofficers possessing such principles.

9. The injustice of the fentences pronounced by the English judges of the Admiralty, and their extravagant conduct, may be ascertained by the two following cases: the English cutter, the Lively, commanded by Joseph Smith, took the Spanish ship, the St. Nicholas, and St. Celmo, (the property of Don Manuel del Cervo Rubio, an inhabitant of the neighbourhood of La Carugna) bound from that port to the Spanish isles. The English captain carried her into the ifland of Anguila, where it was declared the was not a legal prize; and having been released, the English governor gave her a passport to continue her voyage unmolested. That precaution, however, did not avail to her; for, at her going out of port, another English sloop of war took her, and carried her into St. Christopher's, to the port of Basseterre, in which place the was lentenced to be a legal prize. The Spanish packet-boat, the St. Pedro, commander, Captain Francisco Xavier Garcia, had the same lot fince, having been taken on the 8th of May, 1778, by the English captain James Dannovan, and carried into the same isle of Anguila, she was there declared an illegal prize, but at her departure, another English cruizer, Captain Joseph Armet, which happened to be in the same port, retook her, and carried her into St. Christopher, where she was sentenced a legal prize, as the former had been.

rienced, like Spain, the aggreffions and usurpations of the English government, made in the time of

the most profound peace, and without any previous declaration of war. There is hardly one of those English territories, which formerly belonged to Spain, that has not been taken by surprize, in time of peace; and all the feas may be witnesses that when the Spanish thips were beaten or taken, there was no reason to believe they should be attacked: it has been a practice with no other cabinet, but the English, to conclude a treaty with Spain, and immediately after to commit the greatest hostilities against that same treaty. After such a conduct, we leave it to the confideration of the impartial world to decide, if the King was wrong to augment his naval forces, and to frustrate, by anticipation, the deligns of his enemies and offenders.

No motives whatfoever should have hindered England to give redrefs to Spain, to have prevented new iniults, and return it the gratitude it deserves; since, in spite of the projects and public threats of several members of the English parliament, in the session of the months of December, 1777, and January and February, 1778; (who proposed to settle the disputes with the Americans, in order to make war against the House of Bourbon) the Catholic King never would make any treaty with the colonies, for fear of giving to the court of London the least presence for complaints. We do not by this mean to say, that the French ministry had not the strongest reasons to fear new enemies, and confequently to prevent the hokile deagas of the British cabinet.

with so much candour and sincerity

in the treaty made with the Americans, (of which, however, the Catholic King knew nothing then) that the same court declared, by its amballador in London, that Spain, had no hand at all in it. Notwithstanding this, by orders dispatched to Don Francisco Escarano, the Spanish Charge des Affaires in London, on the 24th of March, he had instructions, among other things, to declare to the English ministry, that though his Catholic Majesty had taken no share in what had happened between France and America, and was still resolved to preferve the peace, this was to be underflood, " As long as his Majesty could make it consisent " with the dignity of his crown, " with the preferration of his rights, and the protection he owes to his subjects; and that, therefore, the conduct of Spain " should be guided by that of " England." This was the declaration made by Escarans to the Viscount Weymouth, in a private audience he had on the 4th of April following, and he acquainted his court with it, on the 8th of the iame month.

13. It has been the manifost leading project of England, to bring about a re-union of the colonies with the crown, in order to arm them against the House of Bourbon, or to lead that same House into an error, by means of treacherous negociations and tresties, in order to take revenge on the colonies, after having i them enemies to France. The beginning, progress, and conclufion of the negociations, related in this manifesto, establish evidently the certainty of that project, and the facts contained in the subse-[40] 4

quent notes, will prove it beyond a doubt.

14. The King of Spain could not observe a greater circumspection than he did, to avoid engaging himself in an unfruitful negotiation, or getting entangled in its confequences; he used the same exprestions with the court of London that he had done with France, sending orders, on the 19th of April, to the Charge des Affaires, Don Francisto Escarano, directing him require from the British ministry, a manifest declaration " them, expressing their real longsing after a negotiation with " Prance, by the mediation of " his Majetty, and letting forth " the chief articles whereupon to e ground it." -Those and other like precautions became necessary with a ministry

that always affects to speak mysteriously, ambiguously, and with artfel restriction, and who delivered their thoughts to the Spanish ambassadors and public ministers in a mode very different from that made use of in the public dispatches of bufiness directed by that same ministry to the English ambassador in The Spanish cabinet, Madrid. which does not adopt that political method of delivery, had the open-heartedness to warn the said ministry, to set it aside during the course of the negotiation, without insisting on the cardour and sincerity the same requires.

on the 23d and 25th of May, and on the 1st of June last year, directing him to keep a profound filence upon the negotiation that had been agitated; and to declare again to the court of London, that his Catholic Majesty was blways in the

fame pacific disposition, and would continue so, as long as the conduct of the English nation should not compel him to alter his sentiments. England cannot complain, that Spain has not repeatedly declared this same resolution of the King.

16. It is evident from the contents of the above notes, that hostilizies like the preceding, and even greater ones, were committed by England against the Spanish territories, and the Spanish stag, under the mask of friendship, and in the midst of the most cordial protestations, and assurances of peace.

' 17. It would not appear trange, if clandestine orders, similar to those given to take possession of the French settlements in the Bast Indies, had been fent, in the beginning of this year, for to fall upon the Philippine Islands; and if the emissaries, sent soon after through Alexandria and Suez, had been intrusted with the conduct of that enterprize: at least, those are the opinions of the most judicious men, and also of those who are the best acquainted with the transactions of the court of London. Time will bring those mysteries and enigmas to light; and the world will be better able to comprehend, how the generofity of the King of Spain has been correspondent with that of the English cabinet; at a time, when his Catholic Majesty spared no pains to obtain an honourable peace, and free that nation from great calamities and misfortunes.

181 The Catholic King continued his mediation to his Most Christian Majesty, with an intent of making a peace, not only because his religious and pious heart, and the love he prosesses to his subjects, and to the human race in

general,

general, inspired him with those tentiments; but moreover, because the court of London continued to infinuate its defire of coming to an accommodation with France. And indeed hardly was the Count of Almadovar arrived in London, bot he acquainted his own court, on the 14th of September, 1778, that in a long conference he lately had with the Viscount Weymouth, that minister had concluded his discourse with those terms; · That the King, his master; * knew the amiable dispositions of his Catholic Majetly; that •• he was indebted to him for his 4º demonstrations of friendship: s and most sincerely defired to terff minate the present war by his " mediations, by a method con-" fiftent with the honour of the es crown of Great Britain, and by " which, at the same time, an equal regard should be paid to " France." In confideration of the usual tenderness and honour due to the crown, Lord Weymouth recommended to the Marquis A'Almadovar, not to use in his dispatches (as he, Weymouth, would have the fame care in his own) these words " to ask the mediase tion," but se to request and to • wish that his Catholic Majesty ** . fhould interpose his mediation." The Lord Grantham spoke substant tielly the same language in Madrid; and his Catholic Majesty; having taken it into his contideration, ordered a note or memorial to be delivered to that ambassador, on the 28th of the said month of September, and a copy of the same was dispatched to the Marquis of Aimadevar, with direction to communicate it to the

Buglish government. We thought it indispensibly necessary to write out the enswer contained in the same memorial; because it will throw light upon, and serve for the right understanding of thersaid new gotiation; and which was as folklows:

"The King opendering what " has been written. by his ambas-" factor, the Marquis; of Almado" " war, and out of leve for mant skind; and, moreover, to con-" time upon good and amicable of terms with both the Kings of France and Great Britain; and " also lest he might be reproached 44 with refuting to promote, as far " as lays in his power, the tran-* quillity of Europe, he has re-'s folved to notify to each court, " that if they fincerely wish to se enser into a plan of reconciliaso tion, by the mediation of his " Majeky, without prejudice to " the honour of either crown, but " with an anticipated anxiety for " the dignity of both; the most " regular and decent mode of pro-" ceeding is, that each court " should deliver into the King's " hand, without delay, and at the " same time, the conditions and " the articles they intend to ob-" tain or to grant by the treaty, 46 that his Majesty may communise cate to the one court the proposi-" tions of the other, to the end so that they may be modified, dis-" cussed, or resused. That, after " a due examination of the whole, " his Majesty shall propose his own plan of pacification to terminate the difference. the negotiation must stipulate " the method of concerting with " the Americans; without which

the wished-for peace cannot be se attained: and finally, that at es one and the fame time, the ec conditions relative to the private interest of England and Spain shall likewise be discuses sed and settled; that the King " would be forry if this method was not adopted, or if the nee goziation was not conducted with " ancerity; sace, in spite of the withes and pacific dispositions of of his Majesty, he foresees that the " circumstances of the present war of must oblige him to become a of party, the necessity of having his " flag respected, and of repelling so the insults which are daily offered to his fubjects, baving occa-44 Soued expensive armaments, and " immense losses." The concluson of the foregoing answer cansed snuch uneafinets to the court of London, which, nevertheless, sent a frigate that entered the port of Corungs on the 10th of November, with dispatches for Lord Grantham, with the answer of the same court. That answer was delivered on the 14th of the said month of November; and the contents of it were, that the court of London accepted with pleafore the mediation of his Catholic Majesty to settle the differences that existed between England and France, provided the latter would withdraw the faccours and aid it gave to the colonies. As to the articles relative to the reciprocal interest of Great Britain and Spain, the reply was, that his British Majeky was ready at all times, and wished earnessly to enter into that discussion; and to settle them so as to establish reciprocal advantages to both empires. The Catholic King, in compliance with the tenther he had made to both courts,

communicated to each of them on the soch of November the pretentions, propolitions, and overtures made respectively: persuading both of them, with various reasonings, to feck means and temperaments productive of a fincere and bonourable reconciliation. At the same time a letter was sent to the Marquis of Almadovar, setting forth what follows; viz. "Your Ex-" cellency is authorised to settle " the matters relative to our own "interest, on which important " business, the atmost efforts of " your seal must be employed: " fince the King, who wishes sa-" cerely to preferve the peace, " will receive the greatest plea-" sure, if he sees those differences " satisfactorily settled: to the same " purpose let your Excellency remind the English ministry of " the generolity of Spain, for its " impartial proceedings in cir-" cumflances so critical as the pre-" sent ones. But let your Excellency represent, how badly " we have been answered, and " how ill we are constantly treated by the English navy, as may " be ascertained from the insulu that our navigators receive al-" most daily in different parts of " the ocean, and in the very ports and places on the coasts of this " peninsula. That court will un-" derkand that the greatest pro-" teffations of friendship have no " force to perfunde, while repeat-" ed infults are never reproved or " chastifed, especially after we have " been for years exposing to them our grievances in the most cordial open manner, and with the " most cautious expressions.

"Your Excellency, is not ignorant of what has been regulated

by the preliminaries of the trea-" ty of Paris in the year 1763, in of the 16th article, relative to the Significant of the Bay of Honduras and other adjacent territories. It was there stipu-« lated in politive terms, that, whatever fortifications had been so built, they should be demolished; and that the English should only be allowed to have fome " houses and magazines, without " being molested in the cutting, or in the carriage of the logwood out of the territories, which " have always been acknowledged 44 to belong to Spain. Not only " that demolition was never persormed, but the fortifications " have been even augmented; and there is now artillery and garrisons in them: so that those of plantations have been converted both into a military government with patents, and by the authoso rity of that court; and into a • permanent colony by the usurpation of foreign territories, and " a formal contravention to the " treaties.

" Other enterprizes of the same •• nature have been made in different parts of those extensive oc coasts; as his Excellency will of find related in the papers of his " secretaryship; and his Excel-" lency is likewise desired to take or notice of the artful machina-" tions made use of by the Engse lish to arm the Indians against " the Spaniards. There being no operation possible properties of the possibility of establishing a folid and fincere friendship, except redress be given for such noto-" rious grievances, and except " they be prevented to happen in " future, it becomes the court of "London to compensate those inof equity, and then others will be laid before the faid court with the same freedom: those redreffes, however, once granted, England will find no instances of better disposition than those harms boured in the heart of our august Sovereign.

" I have at different periods ac-'es quainted your Excellency (as I " had often done your predecessor es in the embally) of the various " insults we received near Louisia-" na; wherein the English, either " infligated the Indians, our al-" lies, to raise a rebellion against " us, and to fight us with the " arms and ammunition they had " put into their hands, or insulted " the Spanish plantations and fet-" tlements, and even threatened " to attack the capital towns, with " their men of war, under the " most frivolous pretences, " way excusable. On this head, " I shall only add, that extortions " have been so continual, that " they cry loud for a prompt re-" medy.

" Finally, your Excellency is well informed of all the infults " we have suffered, and which we " never deferved, either by our " past or present conduct. Con-" fequently your Excellency will " expole our rights with the " greatest cordiality and modera-" tion, to the end that the Eng-" lish ministry may be convinced " of the rectitude and fincerity of our conduct, and of the necessity of settling at once our " differences, and of regulating " our claims and interest; at the " same time stifling whatever may " lead to any future discord, for " the respective utility of both nations, upon which I refer to the " instructions sent to your Exceler lency. A sufficient power has " already been invested in your " Excellency, and a greater one " will be given, if necessary, the more effectually to confolidate the friendship of the two courts; " which important point, and that. " of a general peace, are the two objects, which the magnanimous. " heart of our Sovereign greatly " longs after. I suppose, however, es that your Excellency will not " forget, that we can do nothing " whatever against the interest of " France, whole friendship must " always be one of our greatest « concerns."

In consequence of the facts and transactions already enumerated, the world will be convinced of the circum pection, sincerity, and attention, with which the Catholic King has endeavoured to conclude a peace solidly cemented, and to obtain from England redress for an infinite number of insults. The court of London, moreover, affects now to compel his Majesty to take up arms, (a part he has already taken) by renewing the insults, without any appearance of offering tedress.

Ind, in answer to the dispatches of his Catholic Majesty of the 20th of November, 1778, were not received in Madrid before the 13th of January, 1779, and were the sesult of a conference held the 28th of December 1ast, between the Marquis of Almadovar and the Viscount Weymouth.

What his been the conduct of that minister in this occurrence, many be collected from the following expressions, contained in the

dispatches, designed as an answer? and directed to the Marquis of Almadowar, on the 20th of the lame month of January: "I have read " to the King (those are the very words) the whole dispatches of " your Excellency, as well as the paper delivered to him by Lord " Weymouth; I have at the same " time informed his Majesty of the " remarks and observations that "Lord Grantham has communi-" cated to me, relative to the same " object. This ambaffador " put in my hands another paper " timilar to that which your Mi-" nitter of State has forwarded by " your Excellency; nevertheless, I " must say that, neither in the ex-" plications of Lord Grantbam, " nor in the dispatches that he re-" ceived from his court, are found " the substantial and specific ex-" pressions, which have been made " use of with your Excellency, in " order to induce the King to pro-" pole a method of an accommo-" dation.

"Notwithstanding that, I shall tell to your Excellency with freedom and exactness, the reflections made by the King, the resolution he has taken, and the conduct your Excellency should keep to cause it to be understood, and get an answer, and the present dispatches will serve to your Excellency as instructions.

"His Majesty has already re"marked, that the court of Lon"don expresses itself differently by
"word of mouth to what it does
in writing; that is to say, by
"word of mouth, it appears, as if
that court wished for nothing
"more eagerly, than to hear the
"convenient and honourable tem-

ee perament

retament his majesty has found, in order to accede to it; and in writing, it appears, that the British Ministry persist in their former ideas, expressing only their desire of a peace by general protestations."

Sublequently to the foregoing reflections, others were let down in the said dispatches to the Marquis of Alinadovar, explaining some thoughts that occurred to his Majesty, with a desire of falling into a prudent and honourable method that might facilitate the The substance of pacification. thole ideas was confined to know, whether it might be expected that the English Cabinet would consent to a long continued truce between the belligerent powers and the co-Ionies, that might be prudently combined, to preserve the dignity of each of them, and confolidated with various precautions, to remove any suspicion of a new ruptuce; for which purpose it should be referred to a subjequent negociation, or to a Congress, to be held in an impartial place, under the mediation of the King, for the Hipplating or concluding the treaties that might take place between those powers.

20. From the 20th January of this year, when an extraordinary dispatch was forwarded to London, with the ideas or thoughts of the King, as recited in the above number, the English Cabinet deferred giving any answer until the 16th March. At the end of so long a delay, that Court came to an explication in a dispatch sent to Lord Grantham, which was received in Madrid the 28th of the same month. It amounted merely to advert at large on the restec-

tions contained in that of the Court of Madrid of the 20th January; but it deserves much notice what fort of satisfaction Lord Viscount Weymouth gave, relative to the difference observed between his manner of explaining himself by word of mouth, and by writing. My language (thele are the words of his answer) with the Marquis d'Almadovar, flowing from my ardent defire for peace, went 100 far. and were wanting in exactness, if they imported a diffosition to exchange the Royal Honour, and manifest rights for a decent exterior, and plausible temperature. It, with such a finesic, Ministers recede from their words. and latisfy those with whom they treat, what faith or security can be put in the explanations of a Court made solemnly to the Ambassador of a powerful King.

Be it as it may: after all the observations contained in the forementioned English dispatch of the 16th March, it concluded with an appearance which flattered the King with an hope, that at least a paciheatton would be effected. France propose (said the English Cabinet) her complaints, pretensions, or points of any kind aubatever, and an adequate answer will be given; or let there be a truce for a certain time between Great Britain and France, during which period the pretensions of the one and the other may be adjusted through the good offices of bis Catholic Majesty.

Let the Colonies (added the English Cabinet) propose their complaints, and the conditions for their security and caution, by which may be re-established the continuance and authority of a lawful government: we shall then see if we can come to a direct and immediate

382] ANNUAL REGISTER, 1779.

immediate agreement; or if they also preser the method abovementioned, let there be likewise a truce made with North America, that is, a real truce, and efsective suspension of hostilities; during which, the liberty and effects of all forts and classes of persons may be re-established and setured, and all violence suspended, on one fide and the other, against the respective individuals, and the estates or effects they possels. these truces, the French may treat of their own peculiar matters, without giving the umbrages which would be inevitable, if they mixed in the negotiation their own particular advantages with the supposed interests of those whom France affects to call her allies: and his Britannic Majesty may establish the government of his own dominions, without the disagreeable circumstance of receiving the conditions relative thereto from the hands of a declared enemy.

21. It appears by the opening made by the Court of London, in the dispatch mentioned in the preceding note, for the purpole of establishing a truce between France and the Colonies, that it contained no difficulty, except the reserving for a separate treaty the pretentions of the said Power, and those of the American Provinces aforesaid, to that France should not interfere in the arrangement of their interests;—at least, this is what any person of sincerity and good faith would then or even now believe, who read, or now reads the explanations of the English Cabinet in that dispatch. Under this supposition, we shall communicate, for the eye of the impartial public,

the ultimatum of the propositions made by the Catholic King to the two Courts of Paris and London, he having taken on himself the adjustment of the disputes subsisting with the American provinces, and considering there was not time to communicate to them, or even to France, this his resolution, and whereof advice was given to the said Courts on the 3d of April in the present year; that is to say, seven days after the having received the answer of the English Cabinet.

"If these openings or propo-" fitious (thus literally are the expressions of the ultimatum) " had come immediately after the "King had made his, for the forming a plan of reconcilia-"tion, many difficulties might " already have been removed of 44 adjusted by the modifications " which it might have been prac-" ticable to have negociated, if " reciprocal good faith had exia-" ed, and a confidence to con-" clude a peace. But having "lost more than two months time, " (without mentioning what was " neglected before, and observing " in this interval, there was no " need of ceffation in the forming great expeditions or prepara-" tions) suspicions inevitably arole, that the drift was to ". amule and confume the remain-" ing months of the campaign, " and to continue the war with " vigour. If this be the case, every attempt of the King will " be usele," towards establishing " concord between the bellige-" rent powers. Nevertheless, his " Majesty, to give the last proof " of his love of humanity, and et that he has not left andone # BDY

e any thing to impede and put a se flop to the calamities of war, ** has commanded that the followsing plan be proposed to the two ed Courts, which on his part is the e altimatum of his negociation.

"That with a view that this 4 suspension of hostilities may re-46 establish reciprocal security and se good faith between the two « Crowns, there thall be a genedifferming, within e month, in all the European " leas, within four, in those of "America, and within eight, or one year, in those remote parts of Africa and Asia. That in " the space of one month, a place " shall be fixed upon, in which 45 the Plenipotentiaries of the two " Courts shall meet to treat on a « definitive adjustment of peace, regulate the respective restitutions or componiations necessary, in consequence of the reprisals ** that have been made, without se any declaration of war, and to 44 fettle such matters of complaint or pretention, as the one Crown so may have against the other: to " the accomplishment of which end, the King will continue his se mediation, and does now, for 44 the holding of this Congress, se make an offer of the city of " Madrid. That a like suspension of hostilities shall be separately se granted by the King of Great " Britain to the American Colo-" nies, through the intercellion and er mediation of his Catholic Maso jesty, to whom the said Potenee tate shall promife the observance se thereof, and with the condition es that it shall not be broke, wither out giving to his Majesty an anse ticipated notice of one year, that

" he may communicate it to the s said American provinces; and " that there be established a reciprocal disarming the same as with France, in the same times " and places, regulating the limits es that shall not be passed by the " one or the other party, with re-" spect to the places they may re-" spectively occupy at the time of

" ratifying this adjustment.

" That for settling these particulars, and others relative to es the firmnels of the faid suspenee sion, and to the effects it may or produce while it subfists, there shall come to Madrid one or 44 more Commissaries or Agents of the Colonies, and his Britaner nic Majesty will send his under " the like mediation of the King " (if they mould be in need of it) " to accord or agree in the foregoing, and that in the mean time " the Colonies shall be treated as independent in acting.

" Finally, if it be defired by all " or any of the belligerent powers, or by the aforesaid Colonies, " the forementioned powers shall, " jointly with Spain, guarantee the " treaties or agreements which shall ee be made: - the Catholic King. 🏂 now makes an offer of his gua-" rantee to the faid preliminaries."

Whoever compares these articles with the preceding openings made by the Court of London, will decide, if there can be imagined proposals more moderate, or more analogous to the system laid down by the British Cabinet.-Perhaps his Catholic Majeky has rather gone too far in the moderation to which he reduced the faid propofitions, taking on himfelf the difficult talk of fettling the disputes.

32. The

384] ANNUAL REGISTER, 1779.

which the British Cabiner affectedto thew to the ultimatum and gropositions of the King of Spain, rests on the point of treating the Colonies as Independent in acting during the interval of the truce.

To what has been already faid, may be added, what was affirmed in all the public papers of the month of E bruary, 1778, that Lord North had on the 17th of the faid month, prop fed in the House of Commons, as a matter of course, "That the Commission figures, then appointed by the Court of London, should treat with the American Deputies, as if they were Plenipotentiaries of independent States; with proviso, that this concession should resolve to desist from their claim of inseed dependence."

It is a thing very extraordinary, and even ridiculous, that the Court of Landon treats the Colonies as independent, not only in acting, but of right, during this war, and that it should have a repugnance to treat them as such only in acting during a truce or

of Saratoga: the reeral Burgoyne, as a
per, to fulpend his
tchange and liberating
oners made from the
le having named Comle of them, and treat
at the Congress and
the Congress and
the Congress and
the Congress and

of this fort, authorised by the Court of London, have been, and are true signs of the acknowledgment of the independence: and the English nation itself may judge and decide, whether all those acts are so compatible with the decorum of the British crows, as would be the granting to the Colonies, at the intercession of his Catholic Majesty, a subjection of hostilities, adjust their differences, and treat them in this interpal as independent States.

, zg. lt, muß, appear, incredible, siter having confidered the preceding articles, that the Court of London Bookly; refule to accept of the propolitions of the altimatem of that of Madrid, although with some explanations that it might think necessary, but that Court not only rejected them, in its answer given the 4th of May, after various pretexts for delay, but put forth indirect and ftrained interpretations of the proposals that were then made, having the effrontery to lay, that " the drift " of Spain was to form, from the "prerephose of the Colonies to " independence, ORC COMPROS " cause with them, and with "France." - The British Cabinet concluding, with faying. " That if the conditions which "the Court of Verfailles ".communicated to his Catholic !' Majesty, did not present a benif ter alpect then this for the "treştyajor dist pot, offer lefe im-🖞 perious, and junequal terms, the " King of Great Britain would " only have, to lament, that he 44 found the hopes frukrated. " which he bad always conceived \$1, 4(1, 144, 1644) By 1 to Notecine. of " peace,

r peace, as well for his subjects

* as the world in general."

If this is not a want of respect to the mediating King, a real provocation, and evident in confequence, it will be difficult to find, expressions more adapted for it. Neither did his Catholic Majesty make a common cause with France and the Colonies in his last proposals, nor were they made to France, to whom they were not, nor could not, for want of time, be communicated, before they were transmitted to the Court of London; so that the whole apparatus of those haughty expressions of the English Ministry amount merely to fay, that, in spite of the overture made by themselves on the 16th of March, they preferred war to peace, or treating with the fore-mentioned mediator, whom they provokingly infulted, treating him as partial, leagued with the enemies of Great Britain, imperious, and inconfiftent.

In aggravation to all the foregoing, at the same time the Bri- Paris and Madrid, by means of tish Cabinet answered the King of Spain in the terms already mentioned, they were infinuating themselves at the Court of France, by means of secret emissaries, and making very great offers to her, abandon the Colonies, and make peacs with England. But there is yet more: at the very same time, the English Ministry were treating, by means of another certain emissary, with Dr. Franklin, Minister Plenipotentiary from the Colonies, refiding at Paris, to whom they made various proposals to disunite them from France, and to accommodate matters with England, on conditions almost identically the same as those Vol. XXII.

which they had rejected or spurned at, as coming from his Catholic Majesty, but in fact with offers. much more favourable to the faid Colonies. The faid treaty went so far as to be extended in formed. articles, with various explanations; and was carried on under the authority of one of the principal English Ministers. Of all this, and much more, it would be easy to inform the public, by true and formal copies, if it were necessary, or that this implacable enemy hereafter obliges it to be done, and who has always been treated by Spain with the greatest moderation.

24. The true intentions of the Court of London being clearly discovered, the Catholic King could not longer withhold the putting in full force the treaties concluded with France. From what has been observed in the preceding note, it evidently follows, that the whole of the English policy was to disunite the two Courts of the suggestions and offers she separately made to them; also to scparate the Colonies from their treaties and engagements entered into with France, induce them to arm against the House of Bourbon, or, more probably, to oppress them, when they found (from breaking their engagements) they stood alone and without protectors or guarantees for the treaties they might enter into with the British Ministry. This, therefore, is the net they laid for the American States; that is to fay, to tempt them with flattering and very magnificent promites to come to an accommodation with them, exclufive of any intervention of Spain

or France; that the British Mi-'nistry might always remain the arbitrators of the fate of the faid Colonies, in the point of fulfilling any treaties or agreements they might make. But the Catholic King, faithful, on the one part, to the engagements which bind him to the Most Christian King, his nephew; just and upright, on the other, to his own subjects, whom he ought to protect and guard against so many insults; and finally, full of humanity and compassion for the Americans and other individuals who fuffer from the calamities of the present war, he is determined to pursue and profecute it, and to make all the efforts in his power, until he can obtain a solid and permanent peace, with full and fatisfactory fecurities that it shall be observed.

25. To attain, as before-mentioned, the much-defired end of a secure peace, it is absolutely necessary to curtail and destroy the arbitrary proceedings and maxims of the English maritime power; to the attainment of which, all other maritime powers, and even all nations in general, are become much interested. The Catholic King, for his part, has done all he possibly could, that the miults founded in such proceedings and maxims should be put an end to, but this he has not been able to effect by amicable means. contrary, injuries have been repeatedly continued, as has been represented in the negociation set on foot with England by the mediation of the said monarch. Court of Lendon has become forgetful, in these later times, that the should have adjusted and settled her differences with Spain ac-

cording to agreement. In the same month of May, in which this negociation was put an end to, there came advices of the violences committed by English ships and their crews in the river Saint John, and Bay of Honduras, (cf which mention has been made in note the first and it was known also, with great probability, that the English Cabinet had given anticipated orders for the invalion of the Philippine Islands. From fuch deeds, as well as from the foregoing, the impartial and candid world will be enabled to do justice in this famous controverly, and decide whether the declaration presented by the Marquis of Almadovar, the 16th June last, is founded in reason and truth. In the mean while it should be observed, that the Court of London, on the 18th of faid month, illued orders for commencing and committing hostilities, and making reprifals against Spain, who did not issue similar orders till after the had received advice thereof.

Copy of the Answer transpoitted to the Marquis d'Almadovar by Lord Viscount Weymouth, duted the 1316 of July, 1779.

THE Marquis d'Almadovar, late Ambassador of his Catholic Majesty at this Court, on his sudden departure, lest with Viscount, Weymoath, Secretary to his Britannic Majesty, a declaration of war, founded on a detail of motives to justify so violent a step .- In this detail Spain affects to complain in general of the little desire the King shewed towards the preservation of peace, and, in particular, particular, against the disrespectful treatment of the Spanish slag, and the violation of the territory belong-

ing to his Catholic Majesty.

As nothing could be more distant from the King's intention than to break the friendship subsisting between Great Britain and Spain, it is by order of his Majesty, that the said Viscount Weymouth offers such a state of the matters set forth in the said Declaration, as, he doubts not, must shew the sincerity with which his Majesty hath endeavoured to maintain the general tranquisity.

The little defire for peace, as supposed on the part of the Kings is deducible from the conduct attributed to Great Britain during after the the last negociation: professions of the impartiality of his Catholic Majesty; his offers of mediation between Great Britain and France, and after the acceptance of the same, the Declaration affirms,— That every step had been taken necessary to produce the best effects, in order to prepare the two powers towards an accommodation equally honourable to both parties; that to this end wife expedients had been proposed; but notwith kanding these terms were conformable to such as the Court of London, at other times, judged proper and conducive to an accommodation, they were, however, rejected in a manner that proves too well the reluctance on the part of the British Cabinet to restore peace to Europe, and to preserve the friendship of his Catholic Majelty.

The conditions offered by France were, to the highest degree, injurious and inadmissible; the King expressly declared, that he consi-

dered them as such; nothing can be more evident than that the expedients offered by Spain inevitably tended to enforce these very injurious conditions, but just before declared inadmissible.

The pernicious consequences of the proposed expedients had been explained to the Court of Spain, by order of the King, and that they were in the most amicable manner expressly rejected. it been otherwise, there could be no reason for an ultimatum: yet is not without altonishment, that, after the first answer, the King received the ultimatum from the Court of Spain, not only containing the very same offers thus. rejected, but announced with scarce any difference in point of torm.

That, on the 38th of September, the Court of Spain had notified to the belligerent powers, that in case the negociation did succeed, she would then determine how to act. —If the open part the Court of Spain now takes, be THAT she secretly intended at that time, it would have been more consistent with her dignity THEN to avow it, and range herefelf openly under the banners of France.

Instead of such a conduct, the Court of Madrid, assecting impartiality, hath offered to mediate, but not to dictate the terms of peace, promising to communicate to each Court the conditions claimed by either, that so they might be modified, explained, or rejected. When the proposals made by France were rejected, and the Declaration made to Spain to cease her mediation, since her en-

[Bb] 2 deavours

deavours did not succeed, it was accompanied with assurances, that the friendship subsisting between the two nations should not be in-

terrupted.

How far this is true, appears from the actual Declaration, announcing bostilities on the part of Spain, without venturing to state the non-acceptance of the terms as one of the causes of the war: but should it be otherwise infinuated, it will furnish his Majesty with an additional reason to complain of the injustice and arrogance of such

a pretention.

The previous causes which the Court of Spain hath thought proper to urge, are, the insults against her slag, and the violation on her territory. As to the first, these are the terms of her memorial:

Prizes have been made; vessels have been searched and plundered; many have been fired upon who were forced to desend themselves; the registers and packets belonging to the Court, and sound on board his Catholic Majesty's packet-boats, have been opened and torn to pieces.

All forts of American vesses have been received in the ports of Spain; they have been furnished with falle documents, and suffered to carry Spanish colours; their privateers have plundered nations without distinction, and fuch has been the industry of the Spanish Ministry, in order to enhance the number of grievances, that these depredations were by them represented as injuries committed by Great Britain. These complaints, which do not exceed the number of twenty four, feldom specify the author of the supposed insult, and those which did

were frequently ill-founded, and in general frivolous; however, it is granted that the answers were The King thought it amicable. worthy of himself not only to use every precaution necessary to prevent disorders which might offend neutral powers; but also to exert every effort to punish the authors, and repair the loss of the sufferers. Such hath been his conduct at all times, when possible to discover and convict the guilty.—Among the vast operations, such as in the present war, it is not furprifing that some irregularities have happened; but when such cases were proved, restitution was made with ample da-. mages, and all charges paid.

It has been advanced, That his Catholic Majesty formally declared to the Court of London, ever fince France commenced hostilities, that the Court of Madrid would regulate her conduct by that of the Court of Great Britain.'-Nevertheless thirteen English vessels have been seized, on what pretence, or by whose order, we are still to learn, although his Majesty ordered such representations to be made, as are usual on the like occasions, between nations in a state of amity; which his Majesty did, not attributing these seizures to a perfidious and inimical design, until the conduct of the Court of Spain has been better explained by the present Declara-

tion.

The pretended violation of the Spanish territory may be reduced to four heads.

In the first place it is said,
That the dominions in America,
belonging to the Court of Spain,
have been threatened, without
specifying time, place, or circumstance.

Secondly,

Secondly, the memorial montions, 'That the Indians have been fet against the innocent inhabitants of Louisiana, who must have fallen victims to their fury, had not even the Chactaws repented, and revealed the conspiracy.'—It is well known that the Governor of New Orleans tried to feduce the Chactaws, and that he received with open arms those tribes which committed devastations in the English Western settlements. These tribes returned, but were not set against the Spanish territory; it was never attempted, nor was such an idea ever entertained.

The Declaration afferts, That a formal representation was made to the Court of London concerning these different grievances, and leeing the equivocal expressions on the two preceding points, such remonstrances were particularly necessary towards the Rrich observance of the good faith between two nations at peace.'—It is not true that the least representation was ever made on either of the two preceding articles, to which the most ample and satisfactory answers might have been given.

Thirdly, they pretend, 'That the sovereignty of his Catholic Majesty, in the province of Damen, and on the coast of Saint Blas, hath been usurped, the government of Jamaica having appointed an Indian to the rank of Genèral over thole provinces, this subject, instructions were dispatched, bearing date the 28th of April last, as is usual between nations in friendship; no advices being received from Jamaica on this matter, fresh orders were fent for a full expianation,

but in point of time no answer could yet be expected.

Fourthly, 'That the territory in the Bay of Honduras has bea ulurped, acts of hostilities c mmitted, the Spaniards im riso ed, and their houses plundered; as also, that England had neglected to fulfil the stipulated article relative to this coak, agreeable to the 17th article of the treaty of Paris -With regard to the English subjects frequenting the Bay of Honduras, that matter had been regulated according to the aforefaid article, and finally adjusted with the Court of Spain in the year Since which period no complaint having been made on either side, this Court is still ignorant whether the least cause ever existed.—Surely this cannot be included among the pretended grievances which the Declaration supposes, as having been duly represented either to the English Court, or to her Ambassador at the Court of Madrid.

Such are the motives alledged by the Court of Spain in the name of his Catholic Majesty, as a justification before God and the world, for commencing hostilities against Great Britain. The King appeals to the actual fate of affairs, being the same as that which subsisted fince the conclusion of the last treaty, as a full proof that no attempt was ever made on his part to infringe this treaty.—He appeals to his uniform conduct ever fince this epoch, to furnish still stronger proofs that he hath endeavoured to preserve the same with all the affiduity and care, which the interests of humanity and the happiness of his subjects

 $[B \ b] \ 3$ required

390] ANNUAL REGISTER, 1779.

required.—Ultimately, he appeals to the conduct of his enemies, and in particular to the aforesaid Declaration from the Court of Spain, as the last proof of the necessity he is under to defend the rights of his Crown and people, against a determined project to invade the same; a project wherein the Court of Spain at length openly joins, without the least reason to colour such a proceeding.

A MANIFESTO published at Paris, displaying the Motives and Conduct of his most Christian Majesty towards England.

TRANSLATION.

WHEN the Sovereign Dif-poser of events called his Majesty to the throne, France enjoyed the most profound peace. The first concern of his Majesty was to fignify to all the powers. Europe, his sincere desire, that the bleffings of peace might be perpetuated to his kingdom. This gracious disposition of his Majesty was generally applauded; the King of England in particular tellified his satisfaction, and gave his Majesty the most expressive assurances of sincere friendship. Such a reciprocity of sentiment justified his Majesty in believing that the Court of London was at last disposed to adopt a mode of conduct more equitable and sciendly, than that which had been adopted fince the conclusion of the peace of 1763, and that a final stop would be put to those various acts of tyranny, which his subjects had in every quarter of the glube experienced on the part

of England, from the zra above mentioned. His Majesty persuaded himself that he could still place the greater reliance on the King of England's protestations, as the primordial seed of the American revolution began to unfold itself in a manner highly alarming to the interest of Great Britain.

But, the Court of London, vainly imputing that to fear or seeblenels, which was only the natural effect of his Majesty's pacitic disposition, strictly adhered to her customary system, and continued every harasting act of violence against the commerce and the navigation of his Majesty's subjects. His Majesty represented these outrages to the King of England with the utmost candour, and judging of his sentiments by his own, his Majerty had the greatest confidence, that the grievances would be no looner niade known to the King of England, than he would redress them. Nay, his Majesty being thofurther, roughly acquainted with the embarrassment which the affairs of North America had occasioned the Court of London, charitably forbore to increase that embarrassment, by infifting too hastily on those reparations of injuries which the English Ministers had never ceased to promise, nor ever failed to evade.

Such was the position of affairs between the two Courts, when the measures of the Court of London compelled the English colonists to have recourse to arms to preserve their rights, their privileges, and their liberty. The whole world knows the æra when this brilliant event score forth; the multiplied and unjuccessful efforts made by

the Americans to be reinstated in the bosom of their mother-country; the disdainful manner in which they were spurned by England; and finally, the act of independence, which was at length, and could not but have been the necessary result of this treatment.

The war in which the United States of North America found themselves involved, with regard to England, necessarily compelled them to explore the means of forming connections with the other powers of Europe, and of opening a direct commerce with them. His Majesty would have neglected the most essential interests of his kingdom, were he to have refuled the Americans admission into his ports, or that participation of commercial advantages which is enjoyed by every other nation.

This conduct, so much the refult of justice and of wisdom, was adopted by far the greater part of the commercial states of Europe; yet it gave occasion to the Court of London, to prefer her reprefentations, and give vent to all the bitterness of complaint. imagined, no doubt, that she had but to employ her usual style of haughtiness and ambition, to obtain of France an unbounded deterence to her will. But, to the most unreasonable propositions, and the most intemperate measures, his Majesty opposed nothing but the calmness of justice, and the moderation of reason. His Majesty gave the King of England plainly to understand, that he neither was, nor did he pretend to be, a judge of the disputes with his colonies; much less would it become his Majesty to avenge his quarrel: that in consequence his

Majesty was under no obligation to treat the Americans as rebels; to exclude them from his ports, and to prohibit them from all commercial intercourse with his subjects. Notwithstanding, his Majesty was very ready to shackle, as much as depended on him, the exportation of arms and military stores; and gave the most positive assurance, not only that he would not protect this species of commerce, but that he would also allow England free permission to stop those of his subjects who should be detected in carrying on such illicit traffic, observing only the faith of treaties, and the laws and the usages of the sea. His Majesty went still further: he was scrupulously exact in observing every commercial stipulation in the treaty of Utrecht, although it was daily violated by the Court of London; and England, at the very time, had refused to ratify it in all its parts. As a confequence of the amicable part thus taken by his Majesty, he interdicted the American privateers from arming in his parts; he would neither suffer them to sell their prizes, hor to remain one moment longer in the ports of France, than was consistent with the Ripulations of the above treaty. His Majesty strictly enjoined his subjects not to purchase such prizes; and in case of dilobedience, they were threatened with confiscation. acts, on the part of his Majesty, had the desired effect. these acts, distinguished as well by their condescension, as by their frict adherence to the spirit and letter of a treaty, which his Majesty (had he been so disposed) might have considered as non-[Bb]4

392] ANNUAL REGISTER, 1779.

existing; all these acts were far from satisfying the Court of London. That Court affected to consider his Majesty as responsible for all transgressions, although the King of England, notwithstanding a solemn act of parliament, could not himself prevent his own merchants from surnishing the North American colonies with merchandize and even military stores.

It is easy to conceive how the refusal of yielding to the assuming demands, and arbitrary pretensions of England, would mortify the self-sufficiency of that Power, and revive its ancient animolity to France. She was the more irritated from her having begun to experience some checks in America, which prognosticated to her the irrevocable separation of her colonies; and from forefeeing the inevitable calamities and losses following such a separation; and obferving France profiting by that commerce, which she, with an inconfiderate hand, had away, and adopting every means to render her flag respectable.

These are the combined causes which have increased the despair of the Court of London, and have led her to cover the seas with her privateers, furnished with letters of marque conceived in the most offensive terms; to violate without scruple the faith of treaties, to harais, under the most frivolous and absurd pretences, the trade and navigation of his Majesty's subjects; to assume to herself a tyrannical empire of the sea; to prescribe unknown and inadmisfible laws and regulations; to in-. fult on many occasions his Majesty's flag; in short, to infringe on his territories, as well in Eu-

rope as in America, in the most marked and characteristic style of insult.

If his Majesty had been less attentive to the facred rights of humanity; if he had been more prodigal of the blood of his subjects: in short, if, instead of following the benevolent impulse of his nature, he had fought to avenge wounded honour, he could not have hefitated a moment to make use of reprisals, and to repel those infults which had been offered to his dignity, by the force of his arms. But his Majesty stifled even his just resentments. He was defirous that the measure of his goodness might overflow, because he still retained such an opinion of his enemies, as to expect, they would yield that to moderation and amicable adjustment on his part, which their own interests required of them.

It was these considerations which moved his Majesty to detail the whole of his complaints to the Court of London. This detail was accompanied with the most serious representations, his Majesty being defirous that the King of England should not be left in any uncertainty, as to his Majesty's actual determination to maintain his own dignity inviolate; to protect the rights and interests of his subjects; and to render his flag But the Court of reipectable. London affected to observe an offensive filence on every grievance represented by his Majesty's Ambassador; and when it was determined to vouchsafe an answer, it was an easy matter to deny the best authenticated facts; to advance principles contrary to the law of nations, to positive treaties,

to marine ulage; and to encourage which he owed to himself, to nojudgments without justice, and confiscations without mercy, not leaving the injured even the means of appeal, At the same time that the Court of London put the moderation and forbearance of the King to the severest trial, in the ports of England there were preparations making and armaments equipping, which could not have America for their object; the defign was too determinate to be His Majesty, theremistaken. fore, found it indispensable to make such dispositions on his part, as might be sufficient to prevent the evil deligns of his enemy, at the same time provide against depredations and infults similar to those committed in 1755.

In this state of things his Ma-- jesty, who had hitherto rejected the overtures of the United States of North America, (and that in contradiction to his most pressing interests) now perceived that he had not a moment to lose in concluding a treaty with them. independence had been declared and established; England herself had in some sort recognized that independence, by permitting the existence of acts which carried every implication of fovereignty. Had it been the intention of his Majesty to deceive England, and to adopt measures for the purpose of covering the deception, he might have drawn the veil of lecrefy over his engagements with his now allies; but the principles of justice, which have ever directed his Majesty, and his sincere desire of preferving peace, were decisive inducements for him to pursue a conduct more generous and noble: his Majesty conceived it a duty tify to the King of England the alliance he had formed with the United States. Nothing could be more simple or less offensive than the Rescript delivered by his Majesty's Ambassador to the British Minister. But the Council of St. James's were not of this opinion; and the King of England, after having first broken the peace, by recalling his Ambassador, announced to his Parliament the Declaration of his Majesty, as an all of hostility, as a formal and premeditated aggression. It would be infulting credulity to suppose it can be believed, that his Majesty's recognition of the independence of the Thirteen United States of America, should of itself have so irritated the King of England; that Prince, without doubt, well acquainted with all those instances of the kind which not only the British annals, but his own reign, can furnish. His resentment is founded on another principle. The French treaty defeated and rendered useless the plan formed at London, for the sudden and precarious coalition that was about to be formed with America. and it baffled those secret projects adopted by his Britannic Majesty for that purpose. The real cause of that extreme animosity which the King of England has manifested, and which he has communicated to his Parliament, was the not being able to regain America, and turn her arms against France.

A conduct thus extraordinary, taught his Majetty what he had to expect from the Court of London; and, even had there remained a possibility of doubt, the immense preparations carrying on in the

different

[394] ANNUAL REGISTER, 1779.

different ports of England with redoubled vigour, would have eleared up the doubt. Measures to manifelly directed against France, had the effect of imposing a law on his Majesty; he put himself in a condition to repel force by force; it was with this view that he hastened the equipment of his armaments, and that he dispatched a squadron to America under the command of Compte d'Estaing.

It is notorious that the armaments of France were in a condi--sion so act offensively, long before choic of England were prepared. It was in his Majesty's power to have made a sudden and a most sensible impression on England. The King was avowedly engaged in the emerprize, and his plans were on the point of being carried into execution, when the bare whisper of peace flayed his hand, suspended their execution. His Catholic Majesty imparted to she King, the delire of the Court of London to avail herfelf of the mediation of Spain on the subject of conciliation. But his Catholic Majefly would not engage to act ' as mediator, without a previous assurance of his good offices being unequivocally accepted, in a case where he interposed without being made acquainted with the principal objects, which were to serve as the basis of the negocia-11011-

The King received the everture with a fatisfaction proportioned to the wish he had uniformly expressed for the continuance of peace. Notwithstanding the King of Spain had proiested it to be a matter of perfect indifference to him, whether his mediation was accepted or 101; and that, not-

withstanding the overtores he made, he lest the King, his nephew, entirely at liberty to act as he thought proper; yet his Majesty not only consented to the mediation, but be immediately countermanded the failing of the Breft fleet, and he agreed to communicate his conditions of peace the moment that England should express, in possive terms, a desire of reconciliation, in which the United States of North America were to be comprehended, France by no means entertaing an idea of abandoning them: there could not jurely be any thing more conformable to the oftenfible withes of the Court of London, than this proposal. His Catholic Majesty lost not a moment to discuss the business with the King of England his Minister; but it was quickly discovered by the Court of Madrid, that the English Minssters were not fincese in their overtures for peace. The British Minister talked expressly of his Mawithdrawing the Rescript which had been delivered by his Amballador on the 13th of March, 1778, as a preliminary and ablolutely necessary step to reconciliation. Such an answer was injurious to Spain as well as to France; and it developed the hostile intentions of England, in the clearest point of view. Both monarchs viewed each other with amazement; and akhough his Majesty (always animated with the love of peace) left the Catholic King to act as he thought most prudent with respect to continuing his mediation, yet he judged it expedient to command his Charge des Affaires at London, to observe a prosound filence on the subject.

The

The hope of peace continued, however, to flatter the disposition of his Majesty, until the sleets commanded by the Admirals Keppel and Byron sailed out of port. Then it was that the veil of deception, which had served to cover the real intentions of the Court of London, was rent asunder. It was no longer possible to place confidence in her infidious professions, nor could the aggressive design of England be any longer doubted. The face of things being thus changed, his Majesty found himfelf obliged to make an alteration in thoic measures he had previoully adopted, for the security of his possessions, and to preserve the commerce of his subjects. The event will very foon demonstrate his Majesty's foresight to have been just. The world can witness in what manner his Majesty's frigate the Belle Poule was attacked by an . English frigate, within view of the coast of France; nor is it less notorious that two other frigates, and a smaller vessel, were furprised and carried into the ports of England. The departure of the fleet under Compte d'Orvilliers absolutely necessary to became frustate the designs of the enemies of his Majelly's Crown, and to revenge the infults his flag had received. Providence disposed the triumph in favour of his Majesty's arms: Compte d'Orvilliers, after being attacked by the English fleet, forced them to retreat with considerable damage.

Since that period hostilities have been continued without any declaration of war. The Court of London has not declared it, because she would be wanting in reasons to justify her conduct. Nor has she

dared to accuse France publickly of being the aggressor, after three of his Majesty's vessels had been captured by the English fleet; and she felt that she would have ample cause to blush, when the execution of those orders she had sent clandestinely to India should have opened the eyes of all Europe to the degree of reliance which can be placed in her pacific professions. and should have enabled every power in it to determine, to which of the two powers, France or England, the term of perfidious most properly applies, an epithet which English Minister loses opportunity of bestowing France.

As to the King, if he has deferred notifying to the world the multiplied injuries he has sustained from the Court of London; if he has delayed demonstrating the absolute necessity of his having recourse to arms; such a procrastination on the part of his Majesty, has been owing to a fond hope that the English Minister would at last recollect himself, and, that either justice, or the more critical situation into which he has plunged his country, would have prevailed on him to change his conduct.

This hope appeared to have been the better founded, as the English Minister was continually dispatching his emissaries to sound his Majesty's dispositions, at the very time the King of Spain was negociating with him for peace. His Majesty, so far from belying those sentiments which he had always expressed, listened with eagerness to the advice of the King his uncle; and, to convince that Prince of his persevering sincerity, his Majesty entrusted him, without

reserve,

referve, with those very moderate conditions, on which his Majesty would most gladly have laid down bis arms.

The Catholie King communicated to the Court of London the assorances he had received from his Majesty, and he urged that Court to perfect the reconciliation which the had long to carneftly afsected to desire. But the English Minister, although constantly feigning a delire of peace, never returned an ingenuous answer to the King of Spain, but was perpetually insulting his Catholic Majesty, with a tender of inadmissible propositions, quite foreign to the

subject of dispute.

It was now clear, from the most. indifputable evidence, that Eng-Land did not wish for peace, and that the negociated for no other purpose but to gain time to make the necessary preparations for war. The King of Spain was perfectly sensible of this truth; nor was he less sensible how much his own dignity was committed; yet his heart anticipated the calamities of war, and he forgot his own wrongs in his anxious wish for peace. even suggested a new plan of a cessation of arms for a term of years. This plan was perfectly agreeable to his Majesty, on condition, that the United States of America should be comprised in the proposal, and that, during the truce, they should be treated as To render it more independent. easy for the King of England to subscribe to this essential stipulation, his Majesty consensed that he should either treat immediately with Congress, or through the mediation of the King of Spain.

In consequence of these over-

tures, his Catholic Majesty dispatched his plan to the Court of Besides the time limited London. for the suspension of hospilities (during which the United States were to be considered as independent de salo) his Catholic Majesty took it on himself to propose, relative to America, that each party should have the possession of what they occupied at the time of figning the treaty of suspension, guaranteed to them. Such infinite pains did the King of Spain take to stop the effusion of human

There is not a doubt but that these conditions must appear, to every well-judging person, such as would have been accepted; they were, however, formally rejected by the Court of London, nor has that Court shewn any disposition to peace, unless on the abourd condition that his Majesty should abandon the Americans, and leave them to themselves.

After this afflicting declaration, the continuation of the war is become inevitable; and therefore his Majesty has invited the Casholic King to join him in virtue of their reciprocal engagements, to avenge their respective injuries, and to put an end to that tyrannical empire which England has ulurped and pretends to maintain upon the ocean.

This succinct exposure of the political views, and the progressive series of events which have occasioned the present rupture between the Courts of Versailles and Lonwill enable all Europe to draw a parallel between the conduct of his Majetty, and that of the King of England; to render justice to the purity and directness

of intention, which, during the whole of the dispute, has characterised his Majesty; and finally, all Europe will be enabled by this publication to judge, which of the two Sovereigns is the real author of the war which afflicts their kingdoms; and which of the two potentates will be answerable at the tribunal of Heaven, for that train of calamities occasioned by the war!

Paris, 1779.

The JUSTIFYING MEMORIAL* of the King of Great Britain, in Answer to the Exposition, &c. of the Court of France.

HE ambition of a power, ever a foe to public tranquillity, hath at length obliged the King of Great Britain to employ the Arength which God and his people have confided to him, in a just and lawful war.—It is in vain that France endeavours to jultify, or rather disguise, in the eyes of Europe, by her last Manifesto, the politics which feem to be dictated by pride and cunning, but which cannot be reconciled with the truth of facts, and the rights That equity, modeof nations. ration, and love of peace, which have always regulated the steps of the King, now engage him to submit the conduct of himself and his enemies, to the judgment of a free and respectable tribunal, which will pronounce, without fear or flattery, the decree of Europe to the present age, and to posterity. This tribunal, composed of the understanding and difinterested men

of all nations, will never regard professions; and it is from the actions of Princes, that they ought to judge of the motives of their conduct, and the sentiments of their hearts.

When the King afcended the throne, he enjoyed the success of his arms in the four quarters of the world! His moderation re-established public tranquillity, at the same time that he supported with firmness the glory of his crown, and procured the most solid advantages to his people. Experience had taught him how bitter and afflicting even the fruits of victory are; and how much wars, whether happy or unfuccessful, exhaust a people without aggrandizing their Princes. His actions proved to the world, that he knew the value of peace, and it was at least to be prefumed, that that reason which had enlightened him to discern the inevitable calamities of war, and the dangerous vanity of conquest, inspired him with the sincere and unibaken teiolution of maistaining the public repose, of which he was himself the author and guarantee. These principles were the foundations of that conduct which his Majesty held invariably for the afteen years which followed the peace concluded at Paris in 1763; that happy zera of quiet and happinels, will be preferred for a long time, by the recollection, perhaps the regret, of the European nations. The instructions of the King to all his Ambassadors, were impressed with the marks of his character and maxims.

He recommended it to them, as the most important part of their duty, to listen, with the most scru-

Although this Memorial has not been formally avowed, its authenticity is not doubted.

pulous attention, to the complaints and representations of the powers, his neighbours or allies; to stifle in the beginning, all grounds of quarrel that might embitter or alienate the minds of men: to turn afide the scourge of war, by every expedient compatible with the dignity of the Sovereign of a respectable nation; and to inspire all people with a just confidence on the political system of a Court which detelled war, without fearing it; which employed no other means than those of reason and sincerity, and which had no other object, but the geperal tranquility. In the midst of this calm, the first sparks of discord were kindled in America. The intrigues of a few bold and criminal leaders, who abused the credulous simplicity of their countrymen, insensibly seduced .the greatest part of the English Colonies to raise the standard of revolt 'against the Mother Country, to which they were indebted for their existence and their happiness. The Court of Versailles easily forgot the faith of treaties, the duties of allies, and the right of Sovereigns, to endeavour to profit of circumstances, which appeared favourable to its ambitious designs. It did not blush to debase its dignity, by the secret connections it formed with rebellious subjects; and after having exhausted all the shameful resources of perfidy and dissimulation, it dared to avow, in the face of Europe (full of indignation at its conduct) the foleinn treaty which the Ministers of the Most Christian King had signed with the dark agents of the English Colonies, who founded their pretended independence on nothing but the daringness of their, revolt.

The offensive Declaration which the Marquis de Noailles was ordered to make to the Court of London, on the 13th of March, in the last year, authorized his Majesty to repel by force of arms, the unheard-of infult that was offered to the honour of his crown; and the King remembered, on that important occasion, what he owed his subjects and himself. same spirit of imposture and ambition continued to reign in the councils of France.—Spain, who has, more than once, repented having neglected her true interests, to follow blindly the destructive projects of the elder branch of the House of Bourbon, was engaged to change the part of mediator, for that of enemy of Great Britain, The calamities of war are mukiplied, but the Court of Versailles hath, hitherto, nothing to boast of the fuccess of its military operations; and Europe knows how to rate those naval victories, which exist no where but in the Gazettes and Manifestos of pretended conquerors.

Since war and peace impole on nations duties entirely different, and even opposite, it is indispenfibly necessary to distinguish, in reasoning as well as in conduct, the two conditions: but in the last Manifesto, published by France, these two conditions are perpetually confounded: the precends to juttify her conduct in making the best, by turns, nay, almost at the same time, of those rights which an enemy only is permitted to claim, and of those maxims which regulate the obligations and procedure of national friendship. finesie of the Court of Versailles, in blending incessantly two suppositions, which have no connecetion, is the natural consequence of a false and treacherous policy, which cannot bear the light of the day. The sentiments and conduct of the King have nothing to sear from the most severe scrutiny; but, on the contrary, invites it to distinguish clearly what his enemies have consounded with so much artisce. Justice alone can speak, without fear, the language of reason and truth.

The full justification of his Majesty, and the indelible condemnation of France, may be reduced to the proof of two simple, and almost self-evident principles.— First, That a profound, permanent, and, on the part of England, a fincere and true peace, substitted between the two nations, when France formed connections with the revolted Colonies, secret at first, but afterwards public and avowed.—Second, That according to the best acknowledged maxims, of the rights of nations, and even according to the tentor of treaties actually subfishing between the two crowns, these connections might be regarded as an infraction of the peace: and the public avowal of these connections was equivalent to a declaration of war on the part of the Most Christian King.—This is, perhaps, the first time that a respeciable nation had an occasion to prove two truths, so incontestible, the memory of which is already acknowledged by every dianterested and unprejudiced person.

When Providence called the King to the throne, Prance enjoyed a most prosound peace." These are the expressions of the last Manifesto of the Court of Versailles, which casily remembers the solema assurances of a sincere friendship,

and the most pacific disposition which it received from his Britannic Majesty, and which were often renewed by the intervention of Ambassadors to the two Courts, during four years, until the fatal and decisive moment of the Declaration of the Marquis de Noail-The question, then, is to prove, that, during this happy time of general tranquillity, England concealed a fecret war underthe appearance of peace; and that her unjust and arbitrary procedure was carried to such a pitch, as to render lawful, on the part of France, the boldest steps, which are permissable only in a declared To attain this object, enemy. griefs clearly articulated and folidly established, should be produced before the tribunal of Europe. This great tribunal will require formals and, perhaps, repeated proofs of the injury, of the complaint, of a refusal of competent lansfaction, and of a protellation of the injured party, that it held itself highly oflended by such refusal, and that it thould look upon itself hereafter as released from the duties of friend. ship, and the bonds of treatice. Those nations which respect the fanctity of oaths, and the advantages of peace, are the flowest to catch hold of opportunities which feem to discharge them from z facred and folemn obligation; and it is but with trembling that ther date to renounce the friendship of powers, from which they have long borne injustice and insult.

But the Court of Versailles bath been either ignorant of these wife and salutary-principles, or it hath despised them; and, instead of fixing the soundations of a just and legitimate war, it hath con-

tented itself to spread through every page of its Manifesto, general and vague complaints, expressed with exaggerations in a metaphorical style.—It goes above threescore years back to accuse England of her want of care to ratify some commercial regulations, some articles of the treaty of Utrecht. presumes to reproach the King's ministers with using the language of haughtiness and ambition, without condescending to the duty of proving imputations as unlikely as they are odious. The free suppositions of the ambition, and infincerity of the court of London, are confessedly healed up, as if they feared to be discriminated; the pretended infults which the commerce, the flag, and the territories of France, have undergone, are infinuated in a very obscure manner, and at last there escapes an avowal of the engagement which the most Christian King had already made with Spain, " to avenge their respective wrongs, and put bounds to the tyrannical empire which England had usurped, and pretended to maintain over every sea."

It is difficult to encounter phantoms, or to answer closely and precisely to the language of declamation. The just confidence of the King, would doubtless desire to submit to the strictest examination, those vague complaints, those pretended wrongs, upon which the court of Versailles has so prudently avoided to explain itself, with that clearness and particularity which alone could support its reasons, and excuse its conduct. During a fifteen years peace, the interests of two powerful, and perhaps jealous nations, which ap-

proached in so many places in the old and new world, would inevitably furnish subjects of complaint and discussion, which a reciprocal moderation would always know how to fettle, but which are but too easily sharpened and impoisoeed by the real hatred, or affected suspicions, of a secret and ambitious enemy: and the troubles of America were but too apt to multiply the hopes, the pretexts, and the unjust pretensions of France. Nevertheless, such has been the ever uniform, and ever peaceable conduct of the King and his ministers, that it hath often filenced his enemies; and if it may be permitted to discover the true sense of these indefinite and equivocal accusations, whose studied obscurity betrays the features to shame and artifice—if it may be permitted of contested objects which have no existence, it may be affirmed with the boldness of truth, that several of these pretended injuries, are announced for the first time, in a declaration of war, without having been proposed to the court of London, at a time when they might have been considered with the serious and favourable attention of friendship. In respect to those complaints which the ambassadors of his most Christian Majesty have communicated from time to time to the King's ministers, it would be easy to give, or rather to repeat satisfactory answers, which would demonstrate, to the eyes of France herself, the King's moderation, his love of justice, and the fincerity of his disposition to preferve the general tranquillity of Europe. Those complaints, which the court of Versailles may dispense with recollecting, were very rarely

founded in truth and reason; and it was most generally found that those persons in Europe, America, or on the seas, from whom an illfounded and suspected intelligence was derived, had not been afraid to abuse the confidence of France, the better to serve her secret intentions.

If some facts, which France enhanced as the ground of her complaints, were built on a less brittle foundation, the King's ministers cleared them without delay, by a most clear and entire justification of the motives and rights of their Sovereign, who might punish a contraband trade on his coast, without wounding the public repose; and to whom the law of nations gave a lawful right to seize all vesfels which carried arms or warlike stores to his enemies, or resuffice were always open to individuals of all nations, and those mast be very ignorant of the British constitution, who suppose that the royal authority was capable to but out the means of an appeal. In the vast and extended theatre of the operations of a naval war, the most active vigilance, and the most teady authority, are unable to discover or suppress every disorder; but every time that the court of Versailles was able to establish the truth of any real injuries that its subjects had sustained, without the very professions serve, at present, knowledge or approbation of the to belie its declaration, and to call speedy and effectual orders to stop ought to have regulated its conan abuse, which injured his own duct. If the court of Versailles dignity, as well as the interest of is unwilling to be accused of a dishis neighbours, who had been in- fimulation unworthy of its granvolved in the calamities of war. deur, it will be forced to acknow-Vol. XXII.

rope, on what principles the political proceedings of Bagland ought to be regulated. Is it likely, that whilst England employed her forces to bring the revolted colonies of America back to their duty, the should have chosen that moment to irritate the most respectable powers of Europe, by the injustice and violence of her conduct? Equity hath always governed the sentiments and conduct of the King; but on this important occasion, his very prudence is a warrant for his fincerity and moderation.

But to establish clearly the pacihe system that subfists between the two nations, nothing more is wanting than to appeal to the very testimony of the court of Verfailles. At the very time in which it doth not blush to place all these pretended infractions of the public bellious subjects. The courts of peace, which would have engaged a Prince less sparing of his subjects blood, to make, without hefitation, reprifals, and to repel infult by force of arms, the minister of the most Christian King spoke the language of confidence and friendship. Instead of denouncing any defign of vengeance, with that haughty tone, which at least spares injustice from the reproaches of and diffigulation, perfidy court of Versailles concealed the most treacherous conduct under the imoothest professions. King, his Majesty gave the most to mind those sentiments which The object and importance of this ledge, that till the moment that will suffice to shew all Bu- it distanted to the Marquis de [C c]

Noalles, that declaration, which has been received as the fignal of war, it did not know any grounds of complaint, sefficiently real or important, to authorize a violation of the obligations of pesce, and the faith of treaties, to which it had fworn in the face of heaven and earth; and to disengage from that amity, to which, to the last moment, it had repeated the most solemn and

lively affurances. When an adversary is incapable of justifying his violence in the public opinion, or even in his own eyes, by the injuries which he pretends to have received, he has recourse to the chimerical danger to which his patience might have been exposed; and in the place of facts, of which he is totally unprovided, he endeavours to substitute a vain picture, which hath existence only in his own imagination, perhaps his own heart. minister of the most Christian King, who feems to have felt the weaknels of the means they were forced to employ, yet made impotent efforts to support means, by the most odious and unaccountable suspicious. court of London made preparations in its ports, and armaments, which could not have America for their object. Their intention was, confequently, too well determined for the King to mistake them, and from thence it became their duty to make fuch dispositions, as were capable of preventing the evil deligns of his enemy, &c.-In this Rate of Mairs, the King found he had not a moment to lose." This is the language of France: now we will shew that of

During the disputes which had

her colonies, the court of Verfailles applied itself, with the most lively and determined actor, to the augmentation of her marine. The King did not "pretend to reign as a tyrant of the seas," but knows that, at all times, maritime forces have constituted the glory and safety of his dominions; and that they have often protected the liberty of Enrope, against the ambitions stare, which hath so long laboured to subdue it.

A fense of his dignity, and a just knowledge of his duty and his interest, engaged his Majesty to watch, with an attentive eye, over the proceedings of France, whole dangerous policy, without a motive, and without an enemy, precipitated the building and arming of ships in all her ports; and which employed a confiderable part of her revenues in the expence of military preparations, the necessity or object of which it was impossible to declare. In that conjuncture the King could not avoid following the counsel of his pradence, and the example of his neighbours. The successive sugmentation of their marine served as a rule for his; and without wounding the sospect that he owed so friendly powers, his Majelly declared publicly to his parliament, that England should be in a respectable state of desence. The naval force which he had so carefully strengthened, was defigued only to maintain the general tranquillity of Europe; ask whilst the dictates of his own conscience disposed the King to give credit to the professions of the court of Verkilles, he prepared w

have nothing to fear from the perfidious designs of its ambition. France now dares to suppose that the King, " instead of confining himself within the limits of a lawful defence, gave himfelf up to a hope of conquest, and that the reconciliation of Great Britain with her colonies, announced; on her part, a fixed project of re-allying them with her crown, to arm them against France." Since, then, that the court of Versailles cannot excuse its procedure, but in fayour of a supposition destitute of truth and likelihood, the King hath a right to call upon that tourt, in the face of Europe, to produce a proof of an affertion as odious as bold; and to develope those public operations, or secret intrigues, that can authorise the suspicions of France, that Great Britain, after a long and painful dispute, offered peace to her subjects, with no other design than to undertake a fresh war against a respeciable power, with which she had preserved all the appearances of friendship.

After having faithfully exposed the frivolous motives, and pretended wrongs of France, we can reflect, with a certainty, justified by reason and by fact, on the sirst proposition, so simple and so important — That a peace subsisted between the two nations, and that France was bound by every obligation of friendship and treaty with the King, who had never failed in his legitimate engagement.

The first article of the treaty figned at Paris, the soth of February 1763, between his Britanmic, most Christian, Catholic, and

most Faithful Majestics, confirms, in the most precise and solemn

manner, the obligations which natural justice imposes on all nations which are in mutual friendship; but these obligations are specified and flipulated in that treaty by expressions as lively as they are just.——After having comprised, in a general form, all the flates and subjects of the high contracting powers, they declared their resolution, " not only never to permit any hostilities by land or sea, but even to procure reciprocally, on every occasion, all that can contribute to their mutual glory, interest, and advantages, without giving any succour or protection, directly or indirectly, to those who would do any prejudice to one or other of the high contracting parties." Such was the sacred engagement which France contracted with Great Britain; and it cannot be disguised, that such a promise ought to bind with greater thrength and energy against the domestic rebels, than the foreign enemies of the two crowns. The revolt of the Americans put the fidelity of the court of Verfailles to a proof; and notwith-Randing the frequent examples that Europe hath already seen of its little regard to the faith of treaties, its conduct in these circumstances assocished and enraged every nation which was not blindly devoted to the interests, and even to the caprices of France. France had intended to fulfil her duty, it was impossible for her to have mistaken it; the spirit as well as the letter of the treaty of Paris imposed on her an obligation to bar their ports against the American vessels; to forbit her subjects to have any commerce with that rebellious people; and not [G c] 2

to afford either succour or protection to the domestic enemies of a crown with which she had sworn a sincere and inviolable friendship. But experience had too well enlightened the King, in regard to the political system of his antient adversaries, to suffer him to hope that they would conform exactly to those just and reasonable principles, which would have assured a general tranquillity.

. As foon as the revolted colonies had compleated their criminal enterprize, by an open declaration of their pretended independence, they thought to form secret connections with the powers who were the least favourable to the interests of their mother country; and to draw from Europe those military aids, without which it would have been impossible for them to have supported the war they had un-Their agents endeadertaken. woured to penetrate into, and fettle in the different states of Europe; but it was only in France that they found an asylum, hopes, and assitance. It is beneath the King's dignity to enquire after the æra, or the nature of the correspondence shat they had the address to contract with the ministers of the court of Versailles, and of which the public effects were soon visible in the general liberty, or rather unbounded licence, of an illegitimate commerce. It is well known that the vigilance of the laws cannot always prevent artful illicit traders, who appear under a thoufand different forms, and whole avidity for gain makes them brave every danger, and clude every precaution: but the conduct of the French merchants, who furnished America not only with uleful and

necessary merchandize, but even with saltpetre, gon-powder, ammunition, arms, and artillery, loudly declared that they were assured not only of impunity, but even of the protection and savour of the ministers of the court of Versailles.

An enterprize so vain and so difficult, as that of hiding from the eyes of Great Britain, and of all Europe, the proceedings of a commercial company, afforiated for furnishing the Americans with whatever could nourish and maintain the fire of a revolt, was not attempted. The informed public named the chief of the enterprize, whole house was established at Paris; his correspondents at Dunkirk, Nantz, and Bourdeaux, were equally known. The immense magazines which they formed, which they replenished every day, were laden in ships that they built or bought, and they scarcely dissembled their objects, or the place These vesof their destination. sels commonly took faile clearances for the French illands in America, but the commodities which composed their cargo were sufficient, before the time of their failing, to discover the fraud and the artifice. These suspicious were quickly confirmed by the course they held; and at the end of a few weeks, it was not surprizing to hear they had fallen into the hands of the King's officers cruixing in the American leas, who took them even within fight of the coasts of the revolted colonies. This vigilance was but too welf justified by the conduct of those who had the luck or cunning to escape it; fince they approached America only to deliver the rebels

the arms and ammunition which they had taken on board for their service. The only marks of these facts, which could be confidered only as manifest breaches of the faith of treaties, multiplied continually, and the diligence of the King's ambaffador to communicate his complaints and proofs to the court of Versailles, did not leave him the shameful and humiliating resource of appearing ignorant of what was carried on, and daily repeated in the very heart of the country. He pointed out the names, number, and quality of the ships, that the commercial agents of America had fitted out in the posts of France, to carry to the rebels arms, warlike stores, and even French officers, who had engaged in the service of the revolted colonies. The dates, places, and persons were always specified, with a precision that afforded the ministers of his most Christian Majesty the greatest facility of being assured of these reports, and of stopping in time the progress of these illicit armaments. Amongs a croud of examples, which accule the court of Versailles of want of attention to fulfil the conditions of peace, or rather its constant atsention to nourish fear and discord, it is impossible to enumerate them all; it is very difficult to select the most striking objects. Nine large ships, fitted out and freighted by the Sieur de Beaumarchais, and his partners, in the month of January, 1777, are not confounded with the Amphitrite, who carried about the same time a great quantity of ammunition, and thirty French officers, who passed with impunity into the service of the rebels. Every month, almost every day, surnished new subjects

of complaint; and a short memorial that Viscount Stormont, the King's ambassador, communicated to the Count de Vergennes, in the month of November, in same year, will give a just, but very imperkect idea of the wrongs which Britain had so often softained. -"There is a fixty gun ship at Rochfort, and an East India ship, pierced for fixty guns, at L'Orient. These two ships are destined; for the fervice of the rebels. They are laden with different merchandize, and freighted by Mess. Chaumont, Holken, and Sebatier. --- The ship L'Heureux, sailed from Marseilles the 26th of September, under another name": she goes strait to New Hampshire, though it is pretended the is bound to the French islands. They have been permitted to take on board three thousand musquets, 25,000 pounds of sulphur, a merchandise as necessary to the Americans as ofeless to the islands. This ship is commanded by M. Lundi, a French officer of distinction, formerly lieutenant to M. de Bouganville.-L'Hippopotame, belonging to the Sieur Beaumarchais, will have on board four thousand anusquets, and many warlike stores for the use of the rebels. —There are about hety French ships laden with ammunition for the use of the rebeis, preparing to fail to They will go North America. from Nantz, L'Orient, St. Malo, Havre, Bourdeaux, Bayonne, and other different ports. - These are the names of some of the persons principally interested; M. Chaumont, M. Menton, and his partners, &c. &c."

In this kingdom, where the will of the Prince meets with no obstacle, succours, so considerable, so '[C c] 3 public, public, so long supported; in fine, so necessary to maintain the war in America, shew clearly enough the most secret intentions of the most Christian King's ministers. they fill carried further their forgetfulness, or contempt of the most solemn engagements, and it was not without their permission that an underhand and dangerous war iffued from the posts of France, under the deceitful malk of peace, and the pretended sag of the American colonies. The favourable reception that their agents found with the ministers of the court of Verlailles, quickly encouraged them to form and execute the audacious project of establishing a place of arms in the country, which had ferved them for an afylum. They had brought with them, or knew how to labricate letters of marque, in the name of the American Congress, who had the impudence to usurp all the rights of lovereignty. The partnership, whose interested views easily embarked in all their deligns, fitted out thips that they had either built or purchased. They armed them to cruize in the European icas, nay, even on the coasts of To save appear-Great Britain. ances, the captains of these corfairs hoisted the pretended American flag, but their crews were always composed of a great number of Frenchmen, who entered, with impunity, under the very eyes of their governors and the officers of the maritime provinces. A numerous swarm of these corsairs, animated by a sport of rapide, sailed from the ports of France, and after cruifing in the British seas, re-entered or took shelter in the same ports. Thicher they brought their

prizes, and under a rude, weak artifice, which they sometimes vouchsafed to employ, the prize were fold publicly and commodioully enough, in the fight of the royal officers, always disposed to protect the commerce of those traders, who violated the laws, to conform to the French ministry. corfairs enriched themselves with the spoils of the King's subjects; and after having profited of full liberty to repair their loffes, provide for their wants, and process all warlike flores, gunpowder, cannon, and rigging, which might ferve for new enterprizes, they departed freely from the same ports, to make new cruizes. The Inflory of the Reprisal privateer may be cited from a crowd of examples, to fet the unjust, but scarcely artificial, conduct of the court of Versailles in a clear light. This ship, which had brought 'Mr. Franklis, agent of the revolted colonies, to Europe, was received, with two prizes the had taken in her passage. She remained in the port of Nantz. as long as the thought convenient; put twice to sea to plunder le King?s subjects, and came questy into L'Orient with the new prizes the had made.

Notwithstanding the strongest representation of the King's ambassador; notwithstanding the most solemn assurances of the French ministers, the captain of that consair was permitted to stay at L'Orient as long as it was necessary to rest his ship, to provide sixty barrels of gunpowder, and so receive as many French seames, as chose to engage with him. Fornished with these reinforcements, the Reprisal sailed a third time from the ports of their new allies,

and presently formed a little squadron of pirates, by the concerted junction of the Lexington and the Dolphin, two privateers; the arfl of which had already carried more than one prize into the river of Bourdeaux; and the other, fitted out at Nantz, and manned entirely by Frenchmen, had nothing American, but the commander. three ships, which so publicly enjoyed the protection of the court of Verfailles, in a short time afterwards took fifteen British ships, the greatest part of which were brought into the ports of France, and secretly fold.—Such facts, which it would be casy to multiply, stand instead of reasonings and reproaches. The faith of treaties cannot avoid being called upon, on this occafion; and it is not necessary to thew that an allied, or even a neutral power, can ever permit war, without violating peace. The principle of the law of nations will, doubtless, refuse to the ambassador of the most respectable power that privilege of arming privateers, which the court of Verfailles granted under-hand, in the very bosom of France, to the agents of rebels. In the French islands, the public tranquillity was violated in a manner yet more audacious; and notwithstanding the change of the governor, the ports of Martinico served always as a thelter to cortains who cruized under American colours, but manned, by Frenchmen. Mr. Bangham, agent for the rebels, who enjoyed the favour and confidence of two successive governors of Martinico, directed the arming of those privateers, and the public sale of their prizes. Two merchant ships, the Lançashire Hero, and the Irish

Gambier, which were taken by the Revenge, affures, that out of her erew, confishing of 125 men, there were but two Americans; and that the owner, who at the same time was proprietor of eleven other privateers, acknowledged himfelf to be an inhabitant of Martinico, where he was looked upon as the favourite, and the fecret agent of

the governor himfelf.

In the midst of all these acts of hokility, (which it is impossible to call by any other name) the court of Verfailles continued always to speak the language of peace and amity, and its ministers exhausted all the sources of artifice and distinulation, to full the just complaints of Great Britain, to deceive her just suspicions, and to stop the effects of her just refentment. From the first tera of the American troubles, to the moment of a declaration of war by the Marquis de Noailles, the ministers, of the most Christian King never ceased to renew the strongest and most expressive protestations of their pacific dispositions; and however. the common conduct of the court of Versailles was adapted to inspire a just doubt, yet his Majesty's just heart furnished him with powerful motives to believe, that France had at length adopted a lystem of moderation and peace, which would perpetuate the folid and reciprocal happiness of the two nations. ministers of the court of Versailles endeavoured to excuse the arrival and refidence of the rebels agent. by the Arongest assurances, that he found only a fimple alylum in France, without either diftinction or encouragement.

The freedom of commerce, and the thirst of gain, serve sometimes

as pretexts to cover the illegitimate deligns of the subjects of France; and at a time when they vainly alledged the imporence, of the laws to prevent abuses, which neighbouring flates know so well how to suppress, they condemned, with every appearance of fincerity, the transportation of arms and ammunition, which she permitted with impunity, for the service of the rebels. To the first representation of the King's ambassador upon the subject of the privateers, which were fitted out in the ports of France under American colours, the ministers of his most Christian Majesty replied, with expressions of surprise and indignation, and by a positive declaration, that tempts, so contrary to the faith of treaties, and the public tranquillity, should never be suffered. train of events, of which a small number hath been shewn, soon mamifested the inconstancy, or rather the falsehood of the court of Verfailles; and the King's ambassador was ordered to represent to the French ministers the serious, but inevitable consequences of their policy. He fulfilled his commission with all the confideration due to a respectable power, the preservation of whole friendship was defired, but with a friendship worthy of a Sovereign, and a nation little accustomed to do, or to suffer injustice. The court of Versailles was called upon to explain its conduct, and its intentions, without delay or evation; and the King proposed to it the alternative of peace or war.—France choic peace, in order to wound her enemy more furely and secretly, without having any thing to dread from her jus-She feverely condemned 1 ... -

those succours and those armaments, that the principles of public equity would not permit her to justify. She declared to the King's ambassador, that she was resolved to banish the American cortairs immediately from all the ports of France, never to return again; and that she would take, in suture, the most rigorous precautions to prevent the sale of prizes taken from the subjects of Great Britain. The orders given to that effect astonished the partizans of the rebels, and seemed to check the progress of the evil; but subjects of complaint sprung up again daily; and the manner in which these orders were first eluded, then violated, and at length entirely forgotten, by the merchants, privateers, nay, even by the royal officers, were not excusable by the protestations of friendship, with which the court of Versailles accompanied those infractions of peace, until the very moment that the treaty of alliance, which it had figured with the agents of the revolted American colonies, was announced by the French ambassador in London.

If a foreign enemy, acknowledged by all the powers of Europe, had conquered the King's American dominions, and if France had confirmed by a solemn treaty, an act of violence, that had plundered in the midst of a profound peace, a respectable neighbour, of whom she stiled herself the friend and ally, all Europe would stand up against the injustice of a conduct which shamefully violated all that is most sacred among men. first discovery, the uninterrupted possession of two hundred years and the consent of all nations,

WETE

were sufficient to ascertain the rights of Great Britain over the lands of North America, and its fovereignty over the people that. had settled there with the permisfion, and under the government of the King's predecessors. If even this people had dared to shake off the yoke of authority, or rather of the laws, if they had psurped the provinces and prerogatives of their Sovereign; and if they had sought the alliance of firangers to jupport their pretended independence; those ilrangers could not accept their alliance, ratify their ulurpations, and acknowledge their independence, without supposing that revolt hath more extensive rights than those of spar; and without granting to rebellious subjects a lawful title to conquest, which they could not have made but in contempt of both law and justice. The secret enemies of peace, of Great Britain, and perhaps of France herself, had nevertheless the criminal dexterity to persuade his most Christian Majesty, that he could, without violating the faith of treaties, publicly declare, that he received the revolted subjects of a King, his neighbour and ally, into the number of his allies. The professions of friendship which accompanied that declaration, which the Marquis de Noailles was ordered to make to the court of London, only serve to aggravate the injury by the infult; and it was reterved for France to boast of pacific dispositions in the very instant that her ambition insligated her to execute and avow an act of perfidy, unexampled in the history of nations. Yet, such as the court of Versailles darcs allow itself to use. "Yet it would be wrong to

believe that the acknowledgment that the King has made of the independence of the Thirteen United States of North America, is what has enraged the King of England: that Prince is, without doubt, not ignorant of all the examples of the like kind that the British annals, even of his own reign, do furnish." - But these pretended examples do not exist. — The King never acknowledged the independence of a people, who had shaken off the yoke of their lawful Prince; it is doubtless very afflicting that the ministers of his most Christian Majesty have cheated the piety of their Sovereign, to cover, with so respectable a name, assertions without any foundation or likelihood, which are contradicted by the memory of all Europe.

At the commencement of the disputes which arose between Great Britain and her colonies, the court of Versailles declared, that it did not pretend to be a judge of the quarrel, and its ignorance of the principles of the British constitution, as well as the privileges and obligations of the colonies, ought to have engaged it to persist always in ... such a wife and modest declaration, that would have spared it the shame of transcribing the manifestos of the American Congress, and of pronouncing now, "That the proceedings of the court of London had compelled its antient colonies to have recourse to arms for the maintenance of their rights, their privileges, and their liberty." These vain pretensions have been already refuted in the most convincing manner, and the rights of Great Britain over that revolted people, her benefactions, and her long patience, have been already

already proved by reason and by facts. It is sufficient here to remark, that France cannot take any advantage of the injustice with right, and in fact is the object of dispute. And the King's dignity will not permit him to accept of those proposals, which, from the very beginning of a negociation, grants all that can fatisfy the ambition of the rebellious Americans, while they exact from his Mafefty, without any stipulation in his favour, that he should desist, for a long or indefinite term, from his most lawful pretensions. is true, the court of Versailles vouchfafed to consent, that the court of London might treat with the Congress, either directly, or by the intervention of the King of His Majesty, certainly, Spain. will not so much demean himself as to complain of that infolence, which feems to grant him, as a favour, the permission of treating directly with his rebellious fubjects. But the Americans them-Telves are not blinded by passion and prejudice, they will fee clearly in the conduct of France, that their new allies will foon become their tyrants, and that that pretended independence, purchased at the price of so much misery and blood, will be foon subjected to the despotic will of a soreign coart.

If France could verify that eagerness which she attributes to the court of London, to seek the mediation of Spain, a like eagerness would serve to prove the King's just confidence in the goodness of his cause, and his esteem for a generous nation which hath always despised fraud and persidy. But the court of London was obliged

to own, that the mediation was offered to it by the ministers of the Catholic King, and it claims no other merit, than that of haying shown, on all occasions, a lively and fincere inclination to deliyer its subjects, nay even its enemies, from the scourge of war. The conduct of the court of Madrid, during that negociation, soon shewed the King that a mediator, who forgets his own dearest interests, to give himself up to the ambition or refentment of a foreign power, must be incapable of proposing a safe or honourable ac-Experience concommodation. firmed these sufficions; the unjust and inadmissible scheme just mentioned, was the fole fruit of this mediation. In the same instant that the ministers of the Catholic King offered, with the most difinterested professions, his capital, his good offices, his guaranty, to facilitate the conclusion of the treaty, they fuffered to appear from the bottom of obscurity new subjects for discosling, particularly relative to Spain, but upon which they always refufed to explain themselves, His Majesty's resusal to accede to the ultimatum of the court of Madrid, was accompanied with all convenient precautions and respect; and, unless that court will arrogate to itself a right to dictate conditions of peace to an independent and respectable neighbour, there was nothing passed in that conjuncture, which ought to have altered the harmony of the two crowns, But the offensive measures of Spain, which she could never cloath with the fairest appearances of equity, will foon show that she bad already taken her resolutions; had been instigated by the French mipittry.

nistry, who had only retarded the declaration of the court of Madrid, from the hope of giving a mortal blow to the honour and interest of Great Britain under the mask of friendship.

Such are the unjust and ambitious enemies, who have despited the faith of treaties, to violate the public tranquillity, and against whom the King now detends the rights of his crown and people. The event is yet in the hands of the Almighty; but his Majesty, who relies upon the divine protection, with a firm but humble allorance, is perfuaded that the withes of Europe will support the justice of his cause, and applaud the success of his arms, which have no other object than to establish the repose of nations on a solid and uoshaken basis.

But France herself appears to teel the weakness, the danger, and the indecency of these pretensions; when, in the declaration of the Marquis de Nozilles, as well as in her last manischo, sic quits her hold on the right of independence; me is content to maintain, that the revolted colonies enjoy in fact, that independence they have bestowed on themselves; that even England herself, in some fort acknowledges it, in fuffering acts of lovereignty to sublist; and that therefore France, without any violence of peace, might conclude a treaty of friendship and commerce with the United States of North America. - Let us see in what manner Great Britain had acknowledged that independence, equally imaginary in right, as in fact. years had not yet elapsed from the day in which the rebels declared their criminal resolution of

thaking off the yelle of their mother country; and that time had been occupied by the events of a bloody and obstinate war. cels had hung in suspence, but the King's army, which possessed the most important maritime towns, continue always to menace the interior provinces. The English flag reigned over all the American leas, and the re-establishment of a law-. ful dependence, was axed as the indispensible condition of the peace, which Great Britain offered to her revolted subjects, whose rights, privileges, nay even whole prejadiess the respected. The court of Verfailles, which announced, with so much openness and simplicity, the treaty figned with the pretended States of America, which it found in an independent fituation, had alone contributed, by its clandeftine succours, to soment the fire of revolt; and it was the dread of peace that engaged France to employ the ramour of that alliance, es the most effectual means to insame the minds of the people, who began already to open their eyes upon the unfortunate confequences of the revolt, the tyranny of their new leaders, and the paternal dispoation of their lawful Sovereign.

Under such circumstances it is impossible, without insulting in too gross a manner both truth and reason, to deny that the declaration of the Marquis of Noailles, of the 13th of March, 1778, ought to be received as a true declaration of war on the part of the most Christian King; and the assurances that he had taken eventual measures, in concert with the United States of America, to maintain a freedom of commerce," which had so often excited the just complaints of

ANNUAL REGISTER, 1779. 412]

Great Britain, authorised the King; from that moment, to rank France in the number of his enemies. The court of Versailles could not avoid, acknowledging that King of England, after having " recalled his ambaffador, denounced to his parliament the measures taken by his Majesty, as an act of hostility, as a formal and premeditated aggression." was, indeed, the declaration which both honour and justice demanded from the King, and which he communicated, without delay, to the ministers of the different courts of Europe, to justify before-hand the effects of a lawful resentment. From thence it is yields to feck for orders, that were fent to the East-Indies, to remark the precise day when the fleets of England or France quitted their respective ports, or to scrutinize into the circumstances of the action with the Belle Poule, and the taking two other frigates, which were, actually garried off in fight of the very coast of France. Hence the repreach made to the King of having so long suspended a formal declaration of war, yanishes of itself. .These declarations are only the measures that nations have reciprocally agreed on, to avoid treachery and surprise; but the ceremonies which approunce the terrible exchange of peace for war, the heralds declarations and manifestos, are not always necessary, are not always alike. The declaration , of the Marquis de Noailles was a fignal of the public infraction of the peace. The King directly pro- Envoy Extraordinary and Pleniclaimed to all nations that he ac- potentiary at the court of Great cepted the war which France of- Britain, and granted by your sered; the last proceedings of his High Mightinesses at the solicita-

his prudence, than his justice, and Europe may now judge if the court of London wanted means to "justify a declaration of war, and if the did not dare to accuse France, publicly, of being the aggressor."

Three Memorials from the Dutch Merchants to the States General, presented Sept. 12tb, 1778.

To their High Mightinesses the . States General of the United Provinces.

MEMORIAL, Respectfully delivered from the Merchanes, Proprietors of Vessels, and Exchange Insurers, of the Town of Amsterdam.

HAT it cannot be unknown L to your High Mightinelles in what manner, for these several weeks pait, a confiderable number of vessels belonging to the inhabigants of this republic, bound for the ports of France, have been thopped in their passage by the ships of his Britannic Majesty, and other commissioned vessels belonging to his subjects; and that, although our captains have proved that their ships belonged to the subjects of this republic, and were not laden with contraband goods they have, notwithstanding, been seized and conducted into the difierent ports of Great Britain, where they are yet detained, without the letters of recommendation written to Count Welderen, your Majesty were rather the spring of tions of many persons interested in

the above vessels, in order to reclaim and effect their speedy enlargement, having produced the. Ieast effect, but, on the contrary, the English continue to seize our vessels more than ever, which seems to announce a plan formed by the English nation to totally prevent the navigation and commerce of the inhabitants of this republic with the ports of France.

That, in consequence, if these proceedings of the British nation continue, they will, no doubt, operate to the total ruin of the commerce and navigation of this republic in general, and also to the ruin of several private persons interested therein, either as proprietors of the vessels, or of the cargoes, or as insurers, and which will occasion them a considerable injury.

From these considerations your memorialists have judged it necessary to lay their injuries, as legal as well founded, before your High Mightinesses, and to implore your relief. The memorialists consider it as superfluous to endeavour to prove more amply to your High Mightinesses the injustice of such seizures and detentions, since it is known to you, that by the naval treaty concluded between the court of Great Britain and the republic, on the 11th of September, 1674, the following, as the first article, is stipulated: " that it shall be permitted, and is legal, for the fubjects of the respective nations to navigate with liberty and safety, to deal and negotiate in all kingdoms and countries, where the respective Sovereigns are at peace, neutrality and friendship, and in such a manner, that their navigation and commerce may be neither hindered or molested, neither by any violence of people who carry on war, nor by the ships of war or other vessels whatsoever, under pretence of any hostility or malice which may arise between one of the sovereign powers and the nations with which the other is in peace or neutrality."

And this liberty of navigation and commerce is also determined by the second article of the same treaty, by which it is agreed, not to suffer that it shall be made the least hindrance of any branch of commerce, on account, or by reason of a war; but on the contrary, to extend this liberty to all sorts of merchandize, which was accustomed to be sold in times of peace, excepting only goods comprized under the denomination of contraband, and which are specified by a subsequent article."

Your High Mightnesses are not less ignorant, that by the point or article fixed on, and concluded the 30th of Dec. 1675, at the Hague, between Sir William Temple, amballador extraordinary from the King of Great Britain, and the deputies of your High Mightinesses, it is specially explained, that the true lense of the above articles of the treaty concluded the 11th of September, 1674, is, and ought to be, that fince the conclusion of the above articles, the vessels and ships belonging to the subjects of the two contracting powers, should and may navigate, trade, and negotiate, not only from a neutral place to a place at war with either of the two nations, but from a place at war to a neutral place, whether or not the two places belong to the same Sovereign

reign or State, or to different States and Sovereigns with which either of the two contracting pow-

ers may be at war."

It will not be difficult for your memorialists to prove in the most convincing manner, as well by folid reasons, as by the authority of the best authors, who have written on the law of nations, and the judgment of civilized States in general, as also by the common rights of men, and without the necessity of any treaty or alliance; that in case of war between two powers, the subjects of that State in peace or neutrality with the belligerent powers, ought to enjoy the liberty of an uninterrupted commerce, and without being tied down by all the powers who are at war, and without meeting with the least obstacle under any pretext whatever; except in cales where neutral nations would supply the belligerent powers with warlike stores or other contraband goods, or are endeavouring to negotiate with places befieged or blockaded.

Your memorialists, therefore, consider it as superfluous to call your attention to such an object, feeing that the law of nations hath obtained the strictest sanction by the treaty concluded between this republic and England. That consequently it is not a question what bught to be the case between two nations who have not any reciprocal alliance, but that it is only to be confidered, what treatment the inhabitants of this republic have a right to expect on the part of the subjects of Great Britain, Ance the alledged treaty still subfifts, and was concluded on, as it he well known to your High Migh-

tinesses, in a time when this state was at war with France; and that consequently it was principally dictated by the English, in order to procure them a free navigation to and from the several ports of France. Since then the English were the first who reaped the fruits of that convention, they ought not to prevent the subjects of this republic from profiting in their turn of the advantages of a free navigation and commerce, which they stipulated in themselves, and which they have enjoyed as they have found it convenient. this objection ought to appear the better founded, as the stipulations in the treaty agreeing with the law of nations, ought to be a consideration of the greatest weight with a nation which would with to preserve any pretentions to reason and equity, and that would not violate in any point the faith of a treaty so solemn as the above-mentioned.

The memorialists, therefore; hope, that by the essicacy of these reasons, the injustice will appear to your High Mightinesses, as well of making those prizes as the manner of carrying away the vessels of the inhabitants of this republic, navigated from a third place to the ports of France, or from one port of the same kingdom to another, without considering what or who he is, who ought to be considered as proprietor of the cargo.

That this injustice carries such a demonstrative proof, that neither the proprietors nor the sharers of the vessels ought, on that head, to begin making by instituting a process; but that it belongs to bis Britannic Mejesty to give immediate or-

ders

ders, as well to the commanders of ships of war as to those of the letters of marque, that they no longer cause the least injury, nor any longer seize the ships or vessels belonging to this State; but, on the contrary, that they shall be bound directly to repair the injuries already done, and make good the damages already sustained, unce they can no longer pretend the necessity of a judicial examination, before having decided previously on the validity of the captures, and that it is otherwise evident, or at least ought to be so, that the commission for seizing the ships and effects belonging to an enemy, cannot concern the subjects of a power with whom they are bound by treaty, and according to which navigation and commerce should be free; and that there is, besides, a right that the ship should protect the cargo; nothing being so certain, that in such circumstances, the least obstruction given to a ship is an act of the most daring injultice; that of courle, the dangerous consequences brought on by so flagrant a violation of the law of nations cannot be repaired, although the ships should be afterwards released, and damages should be awarded.

Besides the justice of these assertions, and the validity of these complaints, the taking of thips bound for the ports of France, not only induces your memorialitis to solicit your High Mightinesses to interpose, and even to insist on immediate reparation for damages already sustained, and security for Your memowhat may accrue. rialists also cannot dispense with respectfully laying open to your High Mightinesses the lamentable consequences which will result to the merchants, and of course to the state in general, in case the vessels and ships of the subjects of this republic cannot be guarded against what are little short of ass.

of piracy:

In effect, the seizure of the ships not only occasions to the proprietors a prejudice and considerable damage, and oppresses them in many respects by very large expeaces, but the Ropping even of . merchandize, and the danger and spoil of goods, to which they are subject; the possibility of the fall of the price of markets, as well as other events, are also very prejudicial to the above proprietors, and others interested therein; and if still by such proceedings, and against all remonstrance, the English will pretend that the goods embarked are from that moment to be considered as French property, and subject to confication, the consequences of so unjust a suppofition will infallibly cause the entire ruin of many insurers in this country; and it will be the more unjust, as the vessels hitherto seized, or liable to be seized, have had all their cargoes insured in a time when there was not the least hostility commenced between France and Great Britain, which alone gives a sufficient reason why those ships sould not be seized, much less should they be declared legal prizes.

Further, without estimating the damage which necessarily must befal on the several persons interested in ships seized, or exposed to seizure, the consequences of a seizure so unjust as that of Dutch ships, destined for the ports of France, will have the most dangerous insluence on the commerce and navigation of the republic in general, since not only the inevitable effect

reign or State, or to different tinesses, in a time whe States and Sovereigns with which either of the two contracting pow-

ers may be at war."

It will not be difficult for your memorialists to prove in the most convincing manner, as well by solid reasons, as by the authority of the best authors, who have written any treaty or alliance; the any treaty or alliance; the impowers, the subjects of that State in peace or neutrality with the belligerent powers, ought to enjoy the liberty of an uninterrup commerce, and without being down by all the powers who war, and without meeting the least obstacle under the least obstacle under where neutral nations with belligerent nounced like like stores or othe goods, or are endeav, lare, trate with places b, me right aded. .y, in cale

Your meme! with him doth confider it ar per to extend the your attentic pefore the expiration to be computed seeing that the treat when the above rerepubliched. Accordsepublit it may then happen sequer Christian Majesty, in reprifals, would also limit chilements of the ships of the, when the memorialists, other inhabitants of the rebe, will see your Mighunesses deprived of their comand navigation with the kingdoms and their dependenand in this manner supportbe, however unjustly, the vigo-

was at war with Frage confequently it was tated by the English procure them de and from the Since then 3 were the Est that ca of repub. 4 busigues, ...y prevented, it occasion to other king-

.o carry on our frade, of atch, against all reason and justice, the usage will be forbidden to the inhabitants of this republic, whilst frequent examples, founded on most woefal experience, will teach us, that one time or other, by a certain concurrence of circumstances, one branch of commerce taken away, can never return into its ancient course.

Prompted thus by every motive that can be alledged, your memorialists respectfully address your High Mightinesses, that it may please them to prevent and resort the damages done to the merchants of this country, by the feizure of her ships bound for the ports of France, by the English nation, against the faith of treaties, in open violation of the law of nations, in opposition to natural equity. In thort; to prevent for the future such extraordinaly

To their High Mightinesses the States General of the United States.

A MEMORIAL,

Respectfully presented by the Merehants and Owners of Ships of the Yown of Rotterdam.

able number of ships belonging to the imhabitants of this State, and bound for France, have been stopped at sea, either by the ships of the royal marine of England, or by commissioned ships of the same nation, and afterwards carried into the ports of Great Britain, where they continue to be detained, notwithstanding the bare Vol. XXII.

inspection of the consignments and other papers sound on board the above ships would sufficiently shew that they were not laden with any sert of merchandize under the denomination of contraband goods, specified by the third article of the Marine Treaty, concluded in the month of December, 1674, between the Court of Great Britain and this republic.

That this conduct of the British tion, the flagrant injustice of the might be very easily proved appeal to the law of nations, not already evident, as he aforesaid treaty, as by 'ory Convention of 1675, ambly accelerate the entire in of the United Provinces, if not timely and efficaciously prevented.

Notwithstanding the many arguments that might be urged, your memorialits will not trouble your High Mightinesses with all the reasons they have to alledge in proof that the destruction of our commerce and navigation must follow, as the unavoidable consequence of the unjust proceedings of the English, our neighbours, of which there is no occasion of any further proof, it having already been fully represented to your High Mightinesses.

Your memorialists therefore only assume the liberty of observing in very sew words, that by the seizure of their ships, although they may afterwards be released even with indemnity, the necessary delays in such cases are yet highly prejudicial, and totally ruinous to the merchants of these provinces.

That, during the detention of the merchandize, the commodities [D d] are

ene in a :

will be the absolute ruin of all commerce with France, but the more so, as all the other nations, which until this time have employed, and will again employ Dutch ships to transport their merchandize to the ports of France, or other places, will be deprived of employing for the suture, ships exposed to be detained or made

prizes of.

These premises will afford a vast ground of speculation, when it will please your High Mightinesses to reflect, that notwithstanding his Most Christian Majesty, by the first article of his regulations, concerning the navigation of neutral ships in times of war, under the date of July 26, 1778, has voluntarily forbidden all his privateers and to flop or seize any ship belonging to neutral powers, even failing from, or bound to, enemy's ports, excepting only Mockaded places, and ships laden with contraband goods; judging it proper, nevertheless, to declare, that his Majesty reserves the right of revoking this liberty, in case the power at war with him doth not think it proper to extend the same favour, before the expiration of fix months, to be computed from the date when the above regulations were published. According to this, it may then happen that his Christian Majesty, making reprifals, would also limit the franchisements of the ships of this state, when the memorialists, and other inhabitants of the republic, will see your Mightinesses entirely deprived of their commerce and navigation with the two kingdoms and their dependencies, and in this manner supporting, however unjustly, the vigorous effects of war, the same as if this republic was actually concerned therein.

However matters may terminate, your memorialists deem it needless to shew to your High Mightinesses the horrible result of such a commercial decline, for all the inhabitants of this country in general, seeing that by commerce the republic is aggrandized; that in trade she finds the most solid benesits, and that if her commerce perishes, she will foon find herself on the brink of destruction. What is still further to be apprehended, when we have reflected on the unfust proceedings on the part of the English, the navigation and commerce between this country and France, and very likely by an inevitable rupture with England, both will be totally prevented, it may furnish occasion to other kingdoms to carry on our frade, of which, against all reason and justice, the usage will be forbidden to the inhabitants of this republic, whilst frequent examples, founded on most woeful experience, will teach us, that one time or other, by a certain concurrence of circumstances, one branch of commerce taken away, can never return into its ancient course.

Prompted thus by every motive that can be alledged, your memorialists respectfully address your High Mightinesses, that it may please them to prevent and resore the damages done to the merchants of this country, by the seizure of her ships bound for the ports of France, by the English nation, against the faith of treasies, in open violation of the law of nations, in opposition to natural equity. In short, to prevent for the future such ex-

traordinary

traordinary proceedings, to maintain the rights and privileges of the several inhabitants of this State, which they hold from God and nature, and on which the English nation are bound by the most solemn treaties to make no instactions.

That it will please your High Mightinesses to provide speedily. and efficaciously, as well by the most serious representations to the Court of England, on the subject Of the disorders committed, and to prevent their consequences, by giving a sufficient protection, by the means of the ships of war, to the commerce and navigation of this country, in such a manner as your High Mightinesses, inspired by your acknowledged wisdom, and animated by paternal regard and zeal for the prosperity of this republic, shall judge proper.

To their High Mightinesses the States General of the United States.

A MEMORIAL,

Respetifully presented by the Merchants and Owners of Ships of the Youn of Rotterdam.

able number of ships belonging to the inhabitants of this State, and bound for France, have been stopped at sea, either by the ships of the royal marine of England, or by commissioned ships of the same nation, and afterwards carried into the ports of Great Britain, where they continue to be detained, notwithstanding the bare Vol. XXII.

inspection of the consignments and other papers sound on board the above ships would sufficiently shew that they were not lader with any sert of merchandize under the denomination of contraband goods, specified by the third article of the Marine Treaty, concluded in the month of December, 1674, between the Court of Great Britain and this republic.

That this conduct of the British nation, the flagrant injustice of which might be very easily proved by an appeal to the law of nations, if it be not already evident, as well by the aforesaid treaty, as by the Explanatory Convention of 1675, will infallibly accelerate the entire ruin of the Commerce and navigation of the United Provinces, if not timely and efficaciously prevented.

Notwithstanding the many arguments that might be urged, your memorialists will not trouble your High Mightinesses with all the reasons they have to alledge in proof that the destruction of our commerce and navigation must follow, as the unavoidable consequence of the unjust proceedings of the English, our neighbours, of which there is no occasion of any

further proof, it having already been fully represented to your High

Mightinesses.
Your memorialists therefore only assume the liberty of observing in very sew words, that by the seizure of their ships, although they may afterwards be released even with indemnity, the necessary delays in such cases are yet highly prejudicial, and totally ruinous to the merchants of these provinces.

That, during the detention of the merchandize, the commodities [D d] are

are exposed to the injury of the fall of markets, and the merchants are, besides, in that interval, deprised of the opportunity of surnishing themselves in return with such goods as they intended when the first cargoes arrived at their destined ports.

In short, the Dutch ships employed for the transportation of merchandize to France and elsewhere, being detained, will, without doubt, (the result of such proceedings out of the question) occa-

fion fewer numbers to be hired in

such service for the future.

That this seizure and detention are not only in themselves sufficient entirely to ruin our commerce and navigation, but that this ruin will be more rapidly brought on, whenever it shall please the English nation to make a second stride of injustice, and having scized the ships bound for our French merchants, or from France to this State, they have only to declare them legal

prizes. That this prospect is still more deplorable, when your memorialists reflect on the regulation given by his Christian Majesty, on the 26th of July last, concerning the navigation of neutral ships; because, although that Monarch therein forbids the stoppage and seizure of neutral ships, bound to or from an enemy's port, he nevertheless reserves to himself a right of revoking that edict, in case any foreign power should not agree to the same regulation respecting neutral ships. From hence it necessarily results, that, if the English continue to detain and seize our ships coming from France, or going thereto, we may expect the same treatment from the French with regard to

our ships coming from, or going to Great Britain, and by these means, and to the total ruin of these States, they will be deprived of the benefits of commerce and navigation with both countries.

Your memorialists, therefore, flatter themselves, that your High Mightinesses will find these reasons sufficiently conclusive to justify the presentation of this memorial, as also that your High Mightinesses will take such measures, dictated by your usual wisdom, and agreeable to the protection of these provinces, in order to save them from that total ruin with which they are now threatened.

To their High Mightinesses the States General of the United Provinces.

A MEMORIAL,

Respectfully delivered from the Merchants, Proprietors of Vessels, and Exchange Insurers, of the Towns of Amsterdam, Rotterdam, and Dordrecht.

of interrupting the navigation and commerce of the inhabitants of this republic, for a considerable time past, by English commissioned ships, as well as by the ships and officers of his Britannic Majesty, has put many proprietors and others, whose ships and goods have been seized, under the indispensible necessity of calling upon the intercession, and entreating the satherly protection of your High Mightinesses, in order to obtain a release of the ships and cargoes which have

anber of thele throughsameing prefentaddress to your nes, to fee those of which, with . they think they have complain, your memoettered themselves, that "1 Mightinesses letters of ndation to Count Welderen, Privoy Extraordinary and potentiary at the Court of and Britain, fent at the request the reclaimants, as well as by a e acral notification addressed by your High Mightinesses to Count Welderen, in order for him to present without delay the most serious remonstrances in the name of your High Mightinesses, as well to his Britannic Majesty, as to his Ministers, (in which your memorialists acknowledged with gratitude the paternal care of your High Mightinesses, for the welfare of the inhabitants of this state) that, we expected, the said letters of recommendation would have produced the defired effect; that is to say, that the ships so stopped and so unjustly seized, with their cargoes, would have been immediately fet at liberty.

That the expences, damages, and interests occasioned by their detention, would have been detrayed to the sufferers, and that the inhabitants of this state would have received the necessary assurances, that they could have continued to carry on their navigation and commerce with that freedom and fafety which they have a right to expect, as well from the com-

mon rights of nature, as by the most solemn treaties which now exist between Great Britain and this Republic; and that your memorialists would then have had every reason to believe, that the violence hitherto committed, were the acts of private persons, and committed without the order or permission of the King of Great Britain, and that so far from avoiding them, his Britannic Majesty, according to his acknowledged equity, would not have made the least difficulty of immediately remedying them, especially after he had received our just complaints from the hands of your High Mightinesses.

That notwithstanding your memorialists, with great regret, perceive that all the representations made by, or on the part of your High Mightinesses on this subject, have only produced an injunction from the Lords of the English admiralty, to release the ships which were not laden with timber or rigging, but not that for the future, such of our ships as might be laden with the under-mentioned articles should be indemnified from capture, and so far from allowing the least damages to the sufferers concerned in the small number of ships which have been released, the English continue daily to detain such of our vessels as are laden with masts; planks, hemp, and other articles for ship building, coming from the Baltic, and bound to France.

Your memorialists are also informed, that the intentions of the British Ministry are to order a confiscation of the lading of all ships whose cargoes they shall deem to belong to France; or rather, in this [Dd] 2 cale

case, where they shall think that the French have not an interest in the vessels, to order them to be released, but to retain the cargo, reimbursing only the value, and paying only the freightage of the ships according to the sums awarded.

Under this confideration. they cannot but allow, that on the one hand this mode of arguing, and this manner of acting, by the British Ministry are diametrically opposite to the reciprocal obligations which bind the two nations, the rights of men, as sanctioned by the laws of nature and nations, as well as to the marine treaty of the 11th of December, 1674, in particular; on which, notwithstanding this republic hath not on her part made the least infraction, and that such procedures must evidently wound and even destroy those rules of equity and good faith, from which civilized nations ought not to depart; so, on the other hand, if the English Ministry should obstinately persist in fuch an unjust conduct, the consequences must necessarily bring on, not only the total ruin of a great number of your memorialists, who are immediately interested, but allo the intire decline of the commerce and navigation of all the inhabitants of this country, on which the welfare, prosperity, and preservation of the state entirely depend.

These evils have been exemplified in former times, but particularly in the years 1746, 1747, and 1748, and from 1756 to 1758. In the first period we may estimate a less of upwards of twenty millions, caused by the English on the commerce and navigation of

this State; and during the second period, near twelve millions, which is sufficiently proved by the printed records of those times, and which are laid before your High Mightinesses.

Besides, the value of the cargoes contained in the thips now actually detained in England, amount already to a very confiderable fum, which is not only excluded from circulation, but the total loss of it, or of great part of it, if such proceedings continue under the frivelous pretext that it belongs to the French, and is, under that description, to be confiscated, will fall almost entirely on the Dutch merchants, assurers, &c. to which we must again add, the prodigious damage occasioned to the owners of ships by the delay of such vesiels, the continuance of wages and provisions during the detention, as well as the stoppage of the navigation during the interval.

Further, the seamen on board fuch vessels, and who are so esfential to this republic, will either escape or be seduced into the service of Great Britain. In short, if the inhabitants of this republic are prevented from freely navigating in a manner agreeable to the faith of treaties, their vessels will be less employed than the ships of any other nation, on whom the English dare not impose the same restrictive law; consequently the ships of the latter will be employed in transporting the goods and merchandize, the exportation and vend of which, interests as much the inhabitants of the north, as their beneficial importation from the fouth of Europe.

The confideration of all these objects sollectively determined

your

your memorialists again to address your High Mightinesses, and to implore once more your fovereign and efficacious protection.- Their memorials are founded upon well grounded apprehensions of inevitable ruin, not only to themselves, but to the State at large, if the English Ministry obstinately persist in their present proceedings towards our ships.

Finally, your memorialists firmly bein c, that this State is neither deficient in porver, ner that ber inhabitan's want inclination or courage to maintain the independency of their republic against all unjust violence; and they also look on it as insufferable, that a nation which owes the security and prejervation of her civil and religious libercies to the affiftance and co-operation of this republic, and auhich otherwise is united avieb ber by ties of mutual and positive interest, Should dare, against the first principles of natural equity, against all rules of right, adopted by all civilized nations, and against the faith of all solemn treaties, for the reason only of CONVENIENCE; that this very nation, we say, should dare to cause so much trouble and prejudice to the commerce and navigation of this republic, and that in so notorious a manner, that the total ruin of individuals, and the entire decay of trade, as well as of navigation, must be the final result of their conduct.

MEMORIAL,

Delivered by Sir Joseph Yorke, ta the Deputies of the States General, on the 22d of November, 1778.

THEIR High Mightinesses will have received, by the answer

from Lord Suffolk, one of his Majesty's Principal Secretaries of State, to the Count Welderen, dated the 19th of October, the most convincing proofs of his Majesty's friend-

ship towards them.

After an explicit detail of the hostile and unprecedented conduct of his most Christian Majesty, which conduct occasioned the seeming irregularity of the Court of Great Britain, in seizing the ships appertaining to neutral powers, bound to the ports of France, the measure hath been fully explained on the principles of necesfity and self-defence, against an enemy who hath ever acted covertly and by jurprize.—The moderation and equity of the King my master, would not permit him to difregard the complaints of the subjects of their High Mightinesses, from the moment there appeared a poliability to renew them. It is for this reason that his Majesty has declared his intention to release the Dutch vessels, under conditions the most amicable and the least disadvantageous, as far as circumstances will admit. war, however, still continues, and the active endeavours of the enemy to push matters to extremity, obliges his Majesty to guard against the danger. He wishes, nevertheless, to involve his good neighbours and allies as little as possible; and although France has even threatened to invade his Majesty's dominions and territories, having, for that purpole, assembled numerous armies on their coast, the King, my master, still forbears to claim such succour from their High Mightinesses as they are bound to grant, by the most explicit and tolemn treaties, whenever iuch

[Dd] 3

fuch succours may be on his part required, namely, the treaty of 1678, and the separate article of 1716; his Majesty consines himself for the present solely to lay before their High Mightinesses the state of affairs, the motive of his conduct, and the necessity he finds himself under to take measures for his own defence, and the preservation of his dominions.

It is only with this view that I am ordered by his Britannic Majesty, to propose to their High Mightinesses a conference, to confider of the most proper means towards an amicable regulation of fuch a mode of proceeding in future, respecting such articles as his Majesty, without yielding to his enemies, cannot polliply lutter them to be supplied with. It cannot have escaped the attention of their High Mightinesses, that Lord Suffolk in explaining his Majesty's sentiments to Count Welderen, fully, demonstrated the King's fincere dehre to pay the itrictest regard to the faith of treaties, as far as they do not directly tend to expole him to imminent danger. is by no means his intention, nor is it his wish, to cause the least interruption to the commerce of Holland, usually carried on with France, excepting warlike and naval stores, and even this restriction shall be enjoyed with equity, and, 1 am confident, with every possible degree of generosity.

I therefore, in obedience to my instructions, have taken the liberty to request an audience, to know whether, in consequence of the answer delivered to Count Welderen, their High Mightinesses are resolved to open a conference with me? On my part, I intreat you to

assure their High Mightinesses, that as well from my being authorised by his Majesty, as from my being personally disposed, after a residence in this country of 27 years, their High Mightinesses will find in me every readiness to attend to their complaints, and regard for their welfare; and I flatter myself that in the course of the conference 1 shall convince them, that whatever forced and affected turn may have been given to the conduct of my Court, it has been founded on the juffice, moderation, and necessity of our fituation. In expectation of the decision of their High Mightinesses on what I have laid before them, I trust that their known equity and friendship towards his Majesty, agreeable to their recent assurances by their Envoy, will prove sufficient not to authorize their subjects to carry naval stores, under convoy, to France, as being the most dangerous object to the security of Great Britain.

A MEMORIAL,

Presented by bis Excellency the Duke de Vauguyon, Ambassador of France to the States General of the United Provinces of the Low Countries.

THE opinion which the King my master hath entertained, that your High Mightinesses, animated with the desire of perpetuating the perfect harmony which subsists between France and the States General, will, in the present circumstances, scrupulously adhere to the principles of absolute neutrality, has induced his Majesty to comprehend the United Provinces

in the regulation which was made in the month of July last, concerning the commerce and navigation

of neutral powers.

His Majesty has still less reason to doubt the perseverance of your High Mightinesses in these principies, after so many assurances given in claiming their captures, which are the foundation and guarantee of the folid repose and profperity of the Republic. But his Majesty, notwithstanding, wishes to procure on this head a more certain assurance, and it is with this view that his Majesty has ordered me to demand of your High Mightinesses a clear and specific explanation of your ulterior determinations, and so to state them, that his Majesty may be enabled to judge whether they tend to maintain or annul the reciprocal regulations which his Majesty would wish to consolidate.

The better to explain his Majesty's views and intentions to your High Mightinesles, I have the honour of notifying to you, that the King my master statters himself, that your answer to this Memorial will preserve to the slag of the United Provinces, all the liberty which of right belongs to them, as an independent State, and to their commerce all the respect which is due by the law of nations, and the faith of treaties.

The least derogation from those principles of neutrality you have professed, will betray a partiality, the consequences of which will incur the necessity of putting an end to not-only the advantages which his Majesty promises to your slag in case of a strict observance of neutrality, but also the essential favours and benefits which the

commerce of the United Provinces enjoy in all the ports of his kingdom.

Memorial is presented This without any other motive, than to show the good will and affection of his Majesty for your High Mightinesses.

Hazue, Dec. 8, 1778.

ORBER of the French King's Council of State, which is to take place on the 26th of January, 1779, and revokes, with respect to the subjects of the United Provinces of the Low Countries, (the City of Amsterdam excepted) all the advantages given, by the first article of the regulation of the 26th of July, 1778, to the navigation of neutral velsels: directs also, that all Holland vessels shall provisionally execute the first, second, third, fourth, and fifth articles of the regulation of the 21st of October, 1744; subjecting the said vessels to the payment of duties on freightage, and to the making a new entry.

January 14, 1779.

Extract from the Registers of the Gouncil of State.

THE King having declared, by his regulation of the 26th of July last, concerning the navigation of neutral vessels, that he reserved to himself the power of revoking the liberty granted by the first article, in case the belligerent powers should not grant the like within the space of six months; and his Majesty, judging it proper to make known his intentions, relative to the vessels belonging to.

[Dd]4

the subjects of the Republic of the United Provinces of the Low Countries, has in council ordered and declared as follows:

Article the 1st.

The Republic of the United Provinces not having obtained of the Court of London the liberty of Amsterdam, the liberty proof navigation, equal to that which the King had conditionally promised to their flag, and which their treaties with England should fecure to them, his Majesty revokes, with respect to the subjects of the said Republic, the advantages granted by the first article, concerning the commerce and navigation of neutral ships; and in consequence declares it his pleafure; that the vessels of the said Republic shall provisionally execute the first, see nd, third, fourth, and fifth articles of the regulation of the 21st of October, 1744.

2. His Majesty further declares, that from the date of the 26th of January, 1779, the vessels belonging to the subjects of the said Republic shall pay the duty on freightage, as is established by the ordinances and regulations, and particularly by the declaration of the 24th of November, 1750, and the order of Council of the 16th of July, 1757; his Majesty reserving to himself the power of laying, when he pleales, new duties on the commodities of the United Provinces, and the productions of their manufactures.

2. His Majesty, however, confidering that the city of Amsterdam has made the most patriotic exertions, to persuade the Republic to procure, from the Court of London, the recurity of that unlimitbd liverty, which belongs to their flag, in consequence of her independence and integrity of commerce, which the rights of nations and treaties secure to her; and his Majesty, desirous of giving the faid city a striking example of his benevolence, has reserved to the ships freighted by the inhabitants mised by the first article of the regulation of the 26th of July last, concerning the navigation of neutral vessels, as well as the exemption of the duties of freightage; except such vessels as are employed in the French coasting trade, which shall continue to be subject to the order of Council of the 16th of July, 1757. His Majesty further referves to the inhabitants of the said city, the advantages granted to their own commodities, and the productions of their manufactures, conformably to what is at present practifed.

4. To secure to the vessels of Amsterdam, exclusively, the enjoyment of the advantages granted in the preceding article, his Majesty declares, that the captains of the said vessels shall be supplied with a certificate from the Commillary of the Marine established at Amsterdam, and an attestation of the magistrates of the said city, afferting that the vessels were actually freighted by the inhabitants of that city, and that they went directly from their port for the

place they were bound to.

5. The said Captains shall be bound, on their return, to appear before the said Commissary of the Marine, and to give sufficient proof, that he landed his cargo in no other port or harbour of the Republic than that of Amsterdam. His Majesty also enjoins the said Commissary,

511,

think he wronged the autes between his crown
Mightinesses, if he
hem to what
to innch they
ney wished
at once atence, sap the
less than their

in Mightinesses are sted not to seel that mer, who takes upon that of grapting particulars to part of your goats to the prejudice of the nance no other view than to scord, and to break the ties a unite you; and that if other cass were to follow the same example, the republic would be torn to pieces by an internal combustion, and an universal anarchy would succeed.

" Thus far the interest only of your High Mightinesses seems concerned; but when we perceive that the end of all these intrigues is manifeftly deligned to cause the republic to quarrel with the King, and to bring on a war between your High Mightinesses and Great Britain, under the feducing preterce of a perfect neutrality and the interest of trade, the King can no longer remain an indifferent spectator, but finds himself obliged to lay before your High Mightinesses the danger into which France wishes to plunge you.

What right has France to dictate to your High Mightinesses the arrangements you ought to make

5, it Brir rend**(hip** gatineffes, actation the cataleen Sove- forebore in-, iciation which ; on relative to ne given to the t all forts of naval r the war, which is ig on between your taietles and France; but recredings of the French r forbid his keeping fi-

h W

make with England? When and how has that court obtained any such right? The treaty which your High Mightinesses do, and which the King might reclaim, contains nothing of that kind; it must therefore be sought for in the ambitions views of that power, which has made a league with the rebels of America, and now endeavours to bring other states into it with them.

" In October last, the King, in amicable manner, communicated his situation and sentiments to your High Mightinesses, by a memorial delivered to your Envoy, Count Welderen, by the late Lord Suffolk, in which he explained his views, and the necessity he was under to defend himself against an enemy, who had attacked him by surprize in an unjust manner; and although that enemy has gone fo far as to dictate to your High Mightinesses, what they were to do during the present troubles; Majesty, far from imitating any fuch arbitrary conduct, only proposed to your High Mightinesses to confer with his ambasiador upon what was most proper to be done for the iccurity, &c. of the two countries. Your High Mightinesses, it is true, to my great regret, thought proper to decline this offer, and to infilt upon the literal and strict observance of a treaty which you yourselves must tee is incompatible with the fecurity of Great Britain, and contrary to the spirit and stipulations of all the future treaties between the two nations.

"What object can be more important, more indispensible, than that of depriving the enemy of any materials which may enable them

to redouble their efforts during the war? and how can a protection of those materials be reconciled to the alliances to often renewed between the two nations, or with the afsurances of friendship, which your High Mightinesses are continually professing to the King? To prevent future bad consequences, and to assure the republic of the unequivocal friendship his Majesty entertains for this republic, the King has ordered me to assure your High Mightinesses of the ardent desire he has to cultivate good harmony between the two nations, to renew the promises he made to them to maintain the liberties of legal trade to their subjects, agreeable to the orders given to the King's ships and privateers, notwithflanding the advantage that may result from it to the enemy; but his Majesty orders me to add, that he cannot depart from the necessity he is under of excluding the transportation of naval stores to the ports of France, and particularly timber, even if they are elcorted by men of war.

" The example which France has let of favouring some members of the republic to the detriment of others, so directly contrary to the union and independence of your High Mightinesses, the King hopes never to be obliged to follow, unless a condescension to the views of France obliges him to take that method of making amends to those members of the republic who are hurt by the partiality of his enemies. His Majesty always thought it derogatory from the dignity of fovereignty to fow discord in any neight bouring states.

"The last edict published by the court of France, which exHaerlem from certain duties imposed on the other members of the republic, to punish them for having made use of that sovereign right which belongs to them, cannot but thew all Europe the motives which have engaged France to league with America.

The King is always ready to do all in his power for the advantage and tranquility of the subjects of the republic, provided it is not incompatible with the interests of his kingdoms.

High Mightinesses will, on this occasion, contalt your true interests, without suffering yourselves to be intimidated by foreign views, and that you will co-operate by that means to keep up the good intelligence between the two nations, and that his Majesty may never be obliged to take other measures towards the republic, than those which friendship and good harmony may dictate.

(Signed)
JOSEPH YORKE."
Hague, April 9, 1779.

Ordinance of the French King's Council of State, respecting the Suspenfion of the Order to collect the Duties of Freightage, and sifteen per, Cent. upon the Ships of the Province of Holland exclusively. July 3, 1779.

Extract from the Registers of the Council of State.

HE King, by the orders of his council of the 14th of January, the 27th of April, and the 5th of June last, having or-

dered to be collected, in all the ports of his kingdom, not only the right of freightage, but also that of fifteen per cent. as well upon the ships of Holland as those of the other Provinces, and upon the merchandize with which they shall be laden, excepting from those dispositions, the cities of Amsterdam and Haerlem; and his Majesty being willing to grant the same exception to the whole Province of Holland, the Sieur Moreau de Beaumont, Counsellor of State in Ordinary, and of the Council of the Royal Finances, has made the following report: The King, being present in his council, has ordered, and does order, that the execution of the ordinances of the 14th of January, the 27th of April, and the 5th of June, shall be suspended, until a new order to the contrary, in favour of the faid Province of Holland exclusively; provided nevertheless, the captains of ships belonging to the faid Province be furnished with a certificate, either from the Commissary of Marine at Amsterdam, or from the Marine Agent at Retterdam, to prove that the faid ships really belonged to a citizen of the said Province, and that their ladings consisted of articles of their own growth, fishery, manufactures, and commerce. His Majesty commands and enjoins his Intendants and Commissaries in his Provinces, to attend to the execution of this present ordinance. Given in the King's Council of State, held at Verlailles, his Majesty being present, the 3d day of July, one thousand seven hundred and seventynine.

(Signed)
DE SARTINE.
Memo-

Memorial presented by Sir Joseph York, Ambassador Extraordinary and Plenipotentiary of the King of Great Britain, to their High Mightinesses the States General of the United Provinces of the Low Countries, on the 22d of July, 1779.

" High and Mighty Lords,

SINCE France, by the declaration made at London on the 13th of March last year, fully discovered the vast and dangerous designs which the Family Compact had before announced to Europe, this part of the world must bear witness to the wisdom and moderation of the King of Great Britain, who endeavoured to ward off the calamities of war, avoiding, as much as possible, engaging his neighbours and allies.

"A conduct like this, founded in the most pointed moderation, seemed so much to embolden the court of Versailles, that after per-Ediously encouraging of rebel subjects, under the mask of liberty, commerce, and independence, to plunge a poignard into the heart of their mother country; France, not contented with to hostile a proceeding, has, without any national quarrel, drawn Spain into its views, and, without any plaufible reasons to colour the design, is making every preparation that an imperious disposition can dictate to invade the British islands.

"On the news of these extraordinary and great preparations, your High Mightinesses cannot but justify the pressing and reiterated instances which the King of Great Britain could not but make to you, relative to the naval armament; and the notorious danger

of England will no doubt convince all the subjects of these Provinces, who have hitherto spoke against it, of the necessity of this

request of my court.

"But those motives, which were only palliatives to prevent an evil, are now out of featon; the danger is become imminent, and the remedy must be speedy. The stipulations of a treaty, founded on the interests of trade only, must give way to those founded on the dearest interests of the two nations. The moment is come to decide whether Great Britain, who has spilt so much blood, and expended so much treasure to succour others, and to maintain liberty and religion, is to have no other relearces against the malice and envy of her enemies, than her own courage, and her own internal strength; whether she is to be abandoned by her most antient friends and allies, to the most ambitious views of the House of Bourbon, which would crush all, to reign over all; and whether Europe in general, and your High Mightinesses in particular, will with indifference see a system established, which will evidently destroy, that equilibrium which is the only guarantee of your commerce, liberty, and even existence itself.

"The King, High and Mighty Lords, has too high an opinion of the understanding, the good faith, and the wisdom of the republic, to doubt a moment of the sentiments of your High Mightinesses on this occasion. A nation whose history contains scarce any thing but the detail of the dangers which the ambition of France successively created, whose best days began with their union with England;

n

in short a nation accustomed to exact the literal execution of a hard treaty, has too much generosity not to fulfil those which have united the interests of the two nations

upwards of a century.

" It is in this persuasion, joined all that is held most sacred among men, that the under-written Ambassador Extraordinary and Plenipotentiary from the King of Great Britain, has, by express order, the honour to notify to your High Mightinesses, that the danger which threatens his kingdoms, necessitates his Majesty to reclaim, without loss of time, the succours stipulated in the treaties of 1678, and others, and of which the Casus Fæderis is so fully explained in the separate article of 1716. His Majesty expects the same with confidence from a neighbour who has never failed in his engagements, and for the rest consides in the divine benediction on the justness of his cause, and on the fidelity and valour of his subjects.

"The underwritten waits with the greatest impatience for a just, speedy, and favourable answer, and is ready to confer with the deputies of your High Mightinesses on what steps are further necessary

to be taken.

(Signed)
JOSEPH YORKE,"
Hague, July 22, 1779.

Resolutions of their High Mightinesses, relative to Paul Jones's Squadron and Prizes, delivered to the English Ambassador at the Hague, on the 25th of October 1779.

THAT their High Mightinesses being informed that three frigates had lately arrived at the Texel, namely, two French and one called an American, commanded by Paul Jones, bringing with them two prizes taken by them in the open sea, and called the Serapis and the Countess of Scarborough, described in the ambassador's memorial. That their High Mightinesses having for a century past strictly observed the following maxim, and notified the same by placards, viz. that they will in no respect whatever pretend to judge of the legality or illegality of the actions of those who have on the open sea taken any vessels which do not belong to this country, and bring them into any of the ports of this republic; that they only open their ports to them to give them shelter from storms or other disasters; and that they oblige them to put to sea again with their prizes without unloading or disposing of their cargoes, but letting them romain exactly as when they arrived. That their High Mightinesses will not examine whether the prizes taken by the three frigates in question belong to the French or the Americans, or whether they are legal or illegal prizes, but leave all that to be determined by the proper judges, and will oblige them to put to sea, that they may be liable to be retaken, and by that means brought before the proper judge, particularly as his Excellency the Ambasfador must own he would have no less a right to re-claim the abovementioned ships, if they had been private property, than as they have been King's ships; therefore their High Mightinesses are not authorised to pass judgment either upon these prizes, or the person of Paul Jones;

ANNUAL REGISTER, 1779. 430]

Jones; that as to what regards acts humanity dictated relative to the of humanity, their High Mightinesses have already made appear how ready they are to shew them towards the wounded on board of the vessels, and that they have given orders accordingly. That an extract of the present resolution shall be given to Sir Joseph Yorke by the Agent Vander Burch

de Spierinxhock.

At the same time it was resolved, that word should be sent to the Admiralty of Amsterdam that their High Mightinesses approve their proceedings, and adhere to their placard of the 3d of November, 1756, by which it is forbid to meddle with any prizes, or to open their cargoes, so as by that means to free them from being retaken, &c. That this is strictly to be observed with regard to the Serapis and Countess of Scarborough. Their High Mightinesses authorise the said Admiralty to order matters so that these five ships do put to sea as soon as possible, and that they take care they are not furnished with any warlike or naval stores but what are absolutely necessary to carry them safe to the first soreign port they can come at, in order that all suspicion of their being fitted out here may drop.

Memorial presented by Sir Joseph Yorke, bis Niajesty's Ambussador at the Hague, to their High Mightinesses, requesting the delivering up the Serapis and Counsels of Scarborough, taken by Paul

High and Mighty Lords, N thanking your High Mightinesses for the orders which your wounded men on board the two King's ships the Serapis and Countels of Scarborough, I cannot but comply with the strict orders of his Majesty, by renewing in the strongest and most pressing manner his request that these ships and their crews may be stopped, and delivered up, which the pirate Paul Jones of Scotland, who is a rebel subject, and a criminal of the State, has taken.

The sentiments of equity and justice which your High Mightinesses possess, leave me no room to doubt but that, upon mature deliberation upon all the circumstances of this affair, you will acknowledge the reasonableness of this request, sounded both on the most folemn treaties now subfifting between Great Britain and the United Provinces, and the right and cultoms of nations in friendship and alliance.

The stipulation of the treaty of Breda of the 10th of July 1667, (Old Stile) confirmed particularly in that of 1716, and all the later ones, are too clear and incontestible in that respect for the full force of

them not to be felt.

The King would think he derogated from his own dignity, as well as that of your High Mightinesses, was he to enter into the particulars of a case so notorious as that in question, or to set before the eyes of the ancient friends and allies of his crown analogous examples of other Princes and States; but will only remark, that all the placards even of your High Mightinesses require that all the captains of foreign armed vessels shall, upon their arrival, present their letters of marque or commission, and authorises, according to the custom of Admiralties, to treat all those as pirates whose letters are found to be illegal for want of being granted by a sovereign power.

The quality of Paul Jones, and all the circumstances of the affair, are too notorious for your High Mightinesses to be ignorant of them. The eyes of all Europe are fixed upon your resolution; your High Mightinesses know too well the value of good saith not to give an example of it in this essential rencontre. The smalless deviation from so sacred a rule, by weakening the friendship of neighbours, may produce serious consequences.

The King has always gloried in cultivating the friendship of your High Mightinesses; his Majesty constantly persists in the same sentiments; but the English nation does not think that it any ways has deserved its fellow-citizens to be imprisoned in the ports of the republic by a man of no character, a subject of the same country, and who enjoys that liberty which they are de-

prived of.

It is for these and many other strong reasons, which cannot escape the wisdom and penetration of your High Mightinesses, that the underwritten hopes to receive a speedy and favourable answer, conformable to the just expectations of the King his matter and the British nation.

(Signed)
JOSEPH YORKE.

Done at the Hague, Oct. 29, 1779.

The answer which their High Mightinesses caused to be given to the above memorial was in brief; That they will in no respect

take upon them to judge of the legality or illegality of those who have on the open lea taken any vessels which do not belong to their country; that they only open their ports to give them shelter from storms or other disasters; and that they oblige them to go to fea again with their prizes, without suffering them to unload or dispose of any part of their cargoes, that they may be liable to be re-taken in the same state they were taken; but do not think themselves au-. thorized to pass judgment upon those prizes, or the person of Paul Jones, &c."

Memorial presented by Sir Joseph Yorke, to their High Mightinesses, Nov. 26th, 1779.

High and Mighty Lords,

HE King cannot without
furprize see the filence that
has been observed, with regard to
the memorial which the underwritten had the honour to present
upwards of four months ago to your
High Mightinesses, requiring the
succours stipulated by treaty.

His Majesty would not have claimed the assistance of his allies, if he had not been sully authorized to it by the menaces, the preparations, and even the attacks of his enemies; and if he had not thoughe your High Mightinesses as much interested in the preservation of Great Britain as in their own.

The spirit and the letter of the treaties confirm this truth. Your High Mightinesses are too wise and too just to dispense with the observance of them, having particularly yourselves solicited the addition

addition of the separate article of the treaty of 1716, in which the Cosus Fæderis is stipulated in a clear and incontestible manner.

The hostile declaration made at London by the Marquis de Noailles, the attack of Jersey, the siege of Gibraltar, and all the other notorious enterprizes, are so many clear proofs of a manifest aggres-Besides which, your High Mightinesses have seen, during the past summer, that the combined forces of the House of Bourbon were evidently directed against his Majesty's kingdoms; and although the vigorous measures of the King, the zealous and patriotic efforts of the nation, crowned with the bleffings of Providence, have happily hitherto frustrated their ambitious designs, yet the danger exists still, and the enemy continues still to announce their intended attacks and Invasions, under the protection of their naval forces.

The King can never imagine that the wildom of your High Mightinesses can permit them to zemain indifferent in interests so folid and to common to both countries, and still less that they should not be convinced of the justice of the motives which have determined his Majesty to claim that succour which is his due on so many accounts. His Majesty would rather persuade himself that your High Mightinesses, having resolved to augment their navy, had through prudence kept back their answer till they were better able to furnish the fuccour required.

It is for this reason, that, in renewing this subject in the most pressing manner, I have orders to request of your High Mightinesses most amicably not to defer the

concerting of measures, in order to fulfil their engagements on this head. The decision of your High Mightinesses is so necessary, and so important in its consequences, that the King would think himfelf wanting to himself, his subjects, and the republic, if his Majesty did not recommend this affair immediately to the most serious deliberation of your High Mightinesses. It is of infinite import to the King to have matters made clear, by a speedy and immediate answer to so essential an object.

His Majesty hopes, from the equity of your High Mightinesses, that their answer will be conformable to the treaties and the seniments of friendship he has always had for the republic; and it will be according to the resolutions of your High Mightinesses that his Majesty proposes to take such future measures as may be adapted to circumstances and most proper for the fecurity of his estates, the welfare of his people, and the

dignity of his crown.

Done at the Hague, Nov. 26, 1779. (Signed) Joseph Yorke.

Treaty of Friendship and Commerce between the French King and the United States of North America.

THE Most Christian King, the Thirteen United and States of North America, viza New - Hampshire, Massachusets-Bay, Rhode - Island, Connecticut, New-York, New-Jersey, Pennsylvania, the Counties of Newcastle, Kent, and Sussex on the Delaware,

ware, Maryland, Virginia, North and South Carolina, and Georgia, desirous of establishing, in an equitable and permanent manner, the rules which ought to be observed, relative to the correspondence and commerce, which the two parties wish to establish between their respective states, dominions, and subjects; his most Christian Majesty and the faid United States have thought proper, and as most conducive to this end, to found their arrangements on the basis of the most perfect equality and reciprocal advantage, taking care to avoid disagreeable preserences, the squrces of altercation, embarrassment, and discontent; to leave to each party the liberty, respecting commerce and navigation, of making such interior regulations as shall suit themselves; to found their commercial advantages as well on reciprocal interest, as on the laws of mutual agreement; and thus to preserve to both parties the liberty of dividing, each according to his will, the same advantages with other nations. this idea, and to accomplish these views, his said Majesty, having nominated and appointed, as his pleripotentiary, M. Conrad Alexander Gerard, royal Syndic of the city of Strasburgh, Secretary of his Majetty's Council of Scate; and the United States having, on their part, invested with full powers Mest. Benjamin Franklin, Deputy of the General Congress of the State of Pennsylvania, and president of the assembly of the said state; Silas Deane, formerly Deputy of the State of Connecticut; and Arthur Lee, Counfellor at Law: the faid plenipotentiaries respectively, after having exchang-Vol. XXII.

ed their credentials, and upon mature deliberation, have concluded and agreed to the following articles:

Art. I. A firm, inviolable, and universal peace, and a true and fincere friendship, shall subsist between the most Christian King, his heirs and successors, and the United States of America, as well as between his most Christian Majesty's subjects, and those of the faid itates; as also between the people, islands, cities, and places, under the government of his Christian Majesty, and the said United States; and between the people and inhabitants of all classes, without any exception to persons or places. The conditions mentioned in the present treaty, shall be perpetual and permanent between the most Christian King, his heirs and successors, and the said United States.

Art. II. The most Christian King and the United States mutually engage, not to grant any particular savour to other nations, respecting commerce and navigation, which shall not be immediately made known to the other party; and such nation shall enjoy that savour gratuitously, if the concession is such, or in granting the same compensation, if the concession is conditional.

Art. III. The subjects of the most Christian King shall not pay, in the ports, harbours, roads, countries, islands, cities, and places of the United States, any greater duties or imposts, of what nature soever they may be, or by whatever name they may be called, than such as the most favoured nation shall pay; and they shall enjoy all the rights, liberties, privileges, im-

munities, and exemptions, in point of trade, navigation, and commerce, whether in passing from one port of the faid States to another, or in going thither, or in returning from or going to any part of the world whatever, as the faid nations may or shall enjoy.

Art. IV. The subjects, people, and inhabitants of the faid United States, or each of them, shall not pay, in the ports, harbours, roads, islands, cities, and places, within the dominions of his most Christian Majesty in Europe, any greater duties or imposts, of what nature loever they may be, or by whatever name they may be called, than the most favourite nation are or shall be bound to pay; and they shall enjoy all the rights, liberties, privileges, immunities, and exemptions, in point of trade, navigation, and commerce, whether in passing from one port to another of the faid dominions of the most Christian King in Europe, or in going thither, or in returning from or going to any part of the world whatever, as the said nations may or thall enjoy.

Art. V. In the above exemption is particularly comprised the imposition of one hundred pence per ton, established in France upon foreign ships; excepting when the ships of the United States shall load with French merchandizes in one port of France for another in the same kingdom; in which case the faid ships of the faid United States shall discharge the usual rights, so long as the most favourite nations shall be obliged to do the same; nevertheless, the said United States, or any of them, shall be at liberty to establish, whenever they shall think proper, a right equivalent to that in question, in the same case as it is established in the ports of his most Christian

Majesty.

Art. VI. The most Christian King shall use all the means in his power to protect and defend all the Thips and effects belonging to the subjects, people, and inhabitants of the said United States, and of each of them, which shall be in his ports, harbours, or roads, or in the seas near his territories, countries, isles, cities, and places; and shall use every effort to recover and restore to the lawful proprietors, their agents or order, all the ships and effects which shall be taken within his jurisdiction; and his most Christian Majesty's ships of war, or other convoys, failing under his authority, shall take, on every occasion, under their protection the ships belonging to the subjects, people, and inhabitants of the faid United States, or any of them, which shall keep the same course and make the same rout, and defend the said ships, so long as they shall keep the same course and make the fame rout, against every attack, force, or violence, in the fame manner as they are bound to defend and protect the ships belonging to the subjects of his most Christian Majesty.

Art. VII. In like manner the said United States, and their ships of war failing under their authority, shall protect and defend, agreeable to the contents of the preceding article, all the ships and effects belonging to the most Christian King, and shall use all their efforts to recover and restore the faid ships and effects, which shall be taken within the extent of the

juril-

jurisdiction of the said United States, or either of them.

Art. VIII. The most Christian King will employ his endeavours and mediation with the King or Emperor of Morocco or Fez, with the Regencies of Algier, Tunis, and Tripoli, or any of them, as well as with every other Prince, State, or Powers, of the Barbary coast in Africa, and with the subjects of the said King, Emperor, States and Powers, and each of them, to secure, as fully and effectually as possible, to the advantage, convenience, and fecurity, of the said United States, and each. of them, as also their subjects, people, and inhabitants, their ships and effects, against violence, infult, attack, or depredation, on the part of the said Barbary Princes and States, or their subjects.

Art. IX. The subjects, inhabitants, merchants, commanders of thips, masters, and seamen, of the states, provinces, and dominions of the two parties, shall reciprocally refrain from and avoid fishing in any of the places possessed, or which shall be possessed, by the other party. The subjects of his most Christian Majesty shall not hih in the harbours, bays, creeks, roads, and places, which the faid United States possess, or shall hereafter posses; and in the same manner the subjects, people, and inhabitants, of the said United States, shall not lish in the harbours, bays, creeks, roads, coasts, and places, which his most Christian Majesty actually possesses, or shall hereafter posses; and if any ship or vessel shall be surprised fishing, in violation of the present treaty, the same hip or vessel, and its cargo, shall, upon clear proof, be confiscated. Provided, the exclusion stipulated in the present article shall stand good only so long as the King and the United States shall not suffer it to be enjoyed by any other nation whatever.

Art. X. The United States, their citizens and inhabitants, shall never disturb the subjects of the most Christian King in the enjoyment and exercise of the right of fishing on the banks of Newfoundland, any more than in the unlimited and exclusive enjoyment they possels on that part of the coasts of that island, as specified in the treaty of Utrecht, nor in the rights relative to all and each of the illes which belong to his most Christian Majesty; the whole conformable to the true sense of the treaties of Utrecht and Paris.

Art. XI. The subjects and inhabitants of the said United States, or any of them, shall not be considered as foreigners in France, and consequently shall be exempt from the right of escheatage, or any other such like right, under any name whatever; they may, by will, donation, or otherwise, dispose of their goods, moveables, and fixtures, in favour of whom they shall please; and their heirs, subjects of the faid United States, resident in France or elsewhere, shall succeed to them, ab intestat, without being obliged to obtain letters of naturalization, and without being exposed to any molestation or hindrance, under pretence of any rights or prerogatives of provinces, cities, or private persons; and the said heirs, either by particular title, or ab intestat, shall be exempt from all right of detraction, or other right of that kind, provided that [Ee]2fuch

such or the like local rights are not established by the said United States, or any of them. The subjects of the most Christian King shall enjoy, on their side, in all the dominious of the said States, an entire and perfect reciprocation, with respect to the stipulations included in the present article.

But it is at the same time agreed, that the contents of this article shall not affect the laws made in France against emigrations, or such as may be made hereaster, such being lest in their sull sorce and vigour; the United Sates, on their side, or any of them, shall be free to make such laws, respecting that matter,

as they shall judge proper.

Art. XII. The merchant ships of both parties, which shall be bound to any port, belonging to a power then an enemy of the other ally, and of which the voyage, or nature of its cargo, shall give just suspicions, shall be bound to produce, either on the high seas, or in ports and harbours, not only their passiports, but also certificates, which shall expressly state, that their cargoes are not of prohibited and contraband wares.

Art. XIII. If the contents of the said certificates leads to a discovery, that the ship carries prohibited and contraband merchandizes, configned to an enemy's port, it shall not be permitted to open the hatches of the said ship, nor any case, chest, trunk, bale, calk, or other cales, contained therein, or to displace or remove the least part of the merchandize, whether the ship belongs to the most Christian King, or to the inhabitants of the United States, until the cargo has been landed in the presence of the efficers of the Ad-

miralty, and an inventory taken of them; but they shall not be permitted to fell, exchange, or dispose of the ships or cargoes, in any manner whatever, until a fair and legal enquiry has been made, the contraband declared, and the Court of Admiralty shall have pronounced the confilcation by judgment, nevertheless without prejudice of ships or cargoes, which, by virtue of this treaty, should be considered as free. It shall not be permitted to retain merchandizes, under pretence that they were found among contraband goods, and full less to confiscate them as legal prizes. .In case where a part only, and not the whole of the cargo, confitts of contraband articles, and that the commander of the thip contents to deliver up to the captor what shall be discovered, then the captain, who shall have made the prize, after having received those articles, shall immediately release the ship, and in no manner prevent it from purtuing its voyage; but in case that the whole or the contraband articles cannot be all taken into the vessel of the captor, then the captain of fuch vessel shall remain malter of his prize, notwithstanding the offer to give up the contraband goods, and conduct the ship into the nearest port, conformably to what is above specified.

Art. XIV. It is agreed, on the contrary, that every thing that shall be found embarked by the respective subjects, in ships belonging to the enemies of the other party, or their subjects, shall be conficated, without regard to their being prohibited or not, in the same manner as if they belonged to the enemy; excepting, however, such effects and merchandizes as

had

had been put on board the said ships before the declaration of war, or even after the faid declaration, if they were ignorant of it at the time of loading; so that the merchandizes of the subjects of both parties, whether they be found among contraband goods or otherwise, which, as hath been just mentioned, shall have been put on board a ship, belonging to the enemy, before the war, or even after the said declaration, when unknown to them, shall not be, in any manner, subject to confiscation, but shall be faithfully and truly restored, without delay, to the owners who shall claim them; it mut, however, be understood, that it will not be permitted to carry contraband goods into an enemy's port. The two contracting parties agree, that after the expiration of two months from the declaration of war, their respective subjects, from what part of the world soever they shall come, shall not be permitted to plead ignorance of the question in this article.

Art. XV. And in order the more effectually to secure the subjects of the two contracting parties from receiving any prejudice from the Thips of war or privateers of eitner party, orders shall be given to all captains of ships of his most Christian Majesty and the said United States, and to all their subjects, to avoid offering infult or doing damage to the ships of either party; and whoever shall act contrary to these orders, shall be punished for it, and shall be bound and obliged personally, in their own effects, to repair all fuch damages and loffes.

Art. XVI. All ships and merchandizes of what nature soever, which shall be taken out of the hands of pirates on the high seas, shall be conducted into some port of the two States, and shall be committed to the care of the officers of the said port, in order that they may be entirely restored to the right owner, as soon as such property shall be fully and clearly proved.

Art. XVII. The ships of war of

his most Christian Majesty, and those of the United States, as well as privateers fitted out by their subjects, shall be at full liberty to conduct where they please such prizes as they shall take from the enemy, without being amenable to the jurisdiction of their admirals or admiralty, or any other power; and the faid vessels, or prizes, entering into the harbours or ports of his most Christian Majesty, or those of the said United States, shall be neither stopped nor seized, nor shall the officers of such places enquire into the validity of the faid prizes, but shall be permitted to depart freely and at full liberty, to such places as directed in the commissions, which the captains of the said ships shall be obliged to produce. And, on the contrary,

they shall neither give fecurity nor

retreat, in their ports or harbours,

to any prizes made on the subjects of his Wlajesty, or the said United

States; and, if such shall be found to enter their ports, through storms

or dangers of the sea, they shall

be obliged to depart as foon as

Art. XVIII. Should a ship, belonging to either of the two States, or their subjects, run aground, be wrecked, or suffer other damages, upon the coasts belonging to one of the two parties, they shall give [E e] 3

all friendly aid and affistance to fuch as are in danger, and take every method to secure their safe passage, and return to their own

country.

Art. XIX. When the subjects and inhabitants of one of the two parties with their ships, whether men of war, privateers, or merchantmen, shall be forced by foul weather, by the pursuits of pirates or enemies, or by any other urgent necessity, to seek shelter and refuge, to run into and enter some river, bay, road, or port, belonging to one of the two parties, they shall be received and treated with humanity and kindness, and shall enjoy all the friendship, protection, and affishance, and shall be permitted to procure refreshments, provisions, and every thing necessary for their subsistence, for the repairing of their ships, and to enable them to pursue their voyage, paying a reasonable price for every thing; and they shall not be detained in any-manner, nor prevented quitting the said ports or roads, but shall be permitted to depart at pleasure, without any obstacle or impediment.

Art. XX. In order the better to promote the commerce of the two parties, it is agreed, that in case a war should commence between the two faid nations, fix months shall be allowed, after the declaration of war, to the merchants living in their towns and cities, to sollect and transport their merchandize; and, if any part of them shall be stolen or damaged, during the time above prescribed, by either of the two parties, their people or subjects shall be obliged to make full and persect satisfaction for the lame.

Art. XXI. No subject of the most Christian King shall take a commission, or letters of marque, to arm any ship or vessel, to act as a privateer against the said United States, or any one of them, or against their subjects, people or inhabitants, or against their property, or that of the inhabitants of any of them, from any Prince whatever, with whom the laid United States shall be at war. like manner, no citizen, subject, or inhabitant of the said United States, or any of them, shall demand or accept any committion, or letters of marque, to arm any ships or vessels, to act against the subjects of his most Christian Majesty, or any of them, or their property, from any Prince or State whatever, with whom his Majesty may be at war; and if any of the two nations shall take fuch commissions, or letters of marque, they shall be punished as pirates.

Art. XXII. No foreign priveteer, not belonging to some subject of his most Christian majesty, or to a citizen of the said United States, which shall have a commission from any Prince or power at war with one of the two nations, shall be permitted to arm their ships in the ports of one of the two parties, nor to fell their prizes, nor to clear their ships, in any manner whatever, of their merchandizes, or any part of their cargo; they shall not even be permitted to purchase any other provisions, than fuch as are necessary to carry them to the nearest port of the Prince or State, of whom they hold their commission.

Art. XXIII. All and each of the subjects of the most Christian King,

as well as the citizens, people, and inhabitants, of the said United States, shall be permited to work their vessels, in full liberty and security, without any exception being made thereto, on account of the proprietors of merchandizes on board the said vessels, coming from any port whatever, and destined for some place belonging to a power enemy, or which actually an may become such, of his Most Christian Majesty or the United States. It shall be equally permitted to the subjects and inhabitants above-mentioned, to navigate their ships and merchandizes, and to frequent, with the same liberty and fecurity, the places, ports, and havens, of the powers, enemies to the two contracting parties, or one of them, without opposition or molestation, and to trade with them, not only directly from ports of the enemy to any neutral port, but also from one port of the enemy to another of the same, whether under the jurisdiction of one or more; and it is stipulated by the present treaty, that all free vessels shall equally enjoy the liberty of trade, and that every thing shall be judged free which is found on board the ships belonging to the subjects of one of the contracting parties, even though the cargo, or part of it, should belong to the enemies of one of them; excepting alway, however, all contraband goods. It is equally agreed, that the same liberty shall extend to persons on board such free ships, even though they shall be enemies to one of the two contracting parties, and shall not be taken from the said ships, unless in arms, and actually in the enemy's service.

Art. XXIV. This free navigation and commerce is extended to all forts of merchandizes, exepting only fuch as fhall be deemed contraband or prohibited, and under such denomination are comprehended arms, cannons, bombs, with their fusees and other apurtenances, bullets, powder, matches, piques, swords, lances, darts, halberds, mortars, petards, grenades, saltpetre, fufils, balls, bucklers, casques, cuirasses, coats of mail, and other arms of that kind, proper for the 'defence of foldiers; gun-locks, shoulder-belts, horses and their trappings, and all other instruments of war whatever. following merchandizes are not to be confidered as contraband or prohibited, viz. all forts of cloths, and other woollen stuffs, linen, filk, cotton, or other such matters; all forts of clothes, with the materials of which they are usually made; gold and filver either in specie or otherwise, pewter, iron, latten, copper, brass, coals, and even wheat and barley, and all other forts of grain and roots; tobacco and all forts of spices, falted and dried provisions, dried fish, cheese and butter, beer, oil, wine, fugar, and all kinds of falt, and, in general, all kinds of provision necessary for the nourishment of man, and for the support of life; also all forts of cotton, hemp, linen, pitch, tar, cords, cables, fails, canvas for fails, anchors, parts of anchors, masts, planks, timber and wood of all kinds, and all other things proper for the building and repairing of ships, other matters whatfoever, which are not in the form of warlike instruments for sea or land. shall not be reputed contraband,

much less such as are already prepared for other uses. All the articles above-mentioned are to be comprised among the free articles of merchandize, as well as all the other merchandizes and effects, which are not comprised and particularly named in the lift of contraband merchandizes; 10 that they may be transported and conducted, in the freelt manner, by the subjects of the two contracting parties, into any or the enemy's ports; excepting, however, that fuch places are not actually belieg-

ed, blocked up or invested.

and prevent dissensions and quarrels on either side, it is agreed, that in case one of the two parties shall find themselves engaged in a war, the thips and vessels belonging to the subjects or people of the other ally, shall be provided with marine passports, which shall express the name, property, and burden of the ship, as well as the name and place of abode of the master and commander of the said thip, in order that it may from thence appear that the same ship really and trully belongs to the subjects of one of the two contracting parties. These passports are to be annually renewed, in case the ship returns home in the space of one year. It is also agreed, that the above-mentioned ships, in case they shall be laden, are to be provided not only with puffports, but alfo with certificates, containing the particulars of the cargo, the place from whence the ship came, and a declaration of what contraband goods are on board; which certificate is to be made in the accustomed form, by the officers of the place from whence the ship failed; and if it be judged necess fary or prudent, to express in the faid passports the persons to whom the merchandize belongs, it must

be freely complied with.

Art. XXVI. In case any ships of the subjects and inhabitants of one of the two contracting parties should approach the coast of the other, without any intention to enter the port, or, after having entered it, without any intention to unload their cargo, or break bulk, they shall conduct themselves, in that respect, according to the general rules prescribed, or to be Art. XXV. In order to remove, prescribed, relative to that matter.

Art. XXVII. When any vessel, to the faid subjects, belonging people, and inhabitants, of one of the two parties, shall meet, while failing along the coast or on the open sea, a ship of war or privateer, belonging to the other, the said ship of war or privateer, in order to avoid disorder, shall bring fuch vessel too, and fend her boat with two or three on board her. to whom the malter or commander of the merchantman shall produce his passport, and prove the property of the vessel; and as soon as such passport shall be produced, the matter shall be at liberty to pursue his voyage, without being molest. ed, or in any other manner driven or forced to alter his intended courfe.

Art. XXVIII. It is agreed, that when the merchandizes shall be put on board ships or vessels of one of the two contracting parties, they shall not be subject to be examined again, all such examination and search being to be made before loading, and the prohibited goods being to be stopped and seized on shore, before they could be embarked,

barked, unless there are strong suspicions or proofs of fraudulent practices. So that no subject of his most Christian Majesty, or of the United States, can be stopped or molested for that cause by any kind of embargo; but such subjects of the State, who shall presume to vend or sell such merchandizes as are prohibited, shall be duly punished for such instaction of the treaty.

Art. XXIX. The two contracting parties mutually grant each other the right of maintaining, in their respective ports, Consuls, Vice Consuls, Agents, and Commissaries, whose business shall be regulated by a particular convention

Art. XXX. In order further to forward and facilitate the commerce between the judgects of the United States and France, the Most Christian King will allow them in Europe one or more free ports, to which they may bring and fell all the commodities and merchandizes of the Thirteen United States. His Majesty will also grant to the subjects of the said States, the free ports, which have been, and are open, in the French islands of America; all which free ports the said subjects of the United States shall enjoy, conformably to the regulations. which determine that matter.

Art. XXXI. The present treaty shall be ratified by both parties, and the ratifications exchanged, within the space of six months, or sooner if may be. In witness of which, the respective Plenipotentiaries have signed the above articles, both in the French and English language, nevertheless declaring, that the present treaty was

originally digested and settled in the French language, to which they have affixed their hands and seals.

Given at Paris the fixth day of the month of February, one thoufand seven hundred and seventyeight.

C. A. GERARD.
B. FRANKLIN.
SILAS DEANE.
ARTHUR LEE.

By the Congress of the United States of America,

MANIFESTO.

heen driven to hostilities by the oppressive and tyrannous measures of Great Britain; having been compelled to commit the essential rights of man to the decision of arms; and having been at length forced to shake off a yoke which had grown too burthensome to bear, they declared themselves free and independent.

Confiding in the justice of their cause, confiding in Him who disposes of human events, although weak and unprovided, they set the power of their enemies at desiance.

In this confidence they have continued, through the various fortune of three bloody campaigns, unawed by the powers, unfubdued by the barbarity of their foes. Their virtuous citizens have borne, without repining, the loss of many things which made life desirable. Their brave troops have patiently endured the hardships and dangers of a situation, fruitful in both beyond example.

The

442] ANNUAL REGISTER, 1779.

The Congress, considering themfelves bound to love their enemies, as children of that Being who is equally the Father of-all, and desirous, since they could not prevent, at least to alleviate the calamities of war, have studied to spare those who were in arms against them, and to lighten the chains of captivity.

The conduct of those serving under the King of Great Britain hath, with some sew exceptions, been diametrically opposite. They have laid waste the open country, burned the desenceless villages, and butchered the citizens of America. Their prisons have been the slaughter-houses of her soldiers, their ships of her seamen, and the severest injuries have been aggravated by the grossest insults.

Foiled in their vain attempt to subjugate the unconquerable spirit of freedom, they have meanly afsailed the Representatives of America with bribes, with deceit, and the fervility of adulation. They have made a mock of humanity, by the wanton destruction of men: they have made a mock of religion, by impious appeals to God, whilst in the violation of his sacred commands: they have made a mock even of reason itself, by endeavouring to prove, that the liberty and happiness of America could safely be entrusted to those who have fold their own, unawed by the sense of virtue, or of shame.

Treated with the contempt which such conduct deserved, they have applied to individuals; they have solicited them to break the bonds of allegiance, and imbrue their souls with the blackest of

crimes: but fearing that none could be found through these United States, equal to the wickedness of their purpose, to influence weak minds, they have threatened more wide devastation.

While the shadow of hope remained, that our enemies could be taught by our example to respect those laws which are held sacred among civilized nations, and to comply with the dictates of a religion which they pretend in common with us to believe and revere, they have been left to the influence of that religion, and that example. But since their incorrigible dispositions cannot be touched by kindness and compassion, it becomes our duty by other means to vindicate the rights of humanity.

We, therefore, the Congress of the United States of America, po SOLEMNLY DECLARE AND PRO-CLAIM, That if our enemies prefume to execute their threats, or perfift in their present career of barbarity, we will take fuch exemplary vengeance as shall deter others from a like conduct. appeal to that God who searcheth the hearts of men, for the recitude of our intentions. And in his holy presence we declare, That as we are not moved by any light and hasty suggestions of anger or revenge, to through every possible change of fortune we will adhere to this our determination.

Done in Congress, by unanimous consent, the thirtieth day of October, one thousand seven hundred and seventy-eight.

Attest,

CHARLES THOMSON, Sec.

LCTERS.

prich, the prir Coxe's er, Croil, and is nierland.

ru, Sept. 18**, 1776.** eard, perhaps, of chuppach, the fadoctor; of whole incry in discovering the astarders, and applying remedies to them; many ' , 'ul flories are recounted by eilers, and which generally, I note, have encreased in the reilous, like Virgil's Progress r hame, in proportion as they receded from the scene of action; 1 am now lodged in the house of this celebrated Æsculapius: it is fituated above the village of Langenau, on the fide of a steep mountain; and from that circumstance' he is generally known by the appellation of the physician of the mountain.

Upon our arrival here we found the doctor in his apartment, furrounded by a number of peafants, who were consulting him upon their respective complaints; each having brought with him a small bottle, containing some of his water: for, it is by inspecting the urine that this medical sage pretends to judge of the state of the patient. His sigure is ex-Vol. XXII.

tremely corpulent; he has a penetrating eye; and one of the best-humoured countenances I ever faw. He fets himfelf opposite to the person who consults him, one , moment examining the water, and the next the patient; and continues regarding aiternately the one and the other for some time, always whilling during the intervals. He then opens the state of the case, acquaints the consultant with the nature of his complaints, and has often the good fortune to hit upon the true cause. In a word, his knack of discovering disorders by urine, has gained such implicit faith in his skill, that one might as well doubt of the Pope's infallibility before a zealous catholic, as of the doctor's in the presence of his pa-He has certainly performed feveral great cures; and the rumour of them hath brought him patients from all quarters of Europe. There are at this time in his house, and in the village, several English and French people, together with many Swiss, who are come hither for his advice.

The doctor was formerly, it feems, a village surgeon, has a slight tincture of anatomy, and is eleemed a proficient in botany and chemistry; but his reputation

tion as a physician has now been established some years. He is said to have but little acquaintance with the theory of physic; the greatest part of his knowledge being derived from his extensive practice, notwithstanding he never stirs a quarter of a mile from his own house; for he would not take the trouble of going to Berne, even to attend the King of France.

It is more than probable, that much of this extraordinary man's success in his practice, is owing to the great faith of his patients, to the benefit they receive from change of climate, to the salubrious air of this mountain, and to the amusement arising from that constant succession of different company which assemble in this place, in order to apply to him for But whatever assistance. have been the causes of his celebrity, it has come to him, as all accounts agree, unfought for by himself. He has certainly many excellent qualities: humane and charitable to the highest degree; he not only furnishes the indigent peafants who confult him, with medicines gratis, but generally makes them a present in money besides; and he always appropriates a certain portion of his gains to the poor of his parish. His wife, as also his grand-daughters who live with him, are dressed like the peasant women of the country; and he has shewn his good sense in giving the latter no better than a plain education: the eldest he bestowed in marriage, when she was but fifteen, upon one of his assistants, and gave with her 1300 l. no inconsiderable portion for this country. He pro- hither by motives of mere curio-

cured a match for her so early, he said, to prevent her being spoiled by the young gentlemen telling her she was pretty, and inspiring her with the ambition of marrying above her rank.

If domestic harmony, and the most perfect simplicity of manners, have any pretentions to please, you would be highly delighted with this rural family. The wife is a notable, active woman, and only superintends all the houshold affairs with remarkable cleverness, but even persorms great part of the business with her own hands: the affists her husband likewife in making up his medicines; and as he talks no other language than the Swiss-German, the serves occasionally as his interpreter. And, as a proof of his confidence in her administration of his affairs, he acts also as his treasurer, and receives all his fees; which, in the course of a year, amount to a considerable sum: for, although he never demands more than the price of his medicines, yet no gentleman consults him without giving him an additional gratuity. Many presents have likewise been made to herfelf, from persons who have reaped benefit by her husband's prescriptions: several of these confist of valuable trinkers, with which on days of ceremony the decks herself forth to the bet advantage, in the simple dress of the country.

The family fit down to table regularly at twelve o'clock; there are always some strangers of the party, confishing not only of a certain number of persons who are under the doctor's case, but of travellers like ourselves, who are led

fity. When the weather is fine, their guests more numerous than usual, dinner is served out of deors in an open shed, that looks upon one side of the mountain and the adjacent country, with a distant view of the glaciers beyoud the lake of Thun. day some peasants, whom the doctor had invited, formed part of our company; after dinner, he gave. some money to those that sat near him, and ordered one of his granddaughters to distribute his bounty to the others. The benevolence of the old man, his gaiety and goodhumour, the chearfulness of his family, the gratitude of the poor peasants, the beauty of the profpect, and the fineness of the weather, formed all together the most agreeable and delightful scenes I ever beheld; and I do not remember in my whole life to have partaken of any meal with a more sensible and heart-selt satisfaction.

This singular man is very often employed in giving his advice from eight in the morning till six in the evening, with no other intermission than during the time he is at table. His drugs are of the best kind; for he collects the simples, as well as distills them, himself. His house, like those of the peasants, is constructed of wood; and, though always sull of people, is remarkably neat and clean. In short, every thing about him has the appearance of the pleasing simplicity of former ages.

I had almost forgotten to tell you, that I consulted him this morning myself; and assuredly I have reason to be highly satisfied with his prescription: sor, he told me I was in such good health, that the only advice he had to give me, was, " to eat and drink well, to dance, be merry, and take moderate exercise."

It is now Langenau fair, and the village is crowded with the neighbouring peasants. numbers of the men have long beards, and many of them cover their heads with a woman's straw hat, extremely broad, which gives them a very grotesque appearance: their dress is chiefly a coarse brown cloth jacket without sleeves; with large puffed breeches of ticking. The women wear their hair plaited behind in tresses, with the riband hanging down below the waist; a flat plain straw hat, which is very becoming; a red or brown cloth jacket without sleeves; a black or b'ue petticoat bordered with red, and scarcely reaching below the knees; red flockings with black clocks, and no heels to their shoes; their shifts fastened close round the throat by a black collar with red ornaments; better fort have chains of filver between the shoulders, brought round under each arm, and fastened beneath the bosom, the ends hanging down with some filver ornaments.

I am so charmed with the situation of this village, the chearfulness and singularity of this rustic and agreeable family, and the uncommon character of the humane doctor, that I could with pleasure continue here some days more: but I am pressed for time, and have a long journey before me.

I am, &c.

ANNUAL REGISTER, 1779.

Account of the Constitution and Government of Geneva. From the Jame.

HE town of Geneva lies upon the narrowest part of the extremity of the lake, where the Rhone issues out in two large and rapid streams, which foon afterwards unite. That river divides the town into two unequal parts; receives the muddy Arve in its course; and slows through part of France into the Mediterranean. Here its waters are of a most beautiful transparent green, like those of the Rhine when it flows from the lake of Constance. The adjacent country is uncommonly picture fque; and I could not fufficiently admire the magnificent views it exhibits: the several objects which composed this enchanting prospect, were, the town; the lake; the numerous hills and mountains, particularly the Saleve and the Mole, rifing suddenly from the plain in a wonderful variety of fantastic forms, backed by the glaciers of Savoy, with their frozen tops glistening in the fun; and the majestic Mont Blanc lifting up its head far above the

The town, which lies partly in the plain upon the borders of the lake, and partly upon a gentle ascent, is irregularly built; the houses are high, and most of those which stand in the trading part of the city, have areades of wood, which are carried up to their tops. These arcades, which are supported by pillars, obstruct the streets, and give them a gloomy appearance; but they are useful to the inhabitants in protecting them from the fun and the rain. Ge-

neva is by far the most populous town in Swisserland: for, Zuric, which comes next to it in respect of population, contains scarcely thirteen thousand souls; whereas the inhabitants of this amount to twenty-four thousand. This superiority is undoubtedly owing to the greater industry and activity of the inhabitants; to its more extensive commerce; to the facility of purchasing the burghership, and to the privileges which government allows to all foreigners who settle here. The members of this city are distinguished into citizens and burghesses, inhabitants and natives. The citizens and burghesses are alone admitted to a share in the government: the inhabitants are strangers who are allowed to lettle in the town with certain privileges; and the natives are the sons of those inhabitants, who pesses certain additional advantages. The two last classes form a large majority of the people.

The liberal policy of this government, in receiving strangers and conferring the burghership, is the more remarkable, as it is contrary to the spirit of most of the other states of Swisserland. here, indeed, more necessary; the territory of this republic being so exceedingly small, that its very existence depends upon the number and industry of the people: for, exclusive of the inhabitants of the town, there are icarcely fixteen thousand souls in the whole district of the Genevois.

To a man of letters, Geneva is particularly interesting; as every branch of science is here cultivated in the most advantageous manner: learning is diverted of pe-

dantry,

(()o thate a tani f stune wellor cr a d enter voluntary her class of angly well inte is no city in learning is fo uni-'d among the inha. have had great fatisc nverfing with feveral keepers upon topics en interature and politics; aftenished to find, in cass of men, fo uncommon · of knowledge. But the ver ceases, when we are told, that they have all of them ree ned an excellent education at tr public academy, where the children of the inhabitants are taught, under the inspection of the magnifrates, and at the expence of government.

There is one circumstance in this seminary, which particularly contributes to the exciting of the industry and emulation of the students: prizes are annually distributed to those, who have distinguished themselves in each class. These rewards consist of small medals, and they are conserred with such solemnity as cannot fail of producing great effect. A yearly meeting is held at the cathedral, of all the magistrates, professors, and principal inhabitants of the town; when the first syndic him-

. Edistributes, in the most public manner, the féveral honorary retrabations to those who have deferved them. I met this morning one of the scholars, and, seeing his medal, asked him what it " Je la porte," replied meant? the little man, scarce eight years old, " parce que j'ai fait mon de-" voir." I wanted no stronger proof to convince me of the beneficial influence, upon young minds, of these encouraging and judicious distinctions, than appeared from the sprightly specimen before

The inhabitants enjoy the advantage also of having free access to the public library; and by this privilege, they not only retain but improve that general tincture of learning which they imbibe in their early youth: when I visited this library, it happened to be crowded with students, who were returning the books they had borrowed, and demanding others. As I passed only an hour in this room, I am ill qualified to give you a just idea of its contents: I requested, however, the librarian to point out to me what was most worthy of particular notice. cordingly, among other books and manuscripts, he shewed me several folio volumes containing letters and other writings of Calvin, which have never been published.

Although Zuingle, Æcolampadius, and Haller, had reformed the greatest part of Swisserland, some years before Calvin made his appearance at Geneva; yet the latter, as Voltaire justly observes, has given his name to the sectaries of the reformed religion, in the same manner as the new continent took its appellation from

Americus Vespasius, although the original discovery was made by Columbus. Neither was Calvin, indeed, the first reformer even of Geneva; but, as he gave additional strength and solidity to the new establishment, and laid the foundation of that ecclefiastical form of government, which has ever since been invariably observed; he totally eclipsed the same of his friend William Farel, who scattered the first seeds of reformation, which the other brought to maturity. In truth, so great was the ascendancy which this extraordinary man, although a stranger in Geneva, acquired over the citizens, that he possessed no inconfiderable influence even in civil matters; and bore a large share in fettling the political constitution of the republic. care and attention was not wholly confined to ecclesiastical and political concerns; he promoted, to the utmost of his power, the cultivation of the liberal arts and sciences, and the study of elegant literature. To this end, as well as for the encouraging of theological erudition, he prevailed upon the government of Geneva to establish a public academy. In this new seminary, himself, together with his colleagues, eminent fot their superior knowledge, read lectures, with such uncommon reputation and success, that the youth from all quarters flocked to receive the benefit of them: and it has sent forth, from its bosom, men of the greatest distinction for their learning and abilities.

There is such a striking splendor in the brighter parts of this disinterested and celebrated resormer's character, that renders one, at the

first glance, almost insensible of those dark spots in it, which have so justly sullied its glory. when one reflects a moment on the asperity, the arrogance, the presumptuous opiniatrety, of his temper and conduct, and, above all, on his cruel persecution of his former friend, the unhappy Servetus; one laments, with abhorrence, the mortifying instance this famous man exhibited, that the noblest qualities sometimes mix with the bases, in the composition of human nature. With regard, however, to his intolerant principles; it must be acknowledged, that the same uncharitable spirit prevailed also among some others of the most celebrated reformers; who seemed to think, by a strange inconfistency, and unaccountable blindness not only to the genius, but to the clearest precepts of the gospel, that persecution for conscience sake was unchristian in every ecclesiastical establishment, except their own. This absurd and dangerous opinion, gave great advantage to their adversaries of the papal hierarchy: for, it is obvious to the meanest understanding, that, if persecution is justifiable in any particular church, it must be so universally.

The republic of Geneva is, however, at present, the most tolerating of all the reformed states of Swisserland; being the only government in this country, which permits the Lutheran religion to be publicly exercised. In this respect the clergy, no less wisely, than suitably to the spirit, as well as the letter, of the Christian revelation, have renounced the principles of their great patriarch, Calvin: for, although they still

pold

hold that able reformer in high veneration; yet they know how to distinguish his virtues from his defects, and to admire the one without being blindly partial to the other.

The town of Geneva and its territory, were formerly united to the German empire, under the successors of Charlemain: but as the power of the Emperors, feeble even in Germany, was still weaker in the frontier provinces; the Bishops of Geneva, like several other great vassals of the empire, gradually acquired very considerable authority over the city and its domains; which the Emperors had no other means of counterbalancing, than by increasing the liberties of the people. During these times of confusion, constant disputes subsisted between the Bishops and the Counts of the Genevois: for, the latter, although at their first institution merely officers of the emperor, and considered as vaffals of the bishops; yet they claimed and afferted a right to the exclusive administration of jus-The citizens took advantage of these quarrels; and, by siding occasionally with each party, obtained an extension of their privileges from both.

But the House of Savoy having purchased the county of the Genevois, and succeeded to all the prerogatives of the counts, with additional power; the bishops and the people sirmly united together, in order to oppose the encroachments of the former, which were no less prejudicial to the authority of the one, than to the liberties of the others. During this period, the respective pretentions of

the counts, the bishops, and the citizens, were fo various, as to form a government equally fingular and complicated. This harmony, however, between the bishops and citizens, was at length broken by the artful management of the Counts of Savoy, who had the address to procure the episcopal fee for their brothers, and even for their illegitimate children. By these methods, their power in the city became so enlarged, that, towards the commencement of the fixteenth century, Charles III, Duke of Savoy, (although the form of the government was entirely republican) obtained an almost absolute authority over the citizens; and he exercised it in the most unjust and arbitrary man-Hence arose perpetual struggles between the duke and the citizens; the latter continually oppoling, either by open violence, or secret measures, his tyrannical usurpation: thus two parties were formed; the zealots for liberty were called eidgenossen, or contederates; while the partisans of the duke were branded with the appellation of mammelucs, llaves.

The treaty of alliance which the town entered into with Berne and Fribourg, in 1526, may be considered as the true æra of its liberty and independence: for, not long after, the duke was despoiled of his authority; the bishop driven from the city; a republican form of government sirmly established; and the reformation introduced. From this time, Charles and his successors waged incessant war against the town: but his hostilities were rendered inessectual.

B 4

by the intrepid bravery of the citizens, and the assistance of the canton of Berne.

In 1584 Geneva entered into a treaty of perpetual alliance with Zuric and Berne, (Fribourg having renounced their alliance when the town embraced the reformation) by which treaty, it is allied with the Swifs cantons.

The last attempt of the House of Savoy against Geneva, was in 1602; when Charles Emanuel treacherously attacked the town during a profound peace. hundred of his soldiers scaled the walls in the night, when the inhabitants were reposed in unsufpecting security; but being timely discovered, they were repulsed by the desperate valour of a sew citizens, who gloriously sacrificed their lives in defence of the liberties of their country. In memory of this event, an inscription is fixed upon the town-house; and fome of the scaling-ladders, which the enemy made use of to enter the town, are preserved in the arse-This perfidy occasioned a war, which was terminated the year following by a folemn treaty; fince which, uninterrupted peace' has been maintained between the House of Savoy and Geneva: but it was not till 1754, that the King of Sardinia acknowledged, by a formal act, the independence of this republic.

No sooner was peace concluded with the House of Savoy, than the siames of internal discord, so apt to kindle in popular governments, and which had been smothered by their common danger from a soreign enemy, began to appear. Accordingly, during the greatest part of the last century, to the

present period, the history of Geneva contains little more than a narrative of contentions between the aristocratical and the popular party. These mutual struggles have occasionally been exerted with so much violence and animosity, as to have threatened, for a moment, a total revolution in the state; but happily, however, they have always been compromised without producing any satal effects.

About the beginning of the present century, the power of the council of two hundred was become almost absolute. In order to rettrain their authority, the popular party, in 1707, procured a law, by which it was enacted, that every five years a general council of all the citizens and burghers should be holden, to deliberate upon the affairs of the republic. Agreeably to this law, a general affembly was convened in 1712; and the very first act exerted by the people in this their collective capacity, was the total abolition of the above-mentioned ordinance. An event of so singular a nature can hardly be accounted for upon the general principle of popular fickleness and inconfittency: accordingly Rousseau, in his Lettres ecrites de la Montague, imputes it to the artifices of the magistrates; and to the equivocal terms marked upon the billets then in use. For, the question proposed to the people being, "Whether the opinion of the "f councils, for abolishing " periodical general assemblies, " should pass into a law?" the words employed on the billets delivered for that purpose, were, approbation, rejection; so that whichever side was taken, it came to

the same point. If the billet of approbation were chosen; the opinion of the councils which rejected the periodical assembly, was approved; if that of rejection; then the periodical assembly, was rejected of course. Accordingly, several of the citizens asterwards complained that they had been deceived, as they never meant to reject the general assembly, but only the opinion of the councils.

In consequence of this extraordinary repeal, the power of the aristocracy continued increasing till within these sew years; when the citizens, by a fingular conjunction of favourable circumstances, joined to an uncommon spirit of union and perseverance, have procured several changes to be made in the constitution of Geneva; by which the authority of the magistrates has been limited, and the privileges of the people have been enlarged. Happy! if they know where to stop; lest, continuing to extend the bounds of their own prerogatives, they shake the foundations of civil government, by too much restraining the power of the magi-Arates.

The present constitution of Geneva, may be considered as a mean between that of the other aristocratical and popular cantons of Swifferland: more demogratical than any of the former, inasmuch as the sovereign and legislative authority entirely resides in the general assembly of the citizens and burghers; and more aristocratical than the latter, because the powers vested in the great and little councils are very considerable.

The members of the senate, or little council of twenty-five, enjoy, in their corporate capacity, several

prerogatives almost as great as those which are possessed by that of the most aristocratical states. They nominate half the members of the great council; the principal magistrates are taken from their body; they convoke the great council and the general affembly of the citizens and burghers; they previously deliberate upon every question which is to be brought into the great council, and from thence into the general affembly: in other words, in them is lodged the power of proposing; consequently, as every act must originate from them, no law can pass without their appro-In this senate is vested also the chief executive power; the administration of the finances: and, to a certain degree, jurisdiction in civil and criminal causes. They nominate, likewise, to most of the smaller posts of government; and enjoy the fole privilege of conferring burghership. They compose, moreover, in conjunction with thirty-five members of their own choosing, the secret council; which never assemblies but by their convoking, and only upon extraordinary occasions.

These considerable prerogatives, however, are counterbalanced as well by the privileges of the great council, as by the franchises of the general assembly. The prerogatives of the former consist in choosing the members of the senate from their own body; in receiving appeals in all causes above a certain value; in pardoning criminals; in disposing of the most important charges of government, those excepted which are conferred by the general assembly; and in approving or rejecting whatever

laid before the people.

The fovereign council, or general affembly of the people, is composed of the citizens and burghers of the town: their number, in general, amounts to about 2,500, but it is feldom that more than 1,200 convene; the remainder being either fettled in foreign countries, or are usually absent. I ought to have explained to you sooner, the distinction between citizens and burgbers: the latter, are either the sons of citizens or burghers*, born out of Geneva, or have obtained the burghership by purchase; the former, are the sons of citizens or burghers, born within the town of Geneva. The burghers may be chosen into the council of two hundred, but the citizens can alone enter into the senate, and possess the charges appropriated to that body.

The general assembly meets twice a year; chooses the principal magistrates; assents to or rejects the laws and regulations proposed by the councils; imposes taxes; contracts alliances; declares war or peace; and nominates one half of the members of the great council. All questions that come before them are decided by the majority of voices; and each member delivers his vote without having the liberty of de-The restriction is certainly reasonable; for, in a popular assembly, like this of Geneva, composed of citizens, the meanest of whom is well versed in the con-

is proposed by the senate to be stitution of the commonwealth, and where the people in general have a strong propensity to enter into political discussions; if every voter were permitted to support and enforce his opinion by argument, there would be no end of debate, and the whole time would be consomed in petulant declamation.

But the principal check to the power of the little council, arises from the method of electing the fyndics, and from the right of re-With respect to the presentation. former, the four syndics, or chiefs of the republic, are chosen annually out of the little council, by the general affembly; and there must be an interval of three years before the same members can be again elected. The usual mode of election is as follows:—The little council nominate eight of their members for candidates, who must be approved by the great council; and out of these eight, the general assembly choose the four fyn-They have it in their power, however, not only to reject these eight proposed candidates, but also all the other members of the senate successively: and in that case, four members are taken from the great council, and proposed to the general assembly. these are appointed syndics, they immediately become members of the senate; and an equal number of that body are at the same time degraded, and retire into the great No instance, however, council. has yet occurred of the general affembly having exerted this power

^{*} The children of those who are employed in foreign countries, in the service of the state, although born out of Geneva, are entitled to all the privileges of citizens.

of expelling four members from the fenate *.

With respect to the other restraint I'mentioned upon the power of the little council, the right Of representation: every citizen or burgher, either fingly or in a body, has the privilege of applying to the senate in order to procure some new regulation, or of remonstrating against any act of the magistracy. These representations have proved one of the principal means, perhaps, of securing the liberties of the people from the respective encroachments of the two councils; as they have frequently prevented the magistrates from stretching their authority to the same arbitrary extent that has been practifed in some of the other commonwealths of Swisserland. The magistrates are obliged to give an explicit answer to these representations; for, if the first is not considered as satisfactory, a second remonstrance is presented. According to the nature and importance of the complaint, the representation is made by a greater or less number of citizens; and it has sometimes happened that each remonstrance has been accompanied by several hundred, in different bodies.

The salaries of the several magistrates are so 'inconsiderable, as not to offer any temptation on the fide of pecuniary emolument: a sense of honour, a spirit of ambition, the defire of serving their country, together with that personal credit which is derived from mistration, are the principal mo- In all cases of controversy, the

tives which actuate the candidates to solicit a share in the magistracy. Accordingly, the public posts are generally filled with men of the first abilities, and of the most re-The revespectable characters. nues of government, at the highest calculation, scarcely amount 30,000 pounds a year; a fum, however, which, by a well regulated economy, is more than fufficient to defray the current expences: so that this republic is enabled to provide for the fecurity of its subjects, from an income, which some individuals, both in England and France, squander in vain pomp and vicious dissipation.

It is very remarkable that, in a republic so free as this of Geneva, and where the true principles of liberty are so well and so generally understood, there should be no precise code of penal laws: for, although the form of the process is fettled with great precision, yet the trial of the criminal is private, and the punishment left to the arbitrary decision of the magistrate. Nor are the franchises of the people ascertained with that accuracy one might well have expected. Indeed, under Ademar Fabri, bishop of Geneva in the fourteenth century, a certain number of political regulations, both civil and criminal, together with several particular customs and liberties, were drawn up in form; and the bishop took an oath to observe These statutes, if they may be so called, were also confirmed exercifing any office in the admi- by Amadeus VIII. duke of Savoy.

_

Since the above was written, I have been informed, that the citizens and burghers expelled four members from the senate, at the election of magistrates for the year 1777.

reople sppeal to this code; but it is not only compiled in a very inaccurate and confused manner, but the magistrates refuse to be governed by it, because it was published before the independence of the republic was confirmed. With respect to the several laws which have fince been enacted in the general assembly; some sew of them indeed are printed, and in the hands of the public, but the rest remain in the archives of the senate: for, there being no particular secretary belonging to the general assembly; all the laws which they pass are taken down by the secretary to the senate; so that the latter are the sole depositaries of those edicts which ought to be laid open to the inspection of the whole community. The people have repeatedly demanded a precise code of municipal and penal laws, so express and determinate, that nothing may be left to the arbitrary decision of the magistrate; but the senate has always found means of evading this very reasonable and just requisition.

Their code of civil law is the most perfect part of this constitution: all matters concerning commerce are well regulated by it; and private property securely guarded. It is unnecessary to trouble you with a particular detail of the · fumptuary laws; they are much the same as those in most of the other states of Swisserland, where restrictions of that kind are enforced. But there is one law, relating to bankrupts, too singularly severe not to be mentioned. If a member of either council becomes a bankrupt, he is immediately degraded; and from that moment is rendered incapable of holding any finall have discharged all the just demands of his creditors: even his children are subjected to the same disgrace; and no citizen can exercise any public employment what-soever, while the debts of his father remain unpaid.

ther remain unpaid. In this city, as in all the other principal towns in Swisterland, a public granary is established. Mapazines of this kind are useful in ail flates, but are more particularly necessary in so populous a place as Geneva; which, if the neighbouring powers were to prohibit the exportation of corn into the territory of the republic, might be exposed to all the horrors of a general famine. The benefit of this institution has been frequently experienced in times of scarcity: and all authors who have published observations upon the government of Geneva, have agreed in mentioning it with the praises it deserves. But they have overlooked one great defect in its regulation, and which is not imputable to the management of those public granaries which are established in Berne and Zuric. The chamber of corn, as it is here called, is a committee from the great council of two hundred, empowered to supply the granary with that commodity, at the expence of government. This corn is dried by means of machines well contrived for that purpose; retailed out to the inn-keepers and bakers; a confiderable profit accrues to government: and there is always, in case of necessity, a sufficient quantity in reserve to support the inhabitants during a year and a half.

Thus far, all is right: but then the burden of this institution falls,

upon the poor. For, as the direc-

tors buy the corn at the cheapest \service; wisely prohibiting the enrate; retail that part of it which, has been kept the longest; and vend it at an higher price than it is fold in the neighbouring territories; the bakers must consequently sell their bread dearer, and not of so good a quality, as that which may be purchased on the frontiers ef Savoy. But the importation of bread is strictly prohibited: those families, therefore, who can atford it, lay in a provision of corn for their own use; while the poorer fort .fuffer, by being obliged to purchase, at an advanced price, their daily provision from the bakers. Perhaps, however, the government is not sufficiently rich to put their granary upon the same footing with those of Berne and Zuric, by facrificing the profit arising from the chamber of corn.

The town is strongly fortified on the fide of Savoy; and a garrison of about nine hundred men constantly maintained: but these fortifications, and this garrison, are only sufficient to guard them from any sudden attack; they could not defend them long against a regular siege. The great security of the republic confifts in its alliance with the Swiss cantons, by means of Zuric and Berne: and, as it is the interest both of the king of France and the king of Sardinia to keep well with the Swiss, and to preserve the independence of Geneva; it derives its greatest security from what, in some cases, would be its greatest danger; namely, that its territory borders upon the dominions of fuch powerful neighbours.

This republic is the only commonwealth in Swisserland, that has no regular companies in any foreign

listing of mercenaries in every part of its territory.

Reflections upon the general State of the thirteen Swifs Cantons. From the same.

TAVING, in the course of my former letters, communicated to you such observations as I was able to make during my tour through Swisserland, concerning the laws, government, state of literature, &c. of each canton in particular; I will now request from you the same candid indulgence I have so repeatedly experienced, whill I lay before you a few concluding remarks, in relation to the state of Swisserland in general.

There is no part of Europe which contains, within the same extent of region, so many independent commonwealths, and such a variety of different governments, as are collected together in this remarkable and delightful country; and yet, with fuch wisdom was the Helvetic union composed, and so little have the Swifs, of late years, been actuated with the spirit of conquest, that fince the firm and complete establishment of their general confederacy, they have scarcely ever had occasion to employ their arms against a foreign enemy; and have had no hostile commotions among themselves that were not very foon happily terminated. Perhaps there is not a similar instance in ancient or modern history, of a warlike people, divided into little independent republics, closely bordering upon each other, and of course having occafionally interfering interests, having continued, during so long a period, in an almost uninterrupted state of tranquillity. And thus, while the several neighbouring kingdoms have suffered, by turns, all the horrors of internal war, this savoured nation hath enjoyed the selicity described by Lucretius, and looked down with security upon the various tempests that have shaken the world around them.

But the happiness of a long peace, has neither broken the spirit, nor enervated the arm of this people. The youth are diligently trained to all the martial exercises, fuch as running, wrestling, and shooting both with the cross-bow and the musket; a considerable number of well-disciplined Swiss troops are always employed in foreign services; and the whole people are enrolled, and regularly exercised in their respective mili-By these means they are capable, in case it should be necesfary, of collecting a very respectable body of forces, which could not fail of proving formidable to any enemy who should invade their country, or attack their liberties. Thus, while most of the other states upon the continent are tending more and more towards a military government, Swisserland alone has no standing armies; and yet, from the nature of its fituation, from its particular alliances, and from the policy of its internal government, is more secure from invasion than any other European power, and full as able to withstand the greatest force that can be brought against it.

But the felicity of Swisserland does not consist merely in being peculiarly exempted from the bur-

dens and miseries of war; there is no country in which happiness and content more universally prevail among the people. For, whether the government be aristocratical, democratical, or mixed; absolute or limited; a general spirit of liberty pervades and actuates the several constitutions; so that even the oligarchical states (which, of all others, are usually the most tyrannical) are here peculiarly mild; and the property of the subject is securely guarded against every kind of violation.

But there is one general defect in their criminal jurisprudence, which prevails throughout this country. For, although the Caroline code, as it is flyled, or the code of the Emperor Charles the Vth, forms in each of the republics the principal basis of their penal laws, with particular modifications and additions in different diftricts; yet much too great a laiitude is allowed to the respective judges, who are less governed in their determinations by this code, or any other written law, than by the common principles of justice. How far long experience may have justified the prudence of trusting them with this extraordinary privilege, I cannot say; but discretionary powers of this kind, are undoubtedly liable to the most alarming abuse, and can never, without the greatest hazard, be committed to the hands of the magistrate.

I cannot forbear reflecting, upon this occasion, on the superior wildom, in the present instance, as well as in many others, of our own most invaluable constitution; and indeed, it is impossible for an Eng-

lifamas

lishman to observe, in his travels, the governments of other countries, without becoming a warmer and more affectionate admirer of his In England, the life and liberty of the subject does not depend upon the arbitrary decision of his judge, but is secured by express laws, from which no magistrate can depart with impunity. This guarded precision, it is true, may occasionally, perhaps, be attended with some inconveniences; but they are overbalanced by advantages of so much greater weight as to be scarcely perceptible in the scales of justice. I do not mean, however, to throw any imputation upon the officers of criminal jurildiction in Swifferland: as far as I could observe, they administer distributive justice with an impartial and equitable hand.

I remarked, with peculiar satissaction, the excellent state of the prisons throughout this country, and the humane precautions which the several legislatures have taken with respect to selons: a circumstance which could not sail of striking me the more forcibly, as the contrary is but too visible in England. In Swisserland, the criminals are confined in wholesome and separate wards; and instead of languishing long in prison, to the great injury of their health, or total waste of their little remnant of money; they are almost immediately brought to trial. In England, a criminal, or one suspected to be such, may be confined fix months before his fate shall be determined: and if he happen to be proved innocent, and should be in low circumstances; the loss of his time, together with the expences of the gaol-fees, may probably occasion his utter ruin; while his morals are in no less danger, by being compelled to affociate with a let of abandoned wretches, lost to all sense of shame, and encouraging each other in their common profligacy. How much is it to be lamented, that, while our code of criminal jurisprudence is in genesal formed upon principles, which distinguish us with honour among the nations of Europe; that our courts of justice are thrown open to the view of all the world; and that we enjoy the inestimable and almost peculiar privilege of being tried by our equals; how much (I cannot forbear repeating) is it to be lamented, that the same equitable and humane spirit should be found wanting in so important an article of our penal laws *.

One

For a more particular account of the prisons in Swisserland, the reader is referred to a treatile concerning "The state of the prisons in England and Wales, and an account of some foreign prisons, by John Howard, Esq; 1777." In this treatise (which merits the attention of every friend to humanity) the worthy author has produced many melancholy proofs of the sad state of the English prisons, and how very inferior they are to those abroad in every circumstance relating to the health and good government of the unhappy persons confined in them. And it cannot but afford him the most sensible satisfaction to find, that his benevolent and persevering labours have already been productive of some very advantageous regulations, particularly concerning the sees of prisoners who shall be acquitted, and the prevention of the gaol distemper. As Mr. II. still continues his laudable researches through all the most considerable prisons

One cannot but be aftonished, as well as concerned, to find, that in a country where the true principles of civil government are so well understood and so generally adopted as in Swisserland, that the trial by torture is not yet abolished: for, in some particular cases, the suspected criminal is still put to the rack. The inefficacy, no Jess than the inhumanity, of endeavouring to extort the truth by the several horrid instruments which too ingenious cruelty has devised for that purpose, has been so often exposed by the ablest writers, that it would be equally impertinent and superfluous to trouble you with any reflections of mine upon the subject: and indeed, the whole strength of the several arguments that have been urged upon this occasion, is comprised in the

very just and pointed observation of the admirable Bruyere, that la question est une invention marveilleuse U tout-à fait sure, pour perdre un innocent qui a la complexion foible, & sauvre un coupable qui est né robuste * 1 I cannot, however, but add, in justice to the Swifs, that zealous advocates have not been wanting among them for the total abolition of torture: but arguments of reafon, and fentiments of humanity, have been found, even in this civilized and enlightened country, to avail little against inveterate custom and long-confirmed prejudices †.

Learning is less generally diffused among the catholic than the protestant states: but in both, a man of letters will find abundant opportunities of gratifying his researches and improving his know-

upon the continent, and intends submitting the result of them to the consideration of Parliament; it may justly be hoped, that he will be rewarded with the happiness of having become the means of effectually fixing the attention of the British Senate upon an object so highly deserving the care of every wise and humane legislature.

* Caracteres, Vol. ii. p. 2036

+ Criminal justice is here, as in the greatest part of Europe, administered agreeably to the rules of the civil law. According to the maxims of that code, the criminal's confession is absolutely requisite, in order to his suffering capital punishment; and consequently, all those nations who have not established a new code of

criminal jurisprudence, retain the use of torture.

The present king of Prussia, it is well known, set the example in Germany; of abolishing this inhuman practice; but sew, perhaps, are apprised, that the first hint of this reformation was suggested to him by reading the History of England. For, one of the principal arguments in support of this method of extorting confession, being that it affords the best means of discovering plots against government; the sagacious monarch remarked, that the British annals fully consuted the fallacy of that reasoning. Few kingdoms, he observed, had abounded more in conspiracies and rebellions than England; and yet, that the leaders and abettors of them had been more successfully traced and discovered, without the use of torture, than in any country where it was practised. From thence," added this wise politician, speaking upon the subject, "I saw the absurdity of torture, and abolished it accordingly."

The above anecdote, which I had from very respectable authority, bears the most honourable testimony to the essicacy as well as the mildness of our penal laws, and to the superior excellency of the process observed in our courts of cri-

minal justice.

ledge,

ledge. To the natural philosopher, Swisserland will afford an inexhaustible source of entertainment and information, as well from the great variety of physical curiosities so plentifully spread over the country, as from the considerable number of persons eminently skilled in that branch of science. Indeed in every town, and almost in every village, the curious traveller will meet with collections worthy of his attention.

With respect to agriculture; there is, perhaps, no country in the world where the advantageous. effects of unwearied and persevering industry are more remarkably In travelling over confpicuous. the mountainous parts of Swisserland, I was itruck with admiration and affonishment, to observe rocks, that were formerly barren, now planted with vines, or abounding in rich pasture; and to mark the traces of the plough along the fides of precipices so steep, that it must be with great difficulty that a horse could even mount them. word, the inhabitants feem to have furmounted every obstruction which foil, fituation, and climate, had thrown in their way, and to have spread sertility over various spots of the country which nature seemed to have configued to everlasting barrenness. In fine, a general simplicity of manners, an open and unaffected frankness, together with an invincible spirit of freedom, may justly be mentioned in the number of those peculiar qualities which dignify the public character of this people, and distinguish them with honour among the nations of Europe.

Vol. XXII.

A Sketch of an Historical Panegyric on the Marshal of Berwick, by the President Montesquieu. From Memoirs of the Duke of Berwick.

gust, 1670; was son of James, Duke of York, since King of England, and of Miss Arabella Churchill. Such indeed was the sate of this house of Churchill, that it gave birth to two men, who were destined, at the same time, each of them to shake, and to support, the two greatest monarchies of Europer

At seven years of age he was sent into France to complete his studies, and follow his exercises. The Duke of York having succeeded to the crown on the 6th day of February, 1685, sent him the following year into Hungary, and he was present at the siege of Buda.

He passed the winter in England, where the King created him Duke of Berwick. In the spring he returned into Hungary, where the Emperor gave him the rank of Colonel to command Taass's regiment of Cuirassiers. He served the campaign of 1687, in which the Duke of Lorrain obtained the victory at Mohatz; and on his return to Vienna, the Emperor promoted him to the rank of Major-General.

Thus the Duke of Berwick was first trained to arms, under the great Duke of Lorrain; and his life, ever since, has been in a manner entirely devoted to this profession.

He returned into England; when the King gave him the government of Portsmouth, and of the county of Southampton. He had already a regiment of infantry. The regiment of horse-guards, belonging to the Earl of Oxford, was afterwards given him: so that at seventeen years of age, he was in a situation highly flattering to a man of an elevated mind; for he saw the track of glory open before him, and was in a way of being able to perform great actions.

In 1688 the Revolution took place in England; and amidst the number of misfortunes that furrounded the King on a sudden, the Duke of Berwick was charged with affairs of the highest consequence. The King having fixed upon him for assembling the army, one of the treacheries committed by his ministers was to delay the sending of the orders for this purpole, that opportunity might be given some other person to lead off the troops to the Prince of Orange. He accidentally met with four regiments that were intended to be conveyed to the Prince of Orange, and brought them back to his post. · He exerted himself to the utmost in order to fave Portsmouth, which was blocked up by sea and land, and had no other provisions than what were daily supplied by the enemy, till the King ordered him to deliver up that fortress. His Majesty having taken the resolution to make his escape into France, the Duke was one of the five persons whom he entrusted with his defign, and who followed him. The King, immediately on his landing, sent him to Versailles to request an asylum. He was then but just eighteen years old.

Almost all Ireland having preferved its fidelity to King James,

that prince went there in the month of March, 1689; and an unfortsnate war enfued, in which bravery was always conspicuous, and conduct always deficient. Of this war in Ireland it may be said, that in London it was confidered as the business-of the day, and the capital concern of Great Britain; and in France, it was looked upon as a war carried on from motives of particular attachment and dece-The English, who choic w avert a civil war from themselves, crushed the kingdom of Ireland, It seemed even as if the French officers who were sent there, were impressed with the same ideas as those who sent them: they had but three objects in view, to get there, to fight, and to return. Time has thewn that the notions of the English upon these matters were more just than ours.

The Duke of Berwick distinguished himself on some particular occasions, and was made a Lieutenant-General.

Lord Tyrconnel, on his deperture for France in the year 1690, left the general command of the kingdom to the Duke of Berwick. He was then but twenty years of age, and it appeared from his conduct, that heaven had bestowed prudence upon him at a more early period of life than upon any other man of his time. The loss of the battle of the Boyne had discouraged the Irish troops: King William had indeed raised the siege of Limerick, and was returned into England; but this did not much improve the state of affairs. Lord Cherchill • landed on a sudden in Ireland when eight thousand meato check the rapidity of his progress, to re-establish the army, to dislipate factions, and to conciliate the minds of the Irish. All this was effected by the Duke of Berwick.

In 1691, the Duke of Tyrconnel having returned into Ireland, the Duke of Berwick went back into France, and attended Lewis XIV. as volunteer, to the fiege of Mons. He served in the same capacity under Marshal Luxembourg, in the campaign of 4692, and was present at the battle of Steinkirk. The following year he was made Lieutenant-General in France, and acquired much honour at the battle of Neerwinden, where he was The reports that taken prisoner. were circulated upon this occation, must certainly have originated from persons who had the highest idea of his steadiness and courage. continued to serve in Flanders under Marshal Luxembourg, afterwards under Marshal Villetoh"

In 1696, he was fent privately into England, to hold a conference with some English noblemen, who had resolved to restore the King. He was charged with a very strange kind of commission, which was to induce these noblemen to act against common sense. He did not succeed; and hastened his return upon receiving information that there was a plot, carrying on against the person of King William, because he did not chuse to be involved in this conspiracy. I remember having heard him say, that a man had discovered him by a kind of family likeness, and particularly by the length of his fingers; that luckily this man hap-

It was necessary at the same time pened to be a Jacobite, and said to him, God bless you in all your undertakings. This relieved him from his embarrassment.

The Duke of Berwick lost his first wife in the month of June, 1698. He had married her in She was daughter of the 1695. Earl of Clauricard. He had a son by her, who was born on the 21st of October, 1696.

In 1699 he made a tour inte Italy, and at his return married Mademoiselle de Bulkeley, daughter of Madame de Bulkeley, Lady of the Bedchamber to the Queen of England, and of M. de Bulkeley, brother of Lord Bulkeley.

After the death of Charles II. King of Spain, King James fent the Duke of Berwick to Rome, to congratulate the Pope on his election, and to offer him his services to command the army that France pressed him to raise, for the purpole of maintaining a neutrality in Italy; and the Court of St. Germains offered to send some Irish troops, to be under his command. The Pope thought the affair rather too terious for him, and the Duke of Berwick returned.

In 1701 he lost the King his father, and in 1702 he served in Flanders under the Duke of Burgundy and Marshal Boufflers; in 1703, on his return from the campaign, he was naturalized a subject of France, with the confent of the Court of St. Germains.

In 1704, the King fent him into Spain at the head of eighteen battalions and hineteen squadrons; and upon his arrival the King of Spain appointed him Captain General of his forces, and made him put his hat on in his presence.

The Court of Spain was disturbed by intrigues. The government was very ill conducted, because every one wished to guide the reins of it. Every thing degenerated into cabals, and it was one of the principal objects of his commission, to get at the bottom of All parties endeavoured to gain him over, but he would not side with either of them; and applying himself only to the success of public affairs, he considered the interest of individuals merely as they were; he paid no attention to Madame d'Orsini, to Orry, to the Abbé d'Etrées, to the inclinations of the Queen, or to the bias of the King: the welfare of the monarchy engrossed all his thoughts.

The Duke of Berwick received orders to endeavour to obtain the dismission of Madame d'Orsini. The King wrote to him in the sollowing terms: "Tell my grand-" son, that he owes me this mark of complaisance. Urge all the motives you can imagine to persuade him, but do not tell him that I shall abandon him, for he would never believe you." The King of Spain consented to the dismission.

This year, 1704, the Duke of Berwick saved the kingdom of Spain; he hindered the Portuguese army from going to Madrid. His army was two-thirds, weaker than that of the enemy; he was constantly receiving orders from court, one after another, to retire and to risk nothing. The Duke of Berwick, who saw that Spain was lost if he obeyed, would not discontinue to expose himself to risks, and disputed every inch of ground. The Portuguese army retired, and

At the end of the campaign he received orders to return into France. This was the effect of court intrigue; and he felt what so many had experienced before, that to please at court is the greatest service a man can do; without which, all our works, to make use of the language of divines, are nothing more than dead works.

In 1705 the Duke of Berwick was sent to command in Languedoc; and the same year he laid

fiege to Nice, and took it.

In 1706 he was made Marshal of France, and sent into Spain to take the command of the army against Portugal. The King of Spain had raised the siege of Barcelona, and had been obliged to return by France, and to re-enter the kingdom of Spain through Navarre.

I have observed, that before he quitted Spain, the first time of his serving there, he had saved the kingdom; and upon this occasion he saved it a second time. I shall take but a cursory view of the circumstances which it is the business of history to record. I shall only fay, that all was lost at the beginning of the campaign, and all recovered at the end of it. dame de Maintenon's Letters to the Princess Orsini, we may see what was the opinion of the two courts at that time. They wished, but they had no hopes remaining. The Marshal of Berwick wanted the Queen to join his army, but she was prevented by the advice of some timid persons. They endeavoured to persuade her to retire to Pampeluna; the Marshai of Berwick made it appear, that if this step were taken, every thing was

Ioft, because the Castilians would then think themselves forsaken: the Queen therefore retired to Burgos with her counsellors, and the King joined the small army. Portuguele went to Madrid; and the Marshal, by conduct merely, without risking a fingle action, obliged the enemy entirely to quit Castile, and wedged in their army between the kingdoms of Valencia. and Arragon. He conducted them thither by one march after another, as a shepherd leads his flock. It may be said, that this campaign was more glorious to him than any of the other he made, because the advantages obtained by it, not having depended on an action, furnished the opportunity for a continual display of his talents. took more than ten thousand prifoners, and by this campaign paved the way for the second, rendered fill more illustrious by the battle of Almanza, the reduction of the kingdoms of Valencia and Arragon, and the capture of Lerida.

It was in this year, 1707, that the King of Spain bestowed upon the Marshal of Berwick the towns of Liria and Xerica, with the rank of Grandee of the first class; which procured him a still greater establishment for his son by his first wife, in his alliance with Donna Catherina of Portugal, heiress of the house of Veragues. The Marshal gave him up all his possessions in Spain.

At the same time Lewis XIV. gave him the government of the Limosin, entirely of his own accord; without being asked for it by the Duke.

I must take this opportunity of

speaking of the Duke of Orleans, and I shall do it with the greater satisfaction, as what I shall say of him, can but redound to his honour as well as the Marshal's.

The Duke of Orleans came to command the army. His evil deftiny made him think he should have time to pass by Madrid. The Marshal of Berwick dispatched messenger after messenger to acquaint him, that he should foon be under a necessity of giving battle: the Duke of Orleans set out, and notwithstanding the utmost expedition, did not arrive in time. There were not wanting courtiers who endeavoured to infinuate to the Prince, that the Marshal of Berwick had been well pleased to give battle without him, in order that he might deprive the Prince of the glory of it. But the Duke of Orleans was satisfied that he had it in his power to do him justice, which he very well knew how to do; and only complained of his ill fortune.

The Duke of Orleans, who could not bear the idea of returning without having done any thing, proposed the siege of Lerida. The Marshal of Berwick, who was far from agreeing with the Duke in this point, explained his reasons for it in a strong manner; and even proposed to refer the matter to court. The fiege of Lerida was resolved upon. From that moment the Marshal saw no farther obstacles: he knew, that though prudence be the first of all virtues before an enterprize is begun, it is only a secondary one after it is undertaken. Perhaps had he been the proposer of this siege, he would have been less apprehensive of the C 3

leans finished the campaign with nion.
glory; and this circumstance, which It would infallibly have bred a quartel between two men of an ordinary turn of mind, served only to minimize these two more sirmly together; and I remember to have heard penethe Marshal say, that he traced the natural origin of the favour shewed him by the Duke of Orleans from the camby p

paign of 1707.

In 1708, the Marshal of Berwick, who was at first deligned to be at the head of the army in Dauphiny, was sent upon the Rhine to command under the Elector of Bavaria. He had defeated a project of M. de Chamillart, whose chief incapacity confifted in not knowing Prince Engene having his own. quitted Germany to go into Flanders, the Marshal of Berwick sollowed him. After the loss of the battle of Oudenarde, the enemy laid fiege to Liste; and then the Marshal of Berwick joined his army to that of M. de Vendosme. Without an infinite number of very extraordinary events, it was imposfible for us to have lost Lisse. The Dake de Vendosme was incented against the Marshal of Berwick, for having made some difficulty of serving under him. From that period, the Dake de Vendosme rejected every proposal that came from the Marshal of Berwick; and his foul, in other respects so great, was no longer animated by any motive, but a warm resentment for the kind of affront which he imagined he received.

The Duke of Burgundy and the King, constantly divided between contradictory proposals, knew not how to act otherwise, than to ac-

The Duke of Or- quiesce in M. de Vendosme's opi-

It must have happened that the King should send to the army, in order to conciliate the Generals, a minister who was incapable of distinguishing; it must have happened, that that malady of human nature, of not being able to bear what is good, when it is done by persons whom we do not like, should have taken possession, during this whole campaign, of the heart and understanding of M. de Vendosme: it must have happened, that a Lieutenant - General fliould have credit enough at court, to commit two blunders, one upon the back of the other, and which will be remembered in all ages, his defeat and his capitulation: it must have happened, that the siege of Bruffels should have been rejected at first, and afterwards undertaken; that it should be determined to cover, at the same time, both the Scheld and the Canal, that is, to cover nothing. word, the cause in agitation between these two great men still exists; the letters written by the King, by the Duke of Burgundy, by the Duke de Vendosme, by the Duke of Berwick, and by M. de Chamillart, are also still preserv-By these it will appear which of the two wanted coolness, and perhaps I might even venture to say, reason. God forbid that I should attempt to call in question the eminent qualities of the Duke de Vendosme! If the Marshal of Berwick were to return upon earth, he would be forry for it. shall say, on this occasion, what Homer said of Glaucus. deprived Glaucus of his wisdom,

and he exchanged a golden shield for a brazen one. This golden shield M. de Vendosme had always borne till this campaign, and he afterwards recovered it.

In 1700 the Marshal of Berwick was fent to cover the frontiers of Provence and Dauphiny; though M. de Chamillart, who left every thing unprovided, had been removed, he found neither money, mor ammunition, nor provisions; but managed so well, that he supplied himself with all he wanted. I remember having heard him fay, that in his distress he seized upon a supply of money that was going from Lyons to the royal treasury; and he used to say to M. D'Angervilliers, who was his Intendant at that time, that in legal firiciness they both of them deserved to have been tried. M. Desmarais exclaimed: and he answered, that it was necessary to provide subsistence for an army, which was to fave the kingdom.

The Marshal of Berwick formed fuch a plan of defence, that it was impossible to penetrate into France on any side, because the Duke of Savoy was obliged to proceed by the arch of a circle, while he kept along the chord. I remember when I was in Piedmont, that the officers who had served at that period, always gave this as a reason for their not having been able to penetrate into France; they made the panegyric of the Marshal of Berwick, without my knowing any thing of the matter.

For this plan of defence the Marshal of Berwick wanted only a small number of forces, and was enabled to fend the King twenty battalions; which, in those times,

confiderable reinforce-Was ment.

It would be very abfurd in me to judge of his military talents; in other words, to judge of what I cannot understand. Nevertheless, might I be allowed to venture, I should say, that as every great man, besides his general capacity, has also some particular talent in which he excels, and which constitutes his distinguishing quality; so the Marshal of Berwick's particular talent confifted in making a defensive war, in restoring affairs that were desperate, and in being thorough master of every resource that can suggest itself in missortune. must undoubtedly have been very sensible of his powers in this respect. I have often heard him fay, that the thing he had most coveted, during the whole course of his life, was to have had a good fortress to defend.

In 1713 the peace was figned at Utrecht: on the first of September, 1715, the King died: The Duke of Orleans was Regent, and the Marshal of Berwick was sent to command in Guyenne, Let me be allowed to fay, that this was a great happiness for me, since it was there I became acquainted with him.

The intrigues of Cardinal Alberoni gave rife to the war which the Marshal Dake of Berwick conducted on the frontiers of Spain. The Ministry being changed upon the death of the Duke of Orleans, he was removed from the command of Guyenne. He divided his time between the Court, Paris. and his country-house of Fitz-This will give me an James. C 4

oppor-

opportunity of speaking of him as a private man, and of giving his character, as concisely as

possible.

He scarce obtained any favours which were not offered to him: when his own interest was concerned, it was always necessary to push him on. — His reserved and rather dry look, which was sometimes even inclined to severity, made him appear at times as if he were not in his proper element in our country, if it were possible that great souls and personal merit could be confined to any one nation.

He knew not how to fay those things that are usually called pretty things. He was more especially free from those numberless errors into which persons, who are overfond of themselves, are continually falling. - He was determined, for the most part, by his own judgment; and if, on the one hand, he had not too high an opinion, on the other, he had no distrust of himself; he considered and knew himself with as much penetration, as he viewed all other objects.—No man ever knew better how to avoid excesses, or, if I may venture to use the expression, to keep clear of the snares of virtue: for example, he was fond of the clergy; he readily enough accommodated himself to the modesty of their station; but he could not bear to be governed by them; especially if they transgressed in the least article the limits of their duty: he required more of them than they would have required of him-It was impossible to behold him, and not be in love with virtue, so evident was tranquillity and happiness in his soul, particularly when he was compared with others who were agitated by various pasfions.—In the works of Platarch. I have seen at a distance what great men were: in him I beheld in a nearer view what they are. I was only acquainted with him in private life: I never faw the hero, but the man from whom the hero issued. — He loved his friends: it was his vultom to do fervices. and not to speak of them: thus the benefit was dispensed by an invisible hand. — He had a great fund of religion. No man ever followed more strictly those laws of the gospel, which are more troublelome to men of the world: in a word, no man ever practifed religion so much, and talked of it so little. — He never spoke ill of any one; and at the same time never bestowed any praise upon those whom he did not think deferving of it.—He held in avertion those controversies, which, under pretence of the glory of God, are nothing more than personal disputes. He had learned from the misfortunes of the King his father, that we expose ourselves to commit great errors, when we have too much faith even in persons of the most respectable character.—When he was appointed Commandant in Guyenne, we were alarmed at the report of his gravity; but soon after his arrival he was beloved by every body, and there is no place where his great qualities have been more admired

No man ever gave a brighter example of the contempt we ought to have for money.—There was a simplicity in all his expences, which ought to have made him very easy in his circumstances: for he included

judulged

indulged himself in no frivolous expence; nevertheless he was always in arrears, because, notwithstanding his natural economy, his expences were great. In the governments he was appointed to, every English or Irish family that was poor, and that had any fort of connection with any one of his house, had a kind of right to be introduced to him; and it is remarkable, that a man who knew how to maintain so much order in his army, and shewed so much judgment in all his projects, should lose all these advantageous talents, when his own private interest was concerned.

He was not one of those persons, who are sometimes complaining of the authors of any misfortune, and at other times slattering them; when he had a cause of complaint against any man, he went directly to him, and told him his sentiments freely, after which he said no more.

Never was the state in which we know France was in at the death of Marshal Turenne, more exactly represented than at the death of the Duke of Berwick. I remember the instant when the news was brought: the conflernation was general. They had both of them left designs interrupted; both of them left an army in danger; both lost their lives in a manner that affects us more than an ordinary death: both of them were possessed of that modest merit, which is so well calculated to call forth our tenderest affections, and to excite our regret.

He lest an affectionate wife, who passed the remainder of her life in sorrow for his loss; and he lest children, whose virtue speaks

their father's panegyric better than I can.

The Marshal of Berwick has written his own Memoirs; and upon this occasion I may repeat what I have before said in the Spirit of Laws, of the narrative of Hanno. The narrative of Hanno is a beautiful relic of antiquity: the same man who has executed, has written. There is no kind of oftentation in his accounts: great commanders pen their actions with simplicity, because they take more pride in what they have done, than in what they have done, than in what they have said.

The conduct of great men is more liable to a rigorous examination than that of other persons: every one takes a delight in arraigning them before his petty Did not the Roman tribunal. foldiers indulge themselves in the most bitter mockeries, while they followed the car of victory? They imagined that they were triumphing over the triumphers themselves; but it is a matter of great praise for the Marshal of Berwick, that the two objections which have been made to him, have been occasioned only by his attachment to his duty.

The objection, of not having been concerned in the Scotch expedition of 1715, is founded only upon considering the Marshal as a man who had no country of his own, and upon the difficulty of persuading ourselves to look upon him as a subject of France. Having become a Frenchman, with the consent of his sirst sovereign, he obeyed the orders of Lewis XIV, and afterwards those of the Regent of France. It became necessary for him to silence the dictates of his heart, and to be guid-

that he was no longer at his own disposal: that he must no longer regulate his conduct by that rule which was most suitable to his wishes, but by the one which his fituation required: he was aware that he should be censured, but he was above every unjust decision. He was never determined by popular savour, nor swayed by the opinions of those who think only su-

perficially.

The ancients, who have treated of our duties, do not place any great difficulty in knowing them, but in chusing between two duties which is preferably to be pursped. He, like fate, followed the gronger duty. These are matters we should never treat of, unless we are obliged; because nothing in the world commands our respect so much as an unfortunate Let us examine the question; it consists in determining, whether the Prince, had he even been restored, would have had a right to recall him? The frongest argument that care be urged on this fide the question, is, that our country never abandons es: but even this was not the case; for he was proscribed by his country, when he got himself na-Grotius, Puffendorf, mealized. and all those writers who have inseenced the opinions of Europe, . decided the question, and declared so him that he was a Frenchman, and subject to the laws of France. .The basis of the political system adopted by France, at that time, How contradictory was peace. would it have been, if a Peer of the realm, a Marshal, a Gover-.

nor of a province, had disobeyed the prohibition to quit the kingdom, that is, had been in actual disobedience, in order to appear to the eyes of the English alone as having not disobeyed! In sact, the Marshal of Berwick was in a very peculiar atuation even from his very dignities; and it was scarce possible to discriminate between his presence in Scotland, and a declaration of war with France did not think England. it confisient with her interest that this war should take place, because it would bring on a war which would extend itself through. out Europe. it was not theretore for him, to take upon himself the immonse weight that such a step would draw upon him. It may indeed be faid, that had be confulted his ambition merely, he could not have a stronger one, than the refloration of the Strams to the English throne. We know how much he loved his children. What a delightful profipect for him, could be have foreseen a third establishment in England!

Had he been even consulted upon the enterprize, in the circumstances of the times, he would not have advised it: he thought that all those kinds of undertakings were of the same nature as others, which ought to be regulated by prudence; and that in such an instance as this, the failure of an enterprize is attended with two kinds of ill success; the present missortune, and a greater difficulty of renewing the undertaking with any prospect of success in

future.

Of the Metaphysical Poets. From Johnson's Life of Cowley.

ow LEY, like other poets who have written with narrow views, and instead of tracing intellectual pleasure to its natural sources in the mind of man, paid their court to temporary prejudices, has been at one time too much praised, and too much neglected at another.

by their nature to the choice of man, has its changes and fashions, and at different times takes different forms. About the beginning of the seventeenth century appeared a race of writers that may be termed the metaphysical poets; of whom, in a criticism on the works of Cowley, the last of the race, it is not improper to give some account.

The metaphysical poets were men of learning, and to shew their learning was their whole endeavour; but, unluckily resolving to shew it in rhyme, instead of writing poetry, they only wrote verses, and very often such verses as shood the trial of the singer better than of the ear; for the modulation was so impersect, that they were only found to be verses by counting the syllables.

If the father of criticism has rightly denominated poetry $\tau i \chi m$ $\mu \mu \mu n l \nu n$, an imitative art, these writers will, without great wrong, lose their right to the name of poets; for they cannot be said to have imitated any thing; they neither copied nature nor life; neither painted the forms of matter, nor represented the operations of intellect.

Those however who deny them to be poets, allow them to be wits. Dryden confesses of himself and his contemporaries, that they fall below Donne in wit, but maintains that they surpass him in poetry.

Pope, as being "that which has "been often thought, but was "never before so well expressed," they certainly never attained, nor ever sought it; for they endeavoured to be singular in their thoughts, and were careless of their diction. But Pope's account of wit is undoubtedly erroneous: he depresses it below its natural dignity, and reduces it from strength of thought to happiness of language.

If by a more noble and more adequate conception that be confidered as wit, which is at once natural and new, that though not obvious, is, upon its first production, acknowledged to be just; if it be that, which he that never found it, wonders how he missed; to wit of this kind the metaphyfical poets have feldom risen. Their thoughts are often new, but feldom natural; they are not obvious, but neither are they just; and the reader, far from wondering that he missed them, wonders more frequently by what perveriencis of industry they were ever found.

But Wit, abstracted from its effects upon the hearer, may be more rigorously and philosophically considered as a kind of concordia discors; a combination of dissimilar images, or discovery of occult resemblances in things apparently unlike. Of Wit, thus defined,

defined, they have more than enough. The most heterogeneous ideas are yoked by violence together; nature and art are ranfacked for illustrations, comparisons, and allusions; their learning instructs, and their subtilty surprises; but the reader commonly thinks his improvement dearly bought, and though he sometimes admires is seldom pleased.

From this account of their compositions it will be readily inferred, that they were not successful in representing or moving the As they were wholly affections. employed on something unexpected and surprising, they had no regard to that uniformity of fentiment which enables us to conceive and to excite the pains and the pleasure of other minds: they never enquired what, on any occasion, they should have faid or done; but wrote rather as beholders than partakers of human nature; as Beings looking upon good and evil, impassive and at leisure; as Epicurean deities making remarks on the actions of men, and the vicissitudes of life, without interest and without emo-Their courtship was void of fondness, and their lamentation of Their wish was only to forrow. fay what they hoped had been never faid before.

Nor was the sublime more within their reach than the pathetick; for they never attempted that comprehension and expanse of thought which at once fills the whole mind, and of which the first effect is sudden astonishment, and the second rational admiration. Sublimity is produced by

aggregation, and littleness by dispersion. Great thoughts are always general, and confift in pofitions not limited by exceptions, and in descriptions not descend-It is with ing to minutenels. great propriety that Subtlety, in its original import which means exility of particles, is taken in its metaphorical meaning for nicety of distinction. These writers who lay on the watch for novelty could have little hope of greatness; for great things cannot have escaped former observa-Their attempts were always analytick; they broke every image into fragments; and could no more represent, by their slender conceits and laboured particularities, the prospects of nature, or the scenes of life, than he, who dissects a fun - beam with a prism, can exhibit the wide esfulgence of a summer noon.

What they wanted however of the sublime, they endeavoured to supply by hyperbole; their amplification had no limits; they lest not only reason but fancy behind them; and produced combinations of consused magnificence, that not only could not be credited, but could not be ima-

gined.

Yet great labour, directed by great abilities, is never wholly lost: if they frequently threw away their wit upon false conceits, they likewise sometimes struck out unexpected truth: if their conceits were far-fetched, they were often worth the carriage. To write on their plan, it was at least necessary to read and think. No man could be born a metaphysical poet, nor

allume

assume the dignity of a writer, by descriptions copied from descriptions, by imitations borrowed from imitations, by traditional imagery, and hereditary similies, by readiness of rhyme, and volubility of syllable.

In perusing the works of this race of authors, the mind is exercifed either by recollection or inquiry; either something already learned is to be retrieved, or something new is to be examined. If their greatness seldom elevates, their acuteness often surprises; if the imagination is not always gratified, at least the powers of reflection and comparison are employed; and in the mais of materials which ingenious abfurdity has thrown together, genuine wit and ulcful knowledge may be sometimes found, buried perhaps in groffness of expression, but useful to those who know their value; and fuch as, when they are expanded to perspicuity, and polished to elegance, may give lustre to works which have more propriety, though less copiousness of fentiment.

This kind of writing, which was, I believe, borrowed from Marino and his followers, had been recommended by the example of Donne, a man of very extensive and various knowledge, and by Jonson, whose manner resembled that of Donne more in the ruggedness of his lines than in the cast of his sentiments.

When their reputation was high, they had undoubtedly more imitators, than time has left behind. Their immediate successors, of whom any remembrance can be said to remain, were Suckling,

Waller, Denham, Cowley, Cleveland, and Milton. Denham and Waller fought another way to fame, by improving the harmony of our numbers. Milton tried the metaphyfick stile only in his lines upon Hobson the Carrier. Cowley adopted it, and excelled his predecessors, having as much fentiment, and more Suckling neither improved verlification, nor abounded in conceits. The fashionable stile remained chiefly with Cowley; Suckling could not reach it, and Milton disdained it.

Strictures on Paradise Lost, and Paradise Regained; from the Life of Milton. By the same.

DY the general consent of cri-D ticks, the first praise of genius is due to the writer of an epick poem, as it requires an assemblage of all the powers which are fingly sufficient for other compositions. Poetry is the art of uniting pleasure with truth, by calling imagination to the help of reason. Epick poetry undertakes to teach the most important truths by the most pleasing precepts, and therefore relates some great event in the most affecting manner. History must supply the writer with the rudiments of narration, which he must improve and exalt by a nobler art, animate by dramatick energy, and diversify by retrospection and anticipation; morality must teach him the exact bounds, and different shades, of vice and virtue: from policy, and the practice of

life.

life, he has to learn the discrimimations of character, and the tendency of the passions, either single or combined; and physiology must supply him with illustrations and image. To put these materials to poetical use, is required an imagination capable of painting nature, and realizing fiction. Nor is he yet a poet till he has attained the whole extension of his language, distinguished all the delicacies of phrase, and all the colours of words, and learned to adjust their different sounds to all the varieties of metrical modulation.

Bossu is of opinion that the poet's first work is to find a moral, which his sable is afterwards to illustrate and establish. This seems to have been the process only of Milton; the moral of other poems is incidental and consequent; in Milton's only it is essential and intrinsick. His purpose was the most useful and the most arduous; to windicate the ways of God to man; to shew the reasonableness of religion, and the necessity of obedience to the Divine Law.

To convey this moral there must be a fable, a narration artfully constructed, so as to excite curiofity, and furprise expectation. this part of his work, Milton must be confessed to have equalled every other poet. He has involved in his account of the Fall of Man the events which preceded, and those that were to follow it: he has interwoven the whole system of theology with such propriety, that every part appears to be necesfary; and scarcely any recital is wished shorter for the sake of quickening the progress of the main action.

The subject of an epick poem is naturally an event of great importance. That of Milton is not the destruction of a city, the conduct of a colony, or the foundation of an empire. His subject is the fate of worlds, the revolutions of heaven and of earth; rebellion against the Supreme King, raised by the highest order of created beings; the overthrow of their hoft, and the punishment of their crime; the creation of a new race of reason. able creatures; their original happinels and innocence, their forfeiture of immortality, and their restoration to hope and peace.

Great events can be haftened or retarded only by persons of dignity. elevated Before greatness displayed in Milton's poem, all other greatness shrinks away. The weakest of his agents are the highest and noblest of heman beings, the original pareau of mankind; with whose actions the elements consented; on whole rectitude, or deviation of will, depended the state of terrestrial nature, and the condition of all the future inhabitants of the globe.

Of the other agents in the poem, the chief are such as it is irreverence to name on slight occasions. The rest were lower powers;

—of which the least could wield

Those elements, and arm him with the
force

Of all their regions.

of Omnipotence refirmins from laying creation waste, and filling the vast expanse of space with ruin and confusion. To display the motives and actions of beings thus superior, so far as human reason can examine them, or human imagination represent them, is the talk which this mighty poet has

undertaken and performed.

In the examination of epick poems, much speculation is commonly employed upon the characters. The characters in the Paradife Loft, which admit of examination, are those of angels and of man; of angels good and evil; of man in his innocent and finful fate.

Among the angels, the virtue of Raphael is mild and placid, of easy condescension and free communication; that of Michael is regal and lofty, and, as may feem, attentive to the dignity of his own nature. Abdiel and Gabriel appear occasionally, and act as every incident requires; the folkary fidelity of Abdiel is very amiably

painted.

Of the evil angels the characters are more diverlified. Satan, as Addison observes, such sentiments are given as suit the most exalted and most depraved being. Milton has been centured, by Clark, for the implety which sometimes breaks from Satan's mouth. For there are thoughts, as he justly remarks, which no observation of character can justify, because no good man would willingly permit them to pass, however transiently, through his own mind. To make Satan speak as a rebel, without any such expresfions as might taint the reader's imagination, was indeed one of the great difficulties in Milton's undertaking, and I cannot but think that he has extricated himself with great happiness. is in Satan's speeches little that

can give pain to a pious ear. The language of rebellion cannot be the lame with that of obedience. The malignity of Satan foams in haughtiness and obstinacy; but his expressions are commonly general. and no otherwife offensive than as they are wicked.

The other chiefs of the celestial rebellion are very judiciously difcriminated in the first and second books; and the ferocious character of Moloch appears, both in the battle and the council, with exact

confiltency.

To Adam and to Eve are given, during their innocence, such sentiments as innocence can generate and utter. Their love is pure benevolence and mutual veneration: their repails are without luxury, and their diligence without toil. Their addresses to their Maker have little more than the voice of admiration and gratitude. Fruition left them nothing to ask, and Innocence left them nothing to tear.

But with guilt enter distruct and discord, mutual accusation, and Rubborn self-defence; they regard each other with alienated minds, and dread their Creator as the avenger of their transgression. At last they seek shelter in his mercy, fosten to repentance, and melt in supplication. Both before and after the fall, the superiority of Adam is diligently suftained.

Of the probable and the marwellous, two parts of a vulgar epick poem, which immerge the critick in deep confideration, the Paradise Lost requires little to be said.. It contains the history of a miracle, of Creation and Redemption 5

it displays the power and the mercy of the Supreme Being; the probable therefore is marvellous, and the marvellous is probable. The substance of the narrative is truth; and as truth allows no choice, it is, like necessity, superior to rule. To the accidental or adventitious parts, as to every thing human, some slight exceptions may be made. But the main fabrick is immovably supported.

It is justly remarked by Addifon, that this poem has, by the
nature of its subject, the advantage above all others, that it is
universally and perpetually interesting. All mankind will,
through all ages, bear the same
relation to Adam and to Eve, and
must partake of that good and
evil which extend to themselves.

Of the machinery, so called from Oids à to unxains, by which is meant the occasional interposition of supernatural power, another sertile topick of critical remarks, here is no room to speak, because every thing is done under the immediate and visible direction of heaven; but the rule is so far observed, that no part of the action could have been accomplished by any other means.

Of episodes, I think there are only two, contained in Raphael's relation of the war in heaven, and Michael's prophetick account of the changes to happen in this world. Both are closely connected with the great action; one was necessary to Adam as a warning, the other as a consolation.

To the compleatness or integrity of the design nothing can be ob-

jected; it has distinctly and clearly what Aristotle requires, a beginning, a middle, and an end. There is perhaps no poem, of the same length, from which so little can be taken without apparent mutilation. Here are no funeral games, nor is there any long description of a shield. The short digressions at the beginning of the third, seventh, and ninth books, might doubtless be spared; but superfluities so beautiful, would take away? or who does not wish that the author of the Iliad had gratified succeeding ages with a little knowledge of himfelf? Perhaps no passages are more frequently or more attentively read than those extrinsick paragraphs; and, fince the end of poetry is pleasure, that cannot be poetical with which all are pleased.

The questions, whether the action of the poem be strictly one, whether the poem can be properly termed beroick, and who is the hero, are raised by such readers as draw their principles of judgment rather from books than Milton, though he from reason. intituled Paradise Lost only a poem, yet calls it himself beroick song. Dryden, petulantly and indecently, denies the heroism of Adam. because he was overcome; but there is no reason why the hero should not be unfortunate, except established practice, since success and virtue do not go necessarily together. Cato is the hero of Lucao; but Lucan's authority will not be suffered by Quintilian to decide. However, if success be necessary, Adam's deceiver was at last crushed; Adam was restored

fore may securely resume his human rank.

After the scheme and fabrick of the poem, must be considered its component parts, the fentiments and the diction.

The fentiments, as expressive of manners, or appropriated to characters, are, for the greater part,

unexceptionably just.

Splendid passages, containing lessons of morality, or precepts of prudence, occur seldom. Such is the original formation of this poem, that, as it admits no human manners till the fall, it can give little affistance to human conduct. Its end is to raise the thoughts above the praise of that fortitude, with which Abdiel maintained his fingularity of virtue against the scorn of multitudes, may be accommodated to all times; and Raphael's reproof of Adam's curiofity after the planetary motions, with the answer returned by Adam, may be confidently opposed to any rule of life which any poet has deli-

The thoughts which are occasionally called forth in the progress, are such as could only be produced by an imagination in the highest degree fervid and active, to which materials were supplied by incessant study and unlimited curiosity. The heat of Milton's mind might be said to sublimate his learning, to throw off into his work the spirit of science, unmingled with its groffer parts.

He had confidered creation in or accompany the choirs of heaven. its whole extent, and his descriptions are therefore learned. He other worlds: he must sometimes

to his Maker's favour, and there- had accustomed his imagination to unrestrained indulgence, and his conceptions therefore were extensive. The characteristick quality of his poem is sublimity. He fometimes descends to the elegant, but his element is the great. He can occasionally invest himself with grace; but his natural port is gigantick loftiness. He can please when pleasure is required; but it is his peculiar power to aftonish.

He feems to have been well acquainted with his own genius, and to know what it was that nature had bestowed upon him more bountifully than upon others; the power of displaying the wast, sublunary cares or pleasures. Yet, illuminating the splendid, enforcing the awful, darkening the gloomy, and aggravating dreadful: he therefore chose a subject on which too much could not be said, on which he might tire his fancy without the censure

of extravagance.

The appearances of nature, and the occurrences of life, did not satiate his appetite of greatness. To paint things as they are, requires a minute attention, and employs the memory rather than the fancy. Milton's delight was to fport in the wide regions of postibility; reality was a scene too narrow for his mind. He sent his faculties out upon discovery, into worlds where only imagination can travel, and delighted to form new modes of existence, and furnish fentiment and action to superior beings, to trace the counsels of hell,

But he could not be always in

Algarotti terms it gigantesca sublimità Miltoniana.

revisit earth, and tell of things visible and known. When he cannot raise wonder by the sublimity of his mind, he gives delight by its fertility.

Whatever be his subject, he never fails to fill the imagination. But his images and descriptions of the scenes or operations of nature do not seem to be always copied from original form, nor to have the freshness, raciness, and energy of immediate observation. saw nature, as Dryden expresses it, through the spectacles of books; and on most occasions calls learning to his assistance. The garden of Eden brings to his mind the vale of Enna, where Proserpine was gathering flowers. makes his way through fighting elements, like Argo between the Cyanean rocks, or Ulyffes between the two Sicilian whirtpools, when he shunned Charybais on the larboard. The mythological allusions have been justly censured, as not being always used with notice of their vanity; but they contribute variety to the narration, and produce an alternate exercise of the memory and the fancy.

His similies are less numerous, and more various, than those of his predecessors. But he does not confine himself within the limits of rigorous comparison: his great excellence is amplitude, and he expands the adventitious image beyond the dimensions which the occasion required. Thus, comparing the shield of Satan to the orb of the Moon, he crowds the imagination with the discovery of the teleforpe, and all the wonwhich the telescope disco-VITS.

Of his moral fentiments it is hardly praise to affirm that they excel those of all other poets; for this superiority he was indebted to his acquaintance with the facred ancient epick 1 he writings. poets, wanting the light of Revelation, were very unkilful teachers of virtue: their principal characters may be great, but they are The reader may not amiable. rise from their works with a greater degree of active or passive tortitude, and fometimes of prudence; but he will be able to carry away few precepts of justice, and none of mercy.

From the Italian writers it appears, that the advantages of even Christian knowledge may be possessed in vain. Ariosto's pravity is generally known; and though the deliverance of Jerusalem may be considered as a sacred subject, the poet has been very sparing of moral instruction.

In Milton every line breathes fanctity of thought, and purity of manners, except when the train of the narration requires the introduction of the rebellious spirits; and even they are compelled to acknowledge their subjection to God, in such a manner as excites reverence and confirms piety.

Of human beings there are but two; but those two are the parents of mankind, venerable before their sall for dignity and innocence, and amiable after it for repentance and submission. In their first state their affection is tender without weakness, and their piety sublime without presumption. When they have sinned, they shew how discord begins in natural frailty, and how it ought to cease in mutual

forbearance; how confidence of the divine favour is forfeited by fin, and how hope of pardon may be obtained by penitence and prayer. A state of innocence we can only conceive, if indeed, in our present misery, it be possible to conceive it; but the sentiments and worship proper to a fallen and offending being, we have all to learn, as we have all to practise.

The poet, whatever be done, is always great. Our progenitors, in their first state, converted with angels; even when folly and fin had degraded them, they had not in their humiliation the port of mean suitors; and they rise again to reverential regard, when we find that their prayers were heard.

As human passions did not enter the world before the fall, there is in the Paradise Lost little opportunity for the pathetick; but what little there is has not been lost. That passion which is peculiar to rational nature, the anguish arising from the consciousness of transgression, and the horrors attending the sense of the Divine displeasure, are very justly described and forcibly impressed. But the passions are moved only on one occasion; sublimity is the general and prevailing quality in poem; sublimity variously modified, sometimes descriptive, sometimes argumentative.

The defects and faults of Paradise Lest, for faults and defects every work of man must have, it is the business of impartial criticism to discover. As, in displaying the excellence of Milton, I have not made long quotations, because of selecting beauties there had been no end, I shall in the same general manner mention that

which feems to deserve censure; for what Englishman can take delight in transcribing passages, which, if they lessen the reputation of Milton, diminish in some degree the honour of our country?

The generality of my scheme does not admit the frequent notice of verbal inaccuracies; which Bently, perhaps better skilled in grammar than in poetry, has often sound, though he sometimes made them, and which he imputed to the obtrusions of a reviser whom the author's blindness obligated him to employ. A supposition rash and groundless, if he thought it true; and vile and pernicious, if, as is said, he in private allowed it to be salse.

The plan of Paradise Less has this inconvenience, that it comprises neither human actions nor human manners. The man and woman who act and suffer, are in a state which no other man or woman can ever know. The reader sinds no transaction in which he can be engaged; beholds no condition in which he can be engaged; beholds no condition in which he can by any effort of imagination place himself; he has, therefore, little natural curiosity or sympathy.

We all, indeed, feel the effects of Adam's disobedience; we all fin like Adam, and like him must all bewail our offences; we have restless and insidious enemies in the fallen angels, and in the blessed spirits we have guardians and friends; in the redemption of mankind we hope to be included; and in the description of heaven and hell we are surely interested, as we are all to reside hereafter either in the regions of horror or of bliss.

D 2 But

But these truths are too important to be new; they have been taught to our infancy; they have mingled with our solitary thoughts and familiar conversation, and are habitually interwoven with the whole texture of life. Being therefore not new, they raise no unaccustomed emotion in the mind; what we knew before we cannot learn; what is not unexpected cannot surprise.

Of the ideas suggested by these awful scenes, from some we recede with reverence, except when stated hours require their association; and from others we shrink with horror, or admit them only as salutary instictions, as counterposses to our interests and passions. Such images rather obstruct the career of fancy than excite it.

Pleasure and terror are indeed the genuine sources of poetry; but poetical pleasure must be such as human imagination can at least conceive, and poetical terror such as human strength and fortitude may combat. The good and evil of eternity are too ponderous for the wings of wit; the mind sinks under them in passive helplessness, content with calm belief and humble adoration.

Known truths, however, may take a different appearance, and be conveyed to the mind by a new train of intermediate images. This Milton has undertaken, and performed with pregnancy and vigour of mind peculiar to himfelf. Whoever considers the few radical politions which the Scriptures afforded him, will wonder ·by what energetick operation he expanded them to such extent, and ramified them to fo much variety, restrained as he was by religious

reverence from licenticularly of fiction.

Here is a full display of the united force of study and genius; of a great accumulation of materials, with judgment to digest, and fancy to combine them: Milton was able to select from nature, or from story, from ancient sable, or from modern science, whatever could illustrate or adorn his thoughts. An accumulation of knowledge impregnated his mind, sermented by study, and sublimed by imagination.

It has been therefore said, without an indecent hyperbole, by one of his encomiasts, that in reading Paradise Loss we read a book of

universal knowledge.

But original deficience cannot be supplied. The want of human interest is always felt. Paradise Loss is one of the books which the reader admires and lays down, and sorgets to take up again. Its perusal is a duty rather than a pleasure. We read Milton for instruction, retire harrassed and overburdened, and look elsewhere for recreation; we desert our master, and seek for companions.

Another inconvenience of Milton's design is, that it requires the description of what cannot be described, the agency of spirits. He saw that immateriality supplied no images, and that he could not show angels acting but by instruments of action; he therefore invested them with form and matter. This, being necessary, was therefore desensible; and he should have secured the consistency of his system, by keeping immateriality out of sight, and enticing his reader to drop it from his thoughts.

But he has unhappily perplexed his poetry with his philosophy. His internal and celestial powers are iometimes pure spirit, and iometimes animated body. Satan walks with his lance upon the burning marle, he has a body; when in his passage between hell and the new world, he is in danger of sinking in the vacuity, and is supported by a gust of rising vapours, he has a body; when he animates the toad, he seems to be mere spirit, that can penetrate matter at pleasure; when he farts up in bis own shape, he has at least a determined form; and when he is brought before Gabriel, he has a spear and spield, which he had the power of hiding in the toad, though the arms of the contending angels are evidently material.

The vulgar inhabitants of Pandæmonium being incorporeal spirits, are at large, though without number, in a limited space; yet in the battle, when they were overwhelmed by mountains, their armour hurt them, crushed in upon their substance, now grown gross by This likewise happened finning. to the uncorrupted angels, who were overthrown the sooner for their arms, for unarmed they might eafily as spirits bave evaded by contraction, or remove. Even as spirits they are hardly spiritual; for contradion and remove are images of matter; but if they could have elcaped without their armour, they might have escaped from it, and left only the empty cover to be battered. Uriel, when he rides on a fun-beam, is material: Satan is material when he is afraid of the prowess of Adam.

The confusion of spirit and matter which pervades the whole

narration of the war of heaven fills it with incongruity; and the book, in which it is related, is, I believe, the favourite of children, and gradually neglected as know-

ledge is increased.

After the operation of immaterial agents, which cannot be explained, may be considered that of allegorical persons, which have no real existence. To exalt causes into agents, to invest abstract ideas with form, and animate them with activity, has always been the right of poetry. But such airy beings are, for the most part, suffered only to do their natural office; and retire. Thus Fame tells a tale, and Victory hovers over a general, or perches on a Randard; but Fame and Victory can do no more. To give them any real employment, or ascribe to them any material agency, is to make them allegorical no longer, but to shock the mind by ascribing effects to non-entity. In the Prometheus of Æschylus, we see Violence and Strength, and in the Alcestis of Euripides, we see Death brought upon the stage, all as active perfons of the drama; but no precedents can justify absurdity.

Milton's allegory of Sin and Death is undoubtedly faulty. Sin is indeed the mother of Death, and may be allowed to be the portress of hell; but when they stop the journey of Satan, a journey described as real, and when Death offers him battle, the allegory is broken. That Sin and Death should have shewn the way to hell might have been allowed; but they cannot facilitate the passage by building a bridge, because the difficulty of Satan's passage is described as real and sensible, and

Q 3

the

the bridge ought to be only figurative. The new affigures to the residual to the residual as not less to all than the residence of man. It is placed in some distant part of pice, separated from the regions of narming and order by a chaotick white and an unoccuped value; not Sn and Deab worked up a mole of aggregated soil, cemented with applains; a work too bunky for ideal ar hirests.

This unferral allegory appears to me one of the greatest faults of the poem; and to this there was no temptation, but the author's

opinion of its beauty.

To the conduct of the narrative some objections may be made. Satan is with great expectation brought before Gabriel in Paradile, and is suffered to go away unmolested. The creation of man is represented as the consequence of the vacuity lest in heaven by the expulsion of the rebels, yet Satan mentions it as a report rife in heaven before his deporture.

To find featiments for the state of innocence, was very difficult; and something of anticipation perhaps is now and then discover-Adam's discourse of dreams seems not to be the speculation of a new-created being, I know not whether his answer to the angel's reproof for curiofity does not want something of propriety: it is the speech of a man acquainted with many other men. Some philosophical notions, especially when the philosophy is falle, might have been better omitted. The angel, in a comparison, speaks of timerous deer, before deer were yet timorous, and before Adam could understand the comparison,

Dryden remarks, that Milton has some flats among his elevations. This is only to say that all the parts are not equal. In every work one part mud be for the take of others; a palace must have pailages; a poem must have tranfitions. It is no more to be required that wit should always be blazing, than that the fun should always hand at noon. In a great work there is a vicissitude of luminous and opake parts, as there is in the world a fuccession of day and night. Milton, when he has expatrated in the sky, may be allowed sometimes to revisit earth; for what other author ever soared to high, or tultained his flight to long?

Milton, being well versed in the Italian poets, appears to have borrowed often from them; and, as every man learns something from his companions, his desire of imitating Ariosto's levity has disgraced his work with the Paradise of Fools; a section not in itself illimagined, but too ludicrous for its

place.

His play on words, in which he delights too often; his equivocations, which Bentley endeavours to defend by the example of the ancients; his unnecessary and ungraceful use of terms of art, it is not necessary to mention, because they are easily marked and generally censured, and at last bear so little proportion to the whole, that they scarcely deserve the attention of a critick.

Such are the faults of that wonderful performance, Paradife Lost; which he who can put in balance with its beauties must be considered not as nice but as dull, as less to be censured for want of candour than pitied for want of sensibility.

Of Paradise Regained, the general judgment teems now to be right, that it is in many parts elegant, and every-where infiructive. It was not to be supposed that the writer of Paradije Lost could ever write without great effusions of fancy, and exalted precepts of wildom. The bans of Paradise Regained is narrow; a dialogue without action can never please like an union of the narrative and dramatick powers. Had this poem been written not by Milton, but by fome imitator, it would have claimed | and received universal praise.

Of the Customs and Characters of Women in the East. From Richardson on the Languages, &c. of Eastern Nations.

RAVELLERS, in general, do not appear to have conceived a just idea of the fituation of Women in many Eattern coun-They are, for the most part, confidered by them as of imall **consequence** in the state: they are represented as mere flaves to the passions of the stronger sex: and because the great men keep many beautiful Circassians locked up from public view, a proper diftinctions does not feem always to have been made between them and free-born women. But an attention to the languages and customs of Alia, will give us reason to believe, that such indiscriminate observations are partial, superficial, and inconclusive. I have already thrown out some ideas on this subject: and shall here offer a few more facts, which appear to streng-

then my opinion.

In Arabia, very early, we find the women in high confiderapossessing privileges tion; and hardly inferior to those which they enjoy in the most enlightened They had a countries of Kurope. right, by the laws, to the enjoyment of independent property, by inheritance, by gift, by marriagefettlement, or by any other mode The wife had a of acquisition. regular dower, which she was to enjoy in full right after the demise of her husband: and she had also à kind of pin-money, or paraphernalia, which she might dispose of in her life time, or bequeath at her death, without his knowledge or confent.

To this confideration and weight, which property, by the laws and customs of the Arabians, gave to the female fex, it may even perhaps be no extravagant stretch of thought, to trace the success, if not the origin, of a religion, which, from the extensiveness of its operations, may be confidered as one of the greatest events in the history of mankind, Poverty, as Cardinal de Retz justly observes, is the grave of many a great defign. And so low in circumstances was Mohammed, in the early part of life, that had it not been for the weight and power which he derived from his marriage with a rich widow, his enthusiasm might, perhaps, have just existed and expired with himself. His father Abdallah was a younger son of Abdollmotalleb, chief of the Koreish tribe; but, dying young, he lest Mohammed and his mother, for all their estate, only five camels and an Ethiopian

4

When

When he arrived at man's estate, his fortune was, of consequence, so humble, that he was recommended by his uncle as factor to the widow Khadijah; who carried on an extensive trade with Syria This lady and other countries. was of a noble family, and of the same tribe. She had been twice married: she had been largely left by both husbands: and had improved the whole by commerce. Her young factor was esteemed the handlomest man of his age: his genius was quick: and his address infinuating. She made him her and, with her third husband: hand, she gave him the disposal of her fortune. Being a man of birth, this raised him at once, from a menial station, to a level with the first nobles of Arabia; and gave him consequence, independence, and leisure, sufficient to prepare the plans for his future greatness. It was fifteen years after this marriage before he publicly assumed the prophetic character: and he then met with such vigorous opposition, particularly from the leading men of his own tribe, that, nearly crushed as he often was, he must probably have been quite overwhelmed, had not his riches, by increasing his power, his importance, and his profelytes, furnished him with resources to overcome difficulties, which might otherwise have baffled all the vigour of his genius.

The Prophet, at his death, left many widows: four of whom, whilft they lived, had confiderable weight in the councils of the Arabs. But the influence of Ayesha, whom they dignified with the title of Mether of the Faithful, was almost unbounded. Ali, as son in-law and

coufin-german to Mohammed, was generally considered as his succesfor: but he had incurred the difpleasure of Ayesha, whom he had once, with many others, accused of incontinence: and the never forgave him. Her father Abubeker owed his elevation to the Khalifat chiefly to her address. Upoa his decease, the supported Omar. She was chief conspirator against Othman, the successor of Omar. And when Ali, at length, succeeded to the Khalifat, she headed a formidable rebellion against him. She took Basrah; and gave him This fabattle near that place. mous action is called Yumu' l'jamal, the day of the camel, from a large white one, upon which the was She rode through the mounted. ranks; and, to animate her troops, the drove into the thickest of the battle. Seventy hands, it is said, were struck off, in attempting to seize her bridle. And, when the legs of her camel were at length cut off, the carriage in which the sat resembled a porcupine, from the number of javelins and arrows with which it was transfixed. The superior generalship of Ali prevailed; her army, though more numerous, was routed; and the fell into the hands of the Khalif. When brought before him, he said, "What doft thou think of the ", work of God to thee?" answered, "Thou has genquer-" ed, O Ali! be merciful." The generous Ali did show her mercy. He sent her to Medina, attended by seventy women in men's apparel: where the was ordered to confine herself to her house, and w meddle no more in state assairs. On the death of Ali, however, the recovered her influence; many

many years afterwards, when Moawiyah wished to make the Khalifat hereditary in his family, he thought it necessary to secure her interest, by a present of bracelets valued at 150,000 dinars, near 70,000 l.

The Arabian women of rank feem indeed to have taken a very active concern both in civil and military affairs, At the battle of Ohod, where Mohammed was defeated by the Pagan Meccans, the reserve, we find, was led on by Henda, the wife of Abu Sofian, a man of the first rank. She was accompanied by fifteen other women of distinction; who, with mufic and exhortations, animated the By their spirit and retroops. proaches they were repeatedly rallied, when retiring before Mohammed: and by them, in a great measure, was the fortune of the day decided.

One of the most considerable of the prophet's opposers, was a lady called Forka; who seems to have answered exactly the description of a feudal peeress in the middle ages of Europe. She was possessed of rerritory, of a castle, and of great riches and confideration. troops had checked the inroads of the Prophet's marauding parties; and Zeid, one of his chief generals, was fent to reduce her to obedience. The defence of her castle was obstinate: but it was at length. taken, by florm: and the lady, with part of her garrison, were killed. Amongst other captives as Forka's young daughter and heires; who, with all her wealth, became the prize of the conqueror.

Many other examples might be given; but it may be sufficient, for the present subject, to observe in general, that the dignified be-

haviour, which distinguished the Arabian women, long before and after Mohammed, points clearly to a consciousness of their own importance: to which an habitual slavery and subjection could never possible have given birth

fibly have given birth.

Numberless instances of the consequence of women might be brought also from Persia, Tartary, and other Eastern countries. But I must again beg the reader to remember, that the limits of these sketches will not permit me to enter into details; or to present to his attention any thing but mere It is certain, among other privileges, that they possessed the right of succession to the throne; and often afted as regents during the minority of their fons. Toursa dokht and Azurmi dokht, the daughters of Khofrou Parvis, were successively the reigning queens of Persia, a sew years before the Mohammedan conquest.—About beginning of the tenth century, queen Seidet was regent, during the non-age of her son, and governed with much wisdom. When he took the reins of government, he appointed the famous physician Avicenna to be his vizir. public affairs being managed with much imprudence, the queen mother, finding herfelf treated with indignity, retired from court; and, raising an army, defeated her son: whom, nevertheless, she restored to the throne; and affished, from that time, with her councils. kingdom flourished whilf she lived: but on her death, the powerful Sultan Mahmoud of Ghezna, who had ever treated her with much respect, attacked her dissipated son, . and annexed Persia to his empire.

According

According to Abulgazi Khan, by the ancient laws of the Mogula. a prince could not reign till he was thirty years of age: on which occasions, the queen mother acted always as regent. He gives an instance, in this place, of a princess, named Alcana, (from whom Jengiz Khan derived descent) who governed her people, for many years, during the minority of her foa. Torkhan Khatun, a Tartar lady, mother of Mohammed, Sultan of Kharezmé, was a princels of uncommon abilities, and had such an ascendancy over her son, that she, in a great measure, governed the kingdom; which, before the invalion of Jengiz Khan, was confidered as the most powerful in the East: and the court the most magmificent and police. Yet ladies of she first distinction thought it not inconfishent with the delicacy of their sex to take the field against the Moguls. They made also many fallies during the siege of. the capital; which held out, near twelve months, against a prodigious army commanded by three of Jengiz Khan's fons. And, when it was taken at last by assault, the inhabitants, male and female, retired, fighting, from house house, and from street to street; till, according to the lowest computation, above a hundred thoufand were killed. The spirit, indeed, of the Kharezmian women, has induced some writers to consider them as the descendants of the ancient Amazons.

The Vizir Nezam gives many instances of the political instance of the Women in Eastern courts; and is at insinite pains to advise his son to pay to them the highest attention. He divides the court

into four classes, at the head of which he places the Women: and observes, that much of his success will depend upon the manner in which he conducts himself towards The first class that claims your notice, fays he, are the principal Women: the next; King's Sons; after them, the great Omras: and, last of all, the inferior Ministers. — Altun continues the Vizir, was the first Omra of the Divan, in the reign of Sultan Mahmoud of Ghezna. When the government of Kharezmé being vacant, he solicited the appointment. As he was effectmed the chief pillar of the throne, the court was surprized, that he should have accepted it. And a friend begging of him to know, what could induce him to relign the power he had over so vast an empire, to take the charge of a corners Altum Tash replied, " By the God who created beaven and earth, the fecret which I chall " now disclose to you I have not " revealed to any living foul. " was the enmity of Jemila_Kan-" dahari, and that only, which " made me give up the power I " had over 'this great empire. " For, many years have the affairs " thereof been under my manage-" ment: and, in that time, what-" ever I tied the unloofed; and " whatever I unloosed she tied. "What she resolved upon I was " incapable of opposing; " whatever she opposed it was in " vain for me to attempt. Vexed " with being continually foiled, " and unable to apply a remedy, " the world appeared dark in my " eyes; and I voluntarily threw " myself into this retirement, " where I work in God I shall be ss lafe

ss safe from the effects of her rese sentment." We must not suppose, that this semale influence was thus powerful in the court of a weak or a dissipated prince: for Mahmond was one of the greatest monarchs that ever reigned: almost the whole of his great empire he had conquered him(elt; and it was governed intirely under Jemila Kanhis own inspection. dahari appears to have been the first lady of the bed-chamber to Mahmoud's Sultana: and her refentment against Altun Tash, was owing to his opposition to the Vizir Alimen Hassan, whom the patronized. Gallantry, at the tame time, does not appear to have had any concern in her operations: for Nezam observes, that, though her favourite Ahmed corresponded with her often, they did not fee one another perhaps once in twelve months.

Marriage settlements and portions given with daughters, or sifzers, appear to be of great antiquity in Arabia: for, long before Mohammed, they had refined fo much upon them, that it became common, where two men were obliged to give great fortunes with their female relations, to evade payment, by making a double espousing marriage; one daughter or fifter of the other; and giving his daughter or lister in re-This practice, which they called Sbigar, probably with the view of encouraging alliances among different tribes, or preventing too much wealth from accumulating in particular families, Mohammed declared to be illegal in the Alcoran.—The separate property, or paraphernalia, which the wife enjoyed, feems to have been the produce of such presents as the bride received from her friends or from her future hulband, before marriage. Those . of the bridegroom, which were called Nukl, had no fixed medium; being proportioned to his affection. to his fortune, and often to his offentation: for it was customary to lend those presents, a day or two before the nuprials, with great pomp, from his house to the dwelling of the bride. And although the whole might have been carried, perhaps with ease, by one or two camels, horses, or servants, they would frequently make a procellion of ten, twenty, thirty, or more: every one bearing fomething, fet off with ornaments, in a gay thewy manner.

Their marriage ceremonies, in the East, seem indeed to have been, in all times, attended with much festivity and public parade. All the friends of both families asfembled: and, where the fortune or the vanity of the bridegroom, or father of the bride, were confiderable, they were in goneral very The nuptials of perexpensive. fons of high rank, were aftonishingly splendid. The marriage of the Khalif Almamoun with the daughter of Hassan Sahal, governor of Babylonian Irak, was attended with almost incredible expence. Slaves or both fexes, with other rich presents, were sent by the governor to every grandee. He defrayed the expence of the whole court and of the Khaliff's guards. during that prince's residence at Fommalialeh, where Hassan Sahal generally lived. The roads from thence to Baghdad, for near a hundred miles, were covered with mais of gold and filver fluff: and the bride's head dress was adorned

with

with a thousand pearls; each, (if there is no mistake or exaggeration) of the size of a pigeon's egg or of a large nut: which the Khalif immediately settled on her, as part of her dower.

Even upon ordinary occasions it was usual to throw amongst the populace, as the procession moved along, money, sweetmeats, flowers, and other articles; which the people catched in cloths, made for such occasions, stretched in a particular manner upon frames. With regard to the money, however, there appears often to have been a mixture of occonomy, or rather of deception; which probably arose from the necessity of complying with a cuftom, that might be illfuited to the fortunes of some, and to the avarice of others; for we find, that it was not uncommon to collect bad money, called kelb, at a low price, to throw away at nuptial processions.

The bride, on the day of marriage, was conducted with great ceremony by her friends to her husband's house; and immediately on her arrival, the made him a variety of presents; especially of boushold furniture, with a spear, and a tent. There seems to be a carious similitude, in some of those ceremonies, to customs which prevailed amongst the old Germans, before they left their forests; as well as among the Gothic nations, after they were established in their conquetts. Tacitus observes, that the German bridegrooms and brides made each other reciprocal prefents; and particularly of arms The gifts made to and cattle. the Eastern bride appear likewise to have been upon the same principles with the Mergengabe, or

Morning gift, which it was common for the European husband, in the early and middle ages, to present to his wife the morning after marriage. And, whilst the dower, in both, seems to have reverted, upon the death of the widow, to the kindred of the husband, the presents were lest entirely at her own disposal.

A man, without the interpolition of the law, might divorce his wife, provided he paid to whatever dower had been settled by the marriage contract: unless he could prove, to the satisfaction of her assembled friends, that her conduct had given sufficient cause for the separation: in which case, her fortune and fettlements were The wife had also the same power of divorce, if the disliked her husband: but then she relinquished her settlements, and returned all the presents she had received from him before or after marriage. A man might re-marry his divorced wife, even unto the third time; beyond which it was unlawfol, The form of repudiation was very concise: the husband saying only, "Get thee " gone, I care not for thee." Yet simple as it was, they considered it as so binding, that if a couple lived afterwards together, without the ceremony of a re marriage, it was reckoned infamous, and viewed in the same light as adultery.

Temporary marriages are common in many parts of the East. The Arabians call them Almutab. The Alcoran speaks rather equivocally with regard to them; which has opened a field for much difference of opinion among the Mohammedan lawyers. About the beginning of the ninth century they

they were interdicted by the Khalif Almamoun: but they were never entirely discontinued; and are now very common. They are contracted by a written indenture, witnessed by the Cadhi; and a certain sum is settled upon the woman, to be paid to her on the expiration of the term; when the engagement may either be renewed or sinally dissolved. The offspring of such connexions cannot inherit.

A fingular matrimonial custom, we may here remark, somewhat resembling the above, prevailed of old in many parts of Europe. Men of rank, who had lost their wives, but had children, to avoid burthening their estates, might marry low-born women; who, bringing no fortune, were intitled to no dower. These contracts (according to Baron von Lowhen) are still prevalent in Germany; where they are stiled Left-banded marriages: it being a part of the ceremony for the bridegroom to give his left hand to the bride. The children of fuch marriages are not capable of inheriting; and bear neither the name nor arms of the father.

We find in Scripture, that when a man died, leaving no iffue by his wife, it was sometimes incumbent upon his next unmarried brother to espoule the widow. A cuftom fimilar to this, is not only found among the Arabians, but another fill more strange. where a father left one or more widows, the fons often married them, provided they were not their own mothers. This usage was suppressed by Mohammed: and it appears, even before his time, to have been marked with a degree of detectation; the word Makt, which denotes this species o marriage, fignifying also batre and enmity. Marrying a brother's widow, if childless, is still customary in some parts of Tartary; particularly in Circassia. Abulgazi Khan mentions several princes who had married their He seems indeed itep-mothers. to confider it as a thing of course: and particularly tells us, that Octai Khan married one of the widows of his father Jengiz Khan. what has most surprized me, is to find so odd a custom prevailing even in Scotland, so late as the eleventh century: it being mentioned by Lord Hailes in his Annals; who supposes, that it might have originated from avarice, in order to relieve the heir from the payment of a jointure.

An inflitution, we are informed, was introduced or revived among the Moguls and Tartars by Jengiz Khan, which appears to have been founded on the principles of found political wisdom: two families, though all their children were dead, being permitted to form a matrimonial alliance, by marrying the deceased son of one to the deceased daughter of the other. These nuptials had often most salutary confequences; hostile tribes having been united by this imaginary tie, when all other means of pacification had failed. And they form even to have viewed it with more superstitious veneration than if the parties had been alive: confidering any breach of treaty, after this ideal contract, as drawing upon themselves the vengeance of the departed spirits. The ancient Persians, from a notion that married people were peculiarly happy in a future state, used often

to hire persons, to be espoused to fuch of their relations as bad died

in celibacy.

It may not be quite foreign to the present subject, to make a sew remarks upon some peculiarities in the dreft of Eastern women; as even from thence some fresh lights may be thrown upon the female In all countries where character. dress has arrived at any degree of refinement, whatever is confidered as a beauty will generally be imitated by art, where nature has denied her bounty. To this general propensity we may trace the origin of face-painting, patches, the bolstering of the petticoats, false hair, and the feathered ornaments of the head: all which we discover very early in the East. From the description of Jezebel, and from various other passages in the Old Testament, we find, that facepainting was then fashionable among women of rank: and from these words of Jeremiah, (ch. iv. 30) "Though thou rendest thy " face with painting, in vain shalt "thou make thyself fair;" we plainly discover, that the Jewish women had then carried it to the vicious excess, of even rending and disfiguring their faces, by repeated and intemperate ulc,

The words in Arabic and Perfian, which express painting in all its stages, are very numerous. They paint their cheeks and also their nails with red; the rest of the face, the neck, and the arms, with white; and their eyes, in a particular manner, with black, to there appear to have been more give them a fine lustre. Eyepainting, we find, was common in even lately by the ladies of Eng-Ezekiel's time, (ch. xxiii. 40.) "Thou didst wash thyself, paint-" edst thine eyes, and deckedst

" thyself with ornaments." particular colours which the Women of Palestine affected, are not mentioned: but, among the Persians and Arabians, we find not only red, black, and white, but even saffron and other Their hair washes for the face. they comb with great care; they highly perfume it with odoriferous unguents or pomatums. Tire-women are much employed: and there are even females, whose only business is to clean, thin, and

sharpen the teeth.

Among other fashions, which may possibly have been borrowed from Asia, are ornamental patches. Black moles on the face have been long confidered as a fingular beauty in the East. We have only to look into the Arabian and Persian poets for innumerable inflances of the enthuliasm with which they admired this fancied elegance. the ladies would, of consequence, use every art to imitate a beauty so highly prized, is extremely natural: and hence, perhaps, the fashion of substituting imprinted marks, or patches of black filk, to counterfeit nature. the same principles we may account for the number of words in the Arabic and Perfian languages which fignify bothering or quilting of the petticoats, to give an appearance of that fine swell below the wair, which those people esteem as one of the greatest elegancies of the female shape. False hair is also frequently alluded to; and feagenerally worn, than they were land.

I have now in my pessession a valuable eastern manuscript, the property

property of General Carnac, Governor of Bombay; which he purchased when Commander in Chief of the East India Company's forces in Bengal, for 1000 rupees (1251.) It contains extracts from the finest authors, especially Persians: some of which are ornamented in the Eastern manner, with drawings of the heroe's and heroines of their Some of the faces have confiderable merit: and the dress of the Princesses, when unveiled, has, in many respects, a resemblance to some of the fashion's of Europe. They are often drawn without any head-dress: the hair dark; and the ringlets waving down over their neck and shoulders. They have frequently round their heads a kind of diadem, set with precious stones; from which rise one or more tusts of seathers: the quills of which are set in sockets of gold and gems. times they have a short stubbed appearance; and fometimes they are long, and flow gracefully backwards. They wear sometimes notejewels, which those who have not been accustomed to them can never think a beauty. They have also ear-rings, not only in the lob, but in the upper part of the ear. Their necklaces confift of many rows of jewels, the lowest of which hang down over the bolom. Their dress, in general, when the upper garment is laid aside, is fitted exactly to the shape; and seems nearly to resemble what, I believe, is called a Jesuit; buttoning down the breaft, covering the pretty high, and the arms down to There is sometimes a the wrists. large square jewel on the fore part of the arm, a little below the shoulder. Their girdles are very broad,

generally made of fine leather: and covered entirely over with embroidery and gems. robes are long and flowing behind: and their ancles are often encircled with a ring of gold, ornamented with jewels. Upon their head they wear sometimes a lowcrowned cap, terminating in a roint, round which they wreathe feveral folds of fine linen or filk: to the top of which, when they go abroad, they fasten, with a gold bodkin, a veil which covers the face and a great part of the body. There are few of the female faces which have not one or two black moles or artificial marks: which the Persians name Khal, and the Arabians Ulieb. - Women of inferior rank, who cannot purchase make their jewels, necklaces. bracelets, and other ornaments, of small shells, or beads of different coloured glass.

It may be observed, before we finish this article of dress, that face and eye painting are also in use among the men; who pay the same attention to their beards, which the women pay to their hair. They persume them highly, and often tinge them; sometimes of a sine red, sometimes with saffron, and with various other dyes. Red was the favourite colour of Mohammed, Abubeker, or Omar: and their example was greatly sollowed.

Biographical Anecdotes of the late Mr. Garrick.

AVID Garrick, Esquire, was born at Hereford, about the month of February, 1716. His grandsather was a merchant

of French extraction, as it is said, who left his native country on the revocation of the edict of Nantz in the year 1685. This gentleman had two fons and two daughters: one of the former became a wine-merchant at Lisbon; and the other, whose name was Peter, the father of the late Mr. Garrick, followed the military profession, and had at the time of his death been advanced to a majority in the army. He married an Irish lady, and happened to be quartered at the Angel-Inn in Heretord, where his fon David (who was baptized * the 28th of February, 1716) was Mr. Garrick, the father, afterwards settled at Litchfield, and refided there several years. mort time before his death he determined to fell his commission. and for that purpose entered into a treaty with a gentleman who had agreed to give him 1100 l. for it; but, unfortunately, before sale was compleated he died, and left a numerous family in a great measure unprovided for.

His son David received the first part of his education at the free school of Litchfield; and very early found a friend in Gilbert Walmsley, Esq; † register of the ecclesiastical court there; a gentle-

man then unmarried and well advanced in years, whose partiality seemed to authorise some favourable expectations of a permanent provision; all which however were destroyed by Mr. Walmsley's unexpectedly taking a wife. however, recommended his young friend to Mr. Colson, master of the academy at Rochester, in order to compleat his education; and accordingly, in the month of March, 1736, Mr. Garrick left Litchfield, in company with Dr, Samuel Johnson, who at the same time quitted his profession of a schoolmaster, and came to London, where he has fince become one of the first ornaments of literature.

On the death of his father Mr. Garrick went over to Lisbon, and was received by his ancle with great kindness; and here perhaps he might have remained, but, that strictness of morals which a fond relation wished to see in his nephew not being observed at that place, to prevent his being corrupted, it was thought proper to send him back to England; his uncle still preserving a great regard for him, which he shewed at his death by leaving him a legacy of 1000 l.

The following is an extract from the register book of the parish of All Saints in the city of Hereford: "David Garrick, the son of Peter and Arabella Garrick, was baptized the 28th of February, 1716."

[†] This gentleman was also the friend of Dr. Samuel Johnson; who has given the world an account of his character in the preface to the Poems of Mr. Edmund Smith. It concludes in the following manner: " at this man's table, I enjoyed many chearful and instructive hours, with companions such as are not often found; with one who has lengthened and one who has gladdened life; with Dr. James, whose skill in physick will be long remembered; and with David Garrick, whom I hoped to have gratified with this character of our common friend: but what are the hopes of man! I am disappointed by that stroke of death which has eclipsed the gaiety of nations, and impowerished the publick stock of harmless pleasures."

It appears from Mr. Walmsley's letters, that Mr. Garrick was intended for the profession of the law; and accordingly, on the 9th day of March, 1736, immediately on his arrival in London, he was entered of the fociety of Lincoln's-Inn; but it is certain he never paid any attention to the study of that science: and indeed it is within the memory of many yet living, that his employment for a short time, in the interval between his return from Lisbon and his appearance on the stage, was of a nature very different from what he was first destined to, and what he afterwards purfued with fo much reputation and fuccess. We are credibly informed that he followed the business of a wine-merchant somewhere in or near Durham-Yard, being induced thereto, it may be presumed, by the encouragement and support of his uncle.

To whatever cause it was owing, we are not informed; but his fucces in buliness was not suffi-'cient to engage his continuance in it; and this want of success might perhaps arise from his attention to a more pleasing pursuit. He had at school performed the part of Serjeant Kite with applause; and he was now prompted to employ the talents which he possessed for his immediate support. He therefore went down to Ipswich, under the name of Lyddel, and performed in a strolling company there. The part in which he first appeared was that of Aboan in Oroonoko; and the approbation he met with in this country excursion encouraged him to pursue his plan in London. He, therefore, after being. (as it is reported) rejected Vol. XXII.

by the manager of Covent Garden, to whom he had offered his service, engaged with Mr. Gifford, at the theatre in Goodman's Fields, in the year 1740. The character he then attempted was that of Richard the Third; and he performed it in a manner which fixed his reputation on that basis upon which it stood, as the first actor of the times, during the rest of his life. 'Two circumstances were obferved on his first night's performance; one, that, on his entrance on the stage, he was under so much embarrassment, that for some time he was unable to speak: the other, that having exerted himfelf with much vehemence in the first two acts, he became so hoarse as to be almost incapable of finishing the character. This difficulty was obviated by a person bebind the scenes recommending him to take the juice of a seville orange, which he fortunately had in his pocket, and which enabled him to go through the remainder of the character with that degree of excellence which he always afterwards shewed in the performance of it, and which produced the applause which ever after uniformly attended him in it. The person to whom he owed the seafonable relief was the late Mr. Dryden Leach, printer, who used often to tell the story to his friends.

It was during this first year of his theatrical life that he produced the farce of The Lying Valet; a performance which has given pleafure to numberless spectators, even after the principal character ceased to be performed by its author. At the end of the season he went over to Ireland, and in that king-

dom added both to his fortune and his fame. The next year (1742 to 1743) he performed at Drury Lane, and the year after (1743 to 1744) at the same theatre. At the beginning of this seafon he was involved in a dispute with Mr. Macklin, who had joined with him in opposing the oppressions of the managers. That gentleman complained that he was deserted in the agreement made with the managers, and published a state of his case, in a pamphlet, intituled, "Mr. Macklin's Reply. " to Mr. Garrick's Answer. " which are prefixed, all the Pa-" pers which have publicly ap-" peared in regard to this im-" portant dispute." The next year (1744 to 1745) he continued at Drury Lane; but the succeeding feason (1745 to 1746) he went again to Dublin, and engaged with Mr. Sheridan as joint sharer and adventurer in the theatre there. In May 1746, he returned to London, and performed in six plays at the end of that month at Covent Garden, by which, we are told, he added 300% to a great fum acquired in Ireland. He performed but one year more as an hired actor (1746 to 1747) which was at Covent Garden theatre. where he produced Miss in ber Teens.

The mismanagement of the patentees of Drury Lane Theatre after the deaths of Booth and Wilks, and the retirement of Cibber from the stage, had ruined every person concerned in it. At this period the successors of Mr. Fleetwood became involved in so many difficulties, that it was no longer possible for them to continue the conduct of a business to which

they were strangers, and therefore they ought never to a c engaged in. In 1745 that gentleman had left the theatre to his creditors to manage, after making the best terms he was able for himself. They conducted the busnels of it for two lealons, when, unable to continue the management any longer, the property of the patent, house, and scenes, was hawked about to several persons; but so apprehensive was every one become of the bazard of intermeddling with the theatre, that no purchaser was for some time to be found. At this juncture the late Mr. Lacy stepped forward, and boldly ventured to engage for the purchase. Having the reputation of a man of integrity, he foon found friends among the monied men to support him in his undertaking; the success of it, he prudently concluded, must depend in some measure on the abi-. lities of the person with whom be should connect himself in scheme. Mr. Garrick's reputation, both as a man and an actor, naturally led him to with for his junction. A treaty was foon begun, and an agreement between them afterwards took place. Application was made for a new patent; which was obtained, and both their names inserted in its The season which began in 1747 was the first of their management, and was opened with an admirable Prologue, written by Dr. Johnson, and spoken by Mr. Garrick. From this time Drury Lane Theatre, which had been so fatal to many adventurers, became the fource of wealth and independence to both partners, who jointly exerted their several abilities in the managemanagement of the undertaking, with a degree of harmony which did credit to their understandings, and with a share of success which in some measure must be ascribed to that good correspondence which subsisted between them.

After he had been a manager two years, and the diffipation of youth had subsided, the charms of a lady, who then lived with the Countels of Burlington as a companion, made a conquest of him. It is unnecessary to add that this lady is at present his widow. is, we are informed, by birth a Her parents lived at German. Vienna; and the appeared on the stage there as a dancer. About the year 1744 she came to England, and performed at one of the theatres one or two seasons. was then called Madame Eva Maria Violetti. The union between them took place on the 22d day -of Jone, 1749; and we add, with great pleasure, that no marriage ever was attended with more happiness to both parties than this for near thirty years, during which time, it is on good authority afferted, they scarce passed a day separate from each other.

The theatrical season which commenced in the year 1750, was rendered remarkable by the spirit of rivalship which prevailed at both houses. At the beginning of Mr. Garrick's management he had engaged Barry, Macklin, Pritchard, Woffington, Cibber, and Clive; and, with thele excellent performers, it may be imagined the profits of the house were very con-Soon after, Mr. Barry, fiderable. who was under articles, refused to continue any longer at Drury Lane, and, when fued for the breach

of his contract, escaped from the penalty by means no way redounding to his honour. Macklin and Mrs. Cibber likewise went over to Covent Garden; as did Mrs. Woffington, who is faid to have entertained expectations of being united in marriage with Mr. Garrick. With these deserters, aided by the Veteran Quin, Mr. Rich openedCovent Garden Thea-Mr. Garrick, not intimidated by the strength of the oppolition, took the field on the 5th of Sept. with an occasional Prologue spoken by himself; which was answered by another delivered by Mr. Barry; and this again replied to by a very humourous Epilogue, admirably repeated by Mrs. Clive. Those were only preludes to the trial of strength which was foon to follow. The play of Romeo and Juliet had lain dormant many years. This was now revived at both houses; at Drury Lane, with alterations by Mr. Garrick, who performed the principal character; Mr. Woodward playing Mercutio; and Mrs. Bellamy, Juliet; against them at Covent Garden, were Mr. Barry and Mrs. Cibber in the principal characters, and Mr. Macklin in Mercutio. Both houses began on the first of October; and continued to perform it for 12 successive nights; when Covent Garden gave up the contention; and its rival kept the field one night more, with the credit of holding out longer than its opponent, though it is supposed neither fide reaped much advantage from the spirit of perseverance which had governed them both in this contest.

In the year 1754, on the 6th day of March, died Mr. Pelham, E 2 who

who had conducted the business of government for some years before with candour, ability, and integrity. He was sincerely lamented by both prince and people; and on this occasion Mr. Garrick displayed his poetical talents, in an ode which we are sold ran through sour editions in a few weeks. It is a performance which does credit to him, both as a man and a poet, and is preserved in the sourch volume of Dodsley's Collection of Poems.

The fuarlers against Mr. Garrick's management of the theatre had a long time complained that he conducted himself with too itrict an attention to economy in the ornamental and decorative parts of theatrical exhibitions. were perpetually throwing out infinuations, that the manager, relying on his own powers, was determined to regul te the entertainments of the Hage with an eye only to his own advantage, and without any regard to the fatisfaction of the public.—These murmurs had continued some time, when at last Mr. Garrick determined to mert the wishes of his friends, and to blence the discontents of his enemies. For this purpose he applied to Mr. Denoyer, sen. to recommend some perfon of genius to fuperintend and contrive a splendid spectacle to be exhibited at Drury Lane. person fixed upon for that purpose was Mr. Noverre, a Swifs; who immediately received orders to engage the best troop of dancers that could be procured. These he selected from the foreign theatres; and they confilled of Swifs, Italians, Germans, and some French. The entertainment in which they

were employed was foon after contrived. It was called THE CHI-NESE FESTIVAL; and was, in the theatrical phrase, got up with great magnificence, and at a very confiderable expence. The expectations of the managers were however wholly disappointed in the fuccess of the performance. though but few of the Freuch nation were employed in it. yet a industriously been report had spread, that not only French dancers had been sent for over, but French dresses also, and even French carpeniers and manufacturers. The nation was then on the eve of a war; and this afforded an opportunity for engaging the passions of those who professed themselves Antigallicans. accordingly formed affociations, to discourage the several performers, and suppress the obnoxious performance whenever it should ap-At length, after having pear. up more than eighteen months in preparing, it was brought before the publick, and received with all the virulence and opposiwhich might be expected from the violence and heat of the The first performance of it was on the 8th day of November 1755, and was honoured with the presence of his late Majesty; yet, notwithstanding that circumstance, it did not even then escape On the second, ill-treatment. third, fourth, and fifth nights the riots continued with increating strength, though opposed each evening by several young men of fashien, who had determined to support the performance. On the fixth evening the opposition acquired fresh vigour and increasing numbers. They frustrated every

every attempt to proceed in the exhibition; and committed every excess which a mob, subject to no controul, is apt to include itself in. That evening was the last representation. After receiving alfurance that the piece should be acted no more, the hernes who had fignalized themselves in this important buliness proceeded to Mr. Garrick's house in Soc hamptonfirect, where they broke his windows, and did other damages. They then ditperied, and the proprietors of the theatre were obliged to submit to the loss of more than four thousand pounds.

It would be impossible to enumerate the several small pieces of poetry which Mr. Garrick used to throw out from time to time, as his leifure permitted, to compliment his friends, or to celebrate public events. In 1759, Dr. Hill wrote a pamphier, intituled. "To David Garrick, Elq; the Petition of I, in behalf of herself and her fifters." The purport of it was to charge Mr. Garrick with mispronouncing some words including the letter I, as furm for firm, vurtue for virtue, and others. The pamphlet is now forgotten; but the following Epigram, which Mr. Garrick wrote on the occasion, deterves to be preserved, as one of the best in the English language:

To Dr. Hill, upon his petition of the letter I to David Garrick, E/q;

If 'tis true, as you say, that I've injur'd a letter,

I'll change my notes soon, and I hope for the better;

May the just right of letters, as well as of

Hereafter be fix'd by the tongue and the

Most devoutly I wish that they both have their due,

And that I may be never mistaken for U.

From this period no event of importance occurs in the annals of Mr. Garrick's life until the year 1761. The business of the theatre went on without interruption; and he continued to acquire both reputation and fortune. In that year, however, he found himself obliged to exert his portical talents, in order to correct the impertinence of an infignificant individual, a Mr. Fitzpatrick, who, without provocation, and in defiance of decency, carried on a weekly attack against him, in a paper called "The Craftsman." The original cause of the quarrel, we are informed, was grounded on some illiberal restections which Mr. Fitzparick threw out against Mr. Garrick, and which the latter relented with spirit and propriety, though a considerable time had elapsed before he was provoked to take pub-As Mr. Fitzlic notice of him. patrick's writings are now entirely forgotten, the revenge which Mr. Garrick took of him mult, for that circumstance alone, be involved in some obscurity. Those, however, who are unacquainted with either persons or facts will receive pleature in reading Mr. Garrick's admirable satire published on this ocasion, intituled THE FRIBLERIAD, a Poem, which had the honour of being highly commended by Churchill, who has also given a very severe correction to the fance person.

However unequal Mr. Fitzpatrick was to the talk of contending with Mr. Garrick in a literary E 3 warfare,

warfare, yet the rancour which his defeat had engendered, pointed out a new mode of attack to distress his antagonist. It had been customary; on the representation of a new performance, to refuse admittance at any part of the evening, unless the whole price of the entertainment was paid. This had almost invariably been The rule; and it had hitherto been fubmitted to, as a reasonable demand from the managers, to compensate for the extraordinary expence which new dresses and scenes occasioned. To gratify his resentment, Mr. Fitzpatrick seized on this circumstance as a ground to disturb the peace of the theatre, and to involve the managers in a contest with the public. this purpose hand-bills were disperfed about the coffee-houses in the neighbourhood of Drury-lane, recommending a peremptory demand to be made, and requiring an absolute promise to be given, that no more than half the usual price should be taken on any evening of performance after the third act, unless at the representation of a new pantomime. kind of affociation was entered into by feveral young men, to obtain a redress of this grievance, as it was called; and Mr. Fitzpatrick put himself at the head of it. The evening on which the attack was made happened to be when The two Gentlemen of Verona was performed for the alterer's benefit. The performance accordingly was interrupted, after several attempts to proceed in it; and the proprietors of the house, thinking the requifition an unjust one, and the manner of making it improper to be acceded to, resused to submit

to it: in consequence whereof, no play was afted that night; and the audience received their money again at the doors, having first amused themselves with doing all the mischief they were able. By this trial, the malecontents had discovered their strength, and determined to carry their point in humbling the pride of the manager. On the next performance, which was at the tragedy of Elwira, they collected their whole force, and again prevented the actors proceeding in the play. It was in vain that Mr. Garrick defired to be heard in defence of the ancient customs of the thes-The opposition insisted on a peremptory answer to their demand in the new regulation; which, after some time, the proprietors of the house were obliged to agree to; and once more peace was restored to the theatre after a considerable loss had been sustained, and obliged to be submitted to.

This season was the last in which Mr. Garrick could be said to have acted in the regular course of his profession. From this time he declined performing any new characters; and, finding his health declining, by the advice of his physician he determined to, give himself some relaxation from care and fatigue. He therefore made the arrangements necessary for carrying on the public entertainments during his absence; and on the 15th of September, 1763, the day on which the house opened, he left London, in order to make the tour of France and Italy. supply his place, he engaged the late Mr. Powell, who had received his instructions the preceding fummer, and whose success was equal

to the abilities he possessed. To the honour of his employers, it may be added, that his abilities were not higher than the encouragement he received for the exertion of them. Although he was engaged for a term of years at a small salary; yet he was, before the season closed, generously allowed an appointment equal to -the first performer in the house. We are credibly informed, the profits that year exceeded even those in which Mr. Garrick performed in the height of his reputation.

The interval from this period, until the month of April, 1765, Mr. Garrick employed in travelding through the principal parts of Europe; and was, at every place where he refided, and at most of the courts to which he was introduced, received in the most honourable and cordial manner; by the great, as well as by men of letters, each vying with the other in thewing respect to the greatest dramatic character of the age. While he flayed at Paris, he amused himself with reading Fonpaine's Fables; which pleased him fo much, that he was induced to attempt an imitation of them. He accordingly wrote one, called The Sick Monkey; which he transmitted over to a friend, to be ready for publication immediately on his arrival. It accordingly made its appearance in two or three days alter, with the following motto: " Thursday afternoon David Garrick, Esq. arrived at his house in Southampton-street, Covent Garden. Public Advertiser, April 27, 2765." And he had the pleasure of hearing the sensiments of his

friends upon it; many of whom mistook it for a satire upon him, and accordingly expressed them-selves in very warm terms on the occasion.

Immediately on his arrival he refumed the management of the theatre, and introduced some improvements which had been suggested by his observations on the conduct of the foreign stages. From the lift of his works, it will be seen that he had not been idle while abroad. He produced the next season several new pieces, and in the beginning of 1766, the excellent comedy of The Clandestine Marriage, written in concert with Mr. Colman. He also, at the request of his Majesty, appeared again on the stage; and on that occasion spoke a new prologue, replete with those strokes of humour which, in that species of composition, manifested his fuperiority over all his contemporaries.

In that year died Mr. Quin and Mr. Cibber. Their deaths were very pathetically taken notice of in the prologue to The Clandestine Marriage; and for the former Mr. Garrick wrote an epitaph, which was placed over his tomb in the cathedral church of Bath. Quin was the only performer of any reputation when Mr. Garrick first appeared on the stage, and he had likewise been one of his earliest opposers. When he saw the fuccess which attended the performances of his rival, he observed, with his usual spleen, that Garrick was like a new religion. Whitfield was followed for a time, but they would all come to church again. We mention his anecdote merely on E 4 account

account of the reply which it induced Mr. Garrick to write, and which was as follows:

Pope Quin, who damns all churches but his own,

Complains "that Heresy corrupts the town;

"That Whitfield Garrick has missed the age,

"And taints the found religion of the "stage;

Schism, he cries, has turn'd the nation's brain,

But eyes will open, and to church again!"

Thou great infallible! forbear to roar,
Thy bulls and errors are rever'd no more;
When doctrines meet with general approbation,

It is not Herefy, but Reformation. .

For several years however before Mr. Quin's death great cordiality had subsisted between him and Mr. Garrick, at whose house at Hampton he spent some time, a few months before his death, and there sirst discovered the symptoms of that disorder which carried him to his grave,

The year 1769 was remarkable for the celebration of a jubilee at Stratford upon Avon, the 6th, 7th, and 8th of September, in honour of Shakespeare; a ceremony which very much engaged the public attention, although it was treated by fome as a subject worthy only of ridicule, and by others as a compliment due to the great writer whose memory it was intended The circumstance honour. which gave rife to it happened some time before, and was as follows: A clergyman, into whose possession the house once belonging to our great poet had come, found that a mulberry tree, which grew in the garden, and which had been planted

cording to tradition by Shakespeare himself, overshadowed too much of his mansion, and made it damp. To remedy this inconvenience, he caused it to be cut down, to the great mortification of his neighbours, who were so enraged at him, that they foon rendered the place, out of revenge, too disagreeable for him to remain in ir. He therefore was obliged to quit it; and the tree, being purchased by a carpenter, was retailed and cut out in various relicks of stand-dishes, tea-chests, tohacco-stoppers, and other things; fome of which were secured by the ' corporation of Stratford. gentlemen belonging to this body soon after agreed to present Mr. Garrick with the freedom of their borough in a box made from the mulberry tree; and their Steward at the same time was ordered to acquaint him, that the corporation would be happy in receiving from his hands some statue, bust, or, picture of Shakespeare, to be placed within their new town-hall; together with a picture of him-

This circumstance probably gave Mr. Garrick the first idea of performing a jubilee to the honour of Shakespeare; and, at the conclusion of the theatrical season, he invited his audience to be present at it in the following terms:

"My eyes till then no fights like this will fee,

"Unless we meet at Shakespeare's jubilee.

"On Avon's banks, where flowers usual biow,

"Like its full stream our gratitude shall "flow!

"There let us revel, shew our fond regard;

"On that lov'd spot, first breath'd our matchless bard:

w Te

To him all honour, gratitude is due,

To him we owe our all—to him and

you."

The manner in which this entertainment was to have been performed, the disappointments it sustained, and the several occurrences which took place at it, are all so recent in the memories of most of our readers, and were so accurately related at the time they happened, that we shall not recapitulate them here. It is sufficient to that accident deprived those who were present of part of their entertainment; that all which was exhibited gave general fatisfaction; and that Mr. Garrick, who was a great sum of money out of pocket by it, framed an entertainmeat, which was performed at Drury-Lane theatre 92 nights with great applause to very crowded audiences. The Ode which was spoken by him at Stratford was also repeated at the same theatre, but not with much success, being performed only feven times.

The management of a theatre is always attended with anxiety and vexation; the difficulty of fatisfying the feveral candidates for sheatrical fame is so great, that he who can preserve the friendship of those whose pieces he rejects, must be allowed to possess very extraordinary abilities. In the year 1772, it was Mr. Garrick's misfortune to be embroiled with a very irascible and troublesome person, who claimed the representation of one of his pieces at Drury Lane; and he enforced his demand in a manner that will always reflect difgrace on his memory. He published a poem to intimidate the manager, called Love in the Suds, containing infinuations of the batest kind, and which he afterwards denied having

had any intention to convey. Garrick had recourse to the court of King's Bench, to punish the infamous libeller of his reputation; and, notwithstanding he had been a second time insulted by another publication conceived with equal malignity, he was weak enough to stop the prosecution he had commenced, on his adversary's figning an acknowledgement of his offence, which was printed in all the public papers. It cannot be denied but that the interests of fociety demanded that so gross an offender should meet with punishment, and that no concessions ought to have been allowed to deprecate, that stroke which the law would have inflicted on so heinous a crime.

From this time no event of importance happened, until the resolution which Mr. Garrick had begun to form of quitting the stage was, to the concern of every one, carried into execution. It will be a matter of surprize, both to the present and future generations, to learn that this determination was accelerated by the caprices of one or two celebrated actresses, who had contrived to render his fituation fo uneasy to him, that he frequently used to declare, that he should have continued some time longer in his public capacity, had it not been for the plague these people occasioned. In the beginning of the year 1776, he entered into an agreement with some of the present patentees, for the sale of his interest in the theatre; but continued to act during the remainder of that season. last night of his performance was, for the theatrical fund, on the 10th day of June in that year, when he represented the character

of Don Felix in The Wonder. the conclusion of the play he came. forward, and addr-fied the audience in a short speech, wherein he said, "it had been usual for per-46 fons in his fituation to address 46 the public in an Epilogue; s and that he had accordingly se turned his thoughts that way, so but found it as impossible " to write, as it would be to " speak, a studied composition; the jingle of rhyme and the " language of fiction ill suiting " his then feelings: that the moment in which he then spoke " was indeed an awful one to whim: that he had received in-" numerable favours from the public, and took his leave on so the spot where those savours were conferred." He then faid, of that, whatever the events of so his future life might be, he . « should ever remember those favours with the highest satisfaction and deepelt gratitude; and of though he admitted the superior kill and abilities of his se successors, he desired them to 4 exert themselves with more sindustry, zeal, and attention, " than he had done." speech, which was delivered with all that emotion which the particular fituation of the speaker rendered very interesting and affecting, was received with the loudest bursts of applause; and he left the stage with the acclamations of a numerous and polite audience, who were unable to forbear expressing the deepest concern for the loss of their favourite persormer.

Mr. Garrick now retired to the enjoyment of his friends, the most

respectable in the kingdom, and of a large fortune, acquired in the course of more than thirty years: but the stone, which he had been afflicted with some time, had already made fuch inroads on his constitution, that he was unable to communicate or receive from his friends that pleasure which his company afforded, except at times, and in a very partial manner. It is supposed that he injured his health by the application of quack medicines, and often experienced the most violent torments from the severity of his disorder.

In August, 1777, Mr. Garrick, accompanied by his neighbour and friend, Mr. Hen. Hoare, of the Adelphi, made a visit to Mr. Hoare, of Stourbead, in Wilts. Being particularly charmed with the Grotto, he said he should like it for his burying-place; upon which one of the company wished him to write his own Epitaph; which, as soon as he returned to the house, he did extempore.

Tom Fool, the tenant of this narrow space, (He play'd no fooligh part to chuse the place)

Hoping for mortal honours e'en in death, Thus spoke his wishes with his latest breath.

"That Hal, fueet-blooded Hal, might once a-year,

At Christmas, 1778, he went to wisit Lord Spencer at Althorp, in Northamptonshire, during the ho-He there was taken ill; but recovered so far that he was removed to town, where growing worse, he died in a few days afterwards, at his house in the Adelphi, on the 20th day of January last, at the age of 63 years; leaving behind him the character of a friendly, humane, charitable, and (notwithstanding many idle reports we may add) liberal man; one who felt for distress, and relieved it; a chearful companion, a pleasing writer, and the first actor of this or any other age.

Lift of Mr. Garrick's Writings.

THE Lying Valet, a Comedy, of two acts, 8vo, 1740. First acted at Goodman's Fields, and afterwards at Drury Lane.

Miss in her Teens, or the Medley of Lovers, a Farce in two acts, performed at Covent Garden, 8vo. 1747. The hint of this piece was taken from La Parisiene of D'Ancourt.

Lethe, a Dramatic Satire, afted at Drury Lane, 8vo, 1748. This admirable performance, which ranks with the first of its kind, was originally represented in a very imperfect state at Goodman's Fields, when the author was engaged there. The first sketch, as then performed, was printed in 12mo, 1745, under the title of Lethe, or Æsopim the Shades.

Romeo and Juliet, a Tragedy, altered from Shakespeare, acted at Drury Lane, 12mo. 1750.

Every Man in his Humour, a Comedy, altered from Ben Jonson, acted at Drury Lane, 840, 1751. This alteration consists chiefly of omissions and transpositions, with the addition of a whole scene in the 4th act. It was excellently acted. Those who remember the original performers do not expect to see a play ever so completely filled again in every character. Prologue by Mr. Whitehead.

The Fairies, an Opera, altered from Shakespeare, set to Music by Mr. Smith, 8vo, 1755. Prologue by Mr. Garrick.

The tempest, an Opera, altered from Shakespeare, set to music by Mr. Smith, 8vo. 1756. The prologue to this piece is evidently by Mr. Garrick.

Florizel and Perdita, a Dramatical Pastoral, in three acts, performed at Drury Lane, 1756. This is taken from The Winter's Tale, and was originally acted under that title. It was not printed until 1758.

Catherine and Petrucio, a Farce, acted at Drury Lane, 8vo, 1756. An alteration of Shakespeare's Taming of the Shrew. Performed on the same night as Florizel and Perdita.

Lilliput, a Dramatic Entertainment, acted at Drury Lane, 8vo, 1757. This was acted by children. In 1777 it was revised by the author, and performed at the Hay-market.

The Male Coquet, or Seventeen Hundred and Fifty Seven, a Farce, acted at Drury Lane, 8vo. 1757.

[.] Henry Hoare, of Stourhead,

This little piece was first acted at Mr. Woodward's benefit. It was planned, written, and acted, in less than a month.

The Gamesters, a Comedy, altered from Shirley, acted at Drury

Lane, 8vo, 1758.

Isabella, or the Fatal Marriage, a Play altered from Southern, acted at Drury Lane, 8vo, 1758. An alteration of The Fatal Marriage, by omission of the comic scenes.

The Guardian, a Comedy, in two acts, performed at Drury Lane, 8vo. 1759. This was performed the first time for the benefit of Mr. Christopher Smart, a very agreeable but unhappy poet, then under confinement. It is taken in a great measure from the celebrated Pupillé of Mons. Fagan.

The Enchanter, or Love and Magic, a Musical Drama, acted at

Drury Lane, 8vo, 1760.

Harlequin's Invasion, a Speaking Pantomime, acted at Drury Lane, 1761; not printed. We are told this was originally performed at Bartholomew Fair.

Cymbeline, a Tragedy, altered from Shakespeare, acted at Drury

Lane, 12mo. 1761.

The Farmer's Return from London, an Interlude, performed at Drury Lane, 4to, 1762. This made its first appearance at Mrs. Pritchard's benefit.

The Clandesline Marriage, a Gomedy, acted at Drury Lane, 8vo, 1766. This was a joint production with Mr. Colman, was acted with great applause, and may be considered as one of the best comedies in the English language.

The Country Girl, a Comedy, altered from Wycherley, acted at Drury Lane, 8vo, 1766.

Neck or Nothing, a Farce, in

two acts, performed at Drury Lane, 8vo, 1766. This farce is ascribed to Mr. Garrick, although it has also been given to Mr. King. It is an imitation of the Crispin Rival de son Maitre of Le Sage.

Cymon, a Dramatic Romance, acted at Drury Lane, 8vo, 1767.

A Peep behind the Curtain, or The New Rehearsal, a Farce, acted at Drury Lane, 8vo, 1767.

The Jubilee, a Dramatic Entertainment, acted at Drury Lane, 1769. This piece, which is not printed, was one of the most suecessful performances ever produced on the stage.

King Arthur, or the British Worthy, altered from Dryden, acted at Drury Lane, 8vo, 1770.

Hamlet, altered from Snakespeare, acted at Drury Lane about

1771. Not printed.

The Irish Widow, a Comedy of two acts, performed at Drury Lane, 8vo, 1772. The intention of this piece seems to have been merely to introduce Mrs. Barry (now Mrs. Crawford) in a new light to the audience, and is very successfully executed. The characters of Whittle, Sir Patrick O'Neale, and Thomas, are extremely well sustained, and that of Kecksy admirably.

The Chances, a Comedy, with alterations, acted at Drury Lane, 8vo, 1773. This is the Duke of Bucking ham's play with the same title. The alterations are chiefly omissions of indecent passages, which the resinement of the present times would not suffer.

Albumazar, a Comedy, with alterations, acted at Drury Lane, 8vo, 1773. This excellent old comedy was revived with all the strength of the house, as it had been before in 1748; yet, notwith-

Anding,

standing, was not so successful as it deserved to have been.

Alfred, a Tragedy, altered from Mallet, acted at Drury Lane, 8vo,

1773.

A Christmas Tale, in five parts, acted at Drury Lane, 8vo, 1774. This hath fince been reduced to two acts, and performed as an after-piece.

The Meeting of the Company, a Prelude, acted at Drury Lane,

1774. Not printed.

May Day, a Ballad Opera, act-

ed at Drury Lane, 8vo, 1775.

The Theatrical Candidates, a Prelude, acted at Drury Lane, 8vo, 1775. The last two pieces are printed together.

He also made some alterations in Rule a Wife and bave a Wife, Mahamet, and many other pieces,

which were performed during his management.

Besides the several pieces mentioned in the foregoing Anecdotes, he was the author of many Prologues and Epilogues, too numerous to be here particularized. He also wrote some poems in Dodsley's Collection of Poems, Vol. III; Letters in the Saint James's Chronicle, signed Oakley; and many little poems in Magazines and News-papers.

The Farce of High Life Below Stairs, which is frequently afcribed to him, is omitted in the above list, as there are many reasons to believe it to have been written by another person, the late Mr. Townly, Master of Merchant-

Taylors school.

NATURAL HISTORY.

Account of a Cure of the St. Vitus's Dance by Electricity. In a Letter from Anthony Fothergill, M. D. F. R. S. at Northampton, to William Henley. F. R. S.

[From the Philosophical Transactions.]

NN AGUTTER, a girl of ten years of age, of a pale, emaciated habit, was admitted an out-patient at the Northamptonhospital on the 6th of June last. From her father's account it appeared (for the was speechless, and with difficulty supported from falling by two assistants) that she had for fix weeks laboured under violent convultive motions, which affected the whole frame, from which she had very short intermissions, except during sleep; that the discase had not only impaired her memory and intellectual faculties, but of late had deprived her of the use of speech.

Volatile and fetid medicines were now recommended, and the warm bath every other night; but with no better fuccess, except that the nights which had been restless became somewhat more composed. Blisters and anti spasmodics were directed, and particularly the slowers of zinc, which were continued till the beginning of July, but without the least abatement of the

fymptoms; when her father growing impatient of fruitless attendance at the hospital, I recommended, as a dernier resort, a trial of electricity, under the management of the Rev. Mr. Usderwood, an ingenious electricias. After this I heard no more of her till the first of August, when her father came to inform me that his daughter was well, and defined she might have her discharge. which, after expressing my doubu of the cure, I consented; but should not have been perfectly convinced of it, had I not receive ed afterwards a full confirmation of it from Mr. Underwood, dated Sept. 16, an extract from whose letter I will now give you in his own words:

I have long expected the pleafure of seeing you, that I might inform you how I proceeded in the cure of the poor girl. As the case was particular, I have been very minute, and wish you may find something in it that may be useful to others. If you think it proper, I beg you will state the case medically, and make it as public as you please.

flool for thirty minutes: sparks were drawn from the arms, neck, and head, which caused a considerable

perspira-

perspiration, and a rash appearance in her forehead. She then received shocks through her hands, arms, breasts, and back; and from this time the symptoms abated, her arms beginning to recover their uses.

fluly 13. On the glass-footed flool forty-five minutes: received flrong shocks through her legs and feet, which from that time began to recover their wonted uses; also four strong shocks through the jaws, soon after which her speech returned.

fool for the space of one hour: sparks were drawn from her arms, legs, head, and breast, which for the sirst time she very sensibly felt; also two shocks through the spine. She could now walk alone; her countenance became more florid, and all her faculties seemed wonderfully strengthened, and from this time she continued mending to a state of perfect health.

Every time the was electrified positively, her pulse quickened to a great degree, and an eruption, much like the itch, appeared in

all her joints.'

Thus far Mr. Underwood. To complete the history of this singular case, I this day (Oct. 28.) rode several miles, on my return from the country, to visit her; and had the satisfaction to find her in good health, and the above account verified in every particular, with this addition, that at the beginning of the disease she had but slight twitchings, attended with running, staggering, and a variety of involuntary gesticulations which distinguish the St. Vitus's

dance, and that these symptoms were afterwards succeeded by convulfions, which rendered it difficult for two assistants to keep her in bed, and which foon deprived her of speech and the use of her limbs. The eruptions which appeared on the parts electrified soon receded, without producing any return of the symptoms, and therefore could not be called critical, but merely the effect of the electrical stimulus. Having given her parents some general directions as to her regimen, &c. I took my leave, with a strong injunction to make me acquainted in case she should happen to relapse. Before I conclude, it may not be improper to observe, that some time ago I was fortunate enough to cure a boy who had long had the St. Vitus's dance (though in a much less degree) by electricity. A violent convulsive disease, somewhat fimilar to the above, though, if I recollect right, not attended with the 'aphonia,' was successfully treated in the same way by Dr. Watson, and is recorded in Philosophical Transactions. May we not then conclude, that these facts alone, and more might perhaps be produced, are sufficient to entitle electricity to a distinguished place in the class of antispasmodics?

I am, &c.

An Account of a Remarkable Imperfection of Sight. From the Same.

Rasen, May 26, 1777.

Rev. Sir,

RECEIVED your favour in due time. I should have given

[•] The coated bottle held near a quart.

you my answer sooner, but have been greatly afflicted with the 'gout. I am very willing to inform you (and take your inquiry as a favour) of my inability concerning colours, as far as I am able from my own common observation.

It is a family failing: my father has exactly the same impediment: my mother and one of my fifters were perfect in all colours: my other fister and myselfalike impersect: my · last mentioned sister has two sons, both imperfect;—but she has a daughter who is very perfect: I have a fon and daughter, who both know all colours without exception; and so did their mother: my mother's own brother had the like impediment with me, though my mother, as mentioned above, knew all colours very well.

Now I will inform you what co-Jours I have least knowledge of. I do not know any green in the world; a pink colour and a pale blue are alike, I do not know one from the other. A full red and full green the same, I have often thought them a good match; but yellows (light, dark, and middle) and all degrees of blue, except those very pale, commonly called sky, I know perfectly well, and can discern a deficiency, in any of those colours, to a particular nicety: a full purple and deep blue sometimes bassle me. ried my daughter to a genteel, worthy man a few years ago; the day before the marriage he came to my house, dressed in a new suit of fine cloth cloaths. I was much displeased that he should come (as I supposed) in black; said, "He should go back to change his colour." But my daughter said, " No, no; the colour is very gen-

teel; that it was my eyes that deceived me." He was a Gentleman of the Law, in a fine, rich claret-coloured dress, which is as much a black to my eyes as any black that ever was dyed. has been married several vears: no child living, and my son is unmarried; so how this impediment may descend from me is unknown.

I have a general good satisfaction in the midst of this my inability; can see objects at a distance when I am on travel with on acquaintance, and can distinguish the fize, figure, or space, equal to most, and, I believe, as quick, colour excepted.

My butiness was behind a counter many years, where I had to do with variety of colours. ten, when alone, met with a difficulty; but I commonly had a servant in the way to attend me, who made up my deficiency. have been now seven years from trade. My eyes, thank God, are very good at discerning men and things.

your learned fociety can fearch out the cause of this very extraordinary infirmity, and find a method for an amendment, you will be so obliging to acquaint

1 am, &c.

J. Scott.

SIR,

Have visited the greatest part of this island, and find that its produc-

An Account of the Island of St. Miguel; by Mr. Francis Mason, in a Letter to Mr. William Aiton, Botanical Gardener to his Majesty. From the same.

St. Miguel, Aug. 10, 1777.

productions differ greatly from those of Madeira, insomuch that none of the trees of the latter are found here, except the faya: it has a nearer affinity to Europe than The mountains are covered with the erica vulgaris, and an elegant ever-green shrub very like a pb:llyrea, which gives them a most beautiful appearance. withstanding this island has been frequently visited by Europeans, I cannot help communicating to you a few of its singularities. It is one of the principal and most fertile of the Azores, sometimes called the Western Islands, of which there are nine, belonging to the crown of Portugal, and situated about 500 miles west of Lisbon. tude west from London 25 to 33. Latitude 36 to 40 north.

The length of St. Miguel is about eighteen or twenty leagues, nearly east to west; its breadth is unequal, not exceeding five leagues, and in some places not more than two. It contains about 80,000 in-

habitants.

Its capital, the city of Ponta del Guda, which contains about 12,000 inhabitants, is fituated on the fouth fide of the island, on a fine fertile, plain country, pretty regularly built; the streets straight and of a good breadth. It is supplied with good water, which is brought about the distance of three leagues from the neighbouring The churches and mountains. Other religious edifices are elegant and well built for, such an There is a large convent of Franciscan friars, and one of the order of St. Augustin, four convents for professed nuns, and three recolbimentos (houses of retirement) for young women and Vol. XXII.

widows who are not professed. The vessels anchor in an open road; but it is not dangerous, as; no wind can prevent their going to sea in case of slormy weather. The country round the city is plain for several miles, well cultivated, and laid out with good tafte into spacious fields, which are fown with wheat, barley, Indian. corn, pulse, &c. and commonly produce annually two crops; for as soon as one is taken off, another is immediately fown in its The soil is remarkably gentle and easy to work, being for the most part composed of pulverized pumice stone. There are in the plains a number of pleasant country seats, with orchards of orange trees, which are esteemed the best in Europe.

The second town is Ribeira Grande, situated on the north side of the island, containing about as many inhabitants as the city; a large convent of Franciscan friars, and one of nuns. It gives title to a count, called the Conde Ribeira Grande, who sirst instituted linen and woollen manusactories in

the island.

The third town is Villa Franca. on the south side of the island, about fix leagues east of Ponta del Guda. It has a convent of Franciscan friars, and one of nuns: which contains about three hun-Here, about half a mile from the shore, lies a small illand (Ilhas) which is hollow in the middle, and contains a fine bason with only one entrance into it, fit to hold fifty sail of vessels secure from all weather; at present it wants cleaning out, as the winter's rain washes down great quantities of earth into it, which has , greatly greatly diminished its depth. But veffels frequently anchor between this island and the main.

Beside these towns, are several fmaller, wiz. Alagoa, Agoa de Pao, Brelanha, Fanaes de Ajuda, and a number of hamlets, called

Lugars, or Places.

About four leagues north-east from Villa Franca, lies a place called Furnas, being a round deep valley in the middle of the east of the island, surrounded with high mountains, though steep, may be easily ascended on horseback by two roads. The valley is about five or fix leagues in circuit, the face of the mountains, which are very steep, entirely covered with evergreens, viz. myrtles, laurels, a large species of bilberry, called ura del fera (mountain grapes) &c. and numberless rivulets of the purest water run down their sides. The valley below is well cultivated, producing wheat, Indian corn, flax, &c. The fields are planted round with a beautiful fort of poplars, which grow into pyramidal forms, and by their careless, irregular disposition, together with the multitudes of rivulets, which run in all directions through the valley, a number of boiling fountains, throwing up clouds of steam, a fine lake in the southwest part about two leagues round, compose a prospect the finest that can be imagined. In the bottom 'their yams (inhames.) of the valley the roads are fmooth and easy, there being no rocks, but a fine pulverized pumice stone that the earth is composed of.

There are a number of hot fountains in different parts of the valley, and also on the sides of the mountains: but the most remark-

able is that called the Caldeira, fituated in the eastern part of the valley, on a small eminence by the fide of a river, on which is a bason about thirty feet in diameter, where the water continually boils with prodigious fury. yards distant from it is a cavery in the fide of the bank, in which the water boils in a dreadful manner, throwing out a thick, middy, unctuous water several yards from its mouth, with a hideous noise. In the middle of the river are several places where the water up fo hot, that a person cannot dip his finger into it without heing scalded; also along its banks are several apertures, out of which the Aream rifes to s considerable height so hot, that there is no approaching it with one's hand: in other places, a person would think, that a hundred fmiths bellows were blowing fal phareces together, and streams issuing out in thousands of places, so that native sulphur is found in every chink, and the ground covered with it like hoar frost; even the bushes that happen to lay near these places are covered with pure brimstone, condenfing from the fiream that iffus out of the ground, which in many places is covered over with a substance like burned allum. In these small caverns, where the firesm issues out, the people often bail

Near these boiling fountains are several mineral springs; two, in particular, whose waters have very strong mineral quality, of an acid taste, and bitter to the

tongue.

About half a mile to the westward, and close by the river side.

the several hot springs, which are used by sick people with great success. Also on the side of a hill, west of St. Ann's Church, are many others, with three bathing houses, which are commonly used. These waters are warm, although not boiling hot; but at the same place issue several streams of cold mineral water, by which they are tempered, according to every one's liking.

About a mile fouth of this place, and over a low ridge of hills, lies a fine lake about two leagues in circumference, and very deep, the water thick, and of a greenish colour. At the north end is a plain piece of ground, where the fulphureous streams issue out in many places, attended with a furprising blowing noise. I could obferve strong springs in the lake, but could not determine whether they were hot or cold: this lake icems to have no visible evacuation. The other springs immediately form a confiderable river, called Ribeira Quente (hot river) which runs a course about two or three leagues through a deep rent in the mountain, on each fide of which are several places where the finoke issues out. It discharges itself into the sea on the south fide, near which are some places where the water boils up at some distance in the sea.

This wonderful place had been taken little notice of, until very lately; so little curiosity had the gentlemen of the island, that scarcely any of them had seen it, until of late some persons afflicted with very virulent, disorders, were persuaded to try its waters, and sound immediate relief from, them. Since that time it has become more.

and more frequented; several perfons who had lost the use of their limbs by the dead palsy have been cured; and also others who were troubled with eruptions on their bodies.

A clergyman, who was greatly afflicted with the gout, tried the faid waters, and was in a short time perfectly cured, and has had no return since.

When I was there, several old gentlemen, who were quite worn out with the said disorder, were using the waters, and had received incredible benefit from them; in, particular, an old gentleman, about fixty years of age, who had. been tormented with that disorder more than twenty years, and often confined to his bed for fix months together: he had used these waters about three weeks, had quite recovered the use of his limbs, and walked about in the greatest spirits imaginable. A friar also who had been troubled with the faid disorder about twelve years, and reduced to a cripple, by using them a short time was quite well, and went a hunting every day. There are many other instances of the esticacy of these waters, which for the lake of brevity I must here omit.

There are several other hot springs in the island, particularly at Ribeira Grande; but they do not possess the same virtues, at least not in so great a degree. The east and west parts of the island rise into high mountains, but the middle is low, interspersed with round conic hills, all of which have very recent marks of fire; all the parts below the surface consisting of melted lava, lying very hollow.

F 2

Moit

Most of the mountains to the westward have their tops hollowed out like a punch bowl, and contain water. Near the west end is an immense deep valley like the Fornas, called the Sete Cidades (the feven cities). This valley is furrounded with very abrupt mountains, about seven or eight leagues round; in the bottom is a deep lake of water, about three leagues in circuit, furnished with a great number of water fowls. This water has no mineral quality; neither are there any hot springs in the valley. All these mountains are composed of a white crumbly pumice stone, which is so loose, that if a person thrust a stick into the banks, whole waggon loads of it will tumble down. The inhabitants of the island relate a story. that he who first discovered it obferved an extraordinary high peak near the west end; but the second time he visited it no such peak was to be seen, which he supposed must have certainly sunk; but however improbable this may be, at some period or another it must have certainly been the cafa

If you should think the account of the mineral waters of any service to the public, they are very welcome to it; and should any person venture so far for his health, a small stock of the superfluities of life only need be laid in, as the island yields every necessary. The climate is very temperate: the thermometer since I have been here has been no higher that 77°, tommonly from 70° to 75°.

An Account of the Figure and For-

raneous Fire, and its Effects—Of the Deluge—Of the Origin of Mountains, Continents, &c.

[From Whitehurst's Enquiry into the original State of the Earth.]

HAVING premised the general laws or principles bestowed upon matter, let us endeavour to trace their operations in forming the chaotic mass into an habitable world.

The first operation which presents itself to our conception is the sigure of the earth: for according to proposition the second, the suid mass no sooner began to revolve upon its axis, than its component parts began to recede from their axes of motion, and thus continued till the two forces were equally balanced, and the earth had acquired its present oblate spheroidical form.

The component parts being now arrived at a state of rest, with respect to the general laws of motion, began a second operation by means of their affinities; for particles of a similar nature attract each other more powerfully than those of a contrary affinity or quality.

Hence particles of air united with those of air; those of water with water; and those of earth with earth; and with their union commenced their specific gravities.

The uniform suspension of the component parts being thus destroyed by the union of similar particles, those bodies which were the most dense began their approach towards the center of gravity, and the others towards the surface.

Thus commenced the separation of the chaotic mass into air, water, earth, &c.

Non

Now as air is eight hundred times lighter than water, it seems to follow, by the laws of statics, that it became freed from the general mass in a like proportion of time, sooner than water, and formed a muddy, impure atmosphere.

The process of separation still goes on, and the earth consolidates every day more and more towards its centre, and its surface becomes gradually covered with water, until one universal sea prevailed over the globe, persectly pure and sit for animal life.

Thus, by the union of similar particles, the component parts of the atmosphere and the ocean feem to have been separated from the general mass, assembled together, and surrounded the terra-

queous globe.

To the peculiar laws of attraction may likewise be ascribed that sameness of quality which prevails in strata of different denominations, as calcarious, argillaceous, &c. and also the assemblage of all other particles into select bodies, of metals, minerals, salts, talks, spars, sluors, crystals, diamonds, rubies, amethysts, &c. and many other phenomena in the natural world.

Having thus defined the general laws or principles by which the component part of the chaos were separated and arranged into the different classes of air, water, &c. it may not be improper to remark, that as the sun is the common center of gravity, or the governing principle in the planetary system, the presumption is great that the governing body was at least coeval with the bodies governed:

Therefore, as the chaos revolved upon its axis during the separation of its component parts, may we not thence inser, that as the atmosphere was progressively freed from its gross matter, light and heat must have gradually increased, until the sun became visible in the sirmament, and shone with its full lustre and brightness on the face of the new-formed globe.

Hence it appears, that several days and nights preceded the sun's appearance in the heavens. How far the result of this reasoning may illustrate the Mosaic account, of the sun being created, or becoming visible, on the sourth day of creation, is most humbly submitted to the consideration and candour of

the learned world.

It is further to be observed, that as the separation of the chaos was owing to the union of similar particles, it seems to follow, that as the central parts of the earth were sooner at rest than the more superficial parts thereof, that the former would begin to consolidate before the latter, and therefore it appears repugnant to the laws of Nature, that the central part should confist of water only, and the more superficial part of a shell or crust, as some writers have imagined.

Having traced the operations of Nature in separating the chaotis mass into air, earth, and water, we have now to enquire into the formation of the primitive islands.

To investigate this matter, let us suppose, for the present, that during the separation of the chaos, the earth was persectly free from the attractive influence of all other bodies; that nothing interfered with the uniform law of its own

F:

gravitation. It will then follow, that as the chaos was an uniform pulp, the folids would equally subside from every part of its surface, and consequently become e-

qually covered with water.

On the contrary, if the moon was coeval with the earth, its attractive power would greatly interfere with the uniform subsiding of the solids: for as the separation of the solids and sluids increased, so, in like manner, the tides would increase, and remove the solids about, from place to place, without any order or regularity.

Hence, the sea necessarily became unequally deep, and those inequalities daily increasing, in process of time dry land would appear, and divide the sea, which had universally covered the earth.

The primitive islands being thus raised, by the flux and reflux of the tides, as fand-banks are formed in the sea, we cannot suppose them to have been of any great extent or elevation, compared to the mountains and continents in the present slate of the earth: therefore they can only be considered as fo many protuberances gradually ascending from the deep: whence it appears, that craggy rocks and impending shores were not then in being; all was smooth, even, and uniform; stones, minerals, &c. only existed in their elementary principles.

The primitive islands being thus raised above the surface of the sea, in process of time, became firm, and fit for animal or vegetable.

life.

Having now considered the formation of the atmosphere, the sea, and the land, I cannot pass over in filence the great analogy between

the Molaic account of the creation and the result of physical reasonings, in so many essential points: for we find the same series of truths asserted in Scripture which are here deduced from the universal laws and operations of Nature.

From this obvious agreement of revelation with reason, may we not conclude, that they both flow from the same fountain, and therefore cannot operate in contradiction to each other? Consequently, by which ever means the same truths are brought to light, be it by reason or revelation, they will perseason or revelation, they will perseason to considered as a testimony of the truth of each.

The instances we find recorded of volcanos, and their effects, leave no room to doubt the existence, force, and immensity of subterraneous fires; not only under the bottom of the ocean, but likewise under mountains, continents, &c. is

all parts of the world.

But from what principles they were generated, at what distance of time from the creation of the world, or whether nearer to its centre or to its surface, is perhaps not ascertainable, whilst the phenomena of fire remain in so much obscurity: for, according to the celebrated chymist M. Macquer, an accurate distinction has not yet been made between the phe-" nomena of fire actually existing " as a principle in the composition " of bodies, and those which it " exhibits when existing separate-" ly in its natural state: nor have " proper and distinct appellations " been assigned to it under those " different circumstances:" therefore, neither the time, the place, nor the mode, in which subterra-

neous

meous fire was generated, can be

truly ascertained.

However, this we know, most afforedly, that a certain degree of amoisture and dryness are productive of fire in the vegetable and mineral kingdoms; and likewife, that those fires are generated from the first increment of heat, and gradually increase to their full matu-Therefore, if we were allowed to reason from the analogy one part of nature bears to another, we should conclude, that subterraneous fire was generated from **the** fame elementary principles, and also gradually increased to its full maturity.

Having premised these matters, let us return to the chaotic state of the earth, and endeavour to trace the progressive operations of subterraneous sire, from its sirst increment of heat, and mark its es-

sects on the incumbent frata.

ture and dryness were equally as necessary to the production of fire in the bowels of the earth as in the vegetable and mineral kingdoms, it seems to follow, that those parts of the globe which first began to consolidate, were also the first which began to generate fire: therefore as the central parts began to consolidate sooner than the more superficial parts, there is some probability that they were the first ignited.

2. It has also been observed, that as the earth began to consolidate by the union of similar particles, an universal sameness prevailed either in the same stratum, or in the central part of the earth; whence it appears, that subterraneous sire was generated universally in the same point of time,

oither in the same fratum or in the central part of the earth, and, gradually increased to its full ma-

turity.

3. All bodies expand with heat, and the force or power of that law is unlimited: therefore, as subterraneous fire increased, its expansive force would gradually increase until it became equal to the incumbent weight. Gravity and expansion being then equal, and the latter continuing to increase, became superior to the former, and distended the incumbent strata, as a bladder forcibly blown;

4. Now if this fire was sprrounded by a shell, or crust of equal thickness, and of equal density, its incumbent weight must have been equal: on the contrary, if the surrounding shell or crust were unequally thick or unequally dense, its incumbent weight must have been

unequal.

5. Hence it appears, that as the primitive illands were uniform protuberances gradually ascending from the deep, the incumbent weight must have been unequal; for as the specific gravity of stone, fand, or mud, is greater than that of water, the incumbent weight of the former must have been greater than that of the latter; consequently the bottom of the fea would ascend by the expansive force of the subterraneous fire fooner than the illands, would therefore become more or less deluged, as the bottom of the sea was more or less elevated; and this effect must have been more or less universal, as the fire prevailed more or less universally, either in the same Aratum, or in the central Therefore, part of the earth, fince it appears, that subterrane-

F 4

ous fire operated universally in the same stratum, with the same degree of force, it appears much more probable, that the deluge prevailed universally over the earth, than partially; and more especially when we consider the elevation of the antediluvian hills. But more of this hereafter.

But the tragical scene endeth not with an universal shood, and the destruction of terrestrial animals: for the expansive force of subterraneous sire, still increasing, became superior to the incumbent weight and cobesion of the strata, which were then burst, and opened a communication between the two oceans of melted matter and water.

The two elements coming thus into contact, the latter would be instantaneously converted into steam, and produce an explosion infinitely beyond all human conception; for it is well known, that the expansive force of water thus converted into steam exceeds that of gunpowder in the proportion of fourteen thousand to sive hundred.

The terraqueous globe being thus burst into millions of fragments, and from a cause apparently seated nearer to its center than its surface, must certainly be thrown into strange heaps of ruins: for the fragments of the strata thus blown up, could not possibly fall together again into their primitive order and regularity: therefore an infinite number of subterraneous caverns must have been formed, probably many miles, or many hundreds of miles below the bottom of the antediluvian sea.

Now it is easy to conceive, when

a body of such an immense magnitude as the earth was thus reduced to an heap of ruins, that its incumbent water would immediately descend into the caverns and interstices thereof; and by approaching so much nearer towards the center, than in its antediluvian state, much of the terrestrial surface would be left naked and exposed, with all its horrid gulphs, craggy rocks, mountains, and other disorderly appearances.

Thus the primitive state of the Earth seems to have been totally metamorphosed by the first convulsion of Nature, at the time of the deluge; its firata broken, and thrown into every possible degree of confusion and disorder. those mighty eminences the Alps, the Andes, the Pyrenean moontains, &c. were brought from beneath the great deep-the sea retired from those vast tracts of land, the continents — became fathomless; environed with craggy rocks, cliffs, and impending shores; and its bottom spread over with mountains and vallies like the land.

It is further to be observed of the horrid effects of this convultionthat as the primitive islands were more ponderous and less elevated than the bottom of the sea, the former would more instantaneously subside into the ocean of melted matter, than the latter: therefore, in all probability, they became the bottom of the postdiluvian sea: and the bottom of the antediluvian sea being more elevated, was converted into the postdiluvian mountains, This conjecture continents, &c. is remarkably confirmed by the vast number of fossil shells, and other marine exuvia, found imbed-

ded

ded near the tops of mountains, and the interior parts of continents, far remote from the sea, in all parts of the world hitherto explored.

The above phenomena have generally been ascribed to the effects of an universal flood; but we prefume such conclusions were too haltily drawn: for it manifeltly appears, upon a more strict examination of the various circumstances accompanying these marine bodies, that they were actually generated, lived, and died, in the very beds wherein they are found; and that those beds were originally the bottom of the ocean, though now elevated several miles above its level. Thus we find a further agreement between natural phenomena and the laws of Nature.

Hence it appears, that mountains and continents were not primary productions of Nature; but of a very distant period of time from the creation of the world.

It may, perhaps, be objected, that many of the above fossil bodies are natives of very distant regions of the earth, and could not have existed in climates wherein they are found, according to the present constitution of Nature.

To avoid prolixity, in the investigation of the deluge, &c. many interesting phenomena respecting earthquakes have been omitted: we shall, therefore, take this opportunity of introducing some of them, before we proceed to shew the improbability of a second universal stood.

r. Previous to an eruption of Vesuvius, the sea retires from its adjacent shores, and leaves its bottom dry, till the mountain is burst

open, when the water returns to its former boundary.

- 2. Before volcanos burst open the bottom of the sea, the water rises in those places, considerably above its former level, runs in mountainous waves towards the less elevated parts, and deluges distant shores.
- 3. The earth is frequently burst open many miles in length, and discharges such vast quantities of water as to deluge the adjacent countries, of which we have had several instances, both in Europe and South America. In the year 1631, several towns were destroyed by an eruption of boiling water from Vesuvius; and in the year 1755, an immense torrent of boiling water flowed from Ætna, a mile and a quarter broad, down to its base. See Sir Wm. Hamilton's Observations on Vesuvius and Atna, p. 82.

4. Eruptions are generally accompanied with thunder and lightning, and succeeded by incessant rains.

5. On the 1st of November 1755, the memorable æra of the earthquake at Lisbon, not only the sea, but lakes and ponds were violently agitated all over Europe. See Philos. Trans. vol. 79.

Most of these phenomena testify the immense force of steam generated by melted matter and water, in the bowels of the earth; for, in the first instance, Mount Vesuvius and its asjacent shores being more elevated by the steams, than the bottom of the distant sea; the water retreats from the shores towards the less elevated parts, and leaves its bottom dry. When the steams find vent, by the cruption,

the mountain subsides to its former level, and the water returns to the shore.

The second instance shews, that the bottom of the sea is more elevated than the land; therefore the water retires, in mountainous waves, towards the less elevated parts, and overslows the coast.

The third is not only a corroborating instance, to shew the expansive force of steam; but likewise coincides with the Mosaic description of the deluge, " the fountains of the great deep were broken up."

The fourth feems to have some analogy to that dreadful event.

The fifth phenomena seems to arise from the same cause. When the strata incumbent on the melted matter are elevated by the force of steam; the impending roof is apparently separated from the liquid mass; and this separation may be laterally extended to the distance of many miles from the original source of the steam, according to its quantity, and degree of its expansive force.

Now if these conjectures are true, the consequences thence arising are manifest. The strata immediately over the steam first geperated being more elevated than those in the act of separation, the horizontal position of the earth's forface must consequently be altered, so as to produce an undulation of the water in lakes, ponds, &c. as in vessels suddenly elevated on one fide more than on the other; and thus continue in motion, altermately overflowing the opposite banks, until the momentum acquired by the first impulse is gradually pyercome.

That steam is the principal agent whence these phenomena arise, I presume will be readily granted by those who have carefully attended to the Rev. Mr. Michell's observations on the cause of earthquakes. Now, as one of the properties of tleam is condensation by a imall degree of cold, the fame degree of expansive force can only exist during the same degree of heat: therefore the incumbent weight cannot become elevated to any greater distance than subterraneous fire is continued. being granted, it seems to follow, that as the waters were thus agitated on the 1st of November 1755, through an extent of country not less than 3000 miles, there med have been one continued uninterrupted mass of melted matter of the same extent at least. idea seems to be corroborated by those vast explosions which were heard in some of the Derbyshire mines, about ten o'clock in the morning fo fatal to Lifbon.

The above examples ferve to illustrate the powerful and extensive effects of steam, produced by melted matter and water: truths well known to founders, particularly to those conversant in casting gold, filver, copper, brass, and iron. " About fixty years ago, a me-" lancholy accident happened " from the casting of bras cannon, " at Windmill-Hill, Moorfields, " where many spectators were as-" sembled to see the metal rou " into the moulds. The heat of " the metal of the first gun drove " so much damp into the mould of " the second, which was near it, " that as soon as the metal was let " into it, it blew up with the

" greatest

e greatest violence, tearing up the se ground some seet deep, breaking "down the furnace, untiling the " house, killing many people on "the spot with the streams of melted metal," &c. See Cramer's Art of Assaying Metals.

English translation, p. 323.

The inflammable vapour damp, in mines, occasions violent explosions; but they are only momentary, as the firing of gunpowder. On the contrary those from volcanos frequently continue many months, with great violence, which plainly shews that those Areams must be continually generating from the above causes.

P. S. As the differtion of the frata, observed in the sormer part of this chapter, may appear highly improbable to some readers, I take this opportunity of reciting the Reverend Mr. Michell's observations on the elasticity and compressibility of stone, &c. mentioned in his excellent Treatife on Earthquakes, note, p. 34, as follows: "The compressibility and elasticity of the earth are qua-" lities which do not shew themse selves in any great degree in " common initances, and there-" fore are not commonly attended to. On this account it is that few people are aware of the se great extent of them, or the effects that may arise from " them, where exceeding large e quantities of matter are con-" cerned, and where the comor pressive force is immensely great. "The compressibility and elasti-" city of the earth may be cole lected, in some measure, from * the vibration of the walls of " houses, occasioned by the pasff fing of carriages in the streets

e next to them. Another in-" stance, to the same purpose, " may be taken from the vibra-"tion of steeples, occasioned by the ringing of bells, or by gutts of wind: not only spires are moved very confiderably by this " means, but even frong towers will sometimes be made to vi-" brace several inches, without " any disjointing of the mortar, or rubbing the stones against one " another. Now, it is manifest, " that this could not happen, " without a confiderable degree of compressibility and elasticity " in the materials of which they " are composed."

Now, if so short a length of stone as that of a steeple, visibly bends, by so small a degree of force as the ringing of bells, or a blast of wind; may we not conclude, that the strata, in the primitive state of the earth, might become confiderably distended, by an unlimited force, and therefore occation an universal deluge, according to the preceding conclufion. Since it appears, that if a globe 80 inches diameter only, suffered a degree of expansion equal to the thickness of a human hair; the same degree of heat, by analogy, would have raised the bottom of the ocean one-fourth of a mile; which is above four times higher than the primitive islands were supposed to have been elevated above the furface of the sea.

[From the Philosophical Transactions.] THAT reason begins to dawn, and reflection to operate, in tome 3

An Account of an Infant Musician, by Dr. Burney, F. R. S.

some children much sooner than inoshers, must be known to every one who has had an opportunity of comparing the faculties of one child with those of another. It has, however, feldom been found, that the senses, by which intelligence is communicated to mind, advance with even pace to-The eye and wards perfection. the ear, for instance, which seem to afford reason its principal supplies, mature at different periods, to proportion to exercise and experience; and not only arrive at different degrees of perfection duzing the stages of infancy, but have different limits at every period of human life. An eye or ear that only serves the common purpoles of existence is intitled to na praise; and it is only by extraordinary proofs of quickness and discrimination in the use of these Lenses, that an early tendency to the art of painting or music is discovered.

Many children, indeed, seem to secognize different forms, persons, sounds, and tones of voice, in very early infancy, who never afterwards endeavour to imitate forms by delineation, or sounds by vocal inflexions.

As drawing or design may be called a refinement of the sense of fight, and practical music of that of hearing; and as a perfection in these arts at every period of life, from the dissiculty of its attainment, and the delight it affords to the admirers and judges of both, is treated with respect, a premature disposition to either unfually excites the same kind of wonder as a phenomena or prodigg.

But as perfors confimmate in these arts, and who are acquainted with the usual difficulties which impede the rapid progress of common students, can only judge of the miraculous parts of a child's knowledge or performance, it will be necessary, before I speak of the talents peculiar to the child who is the subject of the present inquiry, to distinguish, as far as experience and observation shall enable me, between a common and supernatural disposition, during infancy, towards the art of music.

In general a child is not thought capable of profiting from the inthructions of a music-master till sive or fix years old, though many have discovered an ear capable of being pleased with musical tones, and a voice that could imitate them. The lullaby of a much sooner. nurse during the first months of a child's existence has been found to subdue peevishness, and, perhaps, divert attention from pain; and in the second year it has often happened, that a child has not only been more diverted with one tune or series of sounds than another, but has had sufficient power over the organs of voice to imitate the inflexious by which it is formed; and these early proofs of what is commonly called musical genius would doubtiels be more frequently discovered if experiments were made, or the mothers or nurses were mufically curious. ever, spontaneous efforts at forming a tune, or producing harmony upon an infrument so early, have never come to my knowledge.

The arts being governed by laws built on such productions and effects as the most polished part of

nakind

mankind have long agreed to call excellent, can make but small approaches towards persection in a state of nature, however favourable may be the disposition of those who are supposed to be gifted with an uncommon tendency towards their cultivation. Nature never built a palace, painted a picture, or made a tune: these are all works of art. And with respect to architecture and music, there are no models in nature which can encourage imitation: and though there is a wild kind of music among savages, where passion vents itself in lengthened tones different from those of speech, yet these rude effusions can afford no pleasure to a cultivated ear, nor would be honoured in Europe with any better title than the howlings of animals of an inferior order to mankind.

All therefore that is really admirable in early attempts at mufic is the power of imitation; for elegant melody and good harmony can only be such as far as they correspond with or surpass their models: and as melody confifts in the happy arrangement of fingle founds, and harmony in the artificial combination and fimultaneous use of them, an untaught mufician becomes the inventor both; and those who are at all acquainted with the infancy of fuch melody and harmony as constitute modern music, can alone form an idea of the rude state of both when an individual discovers them by the flow process of experiment.

Every art when first discovered seems to resemble a rough and shapeless mass of marble just hewn out of a quarry, which requires the united and successive endeavours of many labourers to form

and polish. The zeal and activity of a single workman can do but little towards its completion; and in music the undirected efforts of an infant must be still more circumscribed: for, without the aid of reason and perseverance he can only depend on memory and a premature delicacy and acuteness of ear for his guides; and in these particulars the child of whom I am going to speak is truly wonderful.

Norwich, July 5, 1775, His father, by trade a carpenter, having a passion for music, of which however he had no knowledge, undertook to build an organ, on which, as soon as it would speak, he learned to play two or three common tunes, such as God save great George our king; Let ambition fire thy mind; and The Easter Hymn; with which, and such chords as were pleasing to his ear, he used to try the perfection of his instrument.

I have been favoured with several particulars concerning his son's first attention to music from Robert Partridge, Esquire, a gentlemen of rank in the corporation of Norwich, who, at my request, has been so obliging as to ascertain many curious sacts, the truth of which, had they rested merely on the authority of the child's sather or mother, might have been sufficiently pected; and transactions out of the common course of nature cannot be too scrupulously or minutely proved.

My correspondent, of whose intelligence and veracity I have the highest opinion, tells me, that I may rest assured of the authenticity of such circumstances as he relates from the information of the child's father, who is an ingenious mechanic, of good reputation, whom he knows very well, and frequently employs, as these circumstances are confirmed by the testimony of many who were witnesses of the child's early performance; and he adds, that he has himself seen and heard most of the very extraordinary essorts

of his genius.

About Christmas 1776, when the child was only a year and a half old, he discovered a great inclination for music, by leaving even his food to attend to it when the organ was playing: and about Midfummer 1777, he would touch the key-note of his particular favourite tunes, in order to per**funde** his father to play them. Soon after this, as he was unable to name thefe tunes, he would play the two or three first notes of them when he thought the keynote did not fufficiently explain which he withed to have played,

But, according to his mother, it feems to have been in confequence of his having heard the fuperior performance of Mrs. Lulman, a mulical lady, who came to try his father's organ, and who not only played on it, but fung to her own accompanyment, that he first attempted to play a tune himfelf: for, the fame evening, after her departure, the child cried, and was to peevish that his mother was wholly unable to appeale him. At length, patting through the dining - room, he screamed and flruggled violently to go to the organ, in which, when he was indulged, he eagerly beat down the keys with his little fifts, as other children usually do after finding themselves able to produce a noise, which pleafes them more than the artificial performance of real me-

lody or harmony by others.

The next day, however, being left, while his mother went out, in the dining-room with his brother, a youth of about fourteen years old, he would not let him rest till he blew the bellows of the organ, while he fat on his knee and beat down the keys, at first promiscuously; but presently, with one hand, he played enough of God save great George our King to awaken the curiofity of his father, who being in a garret, which was his work-shop, hastened down stairs to inform himself who was playing this tune on the organ. When he found it was the child, he could hardly believe what he heard and faw. At this time he was exactly two years and three weeks old, as appears by a copy I have obtained of the register in the parish of St. George's Colgate, Norwich, figned by the reverend Mr. Tapps, Minister. Nor can the age of this child be supposed to exceed this account by those who have seen him, as he has not only all the appearance, but the manners, of an infant, and can no more be prevailed on to play by persuation than a bird to fing.

It is easy to account for God fave great George our King being the first tune he attempted to play, as it was not only that which his father often performed, but had been most frequently administered to him as a narcotic by

iis e	
f hi	
noa	
V28	
Lale	
eca	

year been in he Mrs. t he himfelf: he used to teize his father to play this tune on his organ, and was very clamorous when he did not

earry his point.

When his mother returned, the father, with a look which at once implied joy, wonder, and mystery, defired her to go up stairs with him, as he had something curious so shew her. She obeyed, imagining that fome acquaintance or friend was arrived, or that some interesting event had happened during her absence; but was as much surprized as the father on hearing the child play the first part of God fave great George our King. The next day he made himself mafter of the treble of the fecond part; and the day after he attempted the base, which he performed nearly correct in every particular, except the note immediately before the close, which, being an octave below the preceding found, was out of reach of his little hand.

In the beginning of November 1777, he played both the treble and base of Let ambition fire thy mind, an old tune which is, perhaps, now better known by the words to which it is sung in Love in a Village, Hope, thou nurse of

young desire.

Upon the parents relating this extraordinary circumstance to some of their neighbours, they laughed at it; and, regarding it as the effect of partial fondness for their child, advised them by no means to mention it, as such a marvellous account would only expose them to ridicule. However, a few days after, Mr. Crotch being ill, and unable to go out to work, Mr. Paul, a master-weaver by whom

he was employed, passing accidentally by the door, and hearing the organ, fancied he had been deceived, and that Crotch had stayed at home in order to divert himself on his favourite instrument; fully prepossessed with this idea, he entered the house, and, suddenly opening the dining room door, saw the child playing on the organ while his brother was blowing the bellows. Mr. Paul thought the performance so extraordinary, that he immediately brought two or three of the neighbours to bear it, who propagating the news, a croud of near a hundred people came the next day to hear the young performer, and, on the following days, a still greater number flocked to the house from quarters of the city; till, at length, the child's parents were forced to limit his exhibition to certain days and hours, in order to lessen his fatigue, and exempt themselves from the inconvenience of constant attendance on the curious multitude.

This account agrees in most particulars with a letter I received from Norwich, and of which the following is an extract.

"There is now in this city a " musical prodigy, which en-" gages the conversation and ex-" cites the wonder of every body. A boy, fon to a carpenter, of " only two years and three quar-" ters old, from hearing his fasther play upon an organ which whe is making, has discovered " such musical powers as are " scarcely credible. He plays a " variety of tunes, and has from " memory repeated fragments of " several voluntaries which he " heard Mr. Garland, the orga-

" nist, play at the cathedral. He " has likewise accompanied a peron who played upon the flute, ce not only with a treble, but has " formed a base of his own, which to common hearers feemed harmonious. If any person ce plays false, it throws him into a passion directly; and though " his little fingers can only reach a fixth, he often attempts to or play chords. He does not seem a remarkable clever child in any other respect; but his whole soul 4 is absorbed in music*. Numbers croud daily to hear him, and * the musical people are all amazement +."

The child being but two years and eight months old when this letter was written, his performance must have appeared considerably more wonderful than at present: for as he seems to have received scarce any instructions, and to have pursued no regular course of study or practice since that time, it can hardly be imagined that he is much improved. However, experience must have informed him what series or combination of sounds was most offensive to his ear; but such is his impetuosity

that he never dwells long on any note or chord, and indeed his performance must originally have been as much under the guidance of the eye as the ear, for when his hand unfortunately falls wrong notes, the ear cannot judge till it is too late to correct the mistake. However, habit, and perhaps the delicacy and acuteness of another sense, that of feeling, now direct him to the keys which he presses down, as he hardly ever locks at them.

The first voluntary he heard with attention was performed at his father's house by Mr. Mully, a music-master; and as soon as be was gone, the child seeming to play on the organ in a wild and different manner from what his mother was accustomed to hear. she asked him what he was doing? And he replied, " I am " playing the gentleman's fine "thing." But the was unable to judge of the resemblance: however, when Mr. Mully returned a few days after, and was alked, whether the child had remembered any of the passages in his voluntary, he answered in the assirma-This happened about the tive.

This opinion scems to have been too hastily formed; for, independent of his musical talent, he appears to me possessed of a general intelligence beyond his age: and he has discovered a genius and inclination for drawing, nearly as strong as for music; for whenever he is not at an instrument, he usually employs himself in sketching, with his left-hand, houses, churches, ships, or animals, in his rude and wild manner, with chalk on the shoor, or upon whatever other plain surface he is allowed to scrawl. Painters may, perhaps, some some judgment of his music by his drawings.

+ His father, who has lately been in London, and with whom I have conversed since this account was drawn up, all the particulars of which he has confirmed, told me, that when he first carried the child to the cathedral he used to cry the instant he heard the loud organ, which, being so much more powerful than that to which he had been accustomed at home, he was some time before he could bear without discovering pain, occasioned, perhaps, by the extreme

delicacy of his ear, and irritability of his nerves.

middle

middle of November 1777, when he was only two years and four months old, and for a confiderable time after he would play nothing else but these passages.

A mulical gentleman of Norwich informed Mr. Partridge, that, at this time, such was the rapid progress he had made in judging of the agreement of founds, that he played the Easter-Hymn with fall harmony; and in the last two or three bars of Hallelujab, where the same found is sustained, he played chords with both hands. by which the parts were multiplied to fix, which he had great difficulty in reaching on account of the shortness of his singers. The fame gentleman observed, that in making a base to tunes which he had recently caught by his ear, whenever the harmony displeased him, he would continue the treble note till he had formed a better accompaniment.

From this period his memory was very accurate in retaining any tune that pleased him: and being present at a concert where a band of gentlemen-performers played the overture in Rodelinda, he was so designted with the minuet, that the next morning he hummed part of it in bed; and by noon, without any further assistance, played

His chief delight at present is in playing voluntaries, which certainly would not be called mulic if performed by one of riper years, being descient in harmony and measure; but they manifest such a disternment and selection of notes as is truly wonderful, and which, if spontaneous, would surprize at any age. But though he executes fragments of com-

mon tunes in very good time, yet no adherence to any particular measure is discoverable in his voluntaries; nor have I ever observed in any of them that he tried to play in triple time. If he discovers a partiality for any particular measure, it is for dactyls of one long and two thort notes, which constitute that species of common time in which many fireet-tunes are composed, particularly the first part of the Belleisse March, which, parhaps, may first have suggested this measure to him, and impressed it in his memory. And his ear, though exquifitely formed for discriminating founds, is as yet only captivated by vulgar and common melody, and is fatisfied with very imperfect harmony. 'I examined his countenance when he first heard the voice of Signor Pacchierotti, the principal singer of the Opera, but did not find that he seemed sensible of the superior taste and refinement of that exquisite performer; however, he called out very foon after the air was begun, "He is finging " in F."

And this is one of the aftonishing properties of his ear, that
he can distinguish at a great distance from any instrument, and
out of sight of the keys, any note
that is struck, whether A, B, C, &c.
In this I have repeatedly tried
him, and never found him mistaken even in the half notes; a circumstance the more extraordinary,
as many practitioners and good
performers are unable to distinguish by the ear at the Opera or
elsewhere in what key any air or
piece of music is executed.

But this child was able to find any note that was firuck in his G hearing,

hearing, when out of fight of the keys, at two years and a half old, even before he knew the letters of the alphabet: a circumstance so extraordinary, that I was very curious to know when, and in what manner, this faculty first discovered itself; and his father lays, that in the middle of January 1778, while he was playing the organ, a particular note hung, or, to speak the language of organ builders, ciphered, by which the tone was continued without the pressure of the finger: and though neither himself nor his elder son could find out what note it was, the child, who was then amusing himself with drawing on the floor, left that employment, and going to the organ, immediately laid his hand on the note that ciphered. Mr. Crotch thinking this the effect of chance, the next day purposely caused several notes to cipher, one after the other, all which he infigntly discovered; and at last be weakened the springs of two keys at once, which, by preventing the valves of the wind-cheft from closing, occasioned a double cipher, both of which he directly found Any child, indeed, that is not an idiot, who knows black from white, long from short, and can pronounce the letters of the alphabet by which mufical notes are called, may be taught the names of the keys of the harpfi-

chord in five minutes +; but, integeneral, five years would not be sufficient, at any age, to impress the mind of a musical student with an infallible reminiscence of the tones produced by these keys, when not allowed to look at them.

Another wonderful part of his pre-maturity was the being able at two years and four months old to transpose into the most extraneous and difficult keys whatever he played; and now, in his extemporaneous slights, he modulates into all keys with equal fa-

cility.

The last qualification which I shall point out as extraordinary in this infant musician, is the being able to play an extemporary bake to easy melodies when personned by another person upon the same instrument. But these bases muk not be imagined correct, according to the rules of counter-point, any more than his voluntaries. He generally gives, indeed, the key-note to passages formed from its common chord and its inverficas, and is quick at discovering when the fifth of the key will serve as a At other times he makes the third of the key serve as an accompaniment to melodies formed from the harmony of the chord po the key-note; and if simple pafsages are played slow, in a regalar progression ascending or, descending, he soon finds out that thirds or tenths, below the treble,

* This circumstance proves that he exercised his eye in drawing, after his

manner, before he was two years and a half old.

[†] By remarking that the thort keys, which serve for slats and sharps, are divided into parcels of three's and two's, and that the long key between every two short keys is always called D, it is extremely easy from that note to discover the situation and names of the rest, according to the order of the first seven letters of the alphabet.

will serve his purpose in furnishing an agreeable accompaniment.

However, in this kind of extemporary base, if the same passages are not frequently repeated, the changes of modulation must be sew and slow, or correctness cannot be expected even from a professor. The child is always as ready at finding a treble to a base as a base to a treble, if played in Slow notes, even in chromatic pasfages; that is, if, after the chord of c natural is struck, c be made sharp, he soon finds out that a makes a good base to it; and on the contrary, if, after the chord of D with a sharp third, F is made natural, and A is changed into B, he instantly gives G for the base. Indeed he continued to accompany me with great readiness in the following chromatic modulation, ascending and descending:

I made more experiments of this kind, but to relate them would render my account too technical to all but composers, or such as have long studied harmony.

When he declares himself tired of playing on an instrument, and his musical faculties seem wholly blunted, he can be provoked to attention, even though engaged in any new amusement, by a wrong note being struck in the melody of any well-known tune; and if he stands by the instrument when such a note is designedly struck, he will instantly put down the right, in whatever key the air is playing.

At present, all his own melodies are imitations of common and easy passages, and he seems insensible to others; however, the only method by which such an insant can as yet be taught any thing better seems by example. If he were to hear only good melody and harmony, he would doubtless try so produce something similar; but,

at present, he plays nothing correctly, and his voluntaries are little less wild than the native notes of a lark or a black-bird. Nor does he, as yet, seem a subject for instruction: for till his reason is sufficiently matured to comprehend and retain the precepts of a master, and something like a wish for information appears, by a ready and willing obedience to his injunctions, the transmels of rule would but disgust, and, if somed upon him, destroy the miraculous pasts of his self-taught performance.

Me. Baillet published in the last century a book, Sur les Enfans celebres par leurs etades; and yet, notwithstanding the title of his work, he speaks not of infants but adolescents, for the youngest wonder he celebrates in literature is at least seven years old; an age at which several students in music under my own eye have been able to perform difficult compositions on the harpsichord, with great neatness and precision. However,

G 2

this

this has never been accomplished willbout instructions and laborious practice, not always voluntary.

Musical prodigies of this kind are not infrequent: there have been several in my own memory on the harpfichord. About thirty years ago I heard Palschau, a German boy of nine or ten years 'old, then in London, persorm with great accuracy many of the most difficult compositions that have ever been written for keyed infiruments, particularly some lessons and double fugues by S-bastian Bach, the father of the present eminent professors of that name, which, it that time, there were very few masters in Europe able to execute, as they contained diffi-. - culties of a particular kind; such as rapid divisions for each hand in arferies of thirds, and in fixths, aftending and descending, besides these of full harmony and contrivance in nearly as many parts las fingers; fuch as abound in the . lessons and organ fugues of Handel. · · Mis Frederica, inow Mes. Wynne, a little after this time, - was remarkable: for executing, at i fix years old, a great number of defions by Scarlatti, Paradies, and others, with the atmost precision.

But the two sons of the Reveread Mr. Wettley seem to have out instructions but good models - discovered, during early infancy, very uncommon faculties for the practice of ausic. Charles, the beldeft, at two years and three quarters old, furprized his father had his brother's excellent per by playing a tune on the harpsichord readily, and in just time: and feed his ear with hurmony; foon after he played foveral, what- the German infant; living is the

ever his mother sung, or whatever he heard in the fireet.

Samuel, the youngest, though he was three years old before he aimed at a tune, yet by constant, hearing his brother practife, and being accultomed to good took and masterly execution, before he was fix years old arrived at fed knowledge in music, that his ex temporary performance on keye instruments, like Mozart's, w so masterly in point of inventor, modulation, and accuracy of excution, as to furpals, in man particulars, the attainments of soi professors at any period of the lives.

Indeed Mozart, when little men than four years old, is faid to have been "not only capable of ex-" cuting lesions on his favour "instrument, the haspfichord, be 44 to have composed some in a " easy style and taste, which wer "much approved ":" and & muel Westley before he cock write was a composer, and nactally let the airs of leveral One. rice, which he retained in memor till he was eight years old, as then wrote them down.

Here the difference of edga-- tion appears: little Crotch, lef. to nature, has not only been with of initation; while Mozart and Samuel Westley, on the costray, may be faid to have been nurfet in good music: for as the law: formance to dimulate attention

^{*} See Phil. Trant. vol. LX. for the year 1770; an account of a very remarkable young musician, by the honourable Daines Barrington, P. R. S. who soon intends to favour the public with an account of the two Wessleys. hoak

house of his father, an eminent professor, and an elder sister, a neat player on the harpsichord, and constantly practing compositions of the first class for that instrument, had every advantage of situation and culture joined to the profusion of natural endowments.

Of Mozart's infant attempts at music I was unable to discover the traces from the conversation of his father; who, though an intelligent man, whose education and knowledge of the world did not feem confined to music, confessed himself unable to describe the progressive improvements of his fon during the first stages of infancy. However, at eight years. of age I was frequently convinced of his great knowledge in compolition by his writings; and that his invention, tafte, modulation, and execution in extemporary playing, were such as sew professors are possessed of at forty years of age.

into what the present prodigy may mature is not easy to predict; we more frequently hear of trees in bloffom during the winter months, than of fruits in confequence of such unseasonable appearances. However, to keep pace with the expectations to which such premature talents give birth is hardly allowed to humanity. It is the wish of some, that the uncommon faculties with which this child is endowed might be suffered to expand by their own efforts, neither restrained by rules, nor guided by examples; that, at length, the world might be furnished with a species of natural music, superior to all the surprizing productions of art to which pedantry, affectation, or a powerful hand, have given birth. alas! such a with must have been formed without reflection; music having its classics as well as poetry and other arts, what could he compose or play upon different principles that would not offend the ears of those who have regarded those classics as legislators, and whole fouls have been wrapped in elysium by their strains? He might as well, if secluded from all intercourse with men, be expected to invent a better language than the present English, the work of millions, during many centuries, as a new music more grateful to the ears of a civilized people than that with which all Europe is now delighted.

An individual may doubtless advance nearer perfection in-every art by the assistance of thousands, than by the mere efforts of his own labour and genius.

Another wish has been formed, that the effects of different general and divisions of the musical scale might be tried upon this little musician; but the success of such an experiment is not difficult to divine. An uncultivated ear would as naturally like the most plain and common music, as a young mind would best comprehend the most simple and evident propositions; and, as yet, the attention of Crotch cannot be excited by any musical refinements or elaborate contrivance.

It has likewise been imagined by some, that every child might be taught music in the cradle, if the experiment were made; but to these it may with truth be said, that such an experiment is daily made on every child, by every

 G_3

mother

mother and nurse, that is able to form a tune, on every part of the globe. In Italy the ninne nonne, or lullabies, are fragments of elegant melodies, become common and popular by frequent hearing; and these, though they help to form the national taste, are not found to stimulate the attention of Italian children to melody, or to accelerate the display of musical talents at a more early period than elsewhere.

Premature powers in music have as often surprized by suddenly becoming stationary as by advancing rapidly to the summit of excel-Jence. Sometimes, perhaps, nature is exhausted or enseebled by these early efforts; but when that is not the case, the energy and vigour of her operations are feldom properly seconded, being either impeded and checked by early felfcomplacence, or an injudicious course of study; and sometimes, perhaps, genius is kept from expansion by ill-chosen models, exclusive admiration, want of counsel, or access to the most excellent compositions and performers in the class for which nature has fitted those on whom it is bestowed.

On the Growth of Cedars in England; in a Letter to Sir John Cullum.

MONG the slighter devastations occasioned by the last new-year's hurricane, I cannot, as an admirer of natural productions, but lament with particular regret the destruction of perhaps the finest cedar in England. This superb

tree, ma, mmus, flood close on the north fide of Hendon Place, the elegant refidence of Mr. Aillabie, eight miles from London. the gardener's information, my own admeasurements, some of its dimensions bad been these. The height 70 seet; the diameter of the horizontal extent of the brasches, upon an average, 100; the circumference of the trunk, 7 km above the ground, 16; 12 feet & bove the ground, 20. At this life. ter height it began to branch; and its limbs, about 10 in nonber, were from 6 to 12 feet in cu-Its roots had cumterence. spread wide nor deep; soil that had suited it so well, is a firong clay, upon rather an elevated fituation. Tradition ascribes the planting of this tree to Queez Elizabeth herself; yet the vigou of its trunk, and the full verdure of its branches (belides a reason which I shall presently adduce), make me doubt whether we are to allow it so great an age. ever that be, its appearance them that it had not arrived at maturity, and might have flood, perhaps have thriven, for centuries to come. The gardener made 501, of the cones the year before last, but last year only 12 i.

The great fize, and apparent increasing vigour of this tree, excited my curiosity to inquire into the age and size of some of its brethren; and to collect what particulars I could towards the English history of this noblest of our exotics.

The Rev. Mr. Lightfoot of Uxbridge, upon whose accuracy, as well as friendship, I can depend, has sent me the following dimen-

Hons

tions of one at Hillingdon, in his neighbourhood. The perpendicu-Lar height is 53 feet; the diameter of the horizontal extent of the branches from east to west, 96; from north to south, 89; the circumference of the trunk close to the ground, $15\frac{1}{2}$; $3\frac{1}{2}$ feet above the ground, $13\frac{1}{2}$; 7 feet above the ground, 121; 12 feet above the ground, 14 feet 8 inches; 131, just under the branches, 15 feet 8 inches. It has two principal branches, one of which is bifid $1\frac{1}{2}$ foot above its origin: before it divides, it measures in circumference 12 feet; after its division, one of its forks measures $8\frac{1}{2}$, the other 7 feet 10 inches. The other primary branch at its origin meafures 10 feet; and, soon dividing, throws out two secondary ones, each 51. The proprietor of this tree lays he can, with much certainty, determine its age to be 116 years.

The largest of those at Chelsea, measured last month, is in height 85 feet; the horizontal extent of its branches is about 80; the circumference of its trunk close to the ground, 18½; at 2 feet above the ground, 15; at 10 feet, 16; at about 1 yard higher it begins to branch. These trees, Mr. Miller says, were, as he was credibly informed, planted in 1683, about 3 feethigh. The soil is a lean hungry sand mixed with gravel, and about 8wo feet surface.

In the garden of the old palace at Enfield is a cedar of Libanus, of the following dimensions, taken by Mr. Thomas Lilèy, an ingenious school-master there, at the defice of my friend Mr, Gough, who

was so obliging as to communicate them to me:

	Feet.	Inches.
Height	45	'9
Girt at top	3	7
Second girt	7	9
Third girt	10	•
Fourth girt	14	6

Large arm that branches out near the top, 3 feet 9 inches; several boughs, in girt 3 feet 5 inches; and the boughs extend from the body from 28 to 45 feet. The contents of the body, exclusive of the boughs, is about 103 cubical feet. This tree is known to have been planted by Dr. Uvedale, who kept a flourishing school in this boule at the time of the great plague 1665, and was a great flor rist. Eight feet of the top were broken off by the high wind of Tradition says, this tree 1703. was brought hither immediately from Mount Libanus in a port, The first lime-trees manteau. planted in England found their way over in the same conveyance .

Several other cedars of confider, able fize are scattered about in different parts of the kingdom.

I find not, with exactness, when, or by whom, the cedar was first introduced into England. Turner, one of our earliest herbarists, where he treats " of the pyne tre, and " other of that kynde," says nothing of it. Gerard, published by Johnson in 1636, mentions it not as growing here; and Parkinson, in his Theatrum Botanicum 1640, speaking of the Cedrus magna conifera Libani, says, " The branches, some say,

[·] Harris's Kent, p. 927

all grow upright, but others, first out." Evelyn, whose discourse on forest trees was delivered in the Royal Society in 1662, observing that cedars throve in cold climates, adds, Why then should they not thrive in Old England? I know not, save for want of industry and trial."

Hitherto, I think, it is pretty plain the cedar was unknown among us: and it appears probable, that we are indebted to the last-mentioned gentleman for its introduction into England; for he informs us in the fame paragraph from which I made the above quotation, that he had received cones and feeds from the few trees remaining on the mountains of Libanus.

Something better than twenty years afterwards, we find, among Mr. Ray's philosophical letters, the following chrious one addressed to him from Sir Hans Sloane:

" Landon, March 7, 1684-5. I was the other day at Chelse sea, and find that the artifices of used by Mr. Watts have been es very effectual for the preserva-" tion of his plants; infomuch sthat this severe enough winter " has scarcely killed any of his " fine plants. One thing I wones der much, to see the Gedrus e montis Libani, the inhabitant of « a very different climate, should thrive fo well, as without pot or " green-house, to be able to pror pagate itself by layers this " fpring. Seeds fown last autumn, "have as yet thriven well, and « are like to hold out: the main se artifice I used to them has been, " to keep them from the winds,

" ditional force to cold to define

" the tender plants."

This is the first notice that has occurred to me of the cultivation of the codar among us. Perhaps the tree that propagated itself by layers in 1684, might be from the seed received by Mr. Evelyn; and the reputed age of that at Hillingdon agrees with the time of that importation; supposing that importation was made about the time of the delivery of the discourse on forest-trees; nor probably, notwithstanding tradition, is that at Hendon to be referred to a higher Why Sir Hans should wosder at the cedar thriving so well in the open air at Chellea, I know not; for, though it be found in the warmer climates, it is known to be a native of the fnowy mountains of Libanus, and confequently not likely to be defined by the inclemency of an English winter. But, I believe, we generally treat exotics, upon their first arrival among us, with more tenderness than they require. Perhaps the sear of losing them may be one reason; perhaps, too, they may be gradually habituated to endure a degree of cold, which at first would have proved fatal to them. the first introduction of the seatree; it was either kept in our green-houses, or, if planted in the open ground, matted, or otherwise meltered in the winter: we now find fuch care unnecessary. I have had one at a degree N. of London. thrine and bloffom for fome years, in the open air, without the flightest protection, in the severest wister.

" artifice I used to them has been, That this little memoir may not to keep them from the winds, appear to terminate in mere curiwhich seem to give a great adwhich seem to give a great adwhich seem to give a great ad-

recommending the cultivation of the cedar for common use; as it is well known to be a very valuable material in the hand of the joiner and cabinet-maker. Mr. Miller observed their quick growth at Chelsea, in a poor gravely soil: those at Hendon, Hillingdon, and Essield, shew that they thrive as well in a very different one. Those planted by the old duke of Argyle at Whitton have made the happiest progress; and I am assured that a room has been wainfcoted with their timber.

If these slight notes should induce any better informed person to throw more light on this fubject, it would afford entertainment to many, as well as to,

Hardwicke House, Yours, &c., Feb. 16, 1779. JOHN CULLUM.

An Account of the Vallais, and of the Goitres and Idiots of that Country. From Coxe's Letters from Swisserland.

TAM now writing to you from the little village of Trient in the Vallais, on my way to the glaciers of Savoy. From the mountain of the Furca, its eastern boundary, two vast ranges of Alps enclose the Vallais: the southern chain separates it from the Milanese, Piedmont, and part of Savoy; the northern divides it from the canton of Berne. These two chains, in their various windings, form several small vallies, through which a number of torments rush into the Rhone, as it traverses the whole country from the Furça to St. Maurice. A coun-Ly thus entirely enclosed within

high Alps, and confisting of plains, elevated valleys, and lofty mountains, must necessarily exhibit a great variety of fituations, climates, and productions. Accordingly, the Vallais presents to the Curious traveller a quick succession of prospects, as beautiful as they are diverlified. Numberless vineyards, rich passure-grounds covered with cattle, corn, flax, fruit-trees, and wild foreits: and these occafionally bordered by naked rocks, whole fummits are crowned with everlasting snow, and inaccessible glaciers. This throng and thriking contrast between the pastoral and the sublime; the cultivated and the wild; cannot but affect the mind of an observer with the most

pleasing emotions.

As to the productions of the Vallais; they must evidently vary in different parts, according to the great diversity of climates, by which this country is fo peculiarly distinguished. It supplies more than sufficient wine and corn for the interior confumption; and indeed a confiderable quantity of both are yearly exported; the foil in the midland and lower parts being exceedingly rich and fertile. In the plain, where the heat is collected and confined between the mountains, the harvest is so very forward, that it has already for some time been carried in: whereas, in the more elevated parts, barley is the only grain that can be cultivated with any success; and the crop is feldom cut before November. About Sion, the fig. the melon, and all the other fruits of Italy, ripen to perfection: in consequence of this singular variety of climates, I tailed in the same day (what is usually to be

had only in gradual succession) frawberries, cherries, plums, pears, and grapes; each of them the natural growth of the country.

With respect to manusactures; there are none of any confequence: and indeed the general ignorance of the people is no less remarkable than their indolence; so that they may be confidered, in regard to knowledge and improvements, as some centuries behind the Swifs, who are certainly a very enlightened nation. The poalants feldom endeavour to meliorate those lands where the foil is originally bad; nor to make the most of those, which are uncommonly fertile: having few wants, and being fatisfied with the spontaneous gifts of nature, they enjoy her bicfings without much confidering in what. manner to improve them.

The beauties and varieties of this country you will find amply and faithfully delineated in that elegant letter of the Nouvelle Heloife, where St. Preux relates his excurfions into the upper Vallais. As to the truth of the description he gives, in the same letter, of the manners of the people, I can hardly be supposed to be a competent judge, from the little time I have passed among them. But, as far as I have had an opportunity to observe and inquire, the picture, although in some parts not entirely devoid of resemblance, is, upon the whole, confiderably heightened.

Before I take leave of the Vallais, you will probably expect, that, according to my promise, I should send you some informations concerning the causes which are supposed to occasion, or to contribute to render, goitrous persons and idiots, so remarkably common in many parts of this country. I have indeed made all possible researches in order to gain some satisfactory intelligence upon so curious a subject; but I have the mortification to add, that the very faint lights I have been able to obtain, have lest me almost as much in the dark as I was before: you must rest contented therefore with mere conjectures.

I shall begin however with undoubted fact. The Vallaisans are not all equally subject to the above infirmities; but those chiefly who live in or near the lower parts of the Vallais, as about Sider, Sion, Martinac, &c. The people in general are a robust and hardy race, as well those who dwell in the places last mentioned, as those who inhabit the more mountainous

parts of this country.

It is a common notion, that snow-water occasions goiters; but I have some reason to think the contrary. For, I have been at several places, where the inhabitants drink no other water than what they procure from those rivers and torrents, which descend from the glaciers; and yet are not subject to this malady: indeed I have been affured, though I will not venture to answer for the truth of the allertion, that snow-water, so far from being a cause, is esteemed even 4 preventive. The air of the mountains is also a strong preservative against them; and goiters have been known to diminish upon elevated fituations; whereas, in the lower parts of the Vallais, if this excrescence once begins to thew itself, it always continues

more particularly remarkable for this disorder than others: thus, in a little village, near Sion, almost all the inhabitants are goitrous.

From these facts it seems reasonuble to conclude, that goiters are derived from certain local circumstances; and that several causes, both physical and moral, may jointly contribute to their production. Among the physical; bad water, and bad air, may, perhaps, be justly assigned, but chiefly the former: which, near the particular districts above mentioned, is stagnant, and loaded with particles The torrents also, which are formed by the melting of the fnows, dissolve this substance, or fimilar ones, in their passage; and probably this circumstance has given rife to the notion, that fnowwater, simply in itself, occasions these goiters; but wherever it has that effect, it is strongly impregnated with certain stony particles. I was shewn several pools of these stagnant waters, which I should have supposed no human being to have been capable of drinking. Among the moral causes, which may be supposed to concur in occasioning these gutteral protuberances, the inconceivable laziness and negligence of these people, may be mentioned. For, they rarely take the least precaution to guard against, or to remedy, the ill effects of their unwholesome water; indolently acquiescing in its consequences, they use no sort of means either to prevent or remove them.

The same causes, which seem to produce the goiters, probably operate in the case of idios: for, wherever in this country the former abound, the latter are also in great numbers. Such indeed is the nice and inexplicable connexion between our bodies and our minds, that the one ever fympathizes with the other: we see that the body fuffers, whenever the mind is deeply affected by any strong impression of melancholy and distress; and, in return, that whenever the corporeal frame is impaired and shattered by long pain and fickness, the understanding also is equally out of order. Hence it is by no means an illgrounded conjecture, that in the cale before us, the lame caples which affect the body should also affect the mind; or, in other words, that the same waters, &c. which create obstructions, goiters, should also occasion mental imbecility and difarrangement. But, in conjunction with causes of a physical nature, there is a moral one likewise to be taken into the account: for the children of the common people are totally neglected by their parents; and, with no more education than the meanest brutes, are, like those, suffered to wallow in the dirt, and to eat and drink whatever comes in their way.

I saw several idiots with goiters; but I do not mean to draw any certain conclusion from that circumstance. For, though in general they are the children of goitrous parents, and have frequently

This difference, however, may be occasioned by the different quality of the water, as well as by the superior purity of the air.

those swellings themselves: yet the contrary often happens: and they are sometimes the offspring even of healthy parents, whose other children are all properly organized. So that, it seems, the causes above mentioned operate more or less upon some constitutions than upon others; as indeed is observable in all epidemical disorders whatsoever *.

I was informed at Sion, that the number, both of goitrous perfons, and of idiots, have considerably decreased within these sew years; and two reasons were assigned: one is, the laudable care which the magistrates have taken to dry up the stagnant waters in the neighbourhood; and the other, the custom which now generally prevails of sending the children to the mountains; by which means they escape the bad effects of the unwholesome air and water.

It is to be presumed, that a people accustomed to see these excrescences daily, will not be at all shocked at their deformity; but I do not find, as some writers assert, that they consider them as beauties: I cannot believe that a Vallaisan poet would venture to address a copy of verses to his mistress in praise of her goiter. To judge by the accounts of some

travellers, one might suppose, that all these people, without exception, were gifted with the above appendage: whereas, in sact, as I have before remarked, the Vallaisans, in general, are a robust, hardy race of people; and all that with truth can be affirmed, is, that goitrous persons, and idiots, are more abundant here than perhaps in any other part of the globe.

It has been afferted also by some, that the people very much respect these idiots, and even confider them as bleffings from Heaven; an affertion which is as strongly contradicted by others. made many inquiries in order to get at the truth of this matter. Upon my questioning some gentlemen of this country, whom I met at the baths of Leuk, they treased the notion as absurd and faise: but whether they spoke their real fentiments, or were unwilling to confirm what they thought might lower their countrymen in the opinion of a stranger, will admit perhaps of some doubt. For I have, fince that time, repeatedly enquired among the lower fort, and am convinced, that the common people esteem them as blessings. They call them "Souls of God, without " fin:" and there are many pa-

I was told by a physician of the Vallais, that children are sometimes born with goiters; and I saw several, scarce ten years old, who had very large ones. These swellings, when they increase to a considerable magnitude, check respiration, and render those who have them exceedingly languid and indolent. During my expedition through the Vallais, I observed some of all proportions, from the size of a walnut to the bigness of a peck loaf.

The species of idiots I have mentioned above, and who are deemed by many authors as peculiar to the Vallais, are called Cretins. Among these I also observed a kind of sensible gradation; namely, from those who, being totally deaf and dumb, and incapable of helping themselves, give no proof of their existence, but the mere animal sensations; to others, who are a little more ani-

mated, and possess some faint dawnings of reason.

rents who preser these idiot-children to those whose understandings are persect; because, as they are incapable of intentional criminality, they consider them as more certain than the others of happiness in a suture state. Nor is this opinion entirely without some good effect, as it disposes the parents to

pay the greater attention to those unhappy beings, who are incapable of taking care of themselves. These idiots are suffered to marry, as well among themselves as with others; and thus the breed is, in some measure, prevented from becoming extinct.

* Since I wrote the above letter, I have met with an account of these Cretins in the "Recherches Philosophiques sur les Americains." The ingenious author compares them with the Blafards of the isthmus of Darien; a species of beings who resemble the white negroes. He refers to a memoir written expressly upon these Cretins, by the Count of Mogiron, and read to the Royal Society of Lyons: I am somy that I have not been able to produce this memoir; because, from the character given of it by the author of the Recherches Philosophiques, it must contain some very curious remarks. I shall here subjoin his account of the Cretins, as being, in many respects, more ample than mine; premising, at the same time, that it by no means appears these Cretins are universally goiters.

"On ne sauroit mieux comparer les Blasards quant a leurs facultés, à leur ' 46 'degeneration,' et a leur état, qu'aux Cretins qu'on voit en affez grand nombre se duns le Valais, et principalement à Sion capitale de ce pays : ils sont sourds, - 44 muets, presque infensibles aux coups, et portent des goûtres prodigieux qui . 44 leur descendent hisqu'à la ceinture : ils sont mi furieux ni mulfaisants, quoiqu' . 44 absolument ineptes et incapables de penser; ils n'ont qu'une sorté d'attrait es affez violent pour leurs besoins phytiques, et s'abandonnent aux plaisirs de se sens de toute espece sans y soupçonner aucune crime, aucune indécence. Les 44 habitans du Vallais regardent ces Crètins comme les anges tutélaires des 44 familles, comme des faints; on he les contrarie jamais, on les foigne avec assiduité, on n'oublie rien pour les amuser, et pour satisfaire leurs gouts et se seurs appetits; les enfants n'osent les insulter, et les vieillards les respectent. - . Ils ont la peau très livide et naissent Crètine, c'est-à-dire aussi stupides, aussi imples qu'il est possible de l'être :, les années n'apportent aucun changement a leur état d'abrutissement: ils y persistent jusqu'à la mort, et on ne sunoit point de remede capable de les tirer de cet assoupissement de la raise de cette desaillance du corps et de l'esprit. Il y en a des deux sexes, et on les "honore également, soit qu'ils soient hommes ou femmes. Le respect qu'on porte à ces personnes atteintes du Cretinage, est fondé sur leur innocence et " leur foiblesse: ils ne sauroient pécher, parce qu'ils ne distinguent le vice de se la vertu; ils ne sauroient nuire, parce qu'ils manquent de force, de vaillance, ou d'envie; et c'est justement le cas des Blafards, dont la stupidité est aussi ".grande que celle des Crètins."

In another part he says, "Mr. De Maugiron attribue les causes du Cretinage des Vallaisans à la malpropreté, à l'education, aux chaleurs excessives
des vallées, aux eaux, et aux goîtres qui sont communs à tous les entans de
ce pays: mais il y existe probablement une autre cause specifique, que l'on
se sera plus à portée de connoître quand on sera parvenu à obtenir la permission
de dissequer un de ces Crètins."

See Recherches Philosophiques sur les Americains, &c. Par Mr. De P-, Quatrieme Partie. Section I.

Account of the Glaciers of Savoy, and of Mont Blanc. From the same.

Went along some narrow vallies through forests of pines by the side of the torrent of Trient; and soon afterwards entered the valley of Orsina, which led us to the small village of that name: a little way from Trient we entered the dutchy of Faucigny, which belongs to the King of Sardinia. Our road was very rugged, till we arrived at the vale of Chamouny; the great mountains and glaciers of Savoy rising majestically before us.

There are five glaciers, which extend almost to the plain of the vale of Chamouny, and are separated by wild forests, corn-sields, and rich meadows: so that immense tracts of ice are blended with the highest cultivation, and perpetually succeed to each other in the most singular and striking vicissitude. All these several val-

lies of ice, which lie chiefly in the hollows of the mountains, and are some leagues in length, unite together at the foot of Mont Blanc; the highest mountain in Europe, and probably of the antient world.

According to the calculations of Mr. De Luc, (by whose improvement of the barometer, elevations are taken with a degree of accuracy before unattainable,) the heighth of this mountain above the level of the sea is 2391; French toises. Mr. de Saussure, profese for of natural philosophy at Geneva, has made use of the above barometer in measuring the elevation of several very considerable mountains. This great improvement of the barometer marks a distinguished zera in the history of natural philosophy; as, before it was rectified by that ingenious naturalist, Mr. De Luc, its uncertainty was so great, that there was no relying upon the mensurations, which had been taken by that inffrument *.

I am

It was by this means that Mr. De Luc found the altitude of the glacier of Bact; and from thence he took geometrically the elevation of Mont Blanc above the uet. The labours of this celebrated naturalist, and his rules for complete heighths by the barometer, are to be found in his very valuable treatile, Sur les Modifications de l'Atmosphère." These rules are explained, and his tables reduced to English measure, by Dr. Maskelyne, R. A.; and still more fully by Dr. Horsley, secretary to the Royal Society: both these treatises are published in the Philosophical Transactions for the year 1774.

The accuracy of the barometrical measurements made by Mr. De Luc, was verified by Sir George Schuckborough, in a number of ingenious experiments towards ascertaining the elevation of some of the mountains of Savoy. a short time before I arrived at Geneva. He followed Mr. De Luc's method; took the heighths of several mountains, reciprocally, by barometrical and geometrical observations; and he perceived that the former coincided almost exactly with the

latter.

Having found the elevation of the summit of the Mole, a neighbouring mountain, above the surface of the lake of Geneva; he took from thence the geometrical altitude of Mont Blanc.

During the course of these experiments, he was enabled to correct some trif-

I am convinced, from the fituation of Mont Blanc; from the heighths of the mountains around it; from its superior elevation above them; and its being feen at a great distance from all sides; that it is higher than any mountain in Swisserland; which, beyond a doubt, is, next to Mont Blanc, the highest ground in Europe. That it is more elevated than any part of Asia and Africa, is an affertion that can only be made good by comparing the judicious calculations of modern travellers, with the exaggerated accounts of former ones; and by shewing that there is no mountain in those two quarters of the globe, the altitude whereof, when accurately taken, amounts to 2,400 toiles .

Perhaps in no instance has the imagination of man been more creative, or more given to amplification, than in ascertaining the heighths of mountains. I have been considerably amused to-day with considering this article in

Gruner's description of the Swifs glaciers. In one of the chapters, he has given the altitude of some of the most remarkable mountains of the globe, agreeably to the calculations of several famous geographers and travellers, both antient and modern.

According to Strabo, the highest mountain of the antient world was about

According to Riccioli 58,216

According to Father Kischer, who took the elevations of mountains by the uncertain method of measuring their shadows,

Ætna is - 4,000 The Pike of Teneriss 10,000 Mount Athos - 20,000 Larissa in Egypt - 28,000

But these several calculations are evidently so extravagant, that their exaggeration cannot but strike the most common observer. If we consult the more † modern and

ling errors that had crept into Mr. De Luc's computations; to improve still farther the discoveries of the latter; and has facilitated the means of taking elevations, by simplifying the tables and rules necessary for that purpose.

The height of Mont Blanc, according to Sir George Schuckborough, is 15,662 feet perpendicular above the level of the sex; according to Mr. De Luc, 2,391 French toises: which, reduced to our measure, gives 15,303 feet; if the proportion of the French to the English foot be nearly as 15 to 16, without considering

the fraction. The difference is only 359 feet.

General Phiser indeed computes the heighth of the Schereckborn (the most elevated of the Alps in the canton of Berne) as equal to 2,400 toiles above the level of the sea: a calculation, however, which is probably somewhat exaggerated. For although, as I am informed, his method of taking elevations is in itself exact; yet as he does not correct the difference occasioned by the refractions of the atmosphere; he consequently assigns too great an heighth. Nevertheless, as he accurately preserves the different proportions, this exaggeration may be easily reduced to the true standard. Probably the Schereckborn will be found to be the highest mountain of the old world, excepting Mont Blanc.

† In order to determine with absolute certainty that Mont Blanc is the highest point of the old world, it would be necessary to estimate, by the same mode

and rational accounts, it appears that the Pike of Teneriffe and Ætna have been frequently supposed to be the highest mountains of the globe. The former is estimated by some natural philo-.fophers, to be 3,000 toiles above the level of the sea: but, according to Feuillée, this elevation is redeced to 2,070 toiles (and this measurement too is probably fomewhat beyond the truth) whereas Æina, by the accurate compu-Tations of Mr. De Saussure, rises only * 1672 toises above the sea. So that from these observations, as well as from those which have been made by other travellers, whose skill may be depended upon,

it will appear that there are few mountains, except those in America, (the elevation whereof reaches, according to Condamine, to above 3,000 toises) which are equal in heighth to Mont Blanc.

The access to Mont Blanc has been hitherto found impracticable. About two months ago four inhabitants of Chamouny attempted to reach it; and set out from that village at ten in the evening. After above fourteen hours most violent satigue, employed in mounting rugged and dangerous afteents, in crossing several vallies of ice, and large plains of snow, which was in some parts so loose, that they sunk in it down to the

of mensuration, Mont Blanc, the Schereckhorn, the Pike of Tenerisse, the

mountains of the Moon in Africa, the Taurus, and the Caucasus.

The latter have long been deemed the highest mountains of Asia; and some philosophers, upon considering the great superiority, which the eastern rivers have over the European, both in depth and breadth; have drawn from thence a presumptive argument, that the Asiatic mountains are much more elevated than those of Europe. But conjectures are now banished from natural philosophy: and, till some person of sufficient ability shall shew from undoubted calculations, that the highest part of the Caucasus rises more than 15,000 feet above the level of the sea, Mont Blanc may be fairly considered as more elevated.

N. B. Throughout the text I have made use of the French toise, consisting of

fix French feet.

About 10,660 English seet. According to Sir George Schuelcherough, 10,954: who says, "I have ventured to compute the heighth of this celebrated mountain from my own tables, though from an observation of Mr. De Saussure, in 1773, which that gentleman obligingly communicated to me. It will serve to shew that this Volcano is by no means the highest mountain of the old world; and that Vesuvius, placed upon Mount Ætna, would not be equal to the heighth of Mont Blanc, which I take to be the most elevated point in Europe, Asia, and Africa."

I am happy to find my conjectures corroborated by that ingenious and accu-

rate observer.

Heighth of Ætna, according to Sir George Of Vesuvius, according to Mr. De Saussure		10,954 - 3,900
Of both together -	-	- 34,854
Heighth of Mont Blanc, according to Sir George Difference,—or the height of Mont Blanc above Veiuvius taken together	that of Ætna	25,661 and \$08 waif;

waist; they found themselves upon the summit next to Mont Blanc. At first fight it appeared scarce a league distant: however, they foon discovered that the clearness of the air, the extraordinary whiteness of the snow, and the heighth of that mountain, made it seem nearer than it was in reality; and, they perceived with regret, that it would require at least four hours more to arrive at it, even supposing it were practicable. as the day was now far advanced, and the vapours towards the fummit of Mont Blanc began to gather into clouds, they were obliged to return without having accomplished their enterprise. They had no time to lose: and as they were returning in great hafte, one of the party slipped down in attempting to leap over a chaim of ice. He had in his hand a long pole, spiked with iron, which he had struck into the ice on the

other fide of the opening; and upon this he hung dreadfully fufpended for a few moments, until he was taken out by his companions. The danger he had just escaped, made such an impression upon him, that he fainted away, and continued for some time in that situation; he was at length, however, brought to himself, and, though considerably bruised, he sufficiently recovered to be able to go on. They did not arrive at Chamouny till eight that evening, after having passed two and twenty hours of inconceivable fatigue, and being more than once in danger of losing their lives in those desolate regions; but, as some fort of recompence for so much danger and fatigue, they have the satisfaction, at least, to boast of having approached nearer to Mont Blanc than any former adventureis .

I am, &c.

According to Sir George Schuckborough, the summit to which they arrived, is more than 13,000 feet above the Mediterranean. These persons however do not seem to have taken sufficient precautions for so persons an enterprize: for the expedition was not only hazardous to a great degree, but it was also too satiguing and too difficult to be accomplished within twenty-four hours. They ought to have set out in the morning, have taken surs with them, and, if possible, have sound some proper place in which to have passed the night. If that could have been accomplished, and if by any means they could have guarded themselves against the piercing cold, they would have been sufficiently refreshed the next morning to pursue their expedition; and would not have found themselves, after advancing within four hours of Mont Blanc, so fatigued and terrified as to be unable to proceed; nor the day so far spent, that, had they gone on, they must have been overtaken by darkness, and would probably have either fallen down one of the precipices, or have perished with cold.

USEFUL PROJECTS.

Account of the late Dr. Knight's Method of making artificial Loadfrones; by Mr. Benjamin Wilion, F. R. S.

[From the Philosophical Transactions.]

ficial Loadstones, as it was discovered and practised by the late Dr. Gowin Knight, being unknown to the public, and I myself having been frequently present when the doctor was employed in the most material steps of that curious process, I thought a communication thereof would be agreeable to you and the philo-

sophic world.

The method was this: having provided himself with a large quantity of clean filings of iron, he put them into a large tub that was more than one-third filled with clean water: he then, with great labour, worked the tub to and fro for many hours together, that the friction between grains of iron by this treatment might break off such smaller parts as would remain suspended in the water for a time. The obtaining of those very small particles in sufficient quantity, seemed to him to be one of the principal desiderata in the experiment.

The water being by this treatment rendered very muddy, he poured the same into a clean earthen vessel, leaving the slings behind; and when the water had stood long enough to become clear, he poured it out carefully, without disturbing such of the iron sediment as still remained, which now appeared reduced almost to impalpable powder. This powder was afterwards removed into another vessel, in order to dry it; but as he had not obtained a proper quantity thereof, by this one step, he was obliged to repeat the process many times.

Having at last procured enough of this very fine powder, the next thing to be done was to make a paste of it, and that with some vehicle which would contain a considerable quantity of the phlo-

gistic principle; for this purpose he had recourse to linseed oil, in preserence to all other stuids.

With these two ingredients only he made a stiff passe, and took particular care to knead it well before he moulded it into conve-

nient shapes.

Sometimes, whilst the paste continued in its soft state, he would put the impression of a seal upon the several pieces: one of which is in the British Museum.

This palte was then put upon wood, and sometimes on tiles, in order to bake or dry it before a moderate

moderate fire, at a foot distance or thereabouts.

The doctor found, that a moderate fire was most proper, because a greater degree of heat made the composition frequently crack

in many places.

The time required for the baking or drying of this paste was generally five or fix hours before it attained a sufficient degree of hardness. When that was done, and the several baked pieces were become cold, he gave them their magnetic virtue in any direction he pleased, by placing them between the extreme ends of his large magazine of artificial magnets for a few seconds or more, as he faw occasion.

By this method the virtue they acquired was such, that when any one of those pieces was held between two of his best ten guinea bars, with its poles purposely inverted, it immediately of itself turned about to recover its natural direction, which the force of those very powerful bars was not sufficient to counteract.

I am, &c.

A Metbod to make Potatoe-Bread without the Admixture of Flour, by M. Parmentier, Member of the College of Pharmacy, Royal Censor, &c. of the Royal Printing Office at Paris.

Of the STARCH. HE potatoes must be well washed; they must be ground fine with the assistance of a tin rasp; they are thereby converted into a liquid paste, which must be diluted in water, and well agitated, in order to empty it into a

sieve placed over a proper vessel. The water passes with the starch of the potatoes; this starch must be well washed in several waters; it is to be divided into small pieces, and exposed to the air, in order to dry it: it is of a most exquisite whiteness. The substance which remains in the sieve is the most fibrous part; it must be dried after all the moissure is pressed out of it; it may be used in the composition of brown bread, or may be given in that state to poultry.

Remarks.—One pound of potatoes contains three ounces of starch, two ounces of fibrous substance and extractive matter, and eleven ounces of vegetative wa-These substances vary according to the nature of the foil and the species of the potatoe. It is to clear this root from the fuperabundance of water which it contains, and to separate the starch from the other substances which constitute the potatoe, that the foregoing process is put in prac. tice. You may, in lieu of a rasp, which renders the operation tedious, substitute a broad wheel with double parallel spokes, upon the same axis or axletree, shod with place iron, stamped with holes, instead of bands of iron, or any other instrument; besides, necessity and practice will foon clear up that point.

The starch extrasted from potatoes has this advantage; that it may be kept for many years without the least alteration, and will still subsist without corruption, or untouched in a frozen potatoe, even when animals will not

eat it.

Of the Pulp.—Put the potatoes in boiling-water; when they are 100

boiled enough, cast away the water, and peel them; and, with the assistance of a wooden roller, reduce them into a paste, which, by grinding, grows stiff and elastic. When there are no more clots or lumps in the whole mass, then the pulp is in perfection.

Remarks. — The parts which constitute the potatoe are in its natural state divided; after boiling, these parts are so united as to be but one homogeneous mass. The starch, the sibrous substance which floated, as one may say, in the vegetative water, are in it dissolved.

It is from this very simple operation that the whole fabrication of potatoe-bread depends; without it, no panification: moreover, the potatoe must necessarily be in that state when we intend to mix it with any other grain, such as buck-wheat, barley, or oats: under any other form, its union with these forts of grain will make, at best, but a coarse bread.

Of the Bread.—Take five pounds of dried starch, and five pounds of the pulp; dissolve a suitable quantity of leaven or yeast in warm water the eve or night before. The mixture being exactly made, let it lie all night in a kneading trough, well covered and kept warm until the next day; this is the second leaven; then add five pounds more of starch, and the fame quantity of pulp, and knead it well. The water must be in proportion as a fifth part, that is to fay, that upon twenty pounds of paste there must be sive pounds of the water. You must observe that the water be used as hot as possible.

The paste being completely kneaded, it must be divided into fmall loaves: this bread requires flow preparation, and the oven must be equally and moderately heated: it will require two hours baking.

The falt with which they seafon the bread in some provinces is also necessary for this: the quantity depends on the talle; but half a drachm feems to be fuf-

ficient.

Any one may 'eafily conceive that this abstract cannot wholly give an idea of the process, and that those who have the fabricition of this bread at heart, mut be obliged to have recourse w their own experience, because no exact account is to be expected when a new preparation is to be performed.

Description of a most effectual Mubil of securing Buildings against Fin, invented by Charles Lord Vilcount Mahon, F. R. S.

From the Philosophical Transactions

HE new and very simple method which I have discovered of fecuring every kind of building (even though constructed of timber) against all danger of fire, may very properly be divided into three parts; namely, underflooring, extra-lathing, and interfecuring, which particular methods may be applied, in part or 18 whole, to different buildings, according to the various circumstances attending their construction, and according to the degree of accumulated fire, to which each of these buildings may be exposed, from the different uses to which they are meant to be appropriated. The method of under-flooring may be divided into two parts; viz. into fingle and double under-flooring.

The method of fingle under-flooring is as follows: A common strong lath, of about one quarter of an inch thick (either of oak or fir) should be nailed against each side of every joist, and of every main timber, which supports the floor intended to be secured. fimilar laths ought then to be nailed the whole length of the joists, with their ends butting against each other: these are what I call the fillets. The top of each fillet ought to be at one inch and a half below the top of the joilts or timbers against which they are These fillets will then form, as it were, a fort of small ledge on each fide of all the joists.

When the fillets are going to be nailed, on some of the rough plaster hereafter mentioned, must be spread with a trowel all along that fide of each of the fillets which is to lay next to the joists, in order that these fillets may be well bedded therein, when they are nailed on, so that there should not be any interval between the fillets and the joists. A great number of any common laths (either of oak or fir) must be cut nearly to the length of the width of the intervals between the joists. of the rough plaster referred to above ought to be spread with a trowel, successively upon the top of all the fillets, and along the fides of that part of the joists which is between the top of the fillets and the upper edge of the joifts. The short pieces of common laths just mentioned ought (in order to fill up the intervals between the joists that support the floor) to be laid in the contrary direction to the joists, and close together in a row, to as to touch one another, as much as the want of straitness in the laths will possibly allow, without the laths lapping over each other; their ends must rest upon the fillets spoken of above, and they ought to be well bedded' in the rough plaster. It is not proper to use any nails to fasten down either these short pieces of laths, or those short pieces hereafter mentioned.

These short pieces of laths ought then to be covered with one thick coat of the rough plaster spoken of hereaster, which should be spread all over them, and which should be brought, with a trowel, to be about level with the tops of the joists, but not above them. This rough plaster in a day or two should be trowelled all over close home to the sides of the joists; but the tops of the joists ought not to be any ways covered with it.

The method of double under-flooring is, in the first part of it, exactly the same as the method just
described. The fillets and the
short pieces of laths are applied
in the same manner; but the coat
of rough plaster ought to be little more than half as thick as
the coat of rough plaster applied
in the method of single under flooring.

In the method of double underflooring, as fast as this coat of rough plaster is laid on, some more of the short pieces of laths, cut as above directed, must be laid in the intervals between the joists upon

H₃ the

the first coat of rough plaster; and each of these short laths must be, one after the other, bedded deep and quite sound into this rough plaister whilst it is soft. These short pieces of laths should be laid also as close as possible to each other, and in the same direction as the first layer of short laths.

A coat of the same kind of rough plaster should then be spread over this second layer of short laths, as there was upon the first layer above described. This coat of rough plaster should (as shove directed for the method of single under flooring) be trowelled level with the tops of the joists, but it ought not to rife above them. The sooner this second coat of rough platter is spread upon the fecond layer of short laths just mentioned, the better. What follows is common to the method of fingle as well as to that of double underflooring.

Common coarse lime and hair (such as generally serves for the pricking up coat in plastering) may be used for all the purposes before or hereafter mentioned; but it is confiderably cheaper, and even much better, in all these cases, to make use of bay instead of bair, in order to prevent the platterwork from cracking. The hay ought to be chopped to about three inches in length, but no shorter. One measure of common rough fand, two measures of slacked lime, and three measures, but not less, of chopped bay, will prove in general, a very good proportion, when sufficiently beat up together in the manner of common The hay must be well dragged in this kind of rough platter, and well intermixed with

it; but the hay ought never to be put in, till the two other ingredients are well beat up together with water. The rough plaster ought never to be made thin for any of the work mentioned in this paper. The stiffer it is the better, provided it be not too dry to be ipread properly upon the laths. If the flooring boards are required to be laid very foon, a fourth or a fifth part of quick lime in powder, very well mixed with this rough plaster just before it is used, will cause it to dry very fast.

I have practifed this method in an extensive work with great advantage. In three weeks this rough platter grows perfectly dry. The rough plaster, so made, may be applied at all times of the year with the greatest success. The easiest method, by much, of reducing quick lime to powder, is by dropping a small quantity of water on the lime-stone, a little while before the powder is intended to be used: the lime will still retain a very sufficient degree of heat.

When the rough plaster-work between the joists has got thoroughly dry, it ought to be observed, whether or not there be any small cracks in it, particularly next to the joists. If there are any, they ought to be washed over with a brush, wet with mortarwash, which will effectually close them; but there will never be any cracks at all, if the chopped bay and the quick lime be properly made use of.

The mortar-wash I make use of is merely this. About two measures of quick lime, and one measure of common sand, should be not

Pui

put into a pail, and should be well stirred up with water, till the water grows very thick, so as to be almost of the consistency of a thin jelly. This wash, when used, will grov dry in a few minutes.

Before the flooring boards are laid, a small quantity of very dry common fand should be strewed over the rough plaster-work, but not over the tops of the joilt's The fand should be struck smooth with an hollow rule, which ought to be about the length of the distance from joist to joist, and of about one eighth of an inch curvature; which rule, passing over the sand in the same direction with the joists, will cause the sand to lay rather rounding in the middle of the interval between each pair of joists. The flooring boards may then be laid and fattened down in the usual manner; but very particular attention must be paid to the rough plaster-work, and to the fand being most perfectly dry before the boards are laid, for fear of the dry-rot; of which however there is no kind of danger, when this precaution is made use The method of under-flooring I have also applied with the utmost success, to a wooden staircase. It is made to follow the shape of the steps, but no fand is laid upon the rough plaster-work in this case.

The method of extra-latbing may be applied to cieling joists, to sloping roofs, and to wooden partitions. It is simply this: as the laths are going to be nailed

rough plaster ought to be spread between these laths and the joists (or other timbers) against which these laths are to be nailed. The laths ought to be nailed very close to each other. When either of the ends of any of the laths lap over other laths, it ought to be attended to, that these ends be bedded found in some of the same kind of rough plaster. This attention is equally necessary for the second layer of laths hereafter mentioned.

The first layer of laths ought to be covered with a pretty thick coar of the same rough plaster spoken of above. A second layer of laths ought then to be nailed on, each lath being, as it is put on, well squeezed and bedded found into the foft rough plaster. For this reason, no more of this first coat of rough plaster ought to be laid on at a time than what can be immediately followed with the second layer of laths.

The laths of this fecond layer ought to be laid as close to each other as they can be, to allow of a proper clench for the rough platter. The laths of the second layer may then be plastered over with a coat of the same kind of rough plaster, or it may be plastered over in the usual manner.

The third method, which is that of inter-securing, is very similar, in most respects, to that of underflooring; but no fand is afterwards to be laid upon it. Inter-securing, is applicable to the fame parts of a building as the method of extraon, some of the above-mentioned lathing just described; but it is

^{*} If a third layer of laths be immediately nailed on, and be covered with a third coat of rough plaster, I then call the method treble lathing; but this method of treble lathing can almost in no case be required.

not often necessary to be made

I have made a prodigious number of experiments upon every part of these different methods. I caused a wooden building to be constructed at Chevening in Kent, in order to perform them in the most natural manner. The methods of extra-lathing and double under-stooring were the only ones made use of in that building.

On the 26th of September 1777, I had the honour to repeat some of my experiments before the pre-fident and some of the fellows of the Royal Society, the Lord Mayor and Aldermen of the city of London, the committee of city lands, several of the foreign ministers, and a great number of other persons.

The first experiment was to fill the lower room of the building (which room was about twenty-fix feet long by fixteen wide) full of shavings and faggots, mixed with combustibles, and to fet them all on fire. The heat was so intense, that the glass of the windows was melted like so much common sealing wax, and run down in drops, yet the flooring boards of that very room were not burnt through, nor was one of the fide timbers, floorjoists, or ceiling-joists damaged in the smallest degree; and the persons who went into the room immediately over the room filled with fire, did not perceive any ill effects from it whatever, even the floor of that room being perfectly cool during that enormous conimmediately underflagration . neath.

I then caused a kind of wooden building of full fifty seet in length, and of three stories high in the middle, to be erected, quite cole to one end of the secured wooden house. I filled and covered this building with above eleven hundred large kiln faggou, and several loads of dry shavings; and I set this pile on fire. The height of the stame was no less than eighty-feven feet perpendicular from the ground, and the grass upon a bank, at a hundred and fifty feet from the fire, was all scorched; yet the secured wooden building quite contiguous to this vast heap of fire, was not at all damaged, except fome parts of the outer coat of plaster-work.

This experiment was intended to represent a wooden town on fire, and to show how effectually even a wooden building, if secured according to my new method, would stop the progress of the stames on that side, without my assistance from sire-engines, &c.

The last experiment I made that day was, the attempting to burn a wooden stair-case, secured according to my fimple method of The underfide of under-flooring. the stair-case was extra-lathed. Soveral very large kiln faggots were laid, and kindled, under the staircase, round the stairs and upon the steps; this wooden stair-case notwithstanding refished, as if it had been of fire-stone, all the sttempts that were made to consome it. I have since made five other still stronger fires upon this same stair-case, without having repaired it, having, moreover, filled the small place in which this stair-case is, entirely with shavings and large faggots; but the stair-case is, however, still standand is but ing, maged.

In most houses it is necessary only to secure the floors; and that according to the method of fingle under-flooring already described. The extra expence of it (all maverials included) is only about ninepence per square yard, unless there should be particular difficulties attending the execution, in which case, it will vary a little. quick lime is made use of, the expence is a trifle more. The extraexpence of the method of extralathing, is no more than fix-pence per square yard for the timber, fide-walls, and partitions; but for the cieling about nine-pence per square yard. No extra-lathing is necessary in the generality of honses.

Instructions for cultivating and curing Tobacco in England. From Mr. Carver's Treatise on that Subject.

HE best ground for raising the plant is a warm rich soil, not subject to be over-run with weeds; for from these it must be totally cleared. The soil in which it grows in Virginia is inclining to sandy, consequently warm and light; the nearer therefore the nature of the land approaches to that, the greater probability there is of its flourishing here. The situation most preferable for a plantation is the fouthern declivity of a hill, or a spot that is sheltered from the blighting north winds which so frequently blow, during the spring months, in this island. But at the same time the plants must enjoy a free current of air; for if that be obstructed they will not prosper.

As the tobacco plant, being an annual, is only to be raised from

seed, the greatest care in purchasing these is necessary; lest by sowing such as is not good, we lose, with the expected crop, the season. The different forts of the seeds not being distinguishable from each other, nor the goodness to be ascertained by their appearance, the purchaser should apply to a person of character in that profession. In describing the manner in which the plant ought to be raised from the feed, as well as in the fucceeding progress, I shall confine myfelf to the practice of the northern colonies of America, as these are. more parallel in their latitude to England,

About the middle of April, or rather fooner in a forward spring, fow the feed in beds first prepared for the purpose, with some warm rich manure. In a cold spring, regular hot-beds would be most eligible for this purpose; and indeed the gardeners of this country are persuaded, that the Nicotania cannot be raised in any other way; but these are seldom to be found in common gardens, and I am convinced that if the weather is not remarkably severe, they might be reared without doors. A square yard of land, for which a fmall quantity of seed is sufficient, will produce above five hundred plants, and allow proper space for their nurture till they are fit to transplant.

Having sown the seed in the manner directed, on the least apprehension of a frost after the plants appear, it will be necessary to spread mats over the beds, elevated from the ground by poles laid across. These however must be removed in the morning soon after the sun appears, that they

may receive as much benefit, as possible from its warmth, and from the air. In this manner proceed till the leaves have attained the fize of about two inches in length, and one in breadth, which they will do in about a month, or near the middle of May. One invariable rule for their being able to bear removal is, when the fourth leaf is sprouted, and the fifth just appears. Then take the opportunity of the full rains, or gentle showers, to transplant them into fuch a foil and fituation as before The land must be described. plowed, or dug up with spades, as mellow and light as possible. Raise, with the hoe, small hillocs at the distance of two feet, or a little more, from each other, taking care that no hard fods or lumps are in it, and then just indent the middle of each, without dibbling the holes as for fome other plants. When your ground is thus prepared, dig up the plants in a gentle manner from their native bed. and insert a plant gently into the center of each hillor, pressing the foil around it with your fingers, and taking the greatest care, during the operation, that you do not break off any of the leaves, which are at this time exquisitely tender. If the weather proves dry, after they are thus transplanted, they must be watered with foft water, in the fame manner as is usually done to coleworts, or plants of a fimilar kind. From this time great care must be taken to keep the ground soft, and free from weeds, by often stirring with your hoe the mould round the roots; and pruning off the dead leaves that fometimes are found near the bottom of the stalk.

The difference of this climate from that in which I have been zecustomed to observe the progress of this plant, will not permit me to direct with certainty the time which is most proper to take off the top of it, to prevent it from running to seed. This knowledge can only be perfectly acquired by experience. When it has rifen to upwards of two feet, it commonly begins to put forth the branches on which the flowers and feeds are produced; but as this expansion, if suffered to take place, would drain the nutriment from leaves, and thereby lessen ther fize and efficacy, it becomes needful at this stage to nip off the extremity of the stalk, to prevent its growing higher. In some higher climates, the top is commonly cut off when the plant has fifteen leaves; if the tobacco is intended to be a little stronger than usual, this is done when it has only thirteen; and sometimes, when it is chosen to be remarkably powerful, eleven or twelve leaves only are allowed to expand. On the contrary, if the planter is defirous to have his crop very mild, he suffers it to put forth eighteen or twenty: but in this calculation the three or four lower leaves next the ground are not to be reckoned.

This is denominated 'topping the tobacco,' and is much better done by the finger and thumb, than with any instrument; because the former close, at the same time, the pores of the plants; whereas, when it is done with the latter, the juices are in some degree exhausted. And though this might appear unimportant, yet every method that tends to give vigour to the

the leaves should be carefully pursued. For the same reason care
must be taken to nip off the sprouts
that will be continually springing
up at the junction of the leaves
with the stacks. This is termed
suckering the tobacco, and ought
to be repeated as often as occasion

requires.

The last, and not the least concern in the cultivation of this plant, is the destruction of the worm that Nature has given it for an enemy, and which, like many other reptiles, plays on its benefactor. destroy these, which are the only insects that molest this plant, every leaf must be carefully searched. As foon as fuch a wound is difcovered, the caule of it, who will be found near it, from his unsubstantial texture, which I shall presently describe, may be easily crushed: but the best method is to pluck it away by the horn, and then crush it. Without a constant attention to these noxious insects, a whole field of plants may be foon destroyed. This is termed worming the tobacco; and as there worms are found most predominant the latter end of July, and the beginning of August, they must be particularly attended to at that season.

As I have just observed, that it is impossible, without experience, to point out the due time for topping the plant, so it is equally as impossible to ascertain the time it will take to ripen in this climate. That can only be known by suture observations; for as it is at present only cultivated in England as an ornament for the garden, no particular attention has, I believe, been hitherto bestowed on the preservation of its leaves. The appa-

rent figns, however, of its maturity are, that the leaves, as they approach a state of ripeness, become more corrugated or rough; and when fully ripe, appear mottled with yellowish spots on the raised parts, whilst the cavities retain their usual green colour. They are, at this time, also thicker than they have before been, and are covered with a kind of downy velvet. If heavy rains happen at this critical period, they will wash this excrescent substance off, and thereby damage the plants. In such a case, if the frosty nights are not begun, it is proper to let them stand a few days longer; when, if the weather be more moderate, they will recover this substance again. But if a frost unexpectedly happens during the night, they mult be carefully examined in the morning before the fun has any influence on them: and those which are found to be covered with frosty particles, whether thoroughly ripe or not, must be cut up: for though they may not all appear to be arrived at a state of maturity, yet they cannot be far from it, and will differ but little in goodness from those that are perfectly so.

Having now given every instruction that occurs to my memory relative to the culture of the plant, I shall describe the worm that infests it. It is of the horned species, and appears to be peculiar to this plant; so that in many parts of America it is distinguished by the name of the Tobacco-worm. The first time it is discernible, is when the plants have gained about half their height: it then appears to be nearly as large as a gnat; soon after which it lengthens into a worm, and by degrees increases to the fize of a man's finger. In shape it is regular from its head to itstail, without any diminution at either extremity: indented or ribbed round at equal distances, nearly a quarter of an inch from each other, and having at every one of these divisions a pair of claws, by which it fastens itself to the plant. Its mouth, like that of the caterpillar, is placed under the forepart of the head. On the top of the head, between the eyes, grows a horn about half an inch in length, and greatly resembling a thorn; the extreme part of which is brown, of a firm texture, and sharp-pointed. By this horn, as before obferved, it is usually plucked from the leaf.

When the plant is fit for gathering, on the first morning that promifes a fair day, before the fun is risen, take a long knife, and holding the stalk near the top with one hand, sever it from its root with the other, as low as possible. Having. done this, lay it gently on the ground, and there let it remain exposed to the sun throughout the day, or until the leaves are entirely wilted, as it is termed in America; that is, till they become limper, and will bend any way without breaking. If, on the contrary, the rain. , should continue without any intervals, and the plant appears to be full ripe, they must be cut down and housed immediately. must be done, however, with great care, that the leaves, which are in this state very brittle, may not be broken. Being placed under proper shelter, either in a barn or a covered hovel, where they cannot be affected by the rain or too much air, they must be thinly scattered

on the floor, and if the son does not appear for several days, so that they can be laid out again, they must remain to wilt in that manner; which is not indeed so defirable as in the son, nor will the tobacco prove quite so good.

When the leaves have acquired the flexibility before described, the plants must be laid in heaps, or rather in one heap, if the quantity be not too great, and in about twenty-four hours they will be found to sweat. But during this time, when they have lain for a little while, and begin to ferment, it is necessary to turn them, that the whole quantity may be equally fermented. The longer they lie in this situation, the darker coloured the tobacco becomes. This is termed sweating the tobar o.

After they have lain in this manner for three or four days, for in a longer time they grow mouldy, the plants may be tied together in pairs, and hung across a pole, in the same covered place, a proper interval being left between each pair. In about a month they will be thoroughly dried, and of a proper temperature to be taken down. This state may be ascertained by their appearing of the same colour as those imported from America, with which few are unacquainted. But this can be done at no other season than during wer weather; for the tobacco greatly abounding with salts, it is always affected if there is the least humidity in the atmosphere, even though it be hung in a dry place. If this rule be not observed, but they are removed in dry weather, the leaves will crumble, and a confiderable waste will attend its removal.

As foon as the plants are taken down, they must once more be laid in a heap, and pressed with heavy logs of wood for about a week. This climate, however, may require a longer time. Whilst they remain in this state, it will be necessary to introduce your hand frequently into the heap, to discover whether the heat be not too intense; for in large quantities this will sometimes be the case, and considerable damage will accrue When the heat exceeds from it. a moderate glowing warmth, part of the weight by which they are compressed must be taken away; and the cause being removed, the effect will cease. This is called the ' second or last sweating,' and when completed, which it generally will be in about the time just mentioned, the leaves may be stripped from the stalks for use. Many omit this last operation, but it takes away any remaining barfhness, and renders the tobacco more When the leaves are mellow. stripped from the stalks, they are to be tied up in bunches and kept in a cellar, or any other place that is damp; though if not handled in dry weather, but only during a rainy season, it is of little consequence in what part of the house or barn they are laid up. At this period the tobacco is thoroughly cured, and equally proper for manufacturing as that imported from the colonies. If it has been properly managed, that raw fiery tafte so frequently found in the common sale tobacco will be totally eradicated; and though it retains all its strength, will be soft and pleasing in its flavour. Those who are curious in their tobacco in the

northern colonies of America sprinkle it, when made up into rolls for keeping, with small common white wines or cyder, instead of falt water, which gives it an

inexpressibly fine slavour.

By pursuing the rules which I have endeavoured to give in as explicit terms as possible, country gentlemen, and landholders in general, will be enabled to raise much better tobacco than that which is usually imported from Maryland or Virginia: for notwithstanding there are not wanting prohibitory laws in those countries, to prevent the planters from fending to market any but the principal leaves, yet they frequently, to increase their profit, suffer the sprouts to grow, and mix the smaller leaves of these with the others, which renders them much inferior in goodness.

The crops that I have reason to believe may be raised in England, will greatly exceed in flavour and efficacy any that is imported from the southern colonies: for though northern climates require far more care and exactness to bring tobacco to a proper state of maturity than warmer latitudes, yet this tardiness of growth tends to impregnate the plants with a greater quantity of falts, and consequently with that aromatic flavour for which it is prized, than is to be found in the produce of hotter climes, where it is brought to a state of perfection, from the feed, in half the time required in colder regions.

A pound of tobacco raised in New-England or Nova-Scotia, is supposed to contain as much real strength as two pounds from Virginia; and I doubt not but that

mear double the quantity of salts might be extracted from it by a

chemical process.

I shall also just add, though the example can only be followed in particular parts of these kingdoms, that the Americans usual y chuse for the place where they intend to make the seedling-bed, part of a copfe, or a spot of ground covered with wood, of which they burn down such a portion as they think necessary. Having done this, they rake up the subjacent mould, and mixing it with the ashes thus produced, sow therein the seed, without adding any other manure, or taking any other steps. Where this method cannot be purfued, wood-ashes may be strewed over the mould in which the feed is designed to be sown.

To the uses already known, there is another to which tobacco might be applied, that I believe has never been thought of by Europeans; and which may render it much more estimable than any other. It has been found by the Americans to answer the purpose of tanning leather, as well, if not better, than bark; and was not the latter so plentiful in their country, would be generally used by them instead of it. I have been witness to many experiments wherein it has proved successful, especially on the thinner sorts of hides, and can fafely pronounce it to be, in countries where bark is scarce, a valuable substitute for that article.

Plan by Dr. Franklin and Mr. Dalsymple, for benefiting distant unprovided Countries.

Aug. 29, 1771.

HE country called in the maps New Zealand, has been discovered by the Endeawour, to be two islands, together as large as Great Britain: these islands, named Acpy-nomawie and Towy-poennammo, are inhabited by a brave and generous race, who are destitute of corn, fowls, and all quadrugeds, except dogs.

These circumstances being mentioned lately in a company of men of liberal sentiments, it was observed that it seemed incumbers on such a country as this, to communicate to all others the conveniencies of life which we enjoy.

Dr. Franklin, whose life has ever been directed to promote the true interest of society, said, "he "would, with all his heart, selective to a voyage intended to communicate in general those benefits which we enjoy, to countries destitute of them in the remote parts of the globe." This proposition being warmly adopted by the rest of the company, Mr. Dalrymple, then present, was induced to offer to undertake the command on such an expedition.

On mature reflection, this scheme appears the more honourable to the national character of any which can be conceived, as it is grounded on the noblest principle of be-

^{*} These proposals were printed upon a sheet of paper some two or three years ago, and distributed. The parts written by Dr. Franklin and Mr. Dalrymple are easily distinguished.

nevolence. Good intentions are often frustrated by letting them remain indigested; on this consideration Mr. Dalrymple was induced to put the outlines on paper, which are now published, that by an early communication there may be a better opportunity of collecting all the hints which can conduce to execute effectually the benevolent purpose of the expedition, in case it should meet with general approbation.

On this scheme being shewn to Dr. Franklin, he communicated his sentiments, by way of introduction, to the following effect:

"Britain is said to have produced originally nothing but
floes. What vast advantages
have been communicated to her
by the fruits, seeds, roots, herbage, animals, and arts of other
tountries! We are by their
means become a wealthy and a
mighty nation, abounding in
all good things. Does not some
duty hence arise from us towards
other countries still remaining
in our former state?

" in our former state? . Britain is now the first mari-" time power in the world. Her " ships are innumerable, capable w by their form, fize, and strength, " of sailing all seas. Our sea-" men are equally bold, skilful, " and hardy; dexterous in ex-" ploring the remotest regions, " ready to engage in voyages 46 to unknown countries, though " attended with the greatest dane gers. The inhabitants of those countries, our fellow men, have " canoes only; not knowing iron, " they cannot build ships; they " have little aftronomy, and no " knowledge of the compais to " guide them: they cannot therefore come to us, or obtain any of our advantages. From these circumstances, does not some duty seem to arise from us to them? Does not Providence, by these distinguishing favours, seem to tall on us to do something ourselves for the common interest of humanity?

"Those who think it their duty to ask bread and other blessings daily from heaven, would they not think it equally a duty to communicate of those blessings when they have received them; and show their gratitude to their great Benefactor by the only means in their power, promoting the hap-

"Ceres is said to have made a journey through many countries to teach the use of corn, and the art of raising it. For this single benefit the grateful nations deisied her. How much more may Englishmen deserve such honour, by communicating the knowledge and use not of corn only, but of all the other enjoyments earth can produce, and which they are now in possession of. Communiter bona profundere, Deum est.

"Many voyages have been undertaken with views of profit or of plunder, or to gratify refentment; to procure some advantage to ourselves, or do some mischief to others: but a voyage is now proposed to visit a distant people on the other side the globe; not to cheat them, not to rob them, not to seize their lands, or enslave their persons; but merely to do them good, and make them, as far as in our power lies, to

Extract of a Letter to Dr. Percival, concerning the Provision made is China against Famine.

"I HAVE somewhere read, that in China an account is yearly taken of the number of people, and

the quantities of provision produced. This account is transmitted to the Emperor, whose Ministers can thence foresee a scarcity likely to happen in any province, and from what province it can best be supplied in good time. To facilitate the collecting of this account, and prevent the necessity of entering houses and spending time in alking and answering questions, each house is furnished with a little board to be hung without the door, during a certain time each year; on which board are marked certain words, against which the inhabitant is to mark number or quantity, somewhat in this manner:

> Men, Women, Children, Rice or Wheat, Flesh, &c.

All under 16 are accounted children, and all above, men and Any other particulars women. which the government defires, information of, are occasionally marked on the same boards. Thus the officers appointed to collect the accounts in each district, have only to pass before the doors, and enter into their book what they find marked on the board, without giving the least trouble to the fa-There is a penalty on marking falsely, and as neighbours must know nearly the truth of each others account, they dare not expose themselves by a salse one, to each others accusation. Perhaps such a regulation is scarcely practicable with us."

Vol. XXII.

Positions to be Examined.

- 1. ALL food or subsistence for mankind arise from the earth or waters.
- 2. Necessaries of life that are not foods, and all other conveniencies, have their values estimated by the proportion of food confumed while we are employed in procuring them.
- 3. A small people with a large territory may subsist on the productions of nature, with no other labour than that of gathering the vegetables and catching the animals.
- 4. A large people with a small territory finds these insufficient, and to subsist, must labour the earth, to make it produce greater quantities of vegetable food, suitable for the nourishment of men, and of the animals they intend to eat.
- great increase of vegetable and animal food, and of materials for clothing, as flax, wool, filk, &c. The superfluity of these is wealth. With this wealth we pay for the labour employed in building our houses, cities, &c. which are therefore only subsistence thus meatamorphosed.
- bape into which so much provisions and subsistence are turned, as were equal in value to the manufactures produced. This appears from hence, that the manufacturer does not, in fact, obtain from the employer, for his labour, more than a mere subsistence, including raiment, fuel and shelter; all which derive their value from the provisions consumed in procuring them.

7. The

114 ANNUAL REGISTER, 1779.

- 7. The produce of the earth, thus converted into manufactures, may be more easily carried to distant markets than before such conversion.
- 8. Fair commerce is, where equal values are exchanged for equal, the expence of transport included. Thus, if it costs A in England as much labour and charge to raise a bushel of wheat, as it costs B in France to produce four gallons of wine, then are four gallons of wine the fair exchange for a buffiel of wheat, A and B meeting at half distance with their commodities to make the exchange. advantage of this fair commerce is, that each party increases the number of his enjoyments, having, instead of wheat alone, or wine alone, the we of both wheat and wine.
- 9. Where the labour and expence of producing both commodities are known to both parties, bargains will generally be fair and equal. Where they are known to one party only, bargains will often be unequal, knowledge taking its advantage of ignorance.
- 10. Thus he that carries 1000 bushels of wheat abroad to sell. may not probably obtain so great a profit thereon, as if he had first turned the wheat into manufactures, by subsisting therewith the workmen while producing those manufactures: since there are many expediting and facilitating methods of working, not generally known; and drangers to the manufactures, though they know pretty well the expense of raising wheat, are unacquainted with those short methods of working, and thence being apt to suppose more labour

employed in the manufactures that there really is, are more easily inposed on in their value, and induced to allow more for them that they are honestly worth.

11. Thus the advantage of having manufactures in a country, does not confift, as is commonly supposed, in their highly advancing the value of rough materials of which they are formed; fince, though fix-pennyworth of flax may be worth twenty shillings when worked into lace, yet the very cause of its being worth twenty shillings is, that, besides the fax, it has cost nineteen shillings and fixpence in subfishence to the ma-But the advantage nufacturer. of manufactures is, that under their shape provisions may be more eauly carried to a foreign market; and by their means our trader may more easily cheat strangers. Few, where it is not made, are judges of the value of lace. The importer may demand forty, and perhaps get thirty shillings for that which cost him but twenty.

but three ways for a nation to acquire wealth. The first is by ever, as the Romans did, in plundering their conquered neighbours. This is robbery.—The second by commerce, which is generally cheating.—The third by agriculture, the only bonest way; wherein man receives a real increase of the seed thrown into the ground, in a kird of continual miracle wrought by the hand of God in his favour, us a reward for his innocent life, and his virtuous industry.

B. F.

April 4, 2769.

Specification of Dr. Higgin's Patent for a new-invented Water-Gement or Stucco.

To all subom these Presents shall come, &c.

OW know ye that in com-pliance with the said provisoe, I the said B. H. do hereby declare that my invention of a water cement or flucco, for building, repairing, and plastering walls, and for other purposes, is described in the manner following (that is to say) drift sand, or quarry * sand, which consists chiefly of hard quartose flat faced grains with sharp angles; which is the freest, or may be most easily freed by washing, from clay, salts, and calcareque, gypleous, or other grains less hard and durable than quartz; which contains the smallest quantity of pyrites or heavy metallic matter inseparable by washing; and which suffers the smallest diminution of its bulk in washing in the following manner, is to be preferred before any other. And where a coarse and a fine sand of this kind, and corresponding in the fize of their grains with the coarse and fine sands hereafter described, cannot be easily procured, let such sand of the foregoing quality be chosen, as may be forted and cleanfed in the following manner:

Let the fand be fifted in streaming clear water, through a sieve which shall give passage to all such grains as do not exceed one fixteenth of an inch in diameter: and let the stream of water and the fifting be regulated so that all the sand, which is much finer than the Lynn-sand commonly used in the London glass-houses, together with clay and every other matter specifically lighter than fand, may be washed away with the stream, whilst the purer and coarser sand. which passes through the sieve, subsides in a convenient receptacle, and whilst the coarse rubbish and shingle + remain on the sieve, to be rejected.

Let the fand which thus subsides in the receptacle, be washed in clean streaming water, through a finer fieve, to as to be further cleansed and forted into two parcels; a coarser, which will remain in the sieve, which is to give passage to such grains of sand only as are less than one thirtieth of an inch in diameter, and which is to be laved apart under the name of coarse sand; and a finer, which will pass through the sieve and subfide in the water, and which is to be saved apart under the name of fine fand.—Let the coarse and the fine fand be dried separately, either in the fun, or on a clean iron plate let on a convenient furnace, in the manner of a sand heat i.

• This is commonly called pit-fand.

† I find that I have used this word improperly, on bad authority. The reader is requested to read rubble instead of shingle throughout this specification.

The fand ought to be stirred up continually until it is dried, and is then to be taken off; for otherwise the evaporation will be very flow, and the sand which lies next the iron plate, by being overheated, will be discoloured.

116 ANNUAL REGISTER, 1779.

Let lime be chosen which is stone lime, which heats the most in slaking, and slakes the quickest when duly watered; which is the freshest made and closest kept; which dissolves in distilled vinegar with the least effervescence, and leaves the smallest residue insoluble, and in this residue the smallest quantity of clay gypsum or martial matter.

Let the lime chosen according to these important rules, be put in a brass-wired sieve to the quantity of sourteen pounds. Let the sieve be finer than either of the foregoing; the siner, the better it will be: let the lime be slaked + by plunging it in a butt filled with fost water and raising it out quickly, and suffering it to heat and fume, and by repeating this plunging and raising alternately, and agitating the lime, until it be made to pais through the fieve into the water; and let the part of the lime which does not easily pass through the fieve be rejected: and let fresh portions of the lime be thus used, until as many 1 ounces of lime have passed thio, the sieve, as there are quarts of water in the butt. Let the water thus impregnated stand in the butt closely covered || until it becomes clear; and through wooden & cocks placed

The preference given to stone lime is sounded on the present practice in the burning of lime, and on the eloser texture of it, which prevents it from being so soon injured by exposure to the air, as the more spongy chalk lime is: not on the popular notion that stone lime has something in it whereby it excels the best chalk in the cementing properties. The gypsum contained in lime stone remains unaltered or very little altered in the lime, after the burning; but it is not to be expected that clay or martial matter should be found in their native state, in well burned lime; for they concrete or virisfy with a part of the calcareous earth, and constitute the hard grains or lumps, which remain undissolved in weak acids, or are separable from the slaked lime by sisting it immediately through a size.

diately through a sieve.

This method of impregnating the water with lime is not the only one which may be adopted. It is however preferred before others, because the water clears the sooner in consequence of its being warmed by the slaking lime, and the gypseous part of the lime does not diffuse itself in the water so freely in this way, as it does when the lime is slaked to fine powder in the common method, and is then blended with the water; for the gypseous part of the lime slakes, at first, into grains, rather than into fine powder, and will remain on the sieve, after the pure lime has passed through, long enough to admit of the intended separation; but when the lime is otherwise slaked, the gypseous grains have time to slake to a finer powder, and passing through the sieve, dissolve in the water along with the lime. I have imagined that other advantages attended this method of preparing the lime water, but I cannot yet speak of them with precision.

I If the water contains no more acidulous gas than is usually found in river or rain water, a fourth part of this quantity of lime, or less, will be suffi-

cient.

The calcareous crust which forms on the surface of the water ought not to be broke, for it assists in excluding the air and preventing the absorption of acidulous gas whereby the lime water is spoiled.

§ Brass cocks are apt to colour a part of the liquor.

det different heights in the butt, let the clear liquor be drawn off as * fast and as low as the lime subsides, for use. This clear liquor I call the cementing liquor †. The freer the water is from saline matter, the better will be the cementing liquor made with it.

Let fifty-six pounds of the aforesaid chosen lime be slaked, by gradually sprinkling on it, and especially on the unstaked pieces, the
cementing liquor, in a close t clean
place. Let the slaked part be immediately || sifted through the last
mentioned sine brass-wired sieve:
Let the lime which passes be used
instantly or kept in air-tight vesfels, and let the part of the lime
which does not pass through the
sieve, be rejected s.—This siner
richer part of the lime which passes

through the sieve, I call purified lime.

Let bone-ash be prepared in the usual manner by grinding the whitest burnt bones, but let it be sisted to be much finer than the bone-ash commonly sold for making cupels.

The most eligible materials for making my cement being thus prepared: take sity-six pounds of the coarse sand and forty-two pounds of the sine sand; mix them on a large plank of hard wood placed horizontally; then spread the sand so that it may stand to the height of six inches with a slat surface on the plank; wet it with the cementing liquor; and let any superfluous quantity of the liquor, which the sand in the condition described cannot retain, slow away

Lime water cannot be kept many days unimpaired, in any vessels that are not perfectly air-tight. If the liquor be drawn off before it clears, it will contain whiting, which is injurious; and if it be not instantly used, after it is drawn limpid from the butt into open vessels, it will grow turbid again, and deposit the lime changed to whiting by the gas absorbed from the air. The calcareous matter which subsides in the butt, resembles whiting the more nearly, as the lime has been more sparingly employed; in the contrary circumstances, it approaches to the nature of lime; and in the intermediate state, it is fit for the common composition of the plaisterers for inside stucco.

† At the time of writing this specification I preserved this term before that of

lime-water, on grounds which I had not sufficiently examined.

The vapour which arises in the slaking of the lime contributes greatly to the slaking of these pieces which lie in its way; and an unnecessary waste of the liquor is prevented, by applying it to the lime heaped in a pit or in a vessel, which may restrain the issue of the vapour, and direct it through the mass. If more of the liquor be used than is necessary to slake the lime, it will create error in weighing the slaked powder, and will prevent a part of it from passing freely through the sieve. The liquid is therefore to be used sparingly, and the sime which has escaped its action is to be sprinkled apart with fresh liquor.

When the aggregation of the lumps of lime is thus broken, it is impaired much fooner than it is in the former state, because the air more freely pervades

it.

§ Because it consists of heterogeneous matter, or of ill burnt lime; which last will slake and pass through the sieve, if the lime be not immediately sisted after the slaking, agreeable to the text.

off the plank. To the wetted fand add fourteen pounds of the puri-Red lime in several successive portions, mixing and beating them up together in the mean time with the infiruments generally used inmaking fine mortar: then add fourteen pounds of the bone-ash in faccessive portions, mixing and beating altogether. The quicker and the more perfectly these materials are mixed and beaten together, and the sooner the cement thus formed is used, the better # it will be. This I call the water cement coarse grained, which is to be applied in building, pointing, plastering, stuccoing, or other work, as mortar and stucco now are; with this difference chiefly, that as this cement is shorter than mortar or common stucco, and dries fooner, it ought to be worked expeditioufly in all cases, and in stuccoing it ought to be laid on by sliding the trowel upwards on it; that the materials used along with this cement in building, or the ground on which it is to be laid in stuc-

to be used when it is necessary to moisten the cement, or when a liquid is required to facilitate the floating of the cement.

When such cement is required to be of a finer texture; take ninetyeight pounds of the fine fand, wet it with the cementing liquor, and mix it with the purified lime and the bone-ash in the quantities and in the manner above described, with this difference only, that fifteen pounds of lime, or + there abouts, are to be used instead of fourteen pounds, if the greater part of the fand be as hie a Lynn fand. This I call water cement fine grained. It is to be used in giving the last coating a the finish to any work intended w imitate the finer grained stones or flucco. But, it may be applied to all the uses of the water cemen: coarse grained, and in the same manner.

When for any of the foregoing purposes of pointing, building, Equipment a cement is required much cheaper and coarser grained, then, much coarser clean sand than the foregoing coarse sand, or well washed fine I shingle, is to be provided. Of this coarsest sand or

* These proportions are intended for a cement made with sharp sand, for incrustation in exposed situations, where it is necessary to guard against the effects of hot weather and rain. In general half this quantity of bone-ashes will be found sufficient; and although the incrustation in this latter case will not harden deeply to soon, it will be ultimately stronger, provided the weather be savourable.

The injuries which lime and mortar sustain, by exposure to the air, before the coment is finally placed in a quiescent state, are great; and therefore our cement is the worse for being long beaten, but the better as it is quickly beaten until the

mixture is effected, and no longer.

coing, ought to be well wetted

with the cementing liquor, in the

instant of laying on the cement; and that the cementing liquor is

† The quantity of bone-ashes is not to be increased with that of the lime; but it is to be lessened as the exposure and purposes of the work will admit.

‡ Rubble.

thingle * take fifty-fix pounds, of the foregoing coarle fand twentyeight pounds, and of the fine fand fourteen pounds; and after mixing these and wetting them with the cementing liquor in the foregoing manner, add fourteen pounds, or fomewhat less of the + purified lime, and then fourteen pounds, or fomewhat less, of the bone-ash, mixing them together in the manner already described. When my cement is required to be white, white sand, white lime, and the whitest boneash are to be chosen. Grey sand and grey bone-ash formed of half burnt bones, are to be chosen to make the cement grey; and any other colour of the cement is obtained, either by chooling coloured fand, or by the admixture of the necessary quantity of coloured talc in powder, or of coloured vitreous or metallic powders, or other durable colouring ingredients commonly used in paint.

To the end that such a water cement as I have described may be made as useful as it is possible in all circumstances; and that no person may imagine that my claim and right under these Letters Pa-

riations which may be made in the foregoing process, without producing any notable defect in the cement: and to the end that the principles of this art as well as the art itself of making my cement, may be gathered from this specification, and perpetuated to the public, I shall add the following observations.

This my water cement, whether the coarse or fine grained, is applicable in forming artificial stone, by making alternate layers of the cement and of slint, hard stone, or brick, in moulds of the figure of the intended stone, and by exposing the masses so formed to the open ‡ air to harden.

When such cement is required for water & sences, two thirds of the prescribed quantity of bone ashes are to be omitted; and in the place thereof an equal measure of powdered terras is to be used; and if the sand employed be not of the coarsest fort, more terras must be added, so that the terras shall be by weight one sixth part of the weight of the sand.

[·] Rubble.

[†] Because less lime is necessary, as the sand is coarser.

I But they must not be exposed to the rain, until they are almost as strong as stresh Portland stone; and even then they ought to be sheltered from it, as much as the circumstances will admit. These stones may be made very hard and beautiful, with a small expense of bone-ash, by soaking them, after they have dried thoroughly and hardened, in the lime-liquor, and repeating this process twice or thrice, at distant intervals of time. The like effect was experienced in incrustations.

In my experiments, mortar made with terras powder, in the usual method, does not appear to form so strong a cement for water sences, as that made according to the specification, with coarse sand I see no more reason for avoiding the use of sand in terras mortar, than there would be for rejecting stone from the embankment. The bone-ashes meant in this place are the dark grey or black sort. I am not yet sully satisfied about the operation of them in this in-stance.

120 ANNUAL REGISTER, 1779.

When such a cement is required of the finest grain * or in a fluid form, so that it may be applied with a brush, flint powder, or the powder of any quartole or hard earthy substance may be used in the place of fand, but in a quantity smaller as the flint or other powder is finer; so that the flint powder or other such powder shall not be more than fix times the weight of the lime, nor less than four times its weight. The greater the quantity of lime within these limits, the more will the cement be liable to crack by quick drying, and vice verla.

Where such sand as I preser cannot be conveniently procured, or where the sand cannot be conveniently washed and sorted, that sand which most resembles the mixture of coarse and sine sand above prescribed, may be used as I have directed, provided due attention is paid to the quantity of the lime, which is to be the greater † as the sand is the sand vice wersa.

Where sand cannot be easily procured, any durable stony body, or baked earth grossy powdered ‡ and sorted nearly to the sizes above prescribed for sand, may be used in the place of sand, measure for measure, but not weight for weight, unless such gross powder be as heavy specifically as sand.

Sand may be cleanfed from every foster, lighter, and less durable matter, and from that part of the sand which is too fine, by various methods preserable §, in certain circumstances, to that which I have described.

Water may be found naturally free from fixable gas, selenite or ciay: such water may, without any notable inconvenience, be used in the place of the cementing liquor; and water approaching this state will not require so much lime as I have ordered, to make the cementing liquor; and a cementing liquor sufficiently useful may be made by various methods of mixing lime and water in the described proportions, or nearly so.

† If sea sand be well washed in fresh water, it is as good as any other round sand.

The cement made with these and the proper quantities of purished lime and lime-water, are inferior to the best, as the grains of these powders are more perishable and brittle than those of sand. They will not therefore be employed, unless for the sake of evasion, or for want of sand: in this latter case the finer powder ought to be washed away.

This and the next paragraph is inserted with a view to evasions, as well at to suggest the easier and cheaper methods which may be adopted in certain circumstances, by artists who understand the principles which I have endeavoured to teach.

When

The qualities and uses of such fine calcareous cement are recommended chiefy for the purpose of smoothing and finishing the stronger crustaceous works, or so washing walls to a lively and uniform colour. For this last intention, the mixture must be as thin as new cream, and laid on briskly with a brush, in dry weather; and a thick and durable coat is to be made by repeated washing, but it is not to be attempted by using a thicker liquor; for the coat made with this last is apt to scale, whilst the former endures the weather much longer than any other thin calcareous covering that has been applied in this way. Fine yellow other is the cheapest colouring ingredient for such a wash, when it is required to imitate Bath stone, or the warm white stones.

When stone lime cannot be procured, chalk lime or shell lime which best resembles stone lime, in the characters above written of lime, may be used in the manner described, except that fourteen pounds and a half of chalk lime will be required in the place of fourteen pounds of stone lime. The proportion of lime which I have prescribed above may be increased without inconvenience when the cement or stucco is to be applied where it is not liable to dry quickly; and in the contrary circumstance this proportion may be diminished; and the defect of lime in quantity or quality may be very advantageously supplied *, by cauling a confiderable quantity of the cementing liquor to foak into the work, in successive portions and at distant intervals of time, so that the calcareous matter of the cementing liquor, and the matter attracted from the open air, may fill and strengthen the work.

The powder of almost every well-dried or burnt animal substance may be used instead of bone-ash; and several earthy powders, especially the micaceous and the metallic; and the elixated ashes of divers vegetables whose earth will not burn to lime; and the ashes of mineral suel, which are of the calcareous kind, but will not burn to lime, will answer the ends of bone-ash in some degree.

The quantity of bone-ash described may be lessened without injuring the cement, in those circumstances especially which admit cipating them.

the quantity of lime to be lessened, and in those wherein the cement is not liable to dry quickly. And the art of remedying the desects of lime may be advantageously practised to supply the desciency of bone-ash, especially in building and in making artificial stone with this cement.

N. B. For inside work, the admixture of hair with this cement is useful.

In witness whereof I the said B. H. &c.

The excellence of my cement depends, first, on the figure, fize and purity of the fand; secondly, on the purity of the lime, obtained in the choice of lime-stone, and in the perfect burning, and secured in the preservation of it from air, in my method of flaking, and in the separation of heterogeneous parts; thirdly, on the use of strong and pure lime water in the place of common water; fourthly, on the proportion of fands, lime water, and lime; fifthly, on the manner of mixing them; fixthly, on the knowledge of ingredients and circumitances which are injurious or useful; seventhly, on the use of bone ashes of determinate size: eighthly, on the art of fuiting some of these to the several purposes; and finally, on so many other particulars, as render it very difficult to give a more candid specification, in the usual compass, than this which I have enrolled, or to guard otherwife against evasions, than by anti-

This practice is noticed, as the remedy which may be used for the defects arising from evalive measures, and as the method of giving spungy incrustations containing bone-askes the greatest degree of hardness.

On the Virtues of Acorn-Coffee.

physician, has published, in the Hanover Magazine, some experiments, in which he has shewn the great virtues of Acorn-cossee, and has consisted his experiments by accompanying them with a multitude of sacts: it must therefore give you pleasure to be able to acquaint your readers, that such a common fruit is capable of being converted to many salutary purposes.

The method of preparing the

Acorn-coffee is as follows:

Take found and ripe acorns, peel off the shell or husk, divide the hernels, dry them gradually, and then roust them in a close vessel or rouster, keeping them continually sirring; in doing of which, especial core must be taken that they be not burnt or rousted too much, both which would be hurtful.

Take of these roasted acorns (ground like other coffee) half an ounce every morning and evening, alone or mixed with a drachm of

other coffee, and fweetened with fugar, with or without milk.

The author says that acorns have always been effeemed a wholesome, nourishing, and strengthening astriment for men, and that by their medicinal qualities they have been found to cure the flimy obstructions in the viscera, and to remove nervous complaints when other medicines have failed; and although acorns, he says, have, by the moderns as well as the ancients, been looked upon as a great aftringent, and generally applied more outwardly, and very sparingly inward. ly; yet he is of opinion, that by the heat of the fire they lose their astringent quality, and thence have **no more that effect than other coffee.**

The author forbears all manner of investigation, and contents himself solely with the relation of cases, which he enumerates with brevity and without exaggeration. Many of the cases which accompanied this account respect women, whose complaints arose from disorders peculiar

to their sex.

ANTIQUITIES.

A Description of the Alhambra, or Pelace of the Moorish Kings of Granada.

HIS ancient fortress, and residence of the Mahometan monarchs of Granada, derives its name from the red colour of the marerials that it was originally built with, Alhambra fignifying a red house. Most of the sovereigns took a delight in adding new buildings to the old towers, now called Torres de la campana, or in embellishing what had joined by their predecessors. pleasantness of the situation, and purity of its air, induced the Emperor Charles the Fifth to begin a magnificent edifice on the ruins of the offices of the old palace, and, it is thought, he intended to fix his chief abode here; but his volatile temper, continual wars, and, frequent absences from Spain, made him give up all thoughts of Granada, long before he had finished the plan. It stands between the rivers, on a very high hill, that projects into the plain, and overlooks all the city: the road up to it is through a narrow street, called Calle de los Gomeles, from a great family among the Moors. This brings you through a massive gate, built by the Emperor, into

the outward inclosure of the Alhambra. You then continue to ascend by a very steep avenue of elms, which foon increases to a wood, intersected in many directions by wild neglected walks, where streams of clear water, finding their passage obstructed by the rubbish of their old channels, spread over the whole road. A large fountain adorns the platform near the top of the hill. water, diverted from its proper conduits, has been suffered to run at random for such a length of time, that it has destroyed most of the sculpture and embellishments, which were in a very good tafe. Here you turn short to the left, and come under the walls of the inner inclosure. Its appearance is that of an old town, exhibiting a long range of high battlemented walls, interrupted at regular diftances by large lofty square towers. These have one or two arched windows near the top, and a precipitate slope from the bottom into a dry ditch. The whole, is built with round irregular pebbles, mixed with cement and gravel. Some parts are covered and smoothed over with a thick coat of plaister; in other places, mortar has been laid in between the stones, leaving as much of them uncovered as came

to the level; then the trowel has been carefully drawn round, forming about them triangles, halfmoons, &c. Just before you, stands the present principal entrance into the castle, a square tower built by the king Jusaf Abuhagiagi, in 1348, as an inscription informs us: from its being the place where justice was summarily administered, it was styled the Gate of Judgment. You pass through it under several arches (each of which is more than a full semicircle, refting upon a small impost, the ends of the bow being brought towards each other in the form of a horseshoe.) On the key-stone' of the outward arch is sculptured the figure of an arm, the symbol of strength and dominion: on that of the next arch is a k-y embofsed, the armorial ensign of the Andalusian Moors. Above it, the wall of this partition is covered with a beautiful blue and gold mosaic, in the middle of which they have placed an image of the Virgin Mary. As this is not a gate ever used for carriages, the passage winds through several turns, full of images, indulgences, and aliars, before you get through, out into a narrow street, between a row of shabby barracks on the right, and on the left the cattle wall, supposed to be built by the Phænicians. examined the work very narrowly, and found it confifted of a layer of cement one or two inches thick. epon which is placed flatwife a stone of the same thickness, chisfelled on the face into a kind of a chequered design. This is the regular method employed from top to bottom. This lane ends in the great square, or Plaza de los Algibes, so named from the ancient

eisterns, that undermine it from end to end, and are constantly fed by a supply of running water. The prospect from the parapet-wall is wonderfully grand, over the vale of Dauro, the Albaycin, and down the Vega. On the very brow of the hill, hanging over the city, stands the towers of the bell, a groupe of high square buildings, which now ferve for prisons. low them, on the fouth-fide, on a flip of terrace, is the governor's garden, a very pleasant walk, full of fine orange and cypress trees, and myrtle hedges, but quite abandoned. The view it commands is incomparable. Two large vales enamelled with gold and azure foliages and characters are the only ornaments left: these were taken out of the vaults under the royal apartments. On the right hand of the Plaza de los Algibes, is a folitary gateway, formerly the entrance into some of the outward quadrangles thrown down by Charles the Fifth, to make room for his fuperb palace, which stands facing the Torres de la campana. edifice is a perfect square of two hundred Spanich feet; it has two orders of pilasters, Doric and lonic, upon a rustic base. whole meafures fixty-two feet from the top of the upper entablement to the ground. Three of the fronts are free from all other buildings; the fourth (that to the north) is joined and connected with the ancient palace of the Moorish kings. It was never finished, which is much to be regretted by all lovers of the fine arts, for there are lew edifices more deserving of their admiration. The architect was Alonzo Verruguete, a native of Paredes de Navas, near Valladolid.

In this work he has discovered a most transcendent genius, grandeur of style, and elegance and chastity of design. How different from all that has been done for a century past in this kingdom! The doors are designed in a great manner; the bassereliefs, figures, festoons, medallions, &c. are of excellent invention and execution; the ornaments of the cornices, windows, and capitals, are delicate, and fuitable to the general effect. the pedestals of the columns, that support the entablement of the great door, are reliefs on dark marble, that for polish might pass for bronze at a little distance; the Doric door in the fouth fide, called El Zanguenete, pleased me greatly, as there is fomething simply elegant in the tafte, and new in the ornamental part; the pediment is filled with a scroll thrown with great ease, on which is inscribed Plusoutre, the motto of the Emperor, which he never failed introducing into every public work he undertook. You come, through an oblong vestibule, into the court which forms the centre of the palace. It is an exact circle, of one hundred and forty-four feet diameter, round which runs a Doric colonade, or portico, of thirtytwo columns, supporting an upper gallery of an equal number of pillars, of the Ionic order. They are all of them of one entire block of reddish marble. The portico is nineteen feet wide, and serves as a communication with the stair-case, the intended apartments, which are disposed round the court in various forms and proportions. The roof of the gallery is crumbling away very fast, and many of the columns are much damaged.

The apartments never had any other covering than the sky; and nothing but the matchless temperature of the climate could have saved this beautiful work so many years from total ruin. The magnificence, the unity of this whole pile, but, above all, the elegance of the circular court, quite transported me with pleasure, on the first view, and I have ever fince found my admiration increase in proportion to the number of my visits.

Adjoining (to the north) stands a huge heap of as ugly buildings as can well be feen, all huddled together, seemingly without the least intention of forming one habitation out of them. The walls are entirely unornamented, all gravel and pebbles, daubed over with plaister by a very coarse hand; yet this is the palace of the Moorish kings of Granada, indisputably. the most curious place within, that exists in Spain, perhaps in Europe. In many countries, you may fee excellent modern as well as ancient architecture, both entire and in ruins; but nothing to be met with any where else can convey an idea of this edifice, except you take it from the decorations of an opera, or the tales of the Genii. I therefore look upon it to stand alone in its kind, and consequently think no excuse necessary, previous to my entering upon the dry detail I intend giving you of it.

Passing round the corner of the Emperor's palace, you are admitted at a plain unornamented door in a corner. On my first visit, I confess, I was struck with amazement, as I stept over the threshold, to find myself on a sudden transported into a species of fairy-land.

The

The first place you come to, is the court called the communa, or del mofucer, that is, the common baths: an oblong square, with a deep bason of clear water in the middle; two flights of marble fleps leading down . so the bottom; on each fide a parserre of flowers, and a row of orange-trees. Round the court runs a peryftile paved with marble; the arches bear upon very flight pillars, in proportions and style different from all the regular orders of architecture. The ceilings and walls are incrustated with fretwork in Aucco, fo minute and intricate, that the most patient draughtsman would find it difficult to follow it, unless he made himself master of the general plan. This would facilitate the operation exceedingly, for all this work is frequently and regularly repeated at certain distances, and has been executed by means of square moulds applied successively, and the parts joined together with the ntmost nicety. In every division are Arabic sentences of different lengths, most of them expressive of the following meanings, "There s is no conqueror but God;" or, •• Obedience and honour to our " Lord Abouabdallah." The ceilings are gilt or painted, and time has caused no diminution in the freshiness of their colours, though constantly exposed to the air. The lower part of the walls is mosaic, disposed in fantastic knots and fessoons. A work to new to me, to exquisitely finished, and so diffesent from all I had ever feen, afforded me the most agreeable senfations, which, I affure you, redoubled every step I took in this magic ground. The porches at she ends are more like grotto-work,

than any thing else I can compare them to. That on the right hand opens into an octagon vault, under the Emperor's palace, and forms a persect whispering-gallery, meant to be a communication between the offices of both houses.

Opposite to the door of the communa through which you enter, is another, leading into the Quarte de los leones, or apartment of the lions, which is an oblong court, one hundred feet in length, and fifty in breadth, environed with a colonade seven feet broad on the sides, and ten at the end. Two porticos or cabinets, about fiften feet square, project into the court at the two extremities. square is paved with coloured tiles; the colonade with white marble The walls are covered five feet up from the ground with blue and yellow tiles, disposed chequerwise. Above and below is a border of small escutcheons, enamelled blue and gold, with an Arabic moto on a bend, fignifying, " No con-" queror but God." lumns that support the roof and gallery are of white marble, very Hender, and fantastically adorned. They are nine feet high, including base and capital, and eight inches and a half diameter. They are very irregularly placed, sometimes fingly, at others in groups of three, but more frequently two together. The width of the horse-shoe arches above them is four feet two inches for the large ones, and three for the smaller. The ceiling of the portico is finished in a much finer and more complicated manner, than that of the communa, and the Aucco laid on the walls with inmitable delicacy; in the ceiling it is so artfully frosted and handled.

as to exceed belief. The capitals are of various defigns, though each design is repeated several times in the circumference of the court, but not the least attention has been paid to placing them regularly or You will epposite to each other. form a much clearer idea of their Lyle, as well as dispositions, from the drawings, than from the most elaborate description I can pen. Not the smallest representation of animal life can be discovered amidst the varieties of foliages, grotesques, and strange ornaments. About each arch is a large square of arabefques, furrounded with a rim of characters, that are generally quotations from the Koran. Over the pillars is another square of delightful fillagree work. Higher up is a wooden rim, or kind of cornice, as much enriched with carving as the flucco that covers the part underneath. Over this projects a roof of red tiles, the only thing that disfigures this beautiful square. This ugly covering is modern, put on by order of Mr. Wall, the late prime minister, who a few years ago gave the Alhambra a thorough repair. In Moorish times, the building was covered with large painted and glazed tiles, of which some few are still to be seen. In the center of the court- are twelve ill-made lions muzzled, their fore-parts smooth, their hind-parts rough, which bear upon their backs an enormous bason, out of which a lesser rises. While the pipes were kept in good order, a great volume of water was thrown up, that, falling down into the basons, pas-

sed through the beasts, and issed out of their mouths into a large reservoir, where it communicated by channels with the jet d'eaus in the apartments. This fountain is of white marble, embellished with many sessons, and Arabic distiche, thus translated:

"Seeft thou not how the water flows copiously like the Nile?"

"This resembles a sea washing over its shores, threatening ship wreck to the mariner."

"This water runs abundantly,

"to give drink to the lions."

"Terrible as the lion is our king in the day of battle."

"The Nile gives glory to the king, and the lofty mountains proclaim it."

"This garden is fertile in de-"lights; God takes care that "no noxious animal shall ap-

" proach it."

"The fair princess that walks in this garden, covered with pearls, augments its beauty so much, that thou may'st doubt whether it be a fountain that flows, or the tears of her admirers *."

Passing along the colonade, and keeping on the south side, you come to a circular room used by the men as a place for drinking coffee and sorbets in. A sountain in the middle resreshed the apartment in summer. The sorm of this hall, the elegance of its cupola, the chearful distribution of light from above, and the exquisite manner in which the stucco is designed, painted, and sinished, exceed all my powers of description. Every thing in it inspires the most

This passage is very obscure in the Latin translation. I have endeavoured to make something of it, but it still remains a forced conceit.

aral Church of Burgos, Origin of Gothic Ar-From the fame.

manner of that style which has usually been called Gothic; of late this appellation is exploded, and that of Arabic substituted for it. I confess, I see some reason to doubt of the propriety of this fecond epithet. In the buildings I have had opportunities of examining in Spain and in Sicily, which are undoubtedly Saracenic, I have never been able to discover any thing like an original defign, from which the Gothic ornaments might be supposed to be capied. The arches used in our old cathedrals are pointed; those of the Saracens are almost femi-circular, whenever they are not turned in the form of an horfe-shoe. churches of our anceftors shoot up into spires, towers, pinnucles, and filligree work, and no fuch thing as a copola feems ever to have been attempted; the mosques and other buildings of the Arabians, are rounded into domes and coved roofs, with now and then a flender square minaret terminating in a ball or pine-apple; the Arabic walls thine with painted tiles, molaics, and flucco, none of which ever appear in our ancient edifices; the pillars in the latter are generally grouped many together, and from a very imail member of an entablature (prings one or two arches; in the former, the columns stand single, and if placed more than one together to support fome heavy part, they never touch, or as it were grow into each other; there is always a thick architrave at least to support the arch, and commonly an upright piece of wall to relift the lateral pressure, Whenever it happens, as in the great divitions of the mosque at Cordova, that four pillars are K 2 joined

joined together, it is by means of a square wall or pier, at the sour angles of which are placed the co-Jumns, perfectly separated and distinch. In all the varieties of capitals I have taken drawings of, never found one exactly the same in design or proportions, as our Gothic ones in the churches of England, or in those of France, at least such as I have examined; viz. Saint Denis, Amiens, Rouen, Bordeaux, Tours, and others. The Christian structures are extremely lofty, and full of long windows with painted glass; the porches and doors are deep secesses, with several arches one within another, crowded with little faints and angels. Now every thing is different in the mosque of Cordova, the only one I have ever seen, but which I think may be fairly deemed a proper sample of Arabian sacred architecture, to establish a judgment upon; whether we confider its antiquity, being built before the ninth century; its prefent flate, which, some parts excepted, is exactly as it was a thoufand years ago; or lastly, princely hands that raised it. was crefted by Abdoulrahman the first, probably upon the designs, and under the inspection of the ablest architects of the age, and according to the method of diffribution observed in holy edifices built in Arabia and Egypt. Here, and I have reason to think it is so in most, if not all, mosques, the elevation of the roof is trifling, not a seventeenth part of the length of the iles; there are no windows of any fize, and what there are, are covered with filigree-work in stone, so as never to admit any great quantity of light,

which was received from fky-hights and cupolas, and from the occafional opening of the doors: the finking back of the arches over the gates is scarce perceptible, a they are almost of an equal projection with the wall of the builting. From all these differential marks, I am inclined to fulpet that our old firedures have been new-named, and Mahometania without sufficient proof of their Arabic orgin. At the fame time I acknowledge it is difficult to see them a more fatisfactory and ge

nuine pedigree.

The best age of that style if construction began in England's the reign of Henry the third, & till then we built in the clean manner called Saxon, desitoued every recommendation, but fait. ty; the new tafte came in all prebability from France, introdocal by some Provençals that follows the Queen. If you suppok x imported into that kingdom by those that returned from the crladoes, we must of course let s down as an castern 10 ACRGOS The question is, what part of the east it came from, and whether it was the same as that employed by the Arabians. If there were clear proofs of its being a branch the Arabic architecture, would fill appear extraordism, that its very first introduction is: Christendom should be attended with fo great a variation free the models it was meant to imitar; and that any prince or learned priest that thought it worthy of being employed in his coustry, should immediately fet about ner fashioning it in all its points. We may, if we please to indulge or fancy, fay that some sublime ge-

marble pavement I take to be equal to the finest existing, for the fize Of the flags, and evenness of the The two filers, which colour. give name to the room, are flabs that measure fifteen feet by seven and a half, without flaw or fain. The walls, up to a certain height, are mosaic, and above are divided into very neat compartments of flucco, all of one design, which is also followed in many of the adjacent halls and galleries. ceiling is a fretted cove. To preserve this vaulted roof, as well as some of the other principal capoles, the outward walls of the towers are raised ten feet above the top of the dome, and support another roof over all, by which means no damage can ever be canfed by wet weather, or excessive heat and cold. From this hall you pass round the little myrtle-garden of Lindaraxa, into an additional building made to the east end by Charles V. The rooms are small and low: his dear motto, Plus varre, appears on every beam. This leads to a little tower, projeding from the line of the north wall, called El toçador, or the dreffing-room of the fultana. It is a small square cabinet, in the middle of an open gallery, from which it receives light by a door and three windows. The look-out charming. In one cornér is a large marble flag, drilled full of holes, through which the smoke of persumes asrended from furnaces below; and here, it is presumed, the Moorish queen was wont to fit to fumigate and sweeten her person. The emperor caused this little pretty room to be painted with representations of his wars, and a great variety of gratesques, which appear to be co-Vol. XXII.

pies, or at least imitations, of those in the loggie in the Vatican. They have been shamefully abused by idle scribblers; what remains flews them to have been the work of able artifie. From hence you go through a long passage to the hall of ambassadors, which is magnisicently decorated with innumerable varieties of mosaics, and the mottos of all the kings of Granada. This long narrow antichamber opens into the communa on the left hand, and on the right into the great audience-hall in the tower of Comares, a noble apartment, thirtyfix feet square, thirty-fix high up to the cornice, and eighteen from thence to the centre of the cupola: The walls on three fides are fifteen feet thick, on the other nine; the lower range of windows thirteen feet high. The whole hall is inlaid with mofaic of many colours; disposed in intricate knots, flars, and other agures. In every part are repeated certain Arabic fontences, the principal of which are the following:

"The counsel of God and a "speedy increase; and give joy to

" true beliëvers."

"Praise to God, and to his vice"gerent Nazar, who gave this
"empire, and to our king Abou"abdoulah, to whom be peace,
"elevation, and glory."

N. B. Nazar is an appellation of eminence, and supposed to mean the famous Emironmoumelin Jacob Almantar.

44 There is no God but God."

"Valour, fuccess, and duration to our king Abulhaghagh, king of the Moors; God, guide his fate and elevate his power!"

"Praise be to God, for I en"liven this dwelling of princes
K "with

ANNUAL REGISTER, 1779. 134

courts of law, out of a fine imposed on the Chief Justice of the King's Bench in the 16th year of Edward I, or A. D. 1288 *.

You have in your Commenta-. ries + observed, that this punishment of Radulphus de Hengham is first taken notice of in the Year Book 1 during the reign of Richard III, where indeed no mention is made of a clock's being thus paid for; but if the circumstances stated in the report of this are confidered, it was highly unnecessary, and perhaps improper, to have alluded to this application of the Chief Justice's fine.

It appears by the Year Book, that Richard III. had closeted the _ Judges in the Inner Star Chamber, to take their opinions upon three points of law; the second of which was, "whether a Justice of the "Peace, who had inrolled an indictment which had been ne-. " gatived by the Grand Jury, so amongst the true bills, might be " punished for this abuse of his

office."

On this question a diversity of opinion arises amongst the Judges, some of which suppose, that a maagistrate cannot be prosecuted for what he may have done; whilst others contend, that he may, and cite the case of Hengham, who was fined 800 marks for making an alteration in a record, by which a poor defendant was only to pay 6s. 8d. instead of 13s. 14d.

Thus far the answer of the judges to the question proposed was strictly proper; but the application of the fine to the building a clock-house || was not the least material; besides that it was probably a most notorious fact w every student upon his first attending Westminster-hall, as we find Judge Southcote so much later, in the early part of Queen Elizabeth's reign, not only mentioning the tradition, but that the clock still continued there, which had been furnished out of the Chief Justice's fine &. Sir Edward Coke likewise adds, that the 800 marks were actually entered upon the roll 4, so that it is highly probable he had himself seen the record.

On the fide of New Palace yard, which is opposite to Westminsterhall, and in the second pediment of the new buildings from the Thames, on the exact spot, atcording to Strype, where the clockhouse stood, a dial is inserted with this remarkable motto upon it, " Discite Justitiam Moniti," which feems most clearly to relate to the fine imposed on Radulphus de Hengham, being applied to the paying for a clock.

Mr. Norris, Socretary of the Society of Antiquaries, hath been likewise so obliging as to refer me to the following instance of a very ancient clock in the fame

century.

† Vol. III. p. 408.

1 Mich. 2. Ric. 3.

§ 3 Inst. p. 72.

See Selden in his Pref. to Hengham.

We find that this clock was confidered during the reign of Henry VI. to be of such consequence, that the King gave the keeping of it, with the appurenances, to William Warby, Dean of St. Stephen's, together with the pay of 6d. per diem, to be received at the Exchequer.

^{4 4} Inst. p. 255.

"Anno 1292, Novum Orolo"gium Magnum in Ecclesiâ (sc. Cantuariensi) pretium 301."

I shall now produce a proof, that not only clocks but watches were made in the beginning of the 14th

century.

Seven or eight years ago, some labourers were employed at Bruce Castle in Fischire, where they found a watch, together with some coin; both of which they disposed of to a shopkeeper of St. Andrews, who fent the watch to his brother in London, confidering it as a curious piece of antiquity. The outer case is of silver, raised, in rather a handsome pattern, over a ground of blue enamel; and I think I can diffinguish a cypher of R. B. at each corner of the enchased work. On the dial-plate is written, Robertus B. Rex Scottorus, and over it is a convex transparent horn, instead of the glasses which we use at present.

Now Robertus B. Rex Scottorum can be no other King of Scotland than Robert Bruce, who began his reign in 1305, and died in 1328; for the Christian name of Baliol who succeeded him was Edward; nor can Robertus B. be applied to any later Scottish

king.

This very fingular watch is not of a larger fize than those which are now in common use; at which I was much surprised, till I had seen several of the 16th century

in the collection of Sir Ashton Lever, and Mr. Ingham Forster, which were considerably smaller.

As I mean to deduce the progress of the art of clock-making in a regular chronological series, the next mention I find of Horologia, is in Rymer's Fædera, where there is a protection of Edward the Third, A. D. 1368, to three Dutchmen, who were Orlogiers. The title of this protection is, or De Horologiorum Artisicio excercendo." Mr. B. remarks upon the following lines of Chaucer †; when he speaks of a cock's crowing,

"Full fikerer was his crowing in his loge,
"As is a clock, or any abbey or loge,"

that in the 14th century, clock was often applied to a bell, which was rung at certain periods, determined by the hour-glass or sundial: but that the abbey or loge t (or clock) could not have been uncommon when Chaucer wrote these lines.

I now pass on to a samous astronomical clock, made by one of our countrymen in the reign of Richard the Second, the account of which I have extracted from Leland.

Richard of Walingford was son of a smith, who lived at that town, and who, from his learning and ingenuity, became abbot of St. Alban's. Leland proceeds "cum jam per ample licebat sortunas,

It is now in his Majesty's possession.

† Chaucer was born A. D. 1328, and died in 1400.

Othello, act ii. sc. 3.

The clock of Wells cathedral is also to this day called the borologe.

« voluit

To the time of Queen Elizabeth, clocks were often called orologes;

[&]quot;He'll watch the borologe a double fet,

[&]quot; If drink rock not his cradle."

menta & decrementa."

Richard of Walingford also wrote
a treatise on this clock, "Ne
tam infiguis machina vilesceret

errore monachorum, aut incognito structuræ ordine, silesce-

es ret."

from what hath been above stated it appears, that this astronomical clock continued to go in Leland's time, who was born at the latter end of Henry the Seventh's reign, and who speaks of a tradition, that this samous piece of mechanism was called Albios by the inventor.

Having now produced instances of several clocks, and even a watch, which were made in different parts of the 14th century, as also having endeavoured to prove that they were not excessively uncommon even in the 13th, it may be thought necessary that I should account for their not being more generally used during these periods, as, in their present state at least, they are so very convenient. For this, it should seem, that many reasons may be assigned.

In the infancy of this new piece of mechanism, they were probably of a very impersect construction, perhaps never went tolera-

bly, and were four deranged, whilst there was no one within a reasonable distance to put them in order.

We find, therefore, that Henry the Sixth of England, and Charles the Fifth of France, appointed clock-masters, with a stipend, so keep the Westminster and Paris clocks in order.

It need scarcely be observed also, that as the artists were so sew, their work must have been charged accordingly, and that Kings only could be the purchasers of what was rather an expensive toy, that of any considerable use. And it may perhaps be said, that they continued in a great measure to be no better than toys till the middle of the 17th century.

Add to this, that in the 13th and 14th centuries, there was is little commerce, intercourse, at society, that an hour-glass, or the sun, was very sufficient for the common purposes, which are now more accurately settled by clock of modern construction. Dials and hour-glasses likewise wanted so

mending.

Having now finished what had occurred to me with regard to the first introduction of clocks, I shall conclude by a few particulars, which I have been enabled to pict up, in relation to those more portable measures of time, calici watches, the earliest of which (except that of Robert Bruce King of Scotland) seems to be one in Sir Ashton Lever's most valuable museum, the date upon which is 1541 †.

Derham

· Leland de Seript. Brit.

[†] The oldest clock we have in England that is supposed to go tolerably, is of the preceding year, viz. 1540, the initial letters of the maker's most being

Derham (in his artificial Clockmaker, published in 1714) mentions a watch of Henry the Eighth, which was still in order; and Dr. Demainbray informs me, that he hath heard both Sir Isaac Newton and Demoivre speak of this watch.

The Emperor Charles the Fifth (Henry's contemporary) was so much pleased with these time-measurers, that he used to sit after his dinner with several of them on the table, his bottle being in the center; and when he retired to the monastery of St. Just, he continued still to amuse himself with keeping them in order, which is said to have produced a reflection from him on the absurdity of his attempt to regulate the motions of the different powers of Europe.

Some of the watches used at this time seem to have been strikers; at least we find in the Memoirs of Literature, that such watches having been stolen both from Charles the Fifth and Lewis the Eleventh, whilst they were in a croud, the thief was detected by their striking

the hour.

In most of the more ancient

watches (of which I have feen feveral in the collection of Sir Ashton Lever and Mr. Ingham Forster) catagut supplied the place of a chain, whilst they were commonly of a smaller size than we use at present, and often of an eval form †.

From these and probably many other impersections they were not in any degree of general request till the latter end of Queen Elizabeth's reign; accordingly in Shake-speare's Twelfth Night Malvolio

lays,

"I frown the while, and per"chance wind up my watch, or
"play with some rich jewel."

Again, in the first edition of Harrington's Orlando Forioso (printed in 1591), the author is represented with what seems to be a watch, (though the engraving is by no means distinct) on which is written,

Il tempo passa t.

In the 3d of James the First, a watch was found upon Guy Fawkes, which he and Percy had bought the day before, " to try conclusions for the long and short burning of the touchwood, with which he had prepared to give are to the train of powder."

being N. O. It is in the palace at Hampton Court. Derham's Artificial Clock-maker.

That diffinguished antiquary Mr. Walpole has in his possession a clock, which appears by the inscription to have been a present from Henry the Eighth to Anne Boleyn. Poynet, Bishop of Winchelter, likewise gave an astronomical clock to the same King. Godwyn de Praesul.

† Pancirollus informs us, that about the end of the 15th century, watches were made no larger than an almond, by a man whose name was Mermecide. Encyclop.

In Archbishop Parker's will, made April 5, 1579, is the following le-

16 Do, et lego fratri meo Ricardo episcopo Elienti, baculum meum de canna il Indica, qui Horologium habet in summitate."

As likewise in the brief of his goods, see, "Aclock, valued at 54% 4 s."

138 ANNUAL REGISTER, 1779,

In 1631 Charles the first incorporated the clock-makers; and the charter prohibits elecks, watches, and alarms, from being imported, which sufficiently proves that they were now more commonly used, as well as that we had artists of our own, who were expert in this branch of business.

About the middle of the 17th century, Huygens made his great improvement in clock-work, which produced many others from our own countrymen; the latest of which was the introduction of repeating watches in the time of Charles the Second, who, as I have been informed by the late Lord Bathurst, sent one of the first of these new inventions to Lewis XIV.

The former of these kings was very curious with regard to these time-measurers; and I have been told by an old person of the trade, that watch-makers (particularly East) used to attend whilst he was playing at the Mall, a watch being often the stake.

But we have a much more curious anecdote of royal attention to watches in Dr. Derham's Artificial Clock-maker.

Barlow had produced a patent, in concert with the Lord Chief Justice Allebone, for repeaters; but Quare making one at the same time upon ideas he had entertained before the patent was granted, James the Second tried both, and giving the preference to Quare's, it was notified in the Gazette.

In the succeeding reign, the reputation of the English work in this branch was such, that in the year 1698, an act passed, obliging the makers to put their names on watches, lest discreditable ones might be sold abroad for English.

If any of these particulars, or anecdotes, should prove interesting to you, it will amply recompense the trouble I may have had in collecting them; being,

Dear Sir,
Your most faithful
humble Servant,
Daines Barrington.

Account of the Eisteddfod or Seffions of the Bards and Minstrels.

[From Pennant's Tour through Wales.] THE particular glory of the town of Caerwys, was the honour it had of being the place of the Eisteddfod, or the sessions of the bards and minstrels, for many centuries. It was the refert of those of a certain district; as Aberfraw in Anglesea was of those of that island, and the neighbouring county; and Mathraval of those of the land of Powys. The reason that these places were thus distinguished, was, because the two last were the residence of Princes; Caeranys, on account of the royal palace that stood below the town,

These Eistedsfods were the British Olympics. Fired at first with generous emulation, our poets crowded into the list, and carried off the prize, contented with the mere honour of victory. At length, when the competitors became numerous, and the country became oppressed with the multitude, new regulations of course took place. The disappointed candidates were

the residence of Liewelyn of

Gryffydd.

no longer suffered to torture the ears of the principality with their wretched compositions. None but bards of merit were suffered to rehearse their pieces; and minstrels of skill, to perform. These went through a long probation: judges were appointed to decide on their respective abilities; and degrees suitable were conferred, and permissions granted for exercising their talents, in the manner that willbe related in the following pages. The judges were appointed by commillion from our Princes; and after the conquest of Wales, by the Kings of England, notwithstanding Edward 1. exercised a political cruelty over the generation of bards of his time, yet future princes thought fit to revive an institution so likely to soften the manners of a fierce people. The crown had the power of nominating the judges, who decided not only on the merit, but the fubject of the poems; and, like our modern Lord Chamberlains, were certain of licenfing only those which were agreeable to the English court.

It is highly probable, that the bards and minstrels were under certain regulations during the time of Druidism, but we find no proofs of them till long after; till the days of Cadwaladr, last King of Britain, who died at Rome about the year 688. Of him it is said, that being at an assembly of this nature, with his nobles, there came a minstrel, and played in a key so displeasing, that he and all his brethren were prohibited, under a severe penalty, from ever playing

on it any more; but were ordered to adopt that of Mwynen Gwynedd, or the sweet key of Gwynedd.

I imagine, that previous to this, there had been musical regulations in Britain; for I find that a tune, called Gosteg yr Halen, or the Prelude of the Salt, was always played whenever the salt-seller was placed before King Arthur's knights, at his round table +.

Cadwaladr, the next After Princes who undertook the reform of our minstrelsie, were Bleddyn ap Cynfyn and Gryffydd ap Cy-The first was cotemporary with the conqueror; the last with King Stephen. These enacted, that no person should follow the profession of bard or minstrel, but such only who were admitted by the Eistedafod, which was held once in They were prohibitthree years. ed from invading one another's province: nor were they permitted to degrade themselves by following any other occupation. Neither of these were to demand above ten shillings in any article, under pain of losing the whole, besides being suspended from their profession for three years I.

After the times of the princes, the great men, their descendants, took these people under their care and protection, allowing them the liberty of circuiting their respective territories thrice a year, viz. at Christmas, Easter, and Whitsuntide; and the whole principality once in three years.

The bards were in the highest repute. I cannot give a stronger idea of the esteem they were in, than by citing from the Welfb

^{*} North Wales. Wallicz, 35

laws, the account of their rank in the prince's court, and the various rewards and fees they were entitled to, and the severe penalties that were enacted to preserve their persons from insult. They were supposed to be endowed with powers equal to inspiration. They were the oral historians of all past transactions, public and private. They related the great events of the state; and, like the scalds of the northern nations, retained the memory of numberless transactions, which otherwise would have pe-They were rished in oblivion. likewise thoroughly acquainted with the works of the three primary bards, viz. Myrddyn ap Morfryn, Myrddyn Emrys, and Taliesin ben Beirdd. But they had another talent, which probably endeared them more than all the rest to the Welf nobility; that of being most accomplished genealogilts, and flattering their vanity, in finging the deeds of an anceftry derived from the most distant period.

The Bardd Teulu, or Court Bard, held the eighth place in the Prince's court. He possessed his land free. The prince supplied him with a horse and woollen robe, and the princess with linen. He sat next to the governor of the palace at the three great sestivals; for, at those seasons, the governor was to deliver him his harp to the same sestivals, he was also to have the Disdain's, or steward of the houshold's garment for

his fee.

When a fong is called for, the Cadeir-fardd, or the bard who has got the badge of the chair, is first

to sing a hymn in glory of God; after that, another in honour of the prince. When those are over, the Tculuw, or bard of the hall, is to sing some other subject.

If the princess calls for a song after she has retired from table to her apartment, the Tenlarur must sing to her highness in a low voice, least he should disturb the personners in the hall. John Dafydd Rhys says, that the subject was to be on death; but I rather sollow Water, who, instead of angan, which signifies death, prefers the word angen, or a separate subject from what was

fung in the hall.

When the bard goes with the prince's servants on a plundering expedition, and performs before them his animating compositions, he is to have the finest heiser of the booty: and in case the detachment was drawn up in order of battle, he was to sing at their head, the praises of the British menarchy. This was to remind them of their ancient right to the whole kingdom; for their inroads being almost always on the English territories, they thought they did no more than seize on their own.

The prince bestowed on him an ivory chess-board; others say a harp; and the princess a golden ring. His lodging was to be with the governor of the palace.

When he is required to fing with other bards, by way of distinction, he is to have a double portion.

If the bard asks any savour of the prince, he must sing one of his compositions: if of a nobleman, three; if of a common person, he must sing till he is so weary as to rest on his elbow, or

• Leges Wallicze, 35.

† The same, 35, and 16.

to fall asleep. This, I fear, shows ber bards were a very importuning race, and required a check; yet Hill they were in high estimation. Their Governib, or compensation for their life, was rated at exxvi cows *, and any injury done them, at vi

cows and cxx pence.

The Merch-Gobr of his daughter, or marriage fine of his daughter, was can pence. Her cowyll, arguffren, or nuptial presents, was thirty chillings; and her portion three pounds +. It is remarkable, that the Pencerdd Gwlad, or chief of the faculty, was entitled to the merch-gebr, or amobe for the daughters of all the inferiors of the faculty within the district, who payed xxiv peace on their marriage; which not only shows the antiquity, but the great authority of their people.

The Pencerdd was not among the 1 officers of the court: but occasionally sat in the tenth place. He also had his land free; was to perform much in the lame manner as the court bard, whom he feems to have taken place of, whenever he attended; for, when the Pencerdd was present, the former sat only in the twelfth feat. No other was to play without license from him. His death was valued at exxvi cows; and any injury done him, at vi cows, and cxx pence. Rach of the chief mulicians was to receive from their Lord, the first, a harp; the second, a crouth; the third, a pipe; which, on their

the fame; the key at xxiv pence:

a gentleman's harp was estimated at ix pence.

A commission for holding an Eisteddsod at Caerwys, in 1568, is still in possession of Sir Roger Mostyn, together with the filver harp; which had from time immemorial been in the gift of his ancestors, to bestow on the chief of the fa-This badge of bonour is about five or fix inches long, and furnished with strings equal to the number of the muses. The commission is the last of the kind which was granted; and is in form following:

BY THE QUENE.

ELIZABETH, by the grace of God, of England, Fraunce, and Ireland Quene, defendor of the fayth, &c. to our truftie and ryght wel beloved Sr. Richard Bulkley knight, Sir Rees Gruffich knight, Ellice Price esquior, Doctor in cyvill lawe, and one of our counsail in our marches of Wales, William Mostyn, Jewan Lloyd of Yale, Jb n Salusbury of Ruge, Rees Thomos, Maurice Wynne, Will'm Lewis, Peres Mostyn, Owen Jon ap Holl Vaughan, John Will map John, John Lewis Owen, Moris Gruffyth, Symound Thelwal, Ellice ap Wm Lloyd, Robt Puleston, Harry Aparry, William Glynne, and Rees Hughes, esquiors, and to every of them, greating. in which things, if they offerd, everie man, by the statute, is made an officer, and authorized to arrest and punish them; yez, and to take from them all that

they have about them *.*

They were prohibited from uttering any scandalous words in speech or whispers; detraction, mocking, scotting, inventing lies, or repeating them after others, under pain of fine and imprisonment: nor were they to make a song of any person without his consent; nor to enter any man's house without formal leave first obtained.

Every Penbarda and Penceral was allowed to take in disciples for a certain space of time, but not above one at a time. A distiple was not qualified to make and ther. Bach was to be with his teacher during Lent, unless prevented by sickness or imprisoment, under pain of losing his degree. He was obliged to her every composition to his teacher before it was publicly fung. They were not to follow the practice of cler y dom, i. e. dunghill bards and musicians, or any other species of They were vagabond minstrels. enjoined a month before each feftival, to settle their roots with the respective teachers, least too many of them should crowd to the same places; only one being allowed to go to a person who paid ten pounds a year rent; and two to fuch who payed twenty pounds, and to on it proportion to those of higher rank! and every teacher was obliged w keep a copy of these rules, to sher and inculcate to his pupils in time of Lent, when they came for their inAructions.

No person was to mimic, mock, or scots at the awenyddion on account of their mental absence, or when they had on them the awen or poeticus furor; from an opinion that no bard, duly authorized, could ever meditate on improper

Iubjects.

To whatsoever house they came in the time of wakes, they must remain there while the feasting lasted; unless they had leave from the master of the house, or were invited by another. If they wandered from house to house, they were to be apprehended as strollers and vagabonds, and to be deprived of their elera*, which was forfeited to the use of the church. If they got intoxicated, they forfeited their reward: but if they violated the chastity of wife or maid, they were: fined and imprisoned, and lost their clera for seven years.

Their fees or rewards were regulated. A dyscybl dyscyblaids was entitled to 3 s. 4 d. for his

cowydd.

A dyscybl penceirddiaidd, received for the same species of com-

position 6 s. 9 d.

His teacher, or the Pencerdd, had no more; only the master of the house usually presented him with a garment, or some other mark of favour.

The minstrels received these rewards; a dyscybl yspas graddawl had only is, upon each of the great festivals.

A dyseyble dyseyblaidd, at the same seasons 2 s. and a dyseybl pen-

ceirddiaidd 3 s. 4 d.

A pencerdd the same, besides a voluntary gratuity. He was also entitled to sees at royal and other

weddings; and upon their cylch clera, which was permitted only once in three years. But befides these fees, in order to encourage the clerwyr to keep up the language and the memory of the exploits and pedigrees of the Britons, they were allowed a penny out of every ploughland, and a halfpenny out of every half ploughland of their district.

The Penbarda and Pencerda, in their circuits, frequented only the houses of the gentry; but if he degraded himself by visiting the commonalty, he was only to expect the see of a common clercur, whose province it was to visit the plebeian houses. The following were the persons who were allotted to entertain the vulgar ears.

A person labouring under any infirmity; such as blindness, lame-ness, &c. a dyscybl yspas, a dyscybl dyscyblaidd, and dyscybl penceirddiaidd. The first regulation was founded on

humanity.

No public festivity, great feast, or wedding could be duly folemnized without the presence of the bards and minstrels. A glorious emulation arole among them; and prizes were bestowed on the most worthy. In 1176, the Lord Rhys Prince of Scuth Wales, made a great feast + a. Christmas, on account of the finishing his new castle at Aberteifi; of which he proclaimed notice through all Britain a year and a day before; great was the refort of strangers, who were nobly entertained; so that none departed unsatisfied. Among deeds of arms, and variety of spectacles, Rhys invited all the bards of Wales, and provided ebairs for

Or their pay. Sometimes it signifies the act of their perambulation.

ANNUAL REGISTER, 1779. 145

them, which were placed in his hall, where they fat and disputed. and lang, to thew their skill in their respective faculties, and beflowed great rewards, and rich gifts on the victors. The bards of North Wales won the prizes; but the minstrels of Rbys's household excelled in their faculty. On this occasion the Brawdwr Lirs, or judge of the court, and officer fifth in rank, declared aloud the victor, and received from the bard, for his fee, a mighty drinking-horn, made of the horn of an ex; a golden ring, and the cushon on which he sat in his chair of dignity *.

The bards of those times often accompanied their voices with the harp, as they were wont of old, in the manner described by Ammianus Marcellinus +. There was also another species of musician, of an inferior kind, called Datceimiad, who accompanied the musical instruments of others with his fong. He was inferior to both bard and minstrel; yet it was requisite he should be possessed of a confiderable degree of knowledge in both sciences: he ought to be able to tune the harp and crewib: to shew his skill in playing several notes and keys, and to be perfectly conversant in what are called the twenty-four measures of inilrumental fong; and to be able to fing with judgment and melody. He was likewife to be mafter of reading juftly, and writing correctly. He was not only to understand the twenty-four modes of pany with this species of melody. metrical compositions; but to ex- Wherever he came he mus all " hibit specimens of his own, at least a menial servant to the bard of in three of them; and if he met

with any old fong faultily traffi scribed, he was to rectify it. He was also to carry with him a harp or crusth in a white case. He was further required, not only to be a ready waiter at table, but to be an expert carver of every species of fowl. At the weddings of any of the royal family, his office was to wait on the bride.

On those occasions, I am reminded of another custom in which the bards were concerned. After their nuptial feast, a Penceril was constituted Coff Cler, or pillar of the cler, and seated in a chair surrounded by the other bards standing, who made him the subject of their merry and ludicross compositions, to raise mirth in the company. He was that day w make no reply; but on the next, he was to divert the hall at the expence of the inferior bards; and was also to compose a poem spos a subject given him suitable to his dignity.

The most inserior of the musical admitted. tribe was fometimes This was the Datceiniad pen paftur, or he that fung to the found of his club; being ignorant of every other kind of instrument. When he was permitted to be introduced, he was obliged to stand in the middle of the hall, and fing his countly or awdl, beating time, and playing the symphony with his pafeet or club; but if there was a professor of music present, his less must be first obtained before k presumed to entertain the conmusician.

1 Lib. xv. 9. MISCEL

MISCELLANEOUS ESSAYS.

On Genius and Tafte. From Reynold's Academical Discourses.

Thas been the fate of arts to be inveloped in mysterious and incomprehensible language, as if it was thought necessary that even the terms should correspond to the idea entertained of the instability and uncertainty of the rules which

they expressed.

To speak of genius and taste, as any way connected with reason or common sense, would be, in the opinion of some towering talkers, to speak like a man who possessed neither, who had never selt that enthusiasm, or, to use their own instanted language, was never warmed by that Promethean sire, which animates the canvas and vivisies the marble.

If, in order to be intelligible, I appear to degrade art by bringing her down from her visionary situation in the clouds, it is only to give her a more solid mansion upon the earth. It is necessary that at some time or other we should see things as they really are, and not impose on ourselves by that salse magnitude with which objects appear when viewed indistinctly as through a mist.

We will allow a poet to express his meaning, when his meaning is not well known to himself, with

a certain degree of obscurity, as it is one fource of the fublime. But when, in plain profe, we gravely talk of courting the muse in shady bowers; waiting the call and inspiration of Genius, finding out where he inhabits, and where he is to be invoked with the greatest success; of attending to times and the imagination seasons when shoots with the greatest vigour, whether at the summer solstice or the equinox; fagaciously observing how much the wild freedom and liberty of imagination is cramped by attention to established rules; and how this same imagination begins to grow dim in advanced age, fmothered and deadened by too much judgment. When we talk such language, or entertain such sentiments as these, we generally rest contented with mere words, or at best entertain notions not only groundless, but pernicious.

If all this means what it is very possible was originally intended only to be meant, that in order to cultivate an art, a man secludes himself from the commerce of the world, and retires into the country at particular seasons; or that at one time of the year his body is in better health, and consequently his mind fitter for the business of hard thinking than at another time; or that the mind may be

L 2

fatigued and grow confused by long and unremitted application; this I can understand. I can likewife believe, that a man eminent when young for possessing poetical imagination, may, from having taken another road, so neglect its cultivation, as to show less of its powers in his latter life. But I am persuaded, that scarce a poet is to be found, from Homer down to Dryden, who preserved a sound mind in a found body, and continued practifing his profession to the very last, whose later works are not as replete with the fire of imagination, as those which were produced in his more youthful days.

To understand literally these metaphors or ideas expressed in poetical language, seems to be equally absurd as to conclude, that because painters sometimes reprefent poets writing from the dictates of a little winged boy or genius, that this same genius did really inform him in a whisper what he was to write; and that he is himself but a mere machine, unconscious of the

operations of his own mind.

Opinions generally received and floating in the world, whether true or false, we naturally adopt and make our own; they may be considered as a kind of inheritance to which we fucceed and are tenants for life, and which we leave to our pollerity very near in the condition in which we received it; not much being in any one man's power either to impair or improve it.

The greatest part of these opinions, like current coin in its circulation, we are obliged to take without weighing or examining; but by this inevitable inattention, many adulterated pieces are received, which, when we feriously

estimate our wealth, we must throw away. So the collector of popular opinions, when he embodies his knowledge, and forms a system, must separate those which are true from those which are only plausible. But it becomes more peculiarly a duty to the profesion of art not to let any opinions relating to that art pass unexamined. The caution and circumspection required in such examination we shall presently have an opportunity

of explaining.

Genius and take, in their common acceptation, appear to be very nearly related; the difference lies only in this, that genius has superadded to it a habit or power of execution. Or we may fay, that taste, when this power is added, changes its name, and is called genius. They both, in the poptlar opinion, pretend to an intire exemption from the restraint of rules. It is supposed that their powers are intuitive; that under the name of genius great works are produced, and under the name of taste an exact judgment is given without our knowing why, and without being under the leaft obligation to reason, precept, or experience.

One can scarce state these opinions without exposing their absurding; yet they are constantly in the mouths of men, and particularly of artists. They who have thought seriously on this subject, do us carry the point so far; yet 127 persuaded, that even among those few who may be called thinker. the prevalent opinion gives les than it ought to the powers the reason; and considers the princh ples of tafte, which give all their authority to the rules of art, 11

more fluctuating, and as having less solid soundations, than we shall find, upon examination, they really have.

The common saying, that tastes are not to be disputed, owes its influence, and its general reception, to the same error which leads us to imagine it of too high original to submit to the authority of an earthly tribunal. It will likewise correspond with the notions of those who consider it as a mere phantom of the imagination, so devoid of substance as to elude all criticism.

We often appear to differ in sentiments from each other, merely from the inaccuracy of terms, as we are not obliged to speak always with critical exactness. Something of this too may arise from want of words in the language to express the more nice discriminations which a deep investigation discovers. A great deal however of this difference vanishes, when each opinion is tolerably explained and understood by, constancy and precision in the use of terms.

We apply the term tafte to that act of the mind by which we like or dislike, whatever be the subject. Our judgment upon an airy nothing, a fancy which has no foundation, is called by the same name which we give to our determination concerning those truths which refer to the most general and most unalterable principles of human nature, to works which are only to be produced by the greatest efforts of the human understanding. However inconvenient this may be, we are obliged to take words as we find them; all we can do is to distinguish the things to which they are applied.

We may less pass those things which are at once subjects of taste and sense, and which having as much certainty as the lenies themselves, give no occasion to enquiry or dispute. The natural appetite, or talte of the human mind, is for truth; whether that truth refults from the real agreement or equality of original ideas among themselves; from the agreement of the representation of any object with the thing represented; or from the correspondence of the several parts of any arrangement with each other, It is the very same talle which relishes a demonstration in geometry, that is pleased with the resemblance of a picture to an original, and touched with the harmony of mufic.

All these have unalterable and fixed foundations in nature, and are therefore equally investigated by reason, and known by study; some with more, some with less clearness, but all exactly in the same way. A picture that is unlike, is false. Disproportionate ordonnance of parts is not right; because it cannot be true, until it ceases to be a contradiction to asfert, that the parts have no relation to the whole. Colouring is true where it is naturally adapted to the eye, from brightness, from foftness, from harmony, from resemblance; because these agree with their object nature, and therefore are true, as true as mathematical demonstration; but known to be true only to those who study these things.

But besides real, there is also apparent truth, or opinion, or prejudice. With regard to real truth,

L 3 when

ANNUAL REGISTER, 1779. 750

when it is known, the taste which conforms to it, is, and must be, uniform. With regard to the fecond fort of truth, which may be called truth upon sufferance, or truth by courtely, it is not fixed, but variable. However, whilst these opinions and prejudices, on which it is founded, continue, they operate as truth; and the art, whose office it is to please the mind, as well as instruct it, must direct itself according to epinion, or it will not attain its end.

In proportion as these prejudices are known to be generally diffused, or long received, the taste which conforms to them approaches nearer to certainty, and to a fort of refemblance to real science, even where opinions are found to be no better than prejudices. And fince they deserve, on account of their duration and extent, to be confidered as really true, they become capable of no-small degree of stability and determination by their permanent and uniform nature.

I shall now say something on that part of taste, which, as I have hinted to you before, does not belong so much to the external form of things, but is addressed to the mind, and depends on its original frame, or, to use the expression, the organization of the foul; I mean the imagination and the pas-The principles of these are as invariable as the former, and are to be known and reasoned upon in the same manner, by an appeal to common sense deciding upon the common feelings of mankind. This sense, and these feelings, appear to me of equal authority, and equally conclusive.

Now this appeal implies a goneral uniformity and agreement in the minds of men. It would be else an idle and vain endeavour to establish rules of art; it would be pursuing a phantom to attempt to move affections with which we were entirely unacquainted. have no reason to suspect there is a greater difference between our minds than between our forms, of which, though there are no two alike, yet there is a general fimilitude that goes through the whole race of mankind; and those who have cultivated their taste can diftinguish what is beautiful or deformed, or, in other words, what agrees or what deviates from the general idea of nature, in one cak, as well as in the other.

The internal fabric of our mind, as well as the external form of our bodies, being nearly uniform; it feems then to follow of course, that as the imagination is incapable of producing any thing originally of itself, and can only vary and combine these ideas with which it is furnished by means of the senses, there will be of course an agreement in the imaginations as in the senses of men. There being this agreement, it follows, that in all cases, in our lightest amakments, as well as in our most senous actions and engagements of life, we must regulate our affections of every kind by that of others. The well-disciplined mind acknowledges this authority, and submits its own opinion to the public voice.

It is from knowing what are the general feelings and pations of mankind, that we acquire a true idea of what imagination is;

though

though it appears as if we had nothing to do but to consult our own particular sensations, and these were sufficient to ensure us from all error and mistake.

A knowledge of the disposition and character of the human mind can be acquired only by experience: a great deal will be learned, I admit, by a habit of examining what passes in our bosoms, what are our own motives of action, and of what kind of fentiments we are conscious on any occasion. We may suppose an uniformity, and conclude that the same effect will be produced by the same cause in the minds of others. This examination will contribute to fuggest to us matters of enquiry; but we can never be fure that our own fenfations are true and right, till they are confirmed by more extensive observation.

One man opposing another determines nothing; but a general union of minds, like a general combination of the forces of all mankind, makes a strength that is irressible. In fact, as he who does not know himself does not know others, so it may be said with equal truth, that he who does not know others, knows himself but very imperfectly.

A man who thinks he is guarding himself against prejudices by resisting the authority of others, leaves open every avenue to singularity, vanity, self-conceit, obstinacy, and many other vices, all tending to warp the judgment, and prevent the natural operation of his faculties. This submission to others is a deference which we owe, and indeed are forced involuntarily to pay. In fact, we are never satisfied with our opinions till they are ratified and confirmed by the suffrages of the rest of mankind. We dispute and wrangle for ever; we endeavour to get men to come to us, when we do not go to them.

He therefore who is acquainted with the works which have pleased different ages and different countries, and has formed his opinion on them, has more materials, and more means of knowing what is analogous to the mind of man, than he who is conversant only with the works of his own age or country. What has pleased, and continues to please, is likely to please again: hence are derived the rules of art, and on this immovable foundation they must ever stand.

This fearch and study of the history of the mind ought not to be confined to one art only. It is by the analogy that one art bears to another, that many things are afcertained, which either were but faintly seen, or perhaps, would not have been discovered at all, if the inventor had not received the first hints from the practices of a fifter art on a fimilar occasion *. The frequent allusions which every man who treats of any art is obliged to draw from others in order to illustrate and confirm his principles, sufficiently shew their near connection and inseparable relation.

Mulla ars, non alterius artis, aut mater, aut propinqua est.

TERTULL. as cited by JUNIUS.

ANNUAL REGISTER, 1779.

All arts having the same general end, which is to please, and addreffing themselves to the same faculties through the medium of the senses, it follows that their rules and principles must have as great affinity as the different materials and the different organs or vehicles by which they pass to the mind, will permit them to retain .

We may therefore conclude, that the real substance, as it may be called, of what goes under the name of taste, is fixed and established in the nature of things; that there are certain and regular causes by which the imagination and pations of men are affected; and that the knowledge of these causes is acquired by a laborious and diligent investigation of nature, and by the same slow progress as wisdom or knowledge of every kind, however instantaneous its operations may appear when thus acquired.

It has been often observed, that the good and virtuous man alone can acquire this true or just relish even of works of art. This opinion will not appear entirely without foundation, when we consider that the same habit of mind which is acquired by our search after truth in the more serious duties of life, is only transferred to the pursuit of lighter amulements. The lame · disposition, the same desire to find fomething steady, substantial and durable, on which the mind can lean, as it were, and rest with safefearch after the idea of beauty and perfection in each; of virtue, by looking forward beyond ourselves to fociety, and to the whole; of arts, by extending our views in the fame manner to all ages and all

Every art, like our own, has in its composition fluctuating as well as fixed principles. It is an attentive enquiry into their difference that will enable us to determine how far we are influenced by cuftom and habit, and what is fixed in the nature of things.

To distinguish how much has solid soundation, we may have recourse to the same proof by which fome hold wit ought to be tried; whether it preserves itself when translated. That wit is false which can subsist only in one language; and that picture which pleases only one age or one nation, owes its reception to some local or accidental association of ideas.

We may apply this to every. custom and habit of life. the general principles of urbanity, politeness, or civility, have been ever the same in all nations; bat the mode in which they are dreffed is continually varying. general idea of shewing respect is by making yourself less; but the manner, whether by bowing the body, kneeling, proftration, pulling off the upper part of our dress, or taking away the lower +, is a matter of habit. It would be unjust to conclude that all ornaty. The subject only is changed. ments, because they were at first We pursue the same method in our arbitrarily contrived, are therefore

 Omnes artes quæ ad humanitatem pertinent, habent quoddam commune vinculum, et quasi cognatione inter se continentur. CICERO.

⁺ Put off thy shoes from off thy feet a for the place whereon thou standest is holy ground. Exodus, chap. iii. 5.

undeserving of our attention; on the contrary, he who neglects the cultivation of those ornaments, acts contrarily to nature and reason. As life would be imperfect without its highest ornaments the Arts, so these arts themselves would be imperfect without their ornaments.

Though we by no means ought to rank these with positive and substantial beauties, yet it must be allowed that a knowledge of both is essentially requisite towards forming a complete, whole, and perfect taste. It is in reality from the ornaments that arts receive their peculiar character and complexion; we may add, that in them we find the characteristical 'mark of a national taste, as by throwing up a feather in the air, we know which way the wind blows, better than by a more heavy matter.

The striking distinction between the works of the Roman, Bolognian and Venetian schools, consists more in that general effect which is produced by colours, than in the more profound excellencies of the art; at least it is from thence that each is distinguished and known at first fight. As it is the Ornaments, rather than the proportions of architecture, which at the first glance distinguish the different orders from each other; the Doric is known by its triglyphs, the Ionic by its volutes, and the Corinthian by its acanthus.

Taste in dress is cortainly one of the lowest subjects to which this word is applied; yet there is a right even here, however narrow its foundation respecting the fashion of any particular nation. But we have still more slender means of determining, in regard to the different customs of different ages or countries, to which to give the preference, since they feem to be all equally removed from nature.

If an European, when he has cut off his beard, and put falle hair on his head, or bound up his own natural hair in regular knots, as unlike nature as he can possibly make it; and having rendered them immoveable by the help of the fat of hogs, has covered the whole with flour, laid on by a machine with the utmost regularity; if, when thus attired he issues forth, he meets a Cherokee Indian, who has bestowed as much time at his toilet, and laid on with equal care and attention his yellow and red oker on particular parts of his forehead or cheeks, as he judges most becoming; whoever despises the other for this attention to the fashion of his country: which ever of these two first seels himself provoked to laugh, is the barbarian.

All these fashions are very innecent, neither worth disquisition, nor any endeavour to alter them, as the change would, in all probability, be equally distant from na-The only circumstances against which indignation may reasonably be moved, is where the operation is painful or destructive of health, such as is practised at Otahaiti, and the strait lacing of the English ladies; of the last of which, how destructive it must be to health and long life, the profesfor of anatomy took an opportunity of proving a few days since in this Academy.

It is in dress as in things of greater consequence. Fashions originate from those only who have

the high and powerful advantages of rank, birth, and fortune. many of the ornaments of art, those at least for which no reason can be given, are transmitted to ms, are adopted, and acquire their consequence from the company in which we have been used to see them. As Greece and Rome are the fountains from whence have slowed all kinds of excellence, to that veneration which they have a right to claim for the pleasure and knowledge which they have afforded us, we voluntarily add our approbation of every ornament and every custom that belonged to them, even to the fashion of their For it may be observed that, not fatisfied with them in their own place, we make no difficulty of drefting statues of modern heroes or fenators in the fashion of the Roman armour or peaceful robe, we go so far as hardly to bear a statue in any other drapery.

The figures of the great men of those nations have come down to ps in sculpture. In sculpture remain almost all the excellent spegimens of ancient art. We have so far associated personal dignity to the persons thus represented, and the truth of art to their manner of representation, that it is not in our power any longer to separate them. This is not so in painting; because having no excellent antient portraits, that connection was never formed. Indeed we could no more venture to paint a general officer in a Roman military habit, than we could make a statue in the prefent uniform. But fince we have no ancient portraits, to shew how ready we are to adopt those kind of prejudices, we make the best authority among the moderns ferve

the same purpose. The great variety of excellent portraits with which Vandyke has enriched this nation, we are not content to admire for their real excellence, but extend our approbation even to the dress which happened to be the fashion of that age. We all very well remember how common it was a few years ago for portrain to be drawn in this Gothic dress, and this cullom is not yet entirely laid afide. By this means it mut be acknowledged very ordinary pictures acquired something of the air and effect of the works of Vandyke, and appeared therefore at first fight to be better pictures than they really were; they appeared so, however, to those only who had the means of making this affociation, for when made, it was irrefiltible. But this affociation is nature, and refers to that secondary truth that comes from conformity to general prejudice and opinion; it is therefore not merely fantastical. Besides the prejudice which we have in favour of antient dreffes, there may be likewife other reasons, amongst which we may justly rank the simplicity of them, confisting of little more than one fingle piece of drapery, without those whimsical capricious forms by which all other dresses are embarrassed.

Thus, though it is from the prejudice we have in favour of the antients, who have taught us architecture, that we have adopted likewise their ornaments; and though we are satisfied that neither nature nor reason are the soundation of those beauties which we imagine we see in that art, yet if any one persuaded of this truth should therefore invent new orders

of equal beauty, which we will suppose to be possible, yet they would not please, nor ought he to complain, since the old has that great advantage of having custom and prejudice on its side. In this case we leave what has every prejudice in its savour, to take that which will have no advantage over what we have lest, but novelty, which soon destroys itself, and at any rate is but a weak antagonist against custom.

These ornaments having the right of possession, ought not to be removed, but to make room for not only what has higher pretensions, but such pretensions as will balance the evil and confusion which innovation always brings

with it.

To this we may add, even the durability of the materials will often contribute to give a superiority to one object over another. Ornaments in buildings, with which taste is principally concerned, are composed of materials which last longer than those of which dress is composed; it therefore makes higher pretensions to our favour and prejudice.

Some attention is surely required to what we can no more get rid of than we can go out of ourselves. We are creatures of prejudice; we neither can nor ought to eradicate it; we must only regulate it by reason, which regulation hy reason is indeed little more than obliging the lesser, the local and temporary prejudices, to give way to those which are more durable and lasting.

He therefore who in his practice of portrait painting wishes to dignify his subject which we will suppose to be a Lady, will not

paint her in the modern dress, the familiarity of which alone is sufficient to destroy all dignity. He takes care that his work shall correspond to those ideas and that imagination which he knows will regulate the judgment of others; and therefore dresses his figure fomething with the general air of the antique for the fake of dignity, and preserves something of the modern for the sake of likeness. By this conduct his works correspond with those prejudices which we have in favour of what we continually see; and the relife of the antique simplicity correfponds with what we may call the more learned and scientisic prejudice.

There was a statue made not long since of Voltaire, which the sculptor, not having that respect for the prejudices of mankind which he ought to have, has made entirely naked, and as meagre and emaciated as the original is said to be. The consequence is what might be expected; it has remained in the sculptor's shop, though it was intended as a public ornament and a public honour to Voltaire, as it was procured at the expence of his cotemporary wits and admirers.

Whoever would reform a nation, supposing a bad taste to prevail in it, will not accomplish his purpose by going directly against the stream of their prejudices. Men's minds must be prepared to receive what is new to them. Reformation is a work of time. A national taste, however wrong it may be, cannot be totally changed at once; we must yield a little to the prepossession which has taken hold on the mind, and we

may then bring people to adopt what would offend them, if endeavoured to be introduced by When Battillo Franco employed, in conjunction with Titian, Paul Veronese and Tintoret, to adorn the library of St. Mark, his work, Valari fays, gave less satisfaction than any of the others: the dry manner of the Roman school was very ill calculated to please eyes that had been -accustomed to the luxuriancy, Iplendor and richness of Vene-Had the Rotian colouring. mans been the judges of this work, probably the determination would have been just contrary; for in the more noble parts of the art, Battisto Franco was perhaps not inferior to any of his rivals.

Thoughts on Commercial Subjects. From Dr. Franklin's Political Fragments.

Of Embargoes upon Corn, and of the Poor.

N inland high countries, remote from the sea, and whose rivers are small, running from the country, and not to it, as is the case of Switzerland; great distress may arife from a course of bad harvests, if public granaries are not provided, and kept well stored. ciently too, before navigation was so general, ships so plenty, and commercial connections so well established; even maritime countries might be occasionally distressed by bad crops. But such is now the facility of communication between those countries, that an unseffrained commerce can ever fail of procuring a sufficiency

for any of them. If indeed any government is so imprudent, as to lay its hands on imported corn, forbid its exportation, or compel its sale at limited prices; there the people may fuffer some samine from merchants avoiding ports. But wherever commerce is known to be always free, and the merchant absolute master of his commodity, as in Holland, there will always be a reasonable supply.

When an exportation of com takes place, occasioned by a higher price in some foreign countries, it is common to raise a clamour, on the supposition that we shall thereby produce a domestic famine. Then follows a prohibition, founded on the imaginary distress of the poor. poor, to be sure, if in distress, should be relieved; but if the farmer could have a high price for his corn from the foreign demand, must he by a prohibition of exportation be compelled to take a low price, not of the poor only, but of every one that eats bread, eyen the richest? the duty of relieving the poor is incumbent on the rich; but by this operation the whole burden of it is laid on the farmer, who is to relieve the rich at the Of the poor too, same time, those who are maintained by the parishes have no right to claim this sacrifice of the farmer; 45, while they have their allowance, it makes no difference to them, whether bread be cheap or dear. Those working poor, who now mind business only five or four days in the week, if bread should be so dear as to oblige them to work the whole fix required by the commandment, do not feem to be aggrieved, so as to have a right

to public redress. There will then remain, comparatively, only a few families in every district, who, from sickness or a great number of children, will be so distressed by a high price of corn, as to need relief; and these should be taken care of by particular benefactions, without restraining the farmer's

profit. Those who fear, that exportation may so far drain the country of corn, as to starve ourselves, fear what never did, nor ever can hap-They may as well, when they view the tide ebbing towards the fea, fear that all the water will leave the river. The price of corn, like water, will find its own level. The more we export, the dearer it becomes at home; the more is received abroad, the cheaper it becomes there; and, as soon as these prices are equal, the exportation stops of course. As the feasons vary in different countries, the calamity of a bad harvest is never universal. If then, all ports were always open, and all commerce free; every maritime country would generally eat bread at the, medium price, or average of all the harveits; which would probably be more equal than we can make it by our artificial regulations, and therefore a more iteady encouragement to agriculture. The nation would all have bread at this middle price; and that nation, which at any time inhumanly refuses to relieve the distresses of another nation, deserves no compassion when in distrels irfeif.

Of the Effect of Dearness of Provifions upon Working, and upon Maunsactures.

THE common people do not work for pleasure generally, but from necessity. Cheapness of provisions makes them more idle; less work is then done, it is then more in demand proportionally, and of course the price rises. Dearness of provisions obliges the manufacturer to work more days and more hours; thus more work is done than equals the usual demand; of course it becomes cheaper, and the manufactures in confequence.

Of an open Trade.

PERHAPS, in general, it would be better if government meddled no farther with trade, than to protect it, and let it take its course. Most of the statutes or acts, edicts, arrets, and placarts of parliaments, princes, and states, for regulating, directing, or restraining of trade, have, we think, been either political blunders, or jobs obtained by artful men for private advantage under pretence of public good. When Coibert affembled some wise old merchants of France, and defired their advice and opinion how he could best serve and promote commerce; their answer, after confultation, wes in three words on'y, Laissez nous faire; 'Let us alone.'-It is faid by a very folid writer of the same nation, that he is well advanced in the science of politics, who knows the full force of that maxim, Pas trop gouverner, " not to govern too much; " which. perhaps, wuld be of more use when applied to trade, than in any other public concern. were therefore to be wished, that commerce were as free between all the nations of the world, as it

England; so would all, by mutual communication, obtain more enjoyments. Those counties do not ruin each other by trade, neither would the nations. No nation was ever ruined by trade, even, seemingly, the most disadvantageous.

Wherever desirable superfluities are imported, industry is excited, and thereby plenty is produced. Were only necessaries permitted to be purchased, men would work no more than was necessary for that

purpose.

Of Probibitions with respect to the Exportation of Gold and Silver.

COULD Spain and Portugal have succeeded in executing their foolish laws for bedging in the enckow, as Locke calls it, and have kept at home all their gold and filver, those metals would by this time have been of little more value than fo much lead or iron. Their plenty would have lessened their value. We see the folly of these edicts: but are not our own prohibitory and restrictive laws, that are professedly made with intention to bring a balance in our favour from our trade with foreign nations to be paid in money, and laws to prevent the necessity of exporting that money, which if they could be thoroughly executed, would make money as plenty, and of as little value; I fay, are not such laws akin to those Spanish edicts; follies of the same family?

Of the Returns for foreign Articles.

IN fact, the produce of other countries can hardly be obtained,

unless by fraud and rapine, without giving the produce of our land or our industry in exchange for them. If we have mines of gold and filver, gold and filver may then be called the produce of our land: if we have not, we can only fairly obtain those metals by giving for them the produce of our land or industry. When we have them, they are then only that produce or industry in another shape; which we may give, if the trade requires it, and our other produce will not fuit, in exchange for the produce of some other country that furnishes what we have more occasion for, or more defire. When we have, to an inconvenient degree, parted with our gold and filver, our industry is stimulated afresh to procure more; that, by its means, we may contrive to procure the fame advantage.

Of Restraints upon Commerce in Tint of War.

WHEN princes make war by prohibiting commerce, each may hurt himself as much as his one my. Traders, who by their business are promoting the common good of mankind, as well as farmers and fishermen who labour for the subsistence of all, should never be interrupted, or molested in their business; but enjoy the protection of all in the time of war, as well as in time of peace.

This policy, those we are pleased to call Barbarians, have, in a great measure, adopted; for the trading subjects of any power, with whom the Emperor of Morocco may be at war, are not liable to capture, when within light

If his land, going or coming; and have otherwise free liberty to trade and reside in his dominions.

As a maritime power, we prefume it is not thought right, that Great Britain should grant such freedom, except partially: as in the case of war with France, when tobacco is allowed to be sent thither under the sanction of passports.

Exchanges in Trade may be gainful to each Party.

IN transactions of trade, it is not to be supposed, that, like gameing, what one party gains the other must necessarily lose. The gain to each may be equal. If A has more corn than he can consume, but wants cattle; and B has more cattle, but wants corn, exchange is gain to each: hereby the common stock of comforts in life, is increased.

Of Paper Credit.

IT is impossible for government to circumscribe, or fix the extent of paper credit, which must of course succeedit, which must of course succeedit. Government may as well pretend to lay down rules for the operations, or the considence of every individual in the course of his trade. Any seeming temporary evil arising, must naturally work its own cure.

Rules for a Club formerly established in Philadelphia . From the same.

Previous Question, to be Answered at every Meeting.

HAVE you read over these queries this morning, in order to consider what you might have to offer the Junto touching any one of them? viz.

thing in the author you last read, remarkable, or suitable to be communicated to the junto? particularly in history, morality, poetry, physic, travels, mechanic arts, or other parts of knowledge.

2. What new story have you lately heard agreeable for telling in conversation?

3. Hath any citizen in your knowledge failed in his business lately, and what have you heard of the cause?

4. Have you lately heard of any citizen's thriving well, and by what means?

any present sich man, here or elsewhere, got his estate?

6. Do you know of any fellow-citizen, who has lately done a worthy action, deferving praise and imitation? or who has committed an error proper for us to be warned against and avoid?

7. What unhappy effects of intemperance have you lately ob-

This was an early performance; and carries along with it an air of lingularity, accompanied with such operative good sense and philanthrophy, as characterizes it for Dr. Franklin's. We are informed by the editor, that the club for which it was written, was held in Philadelphia; and was composed of men considerable for their influence and discretion; for though the chief measures of Pensylvania usually received their first formation in this club, it existed for 30 years without the nature of its institution being publicly known.

ferved

ferved or heard? of imprudence? of passion? or of any other vice or folly?

8. What happy effects of temperance? of prudence? of moderation? or of any other virtue?

9. Have you or any of your acquaintance been lately fick or wounded? If so, what remedies were used, and what were their effects ?

10. Who do you know that are shortly going voyages or journies, if one should have occasion to send

by them?

11. Do you think of any thing at present, in which the Junto may be serviceable to mankind? to their country, to their friends, or to themselves?

12. Hath any deferring stranger arrived in town fince last meeting, that you heard of? and what have you heard or observed of his character or merits? and whether, think you, it lies in the power of the Junto to oblige him, or encourage him as he deserves?

13. Do you know of any deserving young beginner lately set up, whom it lies in the power of the Junto any way to encourage?

14. Have you lately observed any defect in the laws of your country, [of] which it would be. proper to move the legislature for an amendment? or do you know of any beneficial law that is wanting?

15. Have you lately observed any encroachment on the just liber-

ties of the people?

16. Hath any body attacked your reputation lately? and what can the Junto do towards securing it?

17. Is there any man whose friendship you want, and which

the Junto, or any of them, ext procure for you?

18. Have you lately heard any member's character attacked, and

how have you defended it?

19. Hath any man injured you, from whom it is in the power of the junto to procure redress?

20. In what manner can the Junto, or any of them, affift you in any of your honourable deligns!

21. Have you any weighty affair in hand, in which you think the advice of the Junto may be of fervice?

22. What benefits have you lately received from any man not preient?

23. Is there any difficulty in matters of opinion, of justice, and injustice, which you would gladly have discussed at this time?

24. Do you see any thing amis in the present customs or proceedings of the Junto, which maight

be amended?

Any person to be qualified, to stand up, and lay his hand on his breast, and be asked these questions; viz.

1. Have you any particular difrespect to any present members?—

Answer. I have not.

2. Do you uncerely declare that you love mankind in general; of what profession or religion soever? $-An \alpha v$. I do.

3. Do you think any person ought to be harmed in his body, name, or goods, for mere speculative opinions, or his external way of worship?—Answ. No.

4. Do you love truth for truth's sake, and will you endeavour impartially to find and receive it yourself, and communicate it to

others?—Answ. Yes.

Observe-

Dhservations en Patrierchal Customs and Manners; by the Hon. Daines Barrington.

Geneus lately with attention, I have formed a short sketch of the patriarchal austoms and manners, some of which, and more particularly what relates to their marriages, I never could at all comprehend from the perusal of detached chapters; it need scarcely be observed also that such customs and manners must in many respects differ from those of their descendants, when they became a considerable nation, and lived in cities.

A patriarch pitched his tents where the ground was unoccupied by others; or, if occupied; where he was permitted to purchase; as in the inflance of Jacob's procuring land from the children of Hamor, for an hundred pieces of money.

As the first of these patriarchs (Abraham) had 318 trained servants, when he assisted his nephew Lot; if we multiply 318 by 5, according to the common rule for giving the number of souls, there were probably 1590 in this patriarchal family: Liau also meets lacob with 400 men.

Their cause consided of camels, cows, asses, sheep, and goats; but I do not find any mention of the horse in the book of Genesis, except of the horsemen which came from Egypt with Joseph, when he is to bury Jacob; and, indeed, this quadruped consumed too much provender, to be easily furnished in such a country as the land of Canaan; besides the camel was a Vol. XXII.

much more convenient heast of burthen, in their slow journies over tracts of sultry deserts.

The distance to which they removed must have depended upon their sinding proper subsistence for themselves and their cattle, whilst the first thing necessary, when they had fixed their settlement, was to dig wells; which act of labourestablished their property in the land that was contiguous.

These wells were of different kinds, and were most valuable if an ebullition of the water appeared, when they are described as living waters; as least such is the expression in the Septuagint, though not in our version.

Some of these wells had steps to go down into them, and had besides a trough to receive the water when brought up in the pitchers; as, otherwise, there would not have been a sufficient quantity for the larger cattle, and particularly the camels: it should seem also, that this labour was imposed upon the women, who chose the cool of the evening for this purpose, and carried their pitchers on their shoulders.

Other wells were covered with a large stone, which required some strength to remove it, and prevented the sand or ordure from being blown into the well, as also accidents to the cattle, or the evaporation of this so precious an element in so parched a country. Other wells again had a wall round them, to which they planted vines. These wells being so valuable, sometimes occasioned contentions between the herdsmen, in which it does not appear what arms

were used, but it should seem that the bow and thrusting sword were their only weapons in war, and that the killing with the edge of the fword, Gen. xxxiv. 26. is therefore improper, as the Septuagint expression is εν σομαίι μαχαιρας, and the literal translation from the Hebrew is in ore gladii. Perhaps the bow is the most ancient of these weapons, as it is alluded to in the covenant with Noah. husband and his wives lived in separate tents, or houses: as Isaac goes into that of his mother Sarah, after her death, and three tents are fearched for the images, viz. Jacob's, Leah's, and Rachel's: in process of time also booths were built for their cattle. from which circumstance 'Jacob names a place.

The patriarch himself seems not to have been occupied in any manual labour, but is often reprefented as fitting before the door of his tent, or under the shade of a tree, with a truly Afiatic indolence, as upon the arrival of a stranger, he is said to lift up bis eyes and see: which very particular expression seems to imply an

effort in such an act.

When the stranger arrives, he is received with great courtesy and hospitality; for Abraham addresses the angels (whom he doth not know to be so) as his Lords, and files himself their servant. They are then invited to wash their feet, whilft Sarah prepares the bread, and Abraham procures a calf, butter, and milk for them, which they eat under the shade of a tree, and Abraham waits upon them during their repalt. If the stranger travelled with cattle, they

were also provided with straw and provender.

The patriarch's own cattle were kept either by his sons, or servants, who attended them day and night; at least, it was a covenant between Laban and Jacob "that " if any were stolen either by day " or night, or destroyed by wild " beafts, the shepherd should be

" answerable for them."

These servants became so either by being born within the patriarch's district, or were purchased for money; whilk some sew engaged only for a term of years, as in the instance of Jacob and Laban. But those who could be most depended upon were the children of the patriarch himself, or their descendants; the increase of which was encouraged by every possible means (being their bek wealth), and unhappy was the woman who did not bear a confi-The wife inderable number. deed having no fortune, was purchased by the husband for this fole purpose, which if she did not answer, her disgrace was complete. Hence Rachel is dismissed with bleffings and wishes for her fruitfulness, and says afterwards to her husband, "give me children or I " shall die:" hence God is supposed " both to open and shut her " womb;" and upon bearing a child, "God hath taken away "her reproach." The belief that the Messiah might be descended from them, might possibly contribute also to this so very earnest defire of becoming a mother.

In their marriages (from the time of Isaac at least), it seems to have always been wished that the bride should live at a distance from the patriarchal residence, but that she should be related, and particularly a first cousin.

The first requisite probably arose from the danger of early incest in the patriarch's own family; and the second, from apprehensions of disagreement between the husband and wife, after the introduction of circumcision, which the wife might probably have opposed, when her new-born infant was but eight days old, unless she was in some measure descended from Abraham the introducer of this practice.

We find accordingly that Ziporah, who was a Midianite, and married to Moses, had delayed this operation so long, that he is threatened with death by an angel; upon which the mother complies indeed, but reproaches Moses twice with being a bloody husband to her on this account. lacob's sons likewise for the same reason declare, that they will not marry the daughters of the Schechemites, till circumcision is submitted to by all the male inhabitants of the town of Shechem.

It was allowed to marry at least two wives though fifters; but as both of these might prove barren, we find that in the instance of Rachel and Leah, they received from their father two handmaids, in whom they continued to have such absolute property, that if they bestowed them upon their husbands in marriage, the children which they bore were in a manner confidered as their own, whilst to make them more completely so, the handmaid was delivered upon the knees of her mittress: "Go in " unto her, and the shall bear es upon my knees, that I may

" have also children by her." Gen. xxx. It feems to me that what I have suggested is fairly to be inferred from these words; and I have been informed by a learned friend, that some years part it was not uncommon in many parts of England, for the granddaughter to be delivered upon the knees not only of the grand-mother, but the grand-father. The husband often also places the wife upon his knees for this same purpose, amongst the lower class of peasants both in Prussia and Lapland:

Though the handmaid's children were therefore considered as legitimate; yet she and her offspring seem to have continued under the power of the mistress, for Sarah insists upon Hagar being sent with her child into the desert, which Abraham cannot oppose, though he wishes to do so; and such a maid is therefore sometimes stiled a bond-woman.

Whilst the mistress however was fatisfied with her hand-maid's behaviour, both she and her children were treated nearly in the fame manner as the wife and her children would have been. Thus Joseph the son of Rachel keeps sheep with the sons of Bilhah and Zilpah, (who were handmaids to Rachel and Leah) and the only reason given for Jacob's preferring Joseph is, that he was the son of his old age. The brothers also refent Joseph's conceiving from his dream, that he should have any superiority over them. Thus lacob likewise with his two wives and their handmaids, and his eleven sons, advance by themselves when he is approaching Elau un-

. M 2

der apprehensions that he shall not be well received, whilst he is preceded by other parts of his train, whose lives are not so precious to him.

It should seem, indeed, that there was some fort of distinction between the two forts of marriage, as far as related to the mothers, though not as to the children, for it was a general law in all the countries adjacent to the promised land, that adultery with the wife of the more folemn marriage, should be punished with death. But if the woman was not under such a contract, the princes of the East often placed her in their seraglio. By this I would allude to the inflances of Sarah and Rebecca whilst in Egypt and Gerar; but the book of Genesis does not furnish an example of its being an equal crime to commit adultery with the wife's handmaid, after she had been given in marriage to the husband. On the contrary, Rouben lay with Bilhah, his mother Rachel's handmaid, which she had given in marriage to Jacob; nor does any punishment or reproof immediately follow, though the Septuagint adds this censure, was wormer spaplios aula.

To avoid, however, this offence of adultery with the wife of the more folemn marriage, if the patriarch removed to the dominions of a foreign prince, it feems to have not been uncommon to murder him, (for which the punishment was not probably so severe in the case of a Aranger) as the woman was then become a widow and not a wife; by which most horrid evasion, the letter of the law seems to have been satisfied.

Murder had indeed been forbit in the time of Noah: but this precept did not probably reach to countries which were not inhabited by his more immediate descendants; for when Abraham apprehends being murdered in Abimelech's kingdom on account of his wife Sarah, he gives it as a reason, "that the sear of God was " not in this place;" by which I understand that the divine law against murder promulged to Nosk had not been heard of, or at least was not observed in Abimelech's country, though it is very clear that adultery with Sarah (whilk the was wife of Abraham) would have been punished with death; and from another fimilar inflance, that the same law prevailed in Hence also Abimelech, Egypt. when he is informed that Isac is the husband of Rebecca, if fues a proclamation for his protection

As a wife was only respected for the number of children with which the or her handmaids increased the patriarchal family, the greatest injury the could receive, was the preventing her having the earliest opportunity of bearing legitimate children. Hence the daughter being at the father's disposal, Laban informs Jacob that he must not complain of Leah being imposed upon him instead of Rachel, because Leah was the elder sister. and therefore was not to lose a year of child-bearing; of which the was capable before her younger fifter.

When a wife was once removed from the family of one patriarch to another, she could not be returned without much trouble and inconvenience; besides which, 25 I have

I have observed before, she was in reality purchased for the purpose of bearing children, and consequently whilst she was of a proper age, no time was to be lost in providing her with another husband (upon the death of the first) from the same family which had made the purchase; the next brother in succession being fixed upon for the second husband.

This appears most strongly in what is mentioned with regard to Tamar, who was first married to Er, the eldest of three brothers, then to Onan the second, and aszerwards betrothed to Sclah the third when he should be fully grown. When this happens, Tamar thinks herself most highly injured by his not being immediately more folemply married to her, which is the occasion of her losing the first opportunity of bearing children, and therefore she commits incest with her father-in-law, who acknowledges afterwards that he had been guilty of a greater fin in not completing the marriage between Tamar and Selah, than the had by adultery; for which otherwise he had ordered her to have been burnt. A disappointment of the same fort occasioned the death of her second husband Onan, who seems to have declined having children by her, because he conceived at least, that Tamar was already pregnant by his elder brother Er.

But a still stronger instance of this supposed duty of bearing children, appears in the conduct of the two daughters of Lot, who commit incest with their father from the same motives, nor do they incur any blame when the deceit is discovered; and I am in-

formed by an able orientalist, that the name of one of the sons. viz. Moab, fignifies, of or by my Father; and of the other, viz. Ammon or Ben-ammi, the for of my nearest kin; from which it is very clear that they meant to perpetuate an honour, and not a difgrace to themselves or their children. Besides this, the two daughters concert a deliberate plan with each other for this purpose, assigning it as a reason that their father was groun old, and it cannot therefore be supposed to have arisen from the common inducements to incontinence. I cannot conclude what I have stated with regard to the patriarchal marriages, without observing, that though some of their usages in this respect may appear so very singular, and perhaps blamable according to our own institutions, yet it must be recollected, that no politive law of divine revelation was promulged till the decalogue, except the forbidding of murder in the time of Noah, and the covenant of cir-The patriarchs therecomcilion. fore accommodated their laws to their own very particular situation.

A patriarch seems to have had the highest powers over his children and family; at least Lot offers his daughters to the Sodomites, and Abraham obliges his son "Ishmael, together with all "the men of his house, born in the house, and bought with money of the stranger," to be circumcised. Reuben moreover offers to deliver up his two sons to be slain, if he does not bring back Benjamin.

This parental authority was much enforced by the father's being believed to have it in his M 2

power to confer either happiness or misery by his bestings or curses, which were therefore deserred till extreme old age, the eyes of both Isaac and Jacob being so dim that they cannot distinguish objects, when they pronounce their blessings on their children. The mother, however, does not appear to have had any such power, nor do we find any instance of a daughter being either blessed or cursed.

The respect to the father during his life was such, that it should seem the child was not permitted to see the child was not permitted to see in his presence, from a very particular excuse which Rachel makes on the occasion; whilst Jacob swears by the fear of his father Isaac, i. e. by the fear he was under of his father's displeasure. Esau also declares that he will kill Jacob, when Isaac dies, and Joseph's brethren apprehend he will revenge himself on the death of Jacob. Gen. xxxi. 42. and L. 15.

The bleffing or curle pronounced by the father, was a prophetic vision of what was to happen, and therefore could not be revoked or altered; for Isaac cannot change what he hath given Jacob reason " to expect when his deceit is difcovered; nor can Jacob be pievailed upon by Joseph to put his right hand upon his son Manasseh, because greater blessings were to come upon his younger brother Ephraim. It appears also from what hath been stated, that the blessing was given by the father's putting his right hand upon the head of the son who was to receive it.

The parental authority was endeavoured to be supported as long

as possible by the funeral honours paid to the deceased patriarch, and the place of his burial. The first purchase that we hear of therefore in the Old Testament, is that of the cave of Macpelah, in the valley of Mamre, which Abraham bought from the sons of Heth (who were otherwise willing to accommodate him in the burying of Sarah), that it might be secured to him and his descendants.

The conveyance therefore is made to Abraham with all possible solemnities and accuracy, in regard to the boundaries, which were delivered down to his grand-son Jacob, who reminds his children of them when he is dying, and requests to be interred in the cave which had been purchased by his

grandfather.

When the patriarch dies, the expression used is, that he was gathered unto his people, with which Montanus' literal version from the Hebrew agrees, being collectus ef ad populos suos. As I must own that I do not understand the meaning of either the English or Latin transsition; I have therefore confulted the Septuagint, where the words are revoiledn reco to have auls, which I translate, " the corps " was produced before his people," and which is the first fense that Stephens gives to this verb, citing Herodian with regard to the funcral of Severus: प्रवीवप्रवृह्मार्द्रिका केंद्र της ιερας οδε, εις δε την αρχαιου αγοςαν πεολιθεασι. L. iv. in princ. Dio also censures Tiberius for his neglect of Livia, थीः 100 क्षत्रका । जानκεπσαίο, είε αποθαιμσας αυίος πρ. σεθεία. Dio. L. Iviii. in princ. μιία separnoailis Taula de (sc. the corpse) rois wearing artists aupielaili. me Aidinai λαμπρως Lucianus Lucianus de Luctu, p. 807, Ed. Bourdelot.

-« Nec tya funera, mater, Aen. xi. 486. « Produxi."

where the poet literally translates the Greek term used in the above citations with regard to funerals. Thus likewise Statius,

___ " Et puerile feretrum " Produxi." L. ii. 3. 1.

To this it may be added, that the expression of being gathered to bis people, is only applied to the death of Abraham, Isaac and Jacob; from whence it may be fairly inferred, that the honour of producing the body, and weeping over. it in public, was paid only to the head of the patriarchal family. Perhaps Abraham might have introduced these funeral solemnities after he had been in Egypt.

Ishmael indeed is said to have been gathered to bis people, in our version of Gen. xxv. 17; but the Septuagint runs mpos to yeros, and not προς τον λαον αυθε; and it should seem, therefore, that his corpse was only lamented over by his relations. If we consider, however, the term ywos to be used in as extensive a sense as haos, it must be recollected that Ishmael, on the death of Abraham, was the head of the patriarchal family.

I shall now endeavour to shew that this is the true sense of the text from the particulars which are stated both as to Sarah and Jacob's funeral; for as to those of Abraham and Isaac, it is only mentioned that they were gathered unto their people, and were buried.

I shall begin, however, with the last instance, viz. that of Jacob,

because the ceremonies used in the burial of Sarah, will then be better understood.

Jacob, in his last agonies, is said to raise his seet upon the bed, and therefore lay in such an attitude that his corpse might be produced to bis people (according to my translation of the passage); immediately after which Joseph falls upon his father's face, weeping and kissing it; which, with other public lamentations, continued (as I apprehend) till the corpse was buried.

This last particular is, I think, fairly to be inferred from different passages which relate to the funeral of Sarah.

Sarah died at some distance from where Abraham happened to be, who therefore comes to mourn and weep for her before she is interred; and addresses the sons of Heth, the body of his wife lying before bim; " and Abraham stood up " from before his dead and spake " unto the fons of Heth."—In the next verse he says, " give me " a burying place that I may bury " my dead out of my fight:" and the same expression is again repeated in the 8th verse.

I have already observed how material a purchase the cave of Macpelah was considered both by Abraham and his descendants, it being destined to receive their remains, and Dr. Shaw informs us, that it continues to be shewn by the Mahometans; he forgets, however, to mention whether it is a double one according to the Septuagint, and the literal version from the Hebrew, as such a separation must still continue if the cave does.

I cannot here but observe, that it is much to be wished the travel-M 4 lers less into the Promised Land would look out for many patriarchal antiquities, if they happen not to be of a perishable nature. Thus Dr. Shaw hath given us an engraving of the rock of Meribah; nor do I see greater difficulties in discovering the cave near Zoar, in which Lot and his daughters lived, than

the cave of Macpelah.

Four different pillars are said to have been erected by Jacob in commemoration of particular events. As it cannot probably have answered any purpose to defirey them, and, on the contrary, both Jews and Mahometans profess an equal veneration for the memory of the patriarchs, I do not fee why some remains of such antiquities may not fill continue. I should suppose likewise, that the twelve flones which Joshua ordered to be placed where the Israelites should encamp after the pallage of the Jordan, may be still found out by an inquisitive and persevering traveller.

A map of the complete course of this river is also much wanted, as well as of all the stations mentioned in the patriarchal times, notwithstanding the labours of Reland, Dr. Wells, and others, who have rather taken notice of the places which occur in the later books of the Old Testament.

If it be faid that it is impossible to settle them with any precision, I admit the objection if accuracy in longitude and latitude is saquired; but circumstances are not wanting to fix the situation of most of them, so as greatly to illustrate the book of Genesis.

Another objection may be perhaps made from the infecurity to the traveller, and the ignorance of the present inhabitants of the Promiled Land. With regard to the first of these circumstances, I have little doubt but that if application was made through our minister at Confrantinople, a proper guard might be procured; but even this would fignify little, unless the perfon who undertakes such a journer can readily speak the language of the country himself, or is accended by an able interpreter, who may ask such questions as are necessary, and which require no great fagacity of knowledge in the person who is to give the answer.

DAINES BARRINGTOS.

likewise, for the islustration of the Greek and Roman Classics, that a missionary of taste and a landscape, painter were sent with the same advantages into poetical Thrace. How little do we know of the river Strymon, Mount Amos, &c.—As for antient Greece, it hath lately been very thoroughly examined, and the sepublic of letters are much obliged to the Society of the Dilettanti for the last voyage undertaken for this laudable purpose,

POETRY,

ODE for she NEW YEAR, 1779.

Written by W. WHITEHBAD, Efq. P. L.

And hail, with founds of might,
And hail, with founds of war, the new-horn year!
Britannia, from her rocky height,
Points to the Gallic coast, and lifts her spear.
The immortal hatred, which by turns,
Wakes and sleeps, with fury burns:
New cause of just offence has Albion found,
And lo! it bleeds afresh the eternal wound!

Tho' great in war, of skill possess,
Tho' native courage fire their breast
With ardour for the public weal,
One want, at least, our rivals feel,
The want of freedom damps each gen'rous aim;
Whoe'er the lord they serve, th' oppression is the same.

Power despotic rarely knows,
Rarely heeds a subject's woes.
By force it claims, with grasping hand,
Whate'er ambition deres demand,
The ravag'd merchant, plunder'd swain,
May pour their weak complaints in vain;
Their private forsows are their own,
A tyrant seels not, tho' a people groan.

O happier far the well-mix'd state,
Which blends the Monarch's with the Subject's sate,
And links the sceptre to the spade.
The stroke which wounds the lowliest clown,
Is insult to the British crown,
And he attacks our rights who dares the throne invade.

One common flame, one active foul
Pervades, and animates the whole;
One heart, one hand, directs the blow,
And hurls the vollied vengeance on the for.

170 ANNUAL REGISTER, 1779.

ODE for His MAJESTY'S BIRTH-DAY.

By the fame.

ET Gallia mourn! th' insulting foe, Who dar'd to aim the treach'rous blow, When lost, she thought, in deep dismay, Forlorn, distress'd Britannia lay,

Deems she missortune e'er can tame,
The gen'rous inborn British slame?
Is Agincourt so little known,
Must fresh conviction curb her pride,
Each age new annals be supply'd,
Of Gallia's shame and our renown?

What though a while the tempest shrouds
Her summits, and a night of clouds
Each rock and mountain wears;
Yet soon returns the slitting breeze,
And brighter o'er her subject seas
The Queen of Isles appears.

Let Gallia mourn! th' insulting foe, Who sees by all the winds that blow, Her treasures wasted to the coast, She insolently deem'd was lost.

Yon sun that with meridian ray
Now gilds the consecrated day,
When Britain breathes her annual vow
For him, the guardian of her laws,
For him, who in her facred cause
Bids the red bolt of vengeance glow:

That very sun, when Ganges' stream
Redden'd beneath his rising beam,
Saw Britain's banners wave
In Eastern air, with honest pride,
O'er vanquish'd forts, which Gallia tried,
But tried in vain to save.

That very sun, e'er evening dew Has dimm'd his radiant orb, will view Where Lucia's mountains tow'r on high, And seem to prop the western sky, That oft contested island own Allegiance to the British throne. Like her own oak, the forest's king,
Tho' Britain seels the blows around;
Ev'n from the steel's inslictive sting
New force she gains, new scyons spring,
And slourish from the wound.

ELEGY to Miss DASHWOOD.

By Mr. HAMMOND.

This Elegy has not yet found a place in his Works. In Dodsley's Collection there is an Answer to it; which, though generally ascribed to Lord Hervey, was more probably written by Lady Mary Wortley Montague.

Say, thou dear possessor of my breast, Where's now my boasted liberty and rest! Where the gay moments which I once have known! O, where that heart I fondly thought my own! From place to place I folitary roam, Abroad uneasy, nor content at home. I scorn the beauties common eyes adore: The more I view them, feel thy worth the more; Unmov'd I hear them speak, or see them fair, And only think on thee, who art not there. In vain would books their formal succour lend, Nor wit nor wisdom can relieve their friend; Wit can't deceive the pain I now endure, And wisdom shews the ill without the cure. When from thy fight I waste the tedious day, A thousand schemes I form, and things to say; But when thy presence gives the time I seek, My heart's so full, I wish, but cannot speak.

And could I speak with eloquence and ease,
Till now not studious of the art to please,
Could I, at woman who so oft exclaim,
Expose (nor blush) thy triumph and my shame,
Abjure those maxims I so lately priz'd,
And court that sex I soolishly despis'd,
Own thou hast soften'd my obdurate mind,
And thou reveng'd the wrongs of womankind;
Lost were my words, and fruitless all my pain.
In vain to tell thee, all I write in vain;
My humble sighs shall only reach thy ears,
And all my eloquence shall be my tears.

And now (for more I never must pretend)
Hear me not as thy lover, but thy friend;

Thousands

172 ANNUAL REGISTER, 1779.

Thousands will fain thy little heart ensage, For without danger none like thee are fair; But wisely choose who best deserves thy slame, So shall the choice itself become thy same; Nor yet despise, though void of winning art, 'The plain and honest courtship of the heart: The skilful tongue in love's persuasive lore, Though less it feels, will please and flatter more, And, meanly learned in that guilty trade, Can long abuse a fond, unthinking maid. And fince their lips, so knowing to deceive, Thy unexperienc'd youth might foon believe; And fince their tears, in falle submission drest, Might thaw the icy coldness of thy break; O! shut thine eyes to such deceitful woe: Caught by the beauty of thy outward show, Like me they do not love, whate'er they seem, Like me-with passion founded on esteem.

Verses to the Memory of Mr. BOSCAWEN, a Son of the late Admiral, who was unfortunately drowned, as he was bathing in a Pond belonging to Sir Charles Price of Jamaica.

Written near bis Grave by Dr. WOLCOT.

By friendship's facred spirit led,
Where horror wraps the twilight grove,
That glooming seems to mourn the dead.

Dear youth! the' hence I wander far,
Thy face will cloud each rising morn;
And to! with evening's dewy star,
My tears shall bathe thy distant urn.

Remembrance often, with a figh, Shall view the spot where many a maid, And many a swain, with swimming eye, The tender rite of sorrow paid.

Remembrance often shall impart
The smile of bliss on Albion's brow,
When kindling in thy youthful heart,
She saw the beam of valour glow.

Yes—Albion's genius with amaze
Did oft thy warrior looks devour;
Proud to behold thy eagle gaze,
High fix'd on glory's star-clad tower!

How few the lighe of Virtue mourn?
For few, alse! the friends he knows—
Yet, here he moves a Pilgrim lorn,
To bid her fon in peace repose.

With Sculpture, let the Marble grown, Where Flattery mocks the lifeless ear—How nobler far thy namely stone, Embalm'd by Pity's simple tear!

On ber Majesty's rebuilding the Lodgings of the Black Prince, and Henry V.

at Queen's College, Oxford.

By Mr. TICKEL. (Not printed in bis Works.)

Where the Black Edward pass'd his beardless youth;
And the fifth Henry, for his sirst renown,
Out-stripp'd each rival, in a student's gown.

In that coarse age, were Princes sond to dwell With meagre monks, and haunt the silent cell: Sent from the Monarch's to the Muse's court, Their meals were frugal, and their sleeps were short; To couch at curseu-time they thought no scorn, And froze at matins every winter-morn; They read, an early book, the starry frame, And lisp'd each constellation by its name; Art, after art, still dawning to their view, And their mind opening, as their stature grew.

Yet, whose ripe manhood spread our same so sar! Sages in peace, and demi-gods in war! Who, stern in sight, made echoing Cress ring, And, mild in conquest, serv'd his captive King? Who gain'd, at Agincourt, the victor's bays, Nor took himself, but gave good Heaven the praise? Thy nurselings, ancient dome! to virtue sorm'd; To mercy listening, whilst in sields they storm'd; Fierce to the serce; and warm th' opprest to save; Through life rever'd, and worship'd in the grave.

In tenfold pride their mouldering roofs shall shime,
The stately work of bounteous Caroline;
And blest Philippa, with unenvious eyes,
From Heaven behold her rival's fabric rise.
If still, bright saint, this spot deserves thy care,
Incline thee to th' ambitious Muse's pray'r:

O, could'st

O, could'st thou win young William's bloom to grace His mother's walls, and fill thy Edward's place, How would that genius, whose propitious wings Have here twice hover'd o'er the sons of Kings, Descend triumphant to his ancient seat, And take in charge a third Plantagenet!

JUPITER and MERCURY; a Fable. Written some Time after Dr. Goldsmith's Poem of Retaliation.

By DAVID GARRICK, E/q.

TERE, Hermes, says Jove, who with nectar was mellow, Go fetch me some clay, I'll make an odd fellow; Right and wrong stall be jumbled, much gold and some dross; Without cause be he pleased, without cause be he cross. Be sure; as I work, to throw in contradictions; A great love of truth, yet a mind turn'd to fictions: Now mix these ingredients, which, warm'd in the baking, Turn to learning and gaming, religion and raking. With the love of a wench, let his writings be chaste; Tip his tongue with strange matter, his pen with fine taste: That the Rake and the Poet o'er all may prevail, Set fire to the head, and fet fire to the tail: For the joy of each fex, on the world I'll bestow it, This scholar, rake, christian, dupe, gamester, and poet; Though a mixture so odd, he shall merit great same, And, amongst other mortals, be Goldsmith his name! When on earth this strange meteor no more shall appear, You, Hermes, shall fetch him-to make us sport here.

LINES occasioned by the intended Demolition of FRIAR BACON'S Stady in Oxford.

Running, thou see'st below what passes, As when on earth thou didst descry With them the wonders of the sky-Look down on you devoted walls!

Oh! save them—ere thy Study salls!

Or to thy votaries quick impart

The secret of thy mystic art:

Teach us, ere Learning's quite forsaken,

To honour thee, and—save our Bacon!

VERSES by Henry Fox. Esq. asterwards Lord Holland, to a Lady, with an artisticial Rose.

RAIR copy of the fairest flower,
Thy colours equal Nature's power; Thou hast the Rose's blushing hue, Art full as pleasing to the view: Go, then, to Chloe's lovely breast, Whose sweetness can give all the reft. But if at first thy artful make Her hafty judgment should mistake, And she grow peevish at the cheat, Urge 'twas an innocent deceit, And safely too thou may'll aver, The first I ever us'd to her. Then bid her mark, that, as to view, The Rose has nothing more than you; That so, if to the eye alone Her wondrous beauty she made known; That, if the never will dispense A trial to some sweeter sense; Nature no longer we prefer, Her very picture equals her. Then whisper gently in her ear, Say, foftly, if the blushing fair Should to such good advice incline, How much I wish that trial mine.

The FIRST of NOVEMBER; or, the WINTER'S WALK.

By Dr. Johnson.

BEHOLD, my fair, where'er we rove, What dreary prospects round us rise! The naked hill, the leastess grove, The hoary ground, the frowning skies!

Nor only through the wasted plain, Stern Winter, is thy force confess'd; Still wider spreads thy horrid reign; I seel thy power usurp my breast.

Enliv'ning Hope and fond Desire Resign the heart to Spleen and Care; Scarce frighted Love maintains her sire, And Rapture saddens to despair.

176 ANNUAL REGISTER, 1779.

In groundless hope, and causeless sear, Unhappy man I behold thy doom Still changing with the changeful year, The slave of sun-shine and of gloom.

Tir'd with vain joys and faile alarms, With mental and corporeal strife, Snatch me, my Stella, to thy sams, And screen me from the ills of life,

Extract from a Monody to the Memory of Mr. GARRICK; by Mr. Sheridan. Spoken at Diury-Lane Theatre.

Our toil attempts the most precarious claim!
To him, whose mimic pencil wins the prize,
Obedient Fame immortal wreaths supplies:
Whate'er of wonder Reynolds now may raise,
Raphael kill boasts cotemporary praise:
Each dazzling light, and gaudier bloom subdu'd,
With undiminish'd awe his works are view'd:
E'en Beauty's portrait wears a softer prime,
Touch'd by the tender hand of mellowing Time.

The patient Sculptor owns an humbler part,
A ruder toil, and more mechanic art;
Content with flow and timorous stroke to trace
The lingering line, and mould the tardy grace;
But once atchiev'd—tho' berbarous wreck o'erthrow
The sacred Fane, and lay its glories low,
Yet shall the sculptur'd Ruin rise to-day,
Grac'd by defect, and worship'd in decay;
Th' enduring record beats the artist's nan-,
Demands his honours, and afferts his same,

O proud diffinction of the facred lyre!—
Wide as th' inspiring Phoebus darts his ray,
Dissusive splendor gilds his votary's lay,
Whether the song heroic woes rehearse,
With epic grandeur, and the pomp of verse;
Or, sondly gay, with unambitious guile
Attempt no prize but savouring Beauty's smile;
Or bear dejected to the lonely grove
The soft despair of unprevailing love,—
Whate'er the theme—thro' every age and clime
Congenial passions meet th' according rhyme;
The pride of glory—Pity's sigh sincere—
Youth's earliest blush—and Beauty's virgin tear.

Such

Such is their meed—their honours thus secure, Whose arts yield objecte, and whose works endure. The Astor only, shrinks from times award; Feeble tradition is His Memory's guard; By whose faint breath his merits must abide, Unvouch'd by proof—to substance unallied! Ev'n matchles Garrick's art, to Heav'n resign'd, No six'd effect, no model leaves behind!

The Grace of Action—the adapted Mien Paithful as Nature to the varied scene; Th' expressive Glance—whose subtle comment draws Entranc'd attention, and a mute applause; Gesture that marks, with force and feeling fraught, A sense in silence, and a will in thought; Harmonious Speech, whose pure and liquid tone Gives verse a music, scarce confess'd its own; As light from gems assumes a brighter ray, And cloathed with orient bues, transcends the day!-Passion's wild break—and Frown that awes the sense, And every Charm of gentler Eloquence-All perishable!—like the electric fire But strike the frame—and as they strike expire: Incense too pure a bodied flame to bear, It's fragrance charms the sense, and blends with air.

We are obliged to the Writer of the Elegy on the Marchioness of Tavistock, for the following original Pieces.

DITTY.

The Measure adapted to an old mournful Tune.

W HILST the children of fortune with int'rested praise,
To the joys in possession still tune their sond lays;—
The son of assistion, unbrib'd, will deplore
Those joys, and those charms, which now are no more.
For the sweetest of maids was my Betty;—
And the joy of all hearts was my Betty.

Her looks were more pleasing than the bloom of sweet May, And her eyes were the sun that enlightened my day; Her accents could torture, or passion beguile; But who'll sing the rapture that hung on her smile? For, &c.

178 ANNUAL REGISTER, 1779.

All nature around me is joyful and gay,...

The trees thoot their buds, and the flow'rs deck their May;

No void in creation's bright (pace is described,

Save that, which the life of my foul once supplied,

For, &c.

But the funshine of life now for ever is flown; Unpitied my grief, and unbleft is my moan; In forrow, and darkness, I pass the long day, Whilst anguish new tunes the sed voice of each lay. For, &c.

Thus, discolour'd, and jaundic'd, all objects appear;
He hates joy in others, who's lost all that's dear.
Like the shades of the hapless, I seek the still night,
And haunt in the gloom each past scene of delight.
For the sweetest of maids was my Betty;
And the joy of all hearts was my Betty.

IMPROMPTU.

BEYOND all climates, far above all kies,.

The foul that once inform'd my Silvia flies:

May guardian angels still point out its way,

Through all the regions of eternal day;

May heavenly love still bless that tender mind,.

Which ever was with love and truth combin'd.

And that her joys unmix'd with care may flow,

Conceal, kind heaven, from her my heart-feit woe.

EXPOSTULATION

POOR, throbbing heart! a while refrain!
I fink beneath thy woe;
I grant a fhort recess from pain,
For thort the space we go.
No fortune can our fate reprieve,
So wretched is our strife;
For you can only live to grieve,
And grief cuts me from life.

ACCOUNT of BOOKS for 1779.

Prefaces, Biographical and Critical, to the Works of the English Poets; by Samuel Johnson, 4 wol. 12mo.

HE many and essential benesits, that English literature hath already derived from the la-· bours of Doctor Samuel Johnson, have long been subjects of general observation and experience. The merit of having given precision and stability to our language belongs almost exclusively to him. Like virtue, it is a merit that will be its own reward. In guarding our tongue against the innovations of time, he has provided the best security for his own fame, and, as it were, connected his reputation with the very existence of our language. It remained, to form the judgment and talle of the nation on the same solid basis, on which he had established its **v**ocabulary. This talk he has performed with his usual ability in the work now before us; in which he hath undertaken write criticisms on that class of our writers, which affords the most conspicuous, as well as the most numerous instances of beauties and of faults of every fort.

Criticism has been very justly considered as the last fruit of literary.

experience. An early acquaintance with authors of established reputation, a frequent intercourse with the men of genius of our own times, and a competent share of natural abilities, are sufficient to form those habits of discrimination, which enable, what is usually called a man of taste, to pronounce with great accuracy on the merits of literary productions. On the other hand, the philosopher, by maxims drawn from the nature of things, the Aructure of the human mind, and the operation of the passions, may arrive at an equal degree of certainty in tracing out the effects of art, and laying down rules for producing them. But the business of criticism does not end here. To trace the gradual progress and improvement of our talle, and point out the causes that have tended to retard or promote it; to comprehend as it were in one view the whole circle of the arts and sciences, to see their mutual connections and dependencies, and to investigate the effects which at various times they have produced on each other, are objects of general criticism, important in themselves, and which require an intimate knowledge of the several subjects on which they depend. In ocea-N₂ sional

fisual criticia, extensive experience is fill more effentially necessary.-In art, as in morality, great excellence is always nearly allied to some kindred fault. The beauties and defects of composition are not only connected with, but frequently artic out of each other. The acturd conceits and extravagant fancies, which disguit or shock the reader in the juvenile poems of our best poets, were the true feeds and germs, which afterwards ripeared, by proper culture, into the most luxuriant harvests. But this chemical process, if we may be allowed the expression, of genius, in which, still preserving some analogy to its prilline form, it is transmuted into a substance of a more valuable kind, is not cafily to be pursued, except by those, whose own experience hath admitted them into the fecrets of the Such an adopt we may fairly suppose our learned critic to be. Our readers have had sufficient proofs of it, in the extracts we have already inserted. The following characters of Waller and Dryden are in the same masterly style.

"As much of Waller's reputation was owed to the foftness and smoothness of his numbers; it is proper to confider those minute particulars to which a verifyer must

attend.

" He certainly very much excelled in smoothness most of the writers who were living when his poetry commenced. The poets of Elizabeth had attained an art of modulation, which was afterwards neglected or forgotten. Fairfax was acknowledged by him as his model; and he might have studied with advantage the poem of Davies, which, though merely philosophical, yet seldom leaves the ear

ungratified.

But he was rather smooth than strong; of the full resounding line, which Pope attributes to Dryden, he has given very few examples. The critical decision has given the praise of strength to Denham, and

of sweetness to Waller.

"His excellence of versification has fome abatements. He uses the expletive do very frequently; and though he lived to see it almost universally ejected, was not more careful to avoid it in his last compositions than in his first. had given him confidence; and finding the world satisfied, he satisfied himself.

"His rhymes are fometimes weak words: so is found to make the rhyme twice in ten lines, and occurs often as a rhyme through his book.

"His double rhymes in heroic verse have been censured by Mrs. Phillips, who was his rival in the translation of Corneille's Pompey; and more faults might be found, were not the enquiry below attention.

"He sometimes uses the obsolete termination of verbs, as wexerb, affictieth; and sometimes retains the final syllable of the preterite, as amazed, supposed; of which I know not whether it is not to the detriment of our language that we have totally rejected them.

" Of triplets he is sparing; but he did not wholly forbear them: of an Alexandrine he has given no

example.

" The general character of his poetry is elegance and gaiety. He is never pathetic, and very rarely sublime. He seems neither to have had a mind much elevated by naHis thoughts are such as liberal conversation and large acquaintance with life would easily supply. They had however, then perhaps, that grace of novelty, which they are now often supposed to want by those who, having already found them in later books, do not know or enquire who produced them first. This treatment is unjust. Let not the original author lose by his imitators.

before it is given. The author of Waller's Life ascribes to him the first practice, of what Erythræus and some late critics call Alliteration, of using in the same verse many words beginning with the same letter. But this knack, whatever be its value, was so frequent among our early writers, that Gascoign, a writer of the sixteenth century, warns the young poet against affecting it; and Shake-speare in the Midsummer Night's Dream is supposed to ridicule it.

" He borrows too many of his Ientiments and illustrations from the old Mythology, for which it is vain to plead the example of the ancient poets: the deities which they introduced fo frequently, were considered as realities, so far as to be received by the imagination, whatever fober reason might even then determine. But of these images time has tarnished the splen-A fiction, not only detected but despised, can never afford a solid balis to any polition, though sometimes it may furnish a tranfient allusion, or slight illustration. No modern monarch can be much exalted by hearing that, as Her-· cules had had his club, he has his aavy.

though much may be taken away, much will remain; for it cannot be denied that he added something to our elegance of diction, and something to our propriety of thought; and to him may be applied what Tasso said, with equal spirit and justice, of himself and Guarini, when, having perused the Pastor Fido, he cried out, "If he had not read Aminta, he had "not excelled it."

From the Preface to Milton's works, we have already given our readers a large extract. The poet who follows next in the feries, is the celebrated author of Hudibrass. The original idea of this poem is, he thinks, undoubtedly to be found in the history of Don Quixotte. Cervantes, he observes, shews a man who having by the inceffant perusal of incredible tales, subjected his understanding to his imagination, and familiarised his mind by pertinacious meditation to think of incredible events, and scenes of impossible existence, goes out in the pride of knighthood to redress wrongs and defend virgins, to rescue captive princesses, and tumble usurpers from their thrones; attended by a 'squire, whose cunning, too low for the suspicion of a generous mind, enables him often to cheat his master.

"The hero of Butler, is a Prefbyterian justice, who in the confidence of legal authority, and the rage of zealous ignorance, ranges the country to repress superstition, and correct abuses, accompanied by an Independent clerk, disputatious and obttinate, with whom he often debates, but never conquers him.

N 3

"Cervantes had so much kindness for Don Quixotte, that, however he embarrasses him with absurd distresses, he gives him so
much sense and virtue as may preserve our esteem; wherever he is,
or whatever he does, he is made
by matchless dexterity commonly
ridiculous, but never contemptihle.

But for poor Hudibrafs, his poet had no tenderness; he chuses not that any pity should be shewn, or respect paid him; he gives him up at once to laughter and contempt, without any quality that

can dignify or protect.

" In forming the character of Hudibrass, and describing his per-, fon and habiliments, the author feems to labour with a tumultuous confusion of dissimilar ideas. had read the history of the mock knight-errant; he knew the notions and manner of a Presbyterian magistrate, and tried to unite the absurdities of both, however distant, in one personage.—Thus he .gave him that pedantic oftentation of knowledge which has no relation to chivalry; and loads him with martial incumbrances that can add nothing to his civil dig-He sends him out a colonelling, and yet never brings him, within fight of war."

Dryden follows Butler, and our learned critic has paid him the ample and liberal attention he so well deserves. It is not easy to make selections from an author, who writes with so much judgment as Dr. Johnson, without doing great injustice to the parts. The two following extracts, which contain his opinion on the prose and poetical language of Dryden, are

written with great spirit, learning, and penetration.

" Criticism, either didactic or defensive, occupies almost all his prose, except those pages which he has devoted to his patrons; but none of his prefaces were ever thought tediques. They have not the formality of a fettled style, in which the first half of the sentence betrays the other. The clauses are never balanced, nor the periods modelled; every word seems to drop by chance, though it falls into its proper place. Nothing is cold or languid; the whole is airy, animated, and vigorous; what is little, is gay; what is great, is splendid. He may be thought to mention himself too frequently; but while he forces himself upon our esteem, we cannot refuse him to stand high in his own. Every thing is excused by the play of images and the sprightliness of ex-Though all is easy, noprellion. thing is sceble; though all seems careless, there is nothing harsh; and though, fince his earlier works, more than a century has passed, they have nothing yet uncouth or obsolete.

"He who writes much, will not casily escape a manner, such a recurrence of particular modes as may be easily noted. Dryden is always another and the same, he does not exhibit a second time the same elegancies in the same form, nor appears to have any art other than that of expressing with clearness what he thinks with vigour. His style could not easily be imitated, either seriously or ludicrously, for being always equable and always varied, it has no prominent or discriminative characters. The beauty

who is totally free from disproportion of parts and seatures cannot be ridiculed by an overcharged resemblance."

Dr. Johnson properly remarks, Dryden derives only his accidental and secondary praise; "the veneration, continues he, with which his name is pronounced by every cultivator of English literature, is paid to him as he refined the language, improved the sentiments, and tuned the numbers of English poetry.

After about half a century of forced thoughts, and rugged metre, fome advances towards nature and harmony had been already made by Waller and Denham; they had thewn that long discourses in rhyme grew more pleasing when they were broken into couplets, and that verse consisted not only in the number but the arrangement of syllables.

who can deny that they lest much to do? Their works were not many, nor were their minds of very ample comprehension. More examples of more modes of composition were necessary for the establishment of regularity, and the introduction of propriety in word and thought.

nation necessarily divides itself into diction scholattic and popular, grave and familiar, elegant and gross; and from a nice distinction of these different parts, arises a great part of the beauty of thyle. But if we except a few minds, the favourites of nature, to whom their own original rectitude was in the place of rules, this delicacy of selection was little known to our authors; our

speech lay before them in a heap of consusion, and every man took for every purpose what chance might offer him.

" There was therefore before the time of Dryden no poetical diction, no system of words at once refined from the groffness of domeltic use, and free from the harshnels of terms appropriated to particular arts. Words too familiar, or too remote, defeat the purpose of a poet. From those founds, which we hear on Imall or on coarse occasions, we do not easily receive strong impressions, or delightful images, and words to which we are nearly strangers, whenever they occur, draw that attention on themselves which they should convey to things.

"Those happy combinations of words which distinguish poetry from prose, had been rarely attempted; we had sew elegancies or slowers of speech, the roses had not yet been plucked from the bramble, or different colours had not been joined to enliven one another.

Waller and Denham could have overborn the prejudices which had long prevailed, and which even then were sheltered by the protection of Cowley. The new versial cation, as it was called, may be considered as owing its establishment to Dryden; from whose time it is apparent that English poetry has had no tendency to relapse to its former savageness.

The minor poets that follow Dryden, from Derham down to Hughes, occupy each a small but well-proportioned share of the author's attention. The distinguishing seatures and the characteristic

teristic faults and merits of each, are always marked with great judg-

ment and precision.

Before we dismiss this article, it will be necessary to take some notice of the historical part of these prefaces. — The great reputation which Doctor Johnson has already acquired as a moral and biographical writer, will not suffer any diminution from his present successful attempt to give (as he himself well expresses it) useful pleasure. -Great care appears to have been taken in felecting the most authentic materials: the errors, into which partiality, prejudice, or want of discernment, have led any of his predecessors, are judiciously corrected; and every part is interspersed with those beautiful effusions of moral sentiment, and reinarks on the manners of mankind, which distinguish him beyond any writer in the English language.— But whilst we do him justice in this respect, it is impossible not to obferve that many parts of his work bear strong marks of those political prejudices, under the influence of which it is well known his mind unfortunately labours. It is for his own sake we wish that he had, on the present occasion, repressed an useless zeal. We should be forry to think, with him, that wiralence and malevolence really belong to any party:—he has taught us that they certainly do not belong to one alone.—If faction, (i. e. the party we oppose) seldom, as he lays, leaves a man bonest, bowever it might find bim, how will the jealous dignity of Doctor Johnson's character brook the suspicions of, perhaps, the greater part of his readers? The bad men of both fides, who have an interest in the destruction of all character, will be glad to make use of his authority; and he cannot comp ain if those of the adverse party bring his own example as one proof of his rule *.

A Hif-

The part which Milton took in the public transactions of the times he lived in, seems to have made him particularly obnoxious to our learned critic. We shall therefore submit to our readers some of the misrepresentations of which he is accused, together with the answers that have been given to them. "I am "as as a submed, says Dr. Johnson, to relate what I am as a stoo true, that Milton was the last student in either university that suffered the public indignity of corporal punishment."—The only evidence of Milton's having suffered the indignity reits on the following lines, taken from his verses to Deodati.

Nec duri libet usque minas perferre magistri, Cateraque ingenio non subeunda meo-

The something eife, he contends, must be corporal correction; for he adds, subat was more than threets, was evidently punishment. To this it is answered, that by rendering catera in the singular number, something else; he has made the application particular, which in the original is general.—He has attempted to pervert the sense still farther, by explaining catera, something more than threats;—whereas it means in general the many insults, besides threats, to which academical subordination might make him liable. But however this may be, he is captainly not the last student in either university that suffered this indignity. At Oxford, both in the public and private statutes, the injunction of inflicting corporal punishment on boys under sixteen remains in force at this day; and at some colleges, where the foundation scholars are elected

A History of the Military Transactions of the British Nation in Indostan. Vol. II.

HE first volume of this history was published in the year 1763, and contains an account of the affairs of India, down to the commencement of the war between the English and French in 1756. To the continuation now before us is prefixed an enquiry into the rise and progress of the English commerce in the province

of Bengal.

It appears that the trade of this country was opened to the English, by means of a furgeon named Boughton, who, in 1636, was sent from Surat to Agra, to attend a daughter of the Empercr Shaw Iehan. His endeavours for the cure of the lady proving successful, the Emperor, besides other favours, granted him the privilege of a free trade throughout his do-Having obtained this minions. indulgence, Boughton immediately proceeded to Bengal, where he intended to purchase goods, and to carry them by sea to Surat. He had no sooner arrived in the former of those places, than he was employed to cure a favourite woman belonging to the Nabob of the province; which having effected, the latter prevailed upon him

to remain in the country; giving him at the same time a handsome stipend, and confirming the privilege that had been granted by the Emperor, with a promise to extend it to all others of the English nation who should come to Bengal. Boughton fent an account of his fuccess to the English governor of Surat, by whose advice the company in 1640 fent two ships from England to Bengal, the agents of which being introduced to the Nabob by Boughton, were kindly received, and affisted in their mercantile transactions.

For some years the English carried on their trade in this province without any molestation, but afterwards the government, either disavowing the patents that had been granted to Boughton, or annihilating their operation by the narrow construction which they now put upon them, the fettlers were obliged to pay the same duties with other merchants. Nor was this the only infraction of former slipulations that they began to experience. The Nabob henceforth assumed a more arbitrary conduct towards them, and their commerce was frequently interrupted by unusual exertions of despotism.

Against these evils our author observes, that there were only two remedies, namely, war or retreat,

elected very young, it was commonly practifed down to the beginning of the present century. In another place he asserts, that "Milton entirely omitted all prayer, either in his family, or in private." With regard to the latter part of the charge, it is answered, that it destroys itself, for solitary prayer could only be known to God and himself.—As to family prayer, it appears to be a calumny drawn from an expression of Toland's, who says, "that in the latter part of his life, he frequented none of the assemblies of any particular fect of Christians, nor made use of their peculiar rites in his family." Bishop Newton has altered this, into his not using any religious rites in his family. And from the hishop, as a story never loses in the telling, Dr. Johnson roundly concludes that he never used prayer in his family.

• See Ann. Reg. Vol. VII. for 1764.

proving detrimental to the company, confidering that the Bengal trade, notwithhanding the various reftraints imposed by the Nabob, was still very lucrative. For forty years therefore the English company attempted no military refilance.

But the peaceable acquiescence of the English rather increased than diminished the exactions imposed by the governors of the province; besides, that the acts of oppression exercised by those inserior despots were abetted by the Emperor at Delhi. Determined therefore to try the effect of arms, the company, in the year 1685, with the approbation of King James II. fitted put two fleets, one of which was ordered to cruise at the bar of Surat, on all vessels belonging to the 'Mogul's subjects, and the other designed not only to commit hostilities by sea at the mouth of the Ganges, but likewise carried six hundred regular troops, in order to attack the Nabob of Bengal by land.

The conduct of this war was entrasted to Job Charnock, the company's principal agent at Hugh-ley, a man es courage, but void of military experience. He deseated the forces of the Nabob in two different actions; but pitching his camp in an unhealthy part of the province, in the space of three months he lost by sickness three hundred Europeans, which was two thirds of his whole force.

The misfortune attending the army was compensated by the success of the fleet that had been fent out to Surat, which greatly distressed the trade of the Mogul's subjects, and took from them

prizes to the amount of a million The clamour sterling money. raised by the merchants in confequence of this disaster, induced the Emperor to send one of his officers from Delhi, with orders to hear the complaints of the English, and to mitigate the oppressions which they had fuffered. Hostilities soon after ceased; and by a treaty figned in August, 1687, it was stipulated that the English should not only be permitted to return to all their factories in the province, but might likewise erect docks and magazines at Ulabarca, a village situated on the western bank, about fifty miles from the mouth of the river.

This treaty was no fooner ratified than the war at Surat broke out afresh, and the Nabob of Bengal not only gave up the English trade to the rapine of his officers, but demanded a very large fum, as an indemnification for the loss which the country had fustained by the late hostilities. In consequence of some unexpected events, however, an accommodation again tock place between the contending parties without this requisition being granted; and the company received a patent from the Emperor, allowing them to trade free of cuftoms, on condition of paying annually the sum of three thousand roupees.

In 1696, an insurrection was commenced by the rajahs on the western side of the river Hughley, within whose jurisdiction were situated the principal settlements of the English, French, and Dutch, all which immediately augmenting their respective forces, declared for the Nabob; of whom they at the same time requested permission to put their sactories into a state of defence.

fence. The Nabob ordered them in general terms to defend them-felves; and they, considering this order as implying a grant of their request, proceeded with all expedition to raise walls and bastions round their sactories; of which that of the English was at Calcutta, where they had built their principal magazines. Such was the origin of the three European forts in the province of Bengal, the sirst that ever were suffered to be erected by foreigners within the

Mogul empire. In 1698, they obtained from Azim-al-Shah, the grandson of Aurengzebe, permission to purchase from the Zemindar or Indian proprietor, the town of Soola-kutty, Calcutta, and Govind-pore, with their districts, the prince reserving an annual fine. About this time, the union of the two companies, by augmenting the stock, increased the trade, and enlarged the views of the direction. The commerce of Bengal more especially became the object of their attention. subordinate factories of Cossimbuzar, Dacca, and Ballasore, were resettled: the exports and imports were doubled in value and quantity, and the garrison of Calcutta was augmented to 300 men: all which the government of Bengal, contrary to its usual maxims, beheld without repugnance, and even without demanding money as the price of its forbearance and favour. The increasing importance of the colony induced the company, in 1707, to withdraw the settlements in it from their former dependence on Madrass, and to declare Calcutta a presidency accountable only to the direction in England.

16 The tranquillity which the

company now enjoyed was in a short time disturbed by the Nabob Jaffier Khan, at this time appointed Governor of Bengal, and who was better enabled to take cognizance of their affairs by having removed the feat of government from Dacca to Muxadavad, in the centre of the province. Mixing policy with oppression, he greatly restrained the freedom of their commerce, without openly violating the privileges which they had obtained from Aurengzebe and Azim-al-Shah. In order to obtain a redress of their grievances, the prefidency of Calcutta, in the year 1713, proposed to the company in England the fending an embassy, supported by a valuable present, to the Great Mogul. The expedient was accordingly adopted; and after various delays occasioned by the intrigues of the vizir, they at length obtained the principal objects of their. One of those was, that the company should be allowed to purchase thirty-seven towns in Bengal, which would give them a diftrict extending ten miles fouth of Calcutta along the banks of the river Hughley, the passage of which might be easily commanded by the erection of batteries or redoubts; and what added to the value of the acquisition was, that the revenue of the territory would be sufficient to defray the charge of its protec-The consequences of so advantageous a grant were beheld with indignation by the Nabob Jaffier, who had endeavoured from the beginning to counteract the purpose of the embassy; but not daring openly to dispute the Mogul's orders, he prevailed, by secret intrigues, with the holders of the land, not to part with it to the

might be offered. Jaffier however admitted the immunity of the company's trade, which no longer paid any customs in the province.

"In the mean time, the settlement of Calcutta had attracted such a number of inhabitants, as excited the jealoufy of the Governor of Hughley, who, pretending that he should be punished for suffering so many of the Mogul's subjects to withdraw themselves from his jusaldiction, threatened to send a cadi, or Mahomedan judge, and officers of the police, to administer justice amongst the natives living under the English flag. The meafuse would have renewed the same inconveniencies, which had forced the English to quit Hughley: it was therefore counteracted by a bribe given to Azim-al-Shah, who forbad the Governor of Hughley from proceeding in his intentions. this constant attention to money, Azim-al-Shah in three years amas-Led three millions of pounds ster-Jing, which he carried with him out of the province: but he left behind him his son Furrukshir to get more; who, in 1713, gained the throne, after his father had perished in disputing it with his brothers."

From this time, the English company continued to reap the fruits of their commercial privileges till the year 1756, when, by the rupture between Great Britain and France, and by the intestine divisions in India, it necessarily became involved in all the calamities of war. The military transactions of this period, are related with the same precision and accuracy which distinguished the former volume of this history; and if

in the language and forms of expression there appear frequent marks of haste and inattention, they may readily be pardoned in a work of such extent and labour.

Isaiah; a new Translation, with a preliminary Dissertation, and Notes critical, philological, and explanatory. By Robert Lowth, D.D. F.R.S.S. Lond. and Gotting. Lord Bishop of London. 410.

HE versions that have hitherto appeared of the prophecies of Isaiah, both in ancient and modern languages, having been made on a mistaken opinion of the nature of those compositions: it is not to be wondered that they have failed in giving a just and expressive resemblance of the original. "It has, I think, says the learned prelate, been universally understood, that the prophecies of Isaiah are written in prose. style, the thoughts, the images, the expressions, have been allowed to be poetical, and that in the highest degree: but that they are written in verse, in measure, or rhythm, or whatever it is that diftiguishes, as poetry, the composition of those books of the Old Teftament, which are allowed to be poetical, such as Job, the Pfalms, and the Proverbs, from the historical books, as mere profe; this has never been supposed, at least has not been at any time the prevailing opinion. The opinions of the learned concerning Hebrew verse have been various: their ideas of the nature of it vague, obscure, and imperfect; yet still there has been a general persuasion, that some books of the Old Testament are written

written in verse; but that the writings of the prophets are not of that number."

The defign of the preliminary differtation is to refute this erroneous opinion; to shew that there is a manisest conformity between the prophetical style and that of the books supposed to be metrical; a conformity in every known part of the poetical character, which equally discriminates the prophetical and the metrical books, from those acknowledged to be prose. This subject, which the learned author had before treated in his eighteenth and nineteenth Prelections, is here more fully and mi-

nutely discussed.

"The first, he says, and most manifest indication of verse in the Hebrew poetical books, presents itself in the acrostick or alphabetical poems, of which there happily remain many examples, and those of The nature, or various kinds. rather the form, of these poems is this: the poem confilts of twentytwo lines, or of twenty-two systems of lines, or periods, or stanzas, according to the number of the letters of the Hebrew alphabet; and every line, or every stanza, begins with each letter in its order, as it stands in the alphabet; that is, the first line, or first stanza, begins with aleph, the second with beth, There are still extant and fo on. in the books of the Old Testament, twelve of these poems; reckoning the four first chapters of the Lamentations of Jeremiah as so many distinct poems; three + of other circumstances which suffithem perfectly alphabetical: in ciently discriminate the parts of the

which every line is marked by its initial letter; the other nine less perfectly alphabetical, in which every stanza only is so distinguished."

After examining some remarkable circumstances in these compofitions, he concludes, that so both these species of alphabetical poems confift of verses properly so called : of verses regulated by some obfervation of harmony or cadence; of measure, numbers, or shythm. For it is not at all probable in the nature of the thing, or from examples of the like kind in other languages, that a portion of mere profe, in which numbers and harmony are totally difregarded, should be laid out according to a scale of division, which carries with it such evident marks of study and labour, of art in the contrivance, and exactness in the execution. general, that the rest of the poems of the Hebrews, bearing evidently the same marks and characteristics of composition with the alphabetical poems in other respects, and falling into regular lines, often into regular stanzas, according to the paules of the fentences, which Aanzas and lines have a certain parity or proportion to one another, these likewise consist of verse measured by the ear, and regulated according to some general laws of metre. rhythm, harmony, or cadence."

The attempt to discover the laws of the Hebrew metre, or rhythm, he confiders as vain and impoffible: but he conceives that there are

Psal. xxv, xxxiv, xxxvii, cxi, cxii, cxix, cxlv. Prov. xxxi. v. 10-31. Lam. i, ii, iii, iv.

[†] Pial. exi, exii. Lam. iii.

190 ANNUAL REGISTER, 1779.

Hebrew scriptures that are written in verse, from those that are written in prose. The first and principal of these, is the correspondence of one verse, or line, with another, which he calls parallelism. When a proposition is delivered, and a second is subjoined to it, or drawn under it, equivalent, or contrasted with it, in sense, or similar to it in the form of grammatical construction, these he calls parallel lines, and the words or phrases answering one to another in the corresponding lines, parallel terms.

Parallel lines he reduces to three forts: parallels synonymous, parallels antithetic, and parallels synthetic. Of each of these he gives a variety of examples, in order to shew the various forms, under which they appear: first from the books universally acknowledged to be poetical; then correspondent examples from the prophet Isaiah; and sometimes also from the other prophets; to shew, that the form and character of the composition is in all the same.

First, of parallel lines synonymous:
that is, which correspond one to
another by expressing the same
sense in different but equivalent
terms. As in the following examples:

O-Jehovah, in - thy - Arength the - king shall-rejoice;

And-in-thy salvation how greatly shall-heexult!

The-defire of-his-heart thou-hast-granted unto him;

And the-request of-his-lips thou-bast-not-denied. Pf. xxi.

Because I-called, and-ye-resused;

I - stretched - out my - hand, and-no-one regarded, &c. Prov. i. 24.

Seek-ye Jehovali, while-he-may-be-found; Call-ye-upon-him, while-he-is-near,' &cc.

Ifa. lv. 6. The author produces many other examples, from the prophets, in which, he observes, the parallel lines sometimes consist of three or more synonymous terms; sometimes of two; which is generally the case, when the verb, or the nominative case of the first sentence is to be carried on to the second, or understood there; and sometimes of one only:

The terms in English, confisting of several words, are hitherto distinguished by marks of connection; to shew, that they answer to single words in Hebrew.

Sometimes, he observes, the lines consist, each of double members, or two propositions.

Bow thy heaven, O Jehovah, and defeend;

Touch the mountains, and they shall smoke, &c. Pf. cxiv. 5.

And they shall build houses, and shall - inhabit them;

And they shall plant vineyards, and shall eat the fruit thereof, &cc.' Isa. ixv. 21.

Sometimes they are formed by a repetition of part of the first sentence.

'My voice is unto God, and I cry aloud; My voice unto God, and he will hearken unto me.'

The waters saw thee, O God;
The waters saw thee; they were seised with anguish.' Ps. lxxvii. 1. 16.

"For he hath humbled those that dwell on high;

The lofty city, he hath brought her down: He hath brought her down to the ground; He hath levelled her with the dust.

The foot shall trample upon her;
The feet of the poor, the steps of the needy.' Isa. xxvi. 5, 6.

There are parallel triplets, when three lines correspond together, and form a kind of stanza; of which however only two commonly are synonymous. The wicked shall see it, and it shall grieve him;

He shall gnash his teeth, and pine away; The desire of the wicked shall perish.

Pf. cxii. 10.

Pf. xxxvii. 1, 2.

And he shall snatch on the right, and yet be hungry;

And he shall devour on the lest, and not be satisfied;

Every man shall devour the slesh of his neighbour.' Isa. ix. 20.

There are likewise parallels confishing of sour lines: two distichs being so connected together by the sense and the construction, as to make one stanza. Such is the form of the thirty-seventh Psalm, which is evidently laid out by the initial letters in stanzas of sour lines.

4 Be not moved with indignation against the evil doers;

Nor with zeal against the workers of iniquity:

For like the grass they shall soon be cut off; And like the green herb they shall wither.

The ox knoweth his possessor;
And the ass the crib of his lord:
But Israel doth not know Me;
Neither doth my people consider.' Isa. i. 3.

In stanzas of four lines sometimes the parallel lines answer to one another alternately; the first to the third, and the second to the fourth:

As the heavens are high above the earth; So high is his goodness over them that sear him:

As remote as the east is from the west;
So far hath he removed from us our transgressions. Pf. ciii. 11, 12.

And ye faid: Nay, but on horses will we fice;

Therefore shall ye be put to slight:

And on swift coursers will we ride;

Therefore shall they be swift, that pursue you. Isa. xxx. 16.

He next proceeds to the second fort of parallels, viz. the antithetic; of which kind are the following:

A wife fon rejoiceth his father:

But a foolish son is the grief of his mother.' Prov. x. 1.

Where every word hath its oppofite: for the terms father and mether are, as the logicians fay, relatively opposite.

The memory of the just is a bleshing; But the name of the wicked shall rot.

Prov. z. 7.

Here are only two antichetic terms: for memory and name are synonymous.

There is that scattereth, and fill encreaseth;

And that is unreasonably sparing, yet groweth poor.' Prov. xi. 24.

Here is a kind of double antithelis; one between the two lines themselves, and likewise a subordinate opposition between the two parts of each.

This form, he observes, is peculiarly adapted to adages, aphorisms, and detached sentences, and that we are not therefore to expect frequent instances of it in the other poems of the Old Testament; especially those that are elevated in the style, and more connected in the style, and more connected in the parts. The author however adds a few examples from the higher poetry.

These in chariots, and those in horses;
But we in the name of Jehovah our God;
will be strong.

They are bowed down, and fallen;
But we are risen, and maintain ourselves
firm. Ps. xx. 7, 8.

The bricks are fallen, but we will build with hewn stone:

The sycamores are cut down, but we will replace them with cedars. If a. ix. 10.

The third fort of parallels the author calls symbetic, or constructive, where the parallelism consists only in the similar form of construction: in which word dies not answer to word, and sentence to sentence, as equivalent or opposite; but there is a correspondence and equality between ifferent propositions in respect of the shape and

turn of the whole sentence, and of the constructive parts; such as noun answering to noun, verb to verb, member to member, negative to negative, interrogative to interrogative.

* Praise ye Jehovah, ye of the earth;
Ye sea-monsters, and all deeps:
Fire and hail, snow and vapour, &c.

Ps. cxlviii. 7.

Is such then the fast which I choose?

That a man should afflict his soul for a day?

Is it, that he should bow down his head like a bulrush;

And spread sackcloth and ashes for his couch, &c. Ija. lviii. 5, 6.

In these instances it is to be obferved, that though there are perhaps no two lines corresponding
one with another as equivalent or
opposite in terms; yet there is a
parallelism equally apparent, and
almost as striking, which arises from
the similar form and equality of the
lines, from the correspondence of
the members and the construction;
the consequence of which is a harmony and rhythm little inferior in
effect to that of the two kinds preceding.

" Of the three different forts of parallels, as above explained, every one hath its peculiar character and proper effect; and therefore they are differently employed on different occasions . . . Synonymous parallels have the appearance of art and concinnity, and a studied elegance. They prevail chiefly in shorter poems; in many of the Psalms; in Balaam's prophecies; frequently in those of Isaiah, which are most of them distinct poems of The antithetic no great length. parallelism gives an acuteness and force to adages and moral fentences; and therefore abounds in Solomon's proverbs, and elsewhere

is not often to be met with. The poem of Job, being on a large plan, and in a high tragic. flyle, though very exact in the division of the lines, and in the parallelism, and affording many fine examples of the synonymous kind, yet confists chiefly of the constructive. A happy mixture of the several sorts gives an agreeable variety; and they serve mutually to recommend and set off one another."

He next considers the distinction of Hebrew verses into longer and shorter, founded also on the authority of the alphabetic poems; one third of the whole number being manifestly of the larger fort of verse, the rest of the shorter. He does not attempt exactly to define, by the number of syllables, the limit which separates one fort of verse from the other; all that he affirms is this; that one of the three poems perfectly alphabetical, and therefore infallibly divided into its verses; and three of the nine other alphabetical poems, divided into their verses, after the manner of the perfectly alphabetical, with the greatest degree of probability; that these four poems, being the four first Lamentations of Jeremiah, fall into verses about one third longer, taking them one with another, than those of the other eight alphabetical poems .-Example of these long verses from a poem perfectly alphabetical:

by the rod of his anger t

He hath led me, and made me walk in darkness, and not in light. &c. Lam. iii. 1-4.

Examples of the same sort of verse, where the limits of the verses are to be collected only from the poetical construction of the sentences:

The law of Jehovah is perfect, restoring the soul:

The testimony of Jehovah is sure; making wise the simple, &c. Ps. xix. 7.

A found of a multitude in the mountains, as of many people;

A found of the tumult of kingdoms, of nations gathered together,' Isa. xiii. 4.

The learned prelate having established, on the grounds we have already mentioned, his opinion concerning the composition of the prophetical writings, proceeds to point out the very important advantages which are to be derived from this source, both to the translator and interpreter of the scriptures.

Flatness, he observes, and infipidity, will generally be the consequences of a deviation from the
native manner of an original,
which has a real merit and a peculiar force of its own. To express
therefore the form and fashion of
the composition becomes as necessary in a translation, as to give the
author's sense with sidelity and exactness: but with what success can
this be attempted, when the translator himself has an inadequate or

even false idea of the real character of the author, as a writer; of the general nature and of the peculiar form of the composition?

He next proves, in a number of examples, that this attention to the peculiar turn and cast of the original, may be of still greater use to the interpreter, by leading him into the meaning of obscure words and phrases, and by suggesting the true reading where the text is corrupted.

With regard to the fidelity of the translation now offered to the public, the excellent author has entered very largely into the principles of criticism, and the method of interpretation, on which he has proceeded. It would be impossible to do justice to this part of his differtation without transcribing the whole; we shall therefore content ourselves with saying, that the principal objects of his invaluable observious are, the Masoretic

.ion, the state of the He-... text, and the ancient versions of the Old Testament.

^{*} The article from our very respectable correspondent at Liverpool, was, by some accident, mislaid; but shall be inserted in the next volume.

THE

CONTENTS.

HISTORY OF EUROPE.

C H A P. I.

Retrospective view of American affairs in the year 1778. Expedition to Bedford, Fair Haven; and to Martha's Vineyard. Admiral Montague disposses the French of the islands of St. Pierre, and Miquelon. Lord Cornavallis, and Gen. Knyphausen, advance into the enemy's country, on both sides of the North River. Surprime of Baylor's light borse. Success of the expedition to Egg Harbour. Surprime of Pulaski's legion. Cruel depredations by Butler, Brandt, and the savages, on the back frontiers. Destruction of the new settlement at Wyoming, attended with circumstances of singular cruelty and barbarity. Col. Clarke's expedition from Vinginia, for the reduction of the Canadian towns and settlements in the Illinois country. Consequences of Clarke's success. Expedition from Schobarie to the Upper Susquehanna. Destruction of the Unadilla and Anaquage settlements.

P. []

C H A P. II.

Review of conciliatory measures pursued by the commissioners for restoring peace in America. Attempt to open and smooth the way to a negociation by private communications and correspondence, fails in the esset, and is highly resented by the Congress. Resolutions by that body against bolding any communication or intercourse with one of the commissioners. Gentleman in question declines asting any longer in the commission, and publishes a declaration in answer to the Congress. Declaration from the remaining commissioners in answer to that body. Final manifesto and proclamation

by the commissioners. Cautionary measures recommended by the Congress to the people; sollowed by a counter manifesto, threatening retaliation. Singular letter from the Marquis de la Fayette, to the Earl of Carlisle. American expedition for the reduction of the British settlements in the country of the Natches, on the borders of the Mississppi. Expedition from New-York, under the conduct of Commodore Parker and Colonel Campbell, for the reduction of the province of Georgia. Landing made good, and the rebels defeated. Town of Savannah taken, and the province in general reduced. Major-General Prevost arrives from the southward; takes the town and fort of Sunbury, and assumes the principal command. [18]

C H A P. III.

Island of Dominica taken by the Marquis de Bouille, governor of Martinico. State of the French fleet at Boston. Riot between the French and inhabitants. Desperate riot between the French and American sailors, in the city and port of Charlestown. M. D'Estaing Sails from Boston for the West-Indies: having first issued a declaration addressed to the French Canadians. Admiral Byron's fleet driven off from the coast of New-England by a violent hurricane, which afforded an opportunity for the departure of the French squadron. British fleet detained at Rhode-Island, to repair the damages Justained in the tempest. Reinforcement sent from New-York to the West-Indies, under the conduct of Commodore Hotham, and Major-General Grant: narrowly miss falling in with the French sleet: join Admiral Barrington at Barbadoes, and proceed together to the reduction of the island of St. Lucia: troops land, take the French posts in the neighbourhood of ibe Grand Cul de Sac: proceed to Morne Fortune and the Viergie. D'Estaing appears in sight, with a wast superiority both of land and marine force: attacks the British squadron in the Grand Cul de Sac; and is bravely repulsed by Admiral Barrington, twice in the same day. French land their troops in Choc Bay: attack General Meadows three times in the Viergie; are repulsed every time, and at length deseated with great loss. Great glory obtained by the British forces, both by sea and land, in these several encounters. M. D'Estaing, after ten days longer stay, abandons the island of St. Lucia, without any farther attempt for its recovery. The Chevalier de Micoud, with the principal inhabitants, capitulate before the French fleet is out of fight. [36

C H A P. IV.

State of public affairs during the recess of parliament. Address and petition from the city of London. Militia embodied. Camps formed. Admiral Keppel appointed to the command of the grand fleet for the home service. Peculiar situation of that commander. Fleet sails from St. Hellens. Licorne, French frigate, stopt and detained. Blameable condust of the Captain, in string unexpectedly into the America man of war. Desperate O 2

engagement between the Arethusa, and the Bell Poule, frigates. French sebooner, bravely taken by the Alert cutter. Another French frigate salls in with the sleet; and is, with the Licorne and schooner, brought to England. Fleet returns to Portsmouth for a reinforcement. Rewards and bounty of the French King, to the officers and crew of the Bell Pouls. Admiral Keppel sails again from Portsmouth. Falls in with the French sleet under the Count d'Orvilliers; and after a chace of sive days, brings them at length to action. Account of the engagement on the 27th of July. View of those circumstances which were supposed to have prevented that action from being decisive. French sleet escape in the night, and return to Brest. Prudent and temperate conduct observed by the Admiral. Returns to Plymouth to resit. Proceeds again to sea, but cannot meet the French sleet.

C H A P. V.

Speech from the throne. Amendment moved to the address in the House of Commons. Great Debates. Amendment rejected upon a division. Opposition to the address in general, in the House of Lords, but no amendment proposed. Address carried upon a division. Motion to address the Crown, in the House of Commons, for a disavorval of certain passages in the late manifesto issued by the Commissioners at New York. The motion, after long debates, rejected upon a division. Similar motion by the Marquis of Rockingham, likewise causes much debate, and is rejected upon a division. Protest. Circumstances, which tended to the rendering the late action off Brest, a subject of parliamentary discussion. Admiral Keppel, being called upon, gives some account of that business in the House of Commons. Answered by Sir Hugh Palliser. Reply. Court martial ordered for the trial of Admiral Keppel. Conduct of the admiralty censured and supported: Question, relative to the discretionary powers of that board, much azitated. Bill brought in and passed, for the holding of the triel of Admiral Keppel on Sore, (in consideration of bis ill state of bealth) instead of its being beld a board ship, as before prescribed by the law-Recess. [75

C H A P. VI.

Debates arifing on questions of supply, previous to the recess. Augmentation of 14,000 men to the land service. Trial at Portsmouth. Admiral Keppel bonourably acquitted. Receives the thanks of both Houses. Vice-Admiral of the blue resigns his employments, and vacates his seat in the House of Commons. Memorial signed by twelve Admirals, presented. Great discontents in the navy. Rejolution of censure moved by Mr. Fox, on the conduct of the admiralty. Motion, after long debates, rejected upon a division. Second motion, of a similar nature, by Mr. Fox, rejected upon a division. Two great naval commanders, declare against assing under the present system. Resignation of naval officers.

ifficers. Sir P. J. Clerke brings in a bill against the contrastors; first question carried upon a division; but the bill rejected upon another. Bill in savour of Dissenters brought in and passed. Assairs of Ireland. Various attempts and proposals for affording commercial relief to that country, prove at length inessectual.

E H A P. VII.

Debates on the army extraordinaries. Motion for printing the estimates rejetted upon a division. Committee on East India affairs. Resolutions moved for and carried, relative to the violence committed on the late Lord Pigot in his government. Motion for prosecuting certain members of the late council at Madrass, agreed to. Mr. Fox's motion, for the removal of the first lord of the admiralty from that department, is, after long debates, rejected upon a division. Committee of enquiry into the conduct of the American war. Amendment moved to the motion for the examination of Earl Cornwallis, by the minister, and carried upon a division in the committee. Amended motion then put, and rejected upon a division. Third motion rejected. Transactions in the committee, discussed in the House, and rescinded. Committee revived. Earl Cornwallis, and other witnesses examined, in behalf of Lord and Sir William Howe. Counter evidence proposed, and agreed to. In the interim, General Burgoyne's evidence brought forward and examined. Counter evidence examined. Committee suddenly dissolved. 129

C H A P. VIII.

Two enquiries in the House of Lords, tending to the same object, and carried on through the greater part of the session. Enquiry into the state of the navy, and the conduct of the admiralty, instituted by the Earl of Bristol. Motions for naval papers, bring out much debate, and are rejected upon a division. Motion by the Earl of Bristol, for the removal of the first Lord of the admiralty from his employment. Great debates. Motion rejected upon a division. Protests. Enquiry into the government and management of Greenwich Hospital, conducted by the Duke of Richmond. Moves for a compensation to Captain Baillie, late Lieutenant-Governor of Greenwich Hospital. Motion rejected upon a division. Minority Lords quit the House. Resolutions in vindication of the Earl of Sandwich. Hard case of Captain Baillie. . Marquis of Rockingbam endeavours to bring forward an enquiry into the affairs of Ireland. After several ineffectual attempts, a kind of compromise takes place, referring the business of that country to the ensuing session. Mr. Townsbend's motion to defer the prorogation of parliament, Spanish manifesto. Address from the Commons, rejected upon a division. Second address moved by Lord John Cavendish. Motion of adjournment carried upon a division. Amendment to the address of the Lords, moved by

the Earl of Abingdon, and rejected upon a division. Second amendment proposed by the Duke of Richmond; rejected upon a division, after considerable debate. Bill brought in by the minister for doubling the militia, after much debate and proposed amendment, passed by the Commons. Indemnity bill likewise passed. Militia bill meets with great opposition in the House of Lords. Indemnity bill much opposed; but carried through. Protests. Militia bill deprived of its principal effective powers, and returned to the Commons. Debate on a point of privilege. Bill passed. Speech from the throne.

C H A P. IX.

Hostilities in the East Indies. Sea fight between Sir Edward Vernon and M. de Tronjolly. French squadron abandon the coast of Coromandel. Siege of Pondicherry. Gallant defence by M. de Bellecombe. Capitalation. State of affairs in Georgia and the Carolinas. Loyalists defeated in North Carolina. American General, Lincoln, arrives in South - Carolina to oppose Major General Prevost. Rebels deseated at Brien Creek. General Prevost passes the Savannah, and penetrates into South Carolina; advances to Charles Town; retires. Action at Stone Ferry. General Prevost takes possession of the island of Port Royal. Expedition from New York to Chejapeak Bay, under the conduct of Sir George Collier and Major General Matthew. Great damage done to the Americans in the neighbourhood of Hampton and Norfolk. Expedition up the Nerth River; Stoney Point and Verplanks taken. Expedition to Connections, under Sir George Colier and Governor Tryon. Surprize of Stoney Point by General Wayne. Recovery of that post. Attack upon Paulus Hok. Lieutenant Colonel Maclane besieged by an armed force from Boston. Relieved by Sir George Collier, who destroys the whole rebel marine is the Penobscot. 174

C H A P. X.

Admiral Byron takes the command in the West Indies. Endeavours me draw M. D'Estaing to an engagement without esset. Mortality at St. Lucia. Mr. Byron convoys the homeward-bound trade. Loss of the island of St. Vincent's, during the absence of the steet. French steet resusforced by the arrival of M. de la Motte: proceeds to the reduction of the Granudes. Lands a body of sorces, which invest the Hospital Hill in the island of Granuda. Attack the works by night, and carry them by storm. Lord Macariney proposes to capitulate; but the terms offered by D'Estaing being deemed inadmissible, surrenders the fort and island at discretion. Admiral Byron returns to St. Lucia; proceeds with the siet and army for the recovery of St. Vincent's. Receives intelligence at sea of the attack upon Granada, and being ignorant of the great superiority of the French steet, changes his course in order to succour that issend

Different views and conduct of the hostile commanders. gagement. Extraordinary acts of gallantry. Vice-admiral Barrington ewounded. French persevere in their resolution of not coming to a close action. Views of the British commanders totally changed, upon discowering that the island was already lost, as they had no force capable of attempting its recovery. Transports and disabled ships sent of to St. Christopher's in the evening. Followed next day by the fleet; the enemy baving returned to Granada in the night. Prodigious loss of men on the French fide accounted for. Claim a victory; and upon what ground. M. D'Estaing directs his operations to the northward. object, the reduction of Georgia.—Second, an attack upon New York, in conjunction with General Washington. Arrives upon the coast of Carolina; takes the Experiment man of war, and some frigates. . Anchors off Tybee. Lands his troops, and invests the town of Sa-Summons General Prevost. Is joined by General Lincoln, and Count Polaski. Attacks the British lines, and is repulsed with great slaughter. French retire to their ships, and totally abandon the coasts of America.
